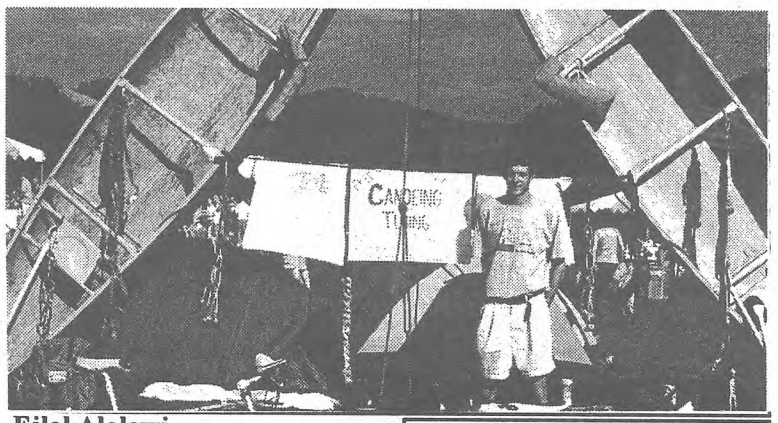
332 Freshmen Inducted in Convocation Ceremony

Tatiana Zarnowski
Co-Editor-in-Chief

Opening Convocation for the 1999-2000 school year commenced at 3:30 p.m. August 30 in Rosenberger Auditorium, Oller Hall. President Kepple opened the ceremony by welcoming the new students to Juniata. He reminded them that they are not alone in their new experience of coming here, but that they stand on the shoulders of previous students and faculty members.



Dr. Keeney speaking at Connvocation. Photo by C. Cato.

Provost James Lakso introduced the speaker, Dr. Jill Keeney, who is an associate professor of biology. Her specialty is in microbiology. Her speech was entitled "Selecting Adaptive Mutations: Biology Not Required." In it, she drew a parallel between DNA mutating in response to changes in its environment, and college students growing in response to changes in their environment.

Scientists consider DNA to be the "blueprint of life." DNA is not a rigid system, however. "Bio-systems rely on flexibility and change." DNA reacts quickly to its environment and adapts in order to deal with it. Dr. Keeney drew a "strikingly similar" analogy

Clubs Recruit at Lobsterfest

Laughing Bush display. Photo by T. Zarnowski

Ejlal Alalawi
Features Editor

Lobsterfest is a traditional Juniata event where all activities' organizers set their booths and interested students sign up. It took place on Saturday, September 4th at 4 p.m. on Sherwood and North Lawns.

Rebecca McClaine, HOSA's (Health Occupation Students of America) representative was grabbing people's attention with her Mr. Gross Mouth. It was an artificial model of a mouth with badly decayed teeth and a cigarette. Most of HOSA's members are pre-medical, pre-dental, and other pre-health professional students. It helps students to see whether they really want to commit themselves to the careers they are considering. This occurs through guest speakers, volunteering activities, and community service. There are also chances for the students to join in competitions with other schools. The club members meet every other week in the science center.

Tri-beta is the national biology honors society. The representative was Lisa Petrella. Generally, a lot of the students are pre-medicine or biology majors. Their first meeting is Thursday at 7 p.m. in B200.

Members of the caving club get to visit places with caves, go into the cave, and explore! They have organized a trip to West Virginia and other local caves. Everyone is welcome to join.

PSO is the Peace Studies Organization. PSO is working to go to the School of the Americas event in Georgia.

The vegetarian society is a new organization, as well. Their goal is to raise awareness of the vegetarian students on campus. They are trying to get Baker to provide a new or a better service for non-meat-eaters, because Baker could serve many more vegetarian dishes besides pasta and pizza.

"55 students are currently signed up for the Philly Model UN event," said Sarah Barrett, a member and representative of the Model United Nations. "It helps students to get to know people from other schools,

It's Not All in Your Head: PMS is Real, and There is Relief

Bridget O'Brien
Staff Writer

Doctors used to brush off the symptoms of premenstrual syndrome, or PMS, as an imaginary illness created in a woman's head. But today, doctors and scientists recognize the reality of the physical and mood symptoms of the 25 million women who suffer from PMS. Fewer and fewer women will have to continue suffering as more of them are seeking and finding effective treatments. As Peter J. Schmidt, M.D., a researcher on PMS explains, "The more we understand about premenstrual syndrome, the less the stigma will be attached to it."

Premenstrual Syndrome: What is it?

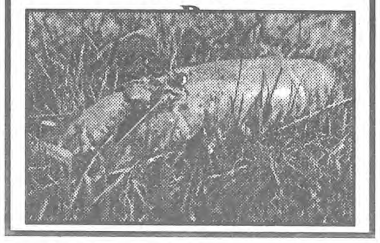
The physical symptoms of premenstrual syndrome include bloating, breast tenderness, cramping, migraines, food cravings, acne, body aches, tiredness, appetite changes, and insomnia. Mood symptoms may be irritability, moodiness, depression, anxiety, sadness, and decreased concentration. These symptoms vary for each woman and range in severity.

Premenstrual syndrome has physiological causes. A woman may experience symptoms as early as fourteen days before her period, and these symptoms may continue until she begins menstruating. Some scientists suggest that the interaction of the ovarian hormones estrogen and progesterone with central neurotransmitters (chemicals used by neurons in the brain to send messages) causes chemical changes in the brain which, in turn, cause symptoms.

Symptoms may originate not only in the brain but in the muscles as well. Calcium deficiency may affect functioning of smooth muscles, the type of muscle that may cause cramping. While the role of calcium regulation has been studied and is thought to play a part in the symptoms, it is unclear exactly how calcium contributes to premenstrual syndrome.

Whether it's calcium deficiency, central neurotransmitter activity, or, most likely, a combination of these and other physiological functions of the body, scientists' studies on the causes of PMS are leading to more effective treatments.

What are the treatments?



Although the exact physiology of how premenstrual syndrome occurs is not completely known,
there are several treatments that many sufferers have found effective. Women suffering from PMS are encouraged to visit their doctors to discuss the possible treatments. Experts suggest keeping a monthly symptom diary before an appointment to help the doctor determine if a patient has premenstrual syndrome, and if so, which treatments would be most effective.

Teaching/Learning Technology Center is to Open Soon

Tatiana Zarnowski
Co-Editor-in-Chief

Two hours before he was scheduled to leave for a week, Anthony Bickle was taking me on a "virtual tour" of the soon-to-be Teaching/Learning Technology Center. Dr. Bickle is the Director of the TLT Center, which should be open sometime this month. It is located in the old International Programs Office on the second floor of Ellis.

Bickle explained that the computer desks had just arrived that day. He had been assembling them for most of the day in the training room, which he said would house twelve computers, with a scanner for every two. He explained that the TLT Center will be receiving a grant for a "smartboard"-a large interactive screen that mounts on the wall for instructing groups. "It's just like being able to touch your screen," instead of keying in commands or using a mouse, Bickle said. Alison Stoltz is the trainer for the Center. She will be teaching faculty and staff to operate such programs as Front Page 2000, Photoshop, and designing web pages.

In the reception room next to the training room, there will be six computers for student use. There will even be an empty port for laptop users. Bickle announced with enthusiasm that they will all be "beefy" PCs with a lot of RAM. They plan to purchase a few of the new Apple G-4's, which will cost a hefty $7,000 each.

Next on the tour was the editing room, where there will be two more computers, with more capabilities. Students, faculty, and staff will be able to use them for producing digital movies. It will be possible to load the information from the video into the computer for editing, and then record it back to the videotape. There will also be CD burners in this room.

The philosophy behind the TLT Center is unique in that it was "engineered from the user's point of view up," Bickle said. They took the faculty and students' needs into consideration when they created it. This concept is going into the computer labs, too, where lab assistants are now expected to approach computer users who need help. "It's all people-centered," Bickle said.

Bickle's Ph.D. is in political science. It is surprising to know that he has no specific technical degree. Remarkably, he only took one computer course in college--the one that he put off until his senior year when he was required to take it before he could graduate. "It's all self-taught," he said of his computer knowledge. Bickle views his place as someone who should bridge the gap between the technology, which can be intimidating, and the people using it. "We don't need more technicians...we need teachers."

Dr. Anthony Bickle is the Director of the new Teaching/Learning Technology Center.

Bickle hopes to promote the "integration of technology in the classroom." He plans to do this by training the professors to use the equipment, so they will encourage students to use more high tech equipment. Bickle believes that technology-based projects like multimedia presentations and designing web pages teach students more than traditional research papers do.

He would also like to see professors and students working together as a team. This is difficult to arrange because professors often think that students are more adept at using the technology. He believes that is often not true. He would like to promote the attitude that "everybody is at a different place on this path" of learning how to use computers.

Although they have a goal opening date of September 13, it may be the end of the month before the editing room is open for use. The planned schedule for the TLT Center is as follows: It will be open for faculty and staff Monday-Friday, 10 a.m.-6 p.m., and Monday-Thursday 6-9 p.m., and Sunday 3-9 p.m. for students. But Bickle emphasizes that the hours are totally "demand-driven." He would love to see it open more for student use because of demand.

Keep reading *The Juniatian* for more information about the TLT Center's Open House and an upcoming contest!

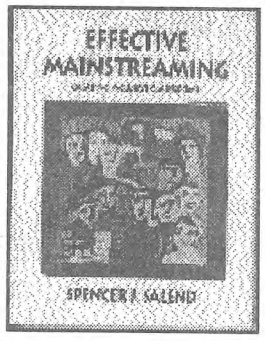
Do You Suffer from Male PMS?

Bridget O'Brien
Staff Writer

Although most men would not say they suffer from PMS, they do experience testosterone cycles that cause many of the same symptoms associated with premenstrual syndrome. Males and females surveyed on this campus suffered twenty of these symptoms. While frequency of symptoms varied for each individual, each of the symptoms was experienced by at least some members of each sex.

Premenstrual symptoms occur in women because of hormone fluctuations. Therefore, it makes sense that men suffer from many of the same symptoms because they also have hormone rhythms that include five different testosterone cycles. According to the Male Menopause Web page (http://www.malemenopause.com/index3.html), these five cycles include hourly, daily, monthly, and seasonally fluctuating levels of testosterone. In addition, levels may decrease as part of male menopause as men age. Fluctuations occur three to four times an hour as well as higher levels of testosterone in the morning than in the afternoon. Rhythmic cycles occur each month but are individual for each man while higher levels in October and lower levels in April are generally present in most men.

If men identify their symptoms, Sweet Annie Herbs, Inc. in downtown Huntingdon can provide some relief. An herbal capsule called Fountain of Youth for Men boosts the immune system, increases energy, and improves prostate health. Tammy Meece, an employee at Sweet Annie Herbs, thinks that most men don't realize that their symptoms are similar to premenstrual syndrome. "Men do go through the same symptoms," says Meece, "but they don't have breast tenderness or a [menstrual] cycle. They do have irritability and moodiness." Although most of her male clients insist that the herbs won't help them, Meece explains that afterwards, "they feel a lot better" and come back for more when their bottles start running low.



Although men's symptoms or causes may be slightly different from women's, they do experience conditions very similar to premenstrual syndrome. Recognition of these symptoms may help men become more in tune with their bodies, which can lead to better health, more energy, and even more understanding about the women in their lives.

Did you recieve a puzzle piece? Or do you know someone who did? Make sure your a part of the solution, R.H.A. TUESDAYS 9PM IN FACULTY LOUNGE.

Cheaper Books Can be Found Online

Jennifer Bartimole
Staff Writer

With a week of classes already over with, everyone has spent a small fortune buying their books. Why is the cost of books so outrageous? There is a 20-page book in the bookstore that costs $4.70. You may think that's not so bad, but it isn't really even a book, it is something that could easily be photocopied for only $2. If you are in a beginning-level language class, expect to pay about $100 for your book, which includes two audio tapes, a CD-ROM, a workbook and answer key to go along with the textbook itself.

There are several online sources that sell textbooks, including Amazon.com, a1books.com, and varsitybooks.com. Of the three, a1books.com is consistently the cheapest. For example, our bookstore sells Effective Mainstreaming for $60.42 with tax. However, a1.com sells it for a total of $57.45 ($3.95 shipping included). Amazon.com and varsitybooks.com are more expensive. They sell the same book for $65.75 and $57.52, respectively.

Another example is A Survey of Mathematics with Applications, which the bookstore sells new for $78. Since a1.com does not have this book, varsitybooks.com is the cheapest place to buy this book. They charge $70.63. Amazon.com, however, charges a total of $87.05.

A drawback of buying books off the Internet is waiting for your books to ship, or pay more to have them arrive sooner. For example, varsitybooks.com charges $4.95 to ship books UPS 2nd Day Air. Amazon.com charges $3.00 plus an additional $.95 for books to ship within two to three days. A1.com also charges $3.95 for ground shipping, which takes around five days.

The cost of used books at our bookstore is not very good, either. Most people think that they can save money by buying used, if they're lucky enough to find used books in the bookstore because there aren't very many to begin with. Used books are expensive, too. Some are only a few dollars, but others are $50 or $60, and even more.

The sell back rate for books is even worse. The bookstore will give you probably about $20 for a book that you bought for about $50 or $60. That's assuming the book hasn't gone into a new edition and the bookstore does in fact buy it back. And if they don't buy it back, what can you do? There really is nowhere else to sell them to, except maybe an unsuspecting underclassman who doesn't know any better.

If you order your books online, then you may not end up paying an arm and a leg for books. However, if you are unable to do that, and buy your books from the bookstore, you will end up paying a small fortune.

A Letter of Welcome

Dr. Thomas Kepple
Contributer

1999-2000 will be an interesting year on campus for us all. Not only will we be preparing to celebrate a new millennium, but we will discuss general key projects and share in a wide variety of campus events. They include:

-Thanks to the hard work of the von Liebig Center for Science committee this summer, our architects displayed the first concepts for this exciting facility at an open campus meeting at 4:30 p.m. on Wednesday, September 8, in the Ellis Hall Ballroom. The building itself should be under construction next summer.

- Plans for a theatre addition to Oller Hall will also be discussed this fall.

- Based on the almost certain $5 million Federal grant to build a new Field Station on Raystown Lake, discussion will begin this fall on exactly how the new facility will be used, including perhaps a full semester-in-residence on the lake.

- In order to pay for these projects, and to provide additional scholarships, financial aid, and other needs, we will launch Juniata's largest capital campaign at an April celebration. Student representatives definitely will be involved in the planning for this campus-wide event.

- In December, the telephone/computer/cable/electric wires along the former 18th Street will be removed, completing the first phase of the pedestrian walkway begun in May.

-This should also be an exciting year for varsity athletics. Most of Juniata's sports teams will be competing for MAC championships and several, including Women's and Men's Volleyball will be in the hunt for a national title!

- Perhaps even more importantly, we have a bumper crop of interesting new faculty.

Dr. Kepple relaxes at Lobsterfest.
Photo by J. Hanohano.

- The Artist Series, theatre events, and Juniata's Museum of Art all have exciting lineups.

- And, of course, there will be Mountain Day, the Madrigal Dinner, the Mr. Juniata competition, Homecoming, Springfest, and All Class Night in addition to improved social events and club activities funded by the new student activity fee.

I look forward to sharing this interesting year with you.

Juniata's Prodigal Daughter

Eric Hammar
Staff Writer

Upon graduating, many students entertain the thought of returning to Juniata--perhaps as a professor or dean or even president. However, for most, a diploma is a ticket out of Huntingdon.

But suppose you are Kara Laskowski, doctoral student from Penn State University and 1996 Juniata graduate, who receives the most unlikely call. On the line is Dr. Donna Weimer, chairperson of ECTA. The offer is surprising and proves too tempting.

Laskowski is back and teaching communication here at her alma mater for one short year. This fall she is teaching two sections of Introduction to Human Communication and a Public Speaking class and plans to teach two sections of Public Speaking and a Group Communications class this spring.

Laskowski's involvement on campus will not be limited to the classroom. She will be assisting the Communication Club and the Communication Honor Society.

Teaching at Juniata is a welcome change for Laskowski, who is taking a year off from the rigors of doctoral candidacy. At the most basic level, her commute to work has shortened. She no longer pushes the pedal to the metal en route to State College, but finds her way to work on foot. Further, Laskowski appreciates the friendly and supportive community at Juniata which affords the opportunity for professors and students to establish a unique working relationship.

Returning to Juniata has also inspired a particular fear. Her previous life at Juniata isn't too far in the past. There are still students here who may remember a green-haired, nose-ringed Communication POE named Kara Laskowski.

Although Laskowski is only teaching introductory level courses, her interest in the field is gender distinction in communication. Much of her graduate and doctoral level work has examined how men and women communicate with each other.

Laskowski believes in the spirit of action at Juniata and encourages students to get involved on campus.

Kara's Five Questions!

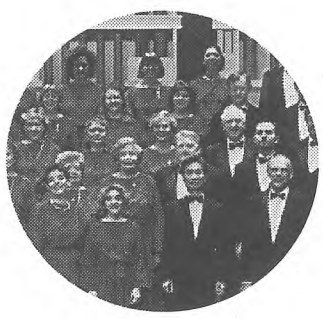
1. What was the last movie you saw?
   October Sky
2. What is the capital of South Dakota?
   I take the Fifth.
3. Favorite Beatle.
   Paul.
4. Mayonnaise or Miracle Whip.
   Mayonnaise.
5. Where's Waldo?
   I don't know.

1999-2000 Juniata College Artist Series

All performances begin at 8:15 pm in Oller Hall.

Zhongmei Dance Company

September 17



The Zhongmei Dance Company was founded in 1992 with the goals of bridging the dance cultures of the east and west, bringing Chinese Dance to American audiences, western style dance to Chinese audiences, and creating a new dance form that combines Chinese themes and modern techniques.

David Leonhardt Jazz Group

October 8

An acoustic blend of mainstream and modern jazz, the David Leonhardt Jazz Group relies on creative improvisation by playing a mixture of originals and jazz standards. David Leonhardt, a highly skilled jazz pianist and composer performs along with bass drum, saxophone and a female vocalist.

The Mendelssohn Choir

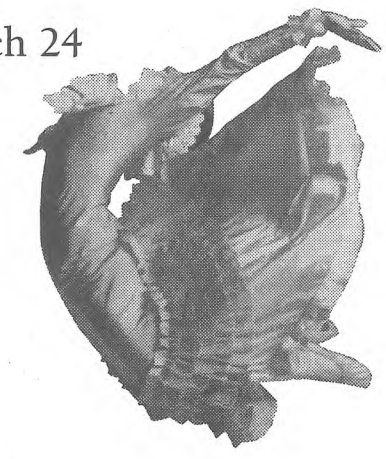
February 5

The Mendelssohn Choir of Pittsburgh is renowned for its versatility of repertoire, including oratorio, symphonic opera, Broadway, and folk music. Over 100 volunteer singers, and a 24-voice core of professional singers are led by Grammy-Award-winning Robert Page, one of the country's leading choral directors.

Ensemble Galilei

February 18

This unique ensemble has a repertoire that spans six centuries and ranges from the Irish, Welsh and Scottish melodies of its Celtic roots to music of Hildegard von Bingen and original compositions by its own members. An intricate blend of instruments grants listeners passage to another world.



New York Chamber Soloists

March 24

An 11-member ensemble of strings, winds and keyboard, the New York Chamber Soloists charm audiences through a diverse and unusual repertoire made possible through their unique instrument combinations.

The Martha Graham Dance Company

April 7

Since its 1926 inception, the Martha Graham Dance Company has received acclaim from audiences in over 50 countries. Martha Graham, choreographer dancer, and company founder, is recognized as a primal artistic force of the 20th century.

JUNIATA STUDENTS FREE* GET YOUR TICKETS AT THE INFO DESK IN ELLIS HALL

It's Not All in Your Head: PMS is Real, and There is Relief

(Continued from page 1)

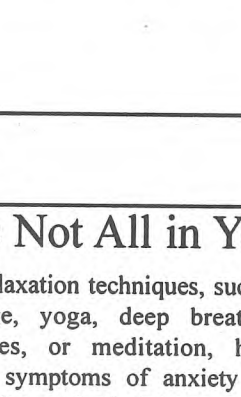
The diary should be a record of symptoms, their dates, and their severity.

The primary suggestions are usually diet and lifestyle changes that are similar to those advised for other ailments or for general health by the American Heart Association and the American Cancer Society. The first concern is a healthy diet and exercise. Avoiding salty foods, simple sugars, caffeine, and alcohol helps alleviate symptoms such as bloating and anxiety. Eating smaller, more frequent meals of low-fat, carbohydrate-rich whole grains and leafy green vegetables helps to reduce fatigue, food cravings, and irritability by stabilizing blood-sugar levels. Common vitamin deficiencies that may contribute to symptoms include calcium, magnesium, manganese, B vitamins, and vitamin E. Regular exercise enhances mood as well as decreases some physical symptoms. Exercise combined with relaxation techniques, such as massage, yoga, deep breathing exercises, or meditation, helps reduce symptoms of anxiety and irritability and diminishes stress, which can worsen premenstrual symptoms. "For any woman stressed out, PMS is going to be worse," according to Alice D. Domar, Ph.D. Domar is the director of the Mind/Body Center for Women's Health at Beth Israel Deaconess Medical Center. "Any condition that is made worse by stress should be helped by relaxation," says Domar.

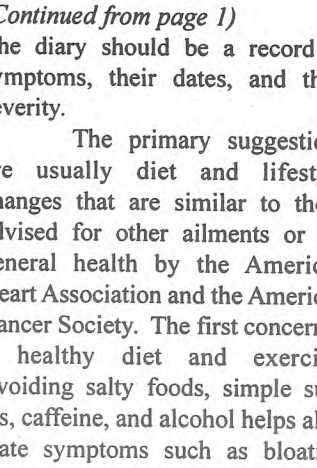
Oral contraceptives also provide many women relief from premenstrual syndrome by suppressing ovulation and stabilizing hormone levels. The pill is often favored by doctors and patients because it is economical, effective, reversible, and provides other health benefits. Nonsteroidal anti-inflammatory drugs may provide relief for pain and body aches, and diuretics may ease bloating and water retention. Antidepressant drugs, Zoloft and Prozac, are sometimes prescribed to treat women with severe mood symptoms. However, antidepressants are not overwhelmingly supported because they treat mood symptoms and not the physiological causes of PMS.

Are there any alternative remedies?

There are also a few alternative methods that use various herbs to treat specific symptoms. These herbs may also compliment traditional medicine, but it is not recommended that pregnant or lactating women take them. Some of the available herbs, a brief description of each, and the main symptoms they address are in the table.



Several other herbal remedies (aromatherapy, candles, and a collection of teas to ease symptoms) are available at Sweet Annie Herbs, Inc. in downtown Huntingdon. According to Tammy Meece at Sweet Annie Herbs, these products are very popular. Meece explains, "We need to be in tune with our bodies. We are missing things we need nutritionally." She believes that a healthy diet and natural products are the best ways for treating ailments.



After a woman assesses her own symptoms, she can discuss with her doctor which treatment is right for her. Continuing research into premenstrual syndrome will likely yield a better understanding of its physiological causes and lead to more and improved treatments for the 25 million women suffering from its unpleasant physical and mood effects. Premenstrual syndrome is no longer considered a figment of women's imaginations, but as more women find effective treatments, their symptoms may become more like mere traces of memory.

	tranquilizer

How Typical are You?

Krissy Lipuma
Staff Writer

Are you a white, Christian student who lives in Pennsylvania? Do you think everyone else is too?

Of all the students attending Juniata during the 1998-1999 school year, 92.0% were white, 95.8% identified themselves as Christians, and 76.2% lived in Pennsylvania. Within the class 2002, 90% attended public high schools, and over half were first-generation college students.

Out of last year's freshmen, approximately 24% reported medicine as their future career choice. Education and research careers also topped the list.

Last year, as many students came here from foreign countries as from New Jersey, and more came from France than from Ohio. Other countries represented included Ecuador, Russia, Germany, Cameroon, Indonesia, and Egypt.

There were also several minority groups represented on campus last year, with twenty-nine students identifying themselves as African-Americans, Hispanics, or Asian or Pacific Islanders.

Overall, there were more than twenty-five different religions represented on campus last year, ranging from Baptist to Buddhist, Mennonite to Moslem. Different backgrounds and beliefs form the students at Juniata.

Lobsterfest

(continued from page 1)

which broadens their connections and ties," added Sarah. It is one of the fastest growing organizations on campus. The students come from a variety of majors, including international studies, history, and even social work, like Sarah.

Another booth was the Campus Ministry's. The representative there was Brandy Seiler. It is divided into four parts she said. The Catholic Council, Koinonia, FCA (Fellowship Christian Athletes), and the Campus Ministry Board. The Catholic Council is in charge of the canned food drive for homecoming. For the canned food drive, the people that provide the most canned food receive points that add to their homecoming scores.

Some were new and others had developed competitive sides to their organizations over the years. Such clubs are the horseback riding club. They give lessons for newcomers, English Western, sectored riding, and Horse Power. There is also a chance for a competition, this year at Horse Adventure, which is near James Creek.

The Spanish Club is planning an Immersion Day and several exciting visits. It's not only a club that teaches people how to practice speaking in Spanish, said Julie Hines, a member and a rep, but they help people as well. They have a fundraiser in Christmas for the orphans of Nicaragua and Puerto Rico. Their first meeting is on September 16 at 8 p.m.

After the boredom of sitting at a booth and trying to get students to join their clubs, all that the organizers needed was LOBSTER. The smell was all over campus and the cracking of the lobsters shells was heard far and wide as the students proceeded to satisfy their craving for seafood.

Effects of Drought Felt at Juniata College

Justin Miller
Political Editor

Walk anywhere on campus and you will hear a now-familiar crunching underfoot. This is the sound of a drought. For the past several months, the majority of the Eastern United States has been in the grip of the most severe drought in nearly a century. Stories of complete crop failure are common throughout the Northeastern US. But how is the drought effecting Juniata College?

Juniata is required to abide by the same restrictions placed on the rest of the state. This means watering grass and lawns, including athletic fields, is not permitted. According to Peter Landschoot, associate professor of turfgrass science at the Pennsylvania State University, "grasses go into a semi-dormant state and become vulnerable when it's dry." Attempting to water the grassy areas around campus would do little more than trigger new growth that the natural environment can not support.

According to President Kepple, the drought is a serious concern for the administration. President Kepple is "disappointed that the new playing fields and various parts of campus, including the football field and the area around East, are not what we had hoped it would be." Until the drought abates and the water use restrictions are lifted by the PA Department of Environmental Resources, we must make do with what little rain we do get.

The Juniatian would like to join President Kepple in urging the entire Juniata College community to "be conscientious in your water use."

What can you do to help?
-- Turn off the water in the shower while lathering.
-- Flush toilets when they need it, not necessarily after every use.
-- Turn off water in sinks when brushing teeth.

Convocation

(continued from page 1)

between DNA and freshmen students, who are embarking on one of the biggest changes in their lives.

Freshmen have many decisions to make, Keeney said, from which classes to take to "how you spend your weekends." Keeney encouraged the students to be open to change, and not resist it. Being open "shapes your degree of success." She added that most students change their college and career goals "numerous times."

Keeney reinforced her theme by using three student examples of people who changed radically during their years at Juniata. One of which was Michael Freeman, who entered Juniata with the intention of studying microbiology to do research. After he returned from studying abroad, he had decided to complete a POE in communications.

Paula Bender is a junior who entered Juniata with very little confidence in her academic ability, and is now a psychology and criminal justice major.

Dr. Greg Stall was a student a few years ago who wanted to be a medical doctor. His MCAT scores were not high enough to admit him to medical school, however. Instead of giving up entirely on his dream, he chose to attend graduate school to work in the research end of medicine. Now he is an associate professor at Harvard University and holds several patents for the research that he has done.

These three people, Keeney said, made adaptive mutations to make the best of their situations. She encouraged the freshman class to make the kind of mutations that will make them better human beings.

Following Keeney's speech, Provost Lakso announced the top five freshman students from last year. They are as follows: Kellie Martin, Eric Orlowsky, Jonathan Patrie, Andrew Radomsky, and Billie Jo Zeigler.

Brandon Zlupko, President of Student Government, gave a short speech entitled "The Potter." He compared a potter at the wheel to the liberal arts education at Juniata. His words of advice to the class of 2003 were, "To all of you who are putting final touches on art," find pride in it.

New Business Professor Excited to Be Here

By Indi Petranek
News Editor

Mike Frandsen joined the Juniata faculty as an Assistant Professor of Business Administration this year.

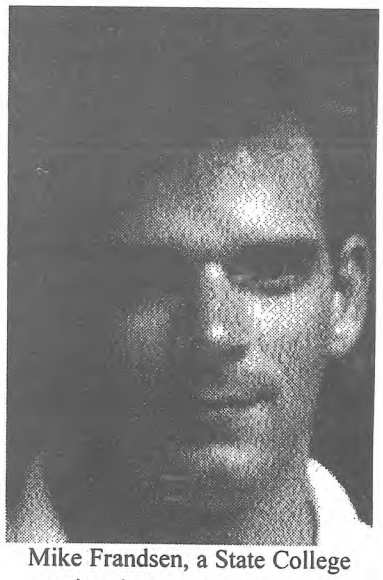
Frandsen comes to Juniata from the University of Texas at Austin, where he is a Ph.D. candidate in Strategic Management. His primary interest is in executives, CEOs and top management teams.

Before pursuing a Ph.D., Frandsen worked for over ten years in industry in various accounting, finance, and operations management positions. Most recently, while taking a year off from Texas, he was a finance manager for Nortel Networks.

Frandsen and his family, wife Sharon and daughters, Janie (7) and Kate (4 fi), are coming back to Central Pennsylvania.

Frandsen and his wife Sharon grew up in State College, graduated from Penn State, and still have family there.

"We like being close, but not too close, to home," said Frandsen.



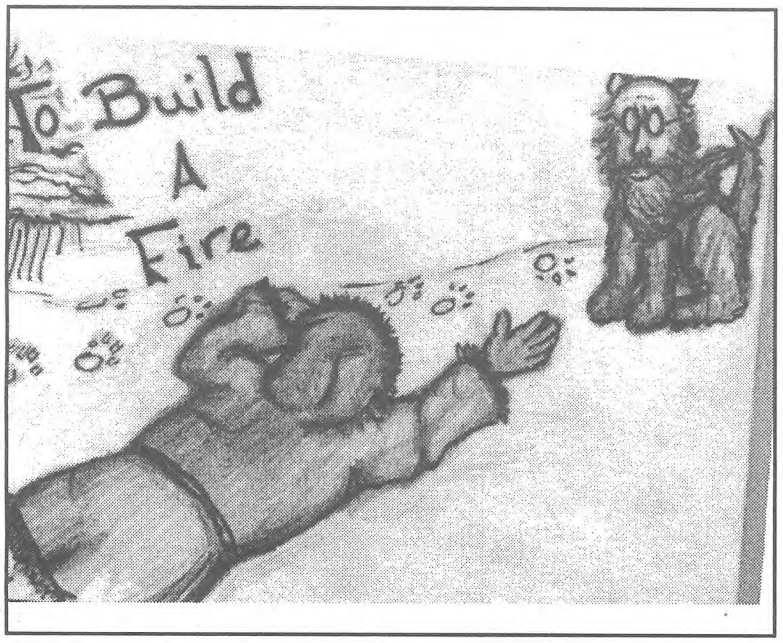
The Frandsens are living in Huntingdon and are excited about the small town atmosphere and grow more excited about being here as they learn more about the Juniata and Huntingdon communities.

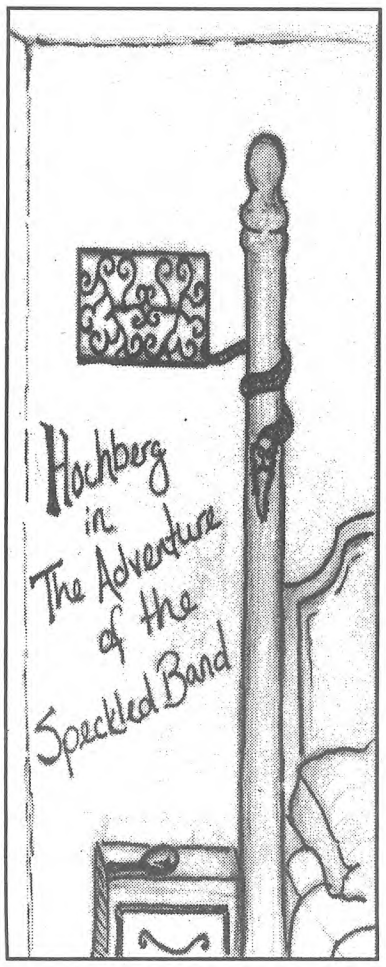
About coming to Juniata, Frandsen says "the whole thing was rather serendipitous. I wanted to be at a place where students and teaching come first and we wanted to be close to home. The opportunity here presented itself and I am fortunate that Juniata chose me."

In an earlier career, Frandsen was a swimming coach, so don't be surprised if you see him at the pool. "I hope to find some way I can help (with the swim team)," he said.

This semester, Professor Frandsen is teaching Introduction to Business and Quantitative Business Analysis I. He is also sitting in on Professor Weaver's Intro to Accounting class. He will teach Intro to Business, Intro to Accounting, Quantative Business Analysis II, and Financial Management II in the spring.

In keeping with his interests, Frandsen would like to eventually offer a class in Executive Leadership. Also, in time, hopes to get involved with the Senior Seminar in economics and business.





Mike Frandsen, a State College native, is a new Professor of Business Administration.

Juniata's Voice Grows Louder: The Freshmen Speak Out

Jaime Lewis
Staff Writer

Everyone is always interested in the statistics of the freshmen class: how many, where from, average SAT score, GPA. However, the freshmen are more than just statistics. They have some wonderful opinions about classes, campus events, and even the cost of books. We asked them the following questions:

1. What is your favorite class? Why?
2. Have you met any interesting and cool professors? What are they like? Why are they so neat?
3. What is the best thing that Baker has served? What is the worst? Have you had any experiences with mystery food thus far?
4. What is the best thing about the campus? The worst?
5. Why did you decide to come to Juniata College?
6. Do any of the upcoming campus activities really excite you?
7. Have you joined any interesting clubs? Which ones would you like to learn more about?
8. What made move-in day memorable? What made it an experience that you would like to avoid forever?
9. Have you visited the Peace Chapel or the Cliffs yet? Have you heard of them?
10. What is the wildest Juniata legend you have heard?
11. How much money did you spend on books? What was the most expensive book you bought? Which books do you use most often? Which ones are most interesting?

Answers resound and resonate with creativity and thought. The class of 2002 is quite knowledgeable and opinionated about Juniata. They have met interesting professors.

"Peter Goldstein," Amy Mullins says, "...he's very different from what I expected college professors to be like."

Indi Petranek loves message analysis because "Dr. Weimer grabs your attention and doesn't let go."

"The best part about the cool profs that I have met is their passion... they obviously like what they are doing," Martin Schettler observed.

Not only are these freshmen enthusiastic about classes and professors, but also they have opened those books that cost between $250 and $500. The most used books are those used in CWS and biology. The most interesting books are also the ones for CWS, along with others ranging in subject matter from biology to business.

As well as being prepared with material for the classroom, these freshmen are prepared to talk about the legends of Juniata. From Mountain Day (which actually does occur) to Organic Chemistry, this class can tell more Juniata stories than can be printed. The most entertaining? "Senior guys shopping on the Stalkernet," wrote Dorian Carl; "people camping out for forever to get the golden rings section at the Madrigal," submitted from Stephanie Durnford; "people from the rugby team running naked across the river at the spillway," was reiterated by Kirsten Crosby; and Matt Wolfe was happy to tell of "the kid who tried to drive a steamroller through the arch."

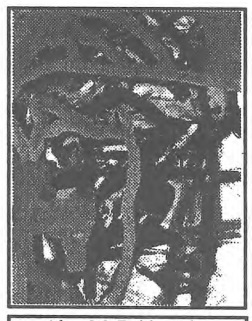
Maybe these stories explain why, as Stephanie Durnford points out "everyone SMILES!"

A Reception of Inner Space

Nicole Bowen
Staff Writer

On Friday, September 3rd, in Juniata's College Museum of Art, students and community came together to experience the depth of "inner space" by Alex McBride. This famous artist and professor is well known on the college campus, and known to most as Sandy McBride.

His works of art were mostly on canvases and composed of a variety of different forms such as acrylic, mixed media, and some digital photos. The opening reception was held from seven to nine Friday evening and it brought students and the community together. Everyone



Alex McBride chats with a woman who attended the reception.
Photo by J. Ramquist.

was involved in analytical conversations about the thought-provoking artworks, and enjoyed the refreshments and posters that were available.

Some of the most striking acrylic paintings were Day Four, Companion Spirits, MC2, and Water Wheel. Day Four, a very thought provoking painting, consisted of a large canvas with one main yellow orange color running throughout the canvas. Then there were five pieces of rope proportionally placed along the bottom of the canvas.

Another meaningful work was Peace Chapel. This work is a mixed media. Transfiguration is a painting depicting the transfiguration of a caterpillar to a butterfly. This work of art is also mixed media.

Alex McBride, *Blue Opening*, 1999, acrylic on paper, 18 x 23 1/2.

Make sure to check out the art works of Alex McBride before October seventh. When you visit the museum, comtemplate the Seek No Further piece. It is a mixed media collage and it will excite your mind to think past what you see.

International Students of Juniata

Ruth Bernhart
Social/Cultural Editor

Meet my roommate, Kenia Arellanos Hernández. Studying accounting and finance, Kenia is one of Juniata's international students from UDLA in Puebla, Mexico. This year there are nearly seventy international students on campus hailing from all over the world. Japanese or French, English or Mexican, these students may seem only a tiny part of the Juniata community, but they bring to the college unique views and experiences from which we can all benefit. You don't have to have an international politics POE to be interested in what they can share with you. Almost every career can involve dealing with people from backgrounds different than your own.

Back to Kenia. The first thing I wonder when I meet an international student is: Why Juniata? Given the broad range of possibilities why come to a small town seemingly in the middle of Nowhere, USA? Kenia had plenty of reasons to come here. Besides the usual advice from friends and others who have come to Juniata from her university, two things helped her to choose Juniata: one, Juniata accepts the Institutional Toeffel, a test for English ability, whereas many other colleges require a higher test or a higher score than we do. And two, Juniata has an agreement with UDLA, which allows her to pay her tuition to UDLA in pesos and need only pay for the meal plan here. Just like any other college student, Kenia needs to watch her money while abroad.

Living in another culture is a strange experience. No book can teach you everything. She knew before coming that there would be many differences between here and home. She's never seen a bunk bed, for instance, and now she needs to climb a ladder to sleep at night. She doesn't have very many T-shirts either. In Mexico, students dress up when going to class, like we would for a dinner date. She thinks it a little strange to show up in jeans and a T-shirt. She also can't have casual conversations in class as she is used to doing in Mexico, and wonders why people don't stay around to chat afterwards. "In Mexico we are not very punctual, but here time is very important to everyone," Kenia told me.

Another cultural difference between Mexico and the United States is the idea of "machismo." "In Mexico, I think that the men are more respectful towards women. They hold doors, and will pull out seats, but here they don't do that much and they don't care if they bump into you." She recognizes that the sexual revolu-

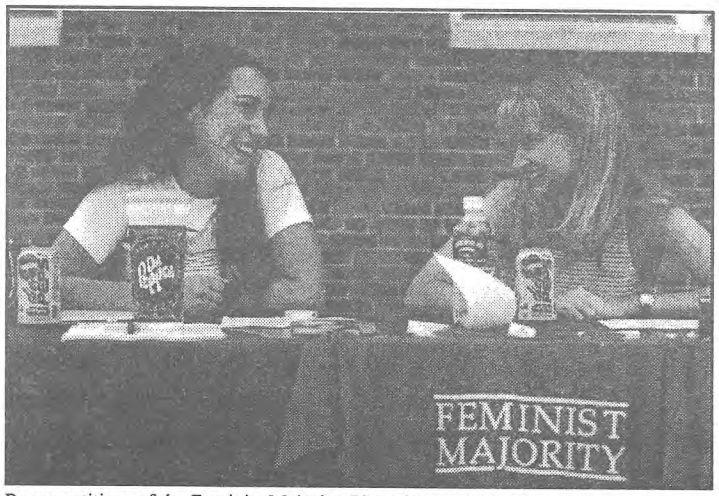
(Continued on page 10)

Juniata Gets 'F' in Diversity

Adam Nelson
Opinion Editor

Look around Juniata very carefully and you will notice something strange. When I first came here three years ago I knew something was askew. What is it? It's diversity on campus. How much does Juniata have? Very, VERY little.

You may think at first that this is a diverse campus, but upon further inspection one quickly finds that it truly isn't. Compared to other schools that Juniata likes to call its "peer institutions" Juniata ranks the worst in diversity. Most of these other schools have five times the number of African students and three times as many Latino students.



It's no surprise that African and/or Latino students do not want to come here. I have heard the reports of racist attacks against these minorities. I haven't heard any administrative solutions either. Black and Latino students don't have many peers or mentors to look upon for support. Juniata has failed to hire even one African or Latino professor!

Juniata can't call itself a 'liberal' institution if it fails to create a well-rounded, diverse community. Juniata's own study shows that we are also one of the most homophobic campuses of our tier. Further, we also fail to have religious representation on campus. There are very few Jewish, Muslim, or other non-Christian students on our campus.

The Juniata community needs to realize that having people from truly different backgrounds helps us to create a community more representative of our world as a whole. Our school is failing at its job! It's time we do something about it. If we expect Juniata to climb the academic ladder, or better yet, create a community where everyone feels welcome, these are issues that we must deal with.

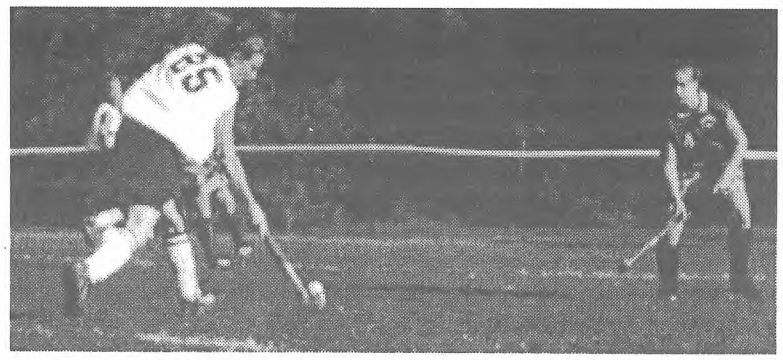
Kenia



(Continued from page 9)

tion here was one cause for these differences, and sees the same changes slowly taking place in Mexico. Unfortunately, many Mexicans are also losing their traditions with the influx of American culture. Her grandfather celebrates Día de los Muertos by placing gifts on an altar with pictures of dead relatives. Her mother doesn't practice this at all, and now Kenia and her sister celebrate Halloween. "There are fewer and fewer small towns where you will see people in the traditional dress. More people prefer to dress as Americans do," she says. "Places like Acapulco and Cancun are too expensive for most Mexicans to go to. Nearly everything is in dollars and there are many people speaking English." These places and many others in Mexico have become more American with a bit of Mexican flavor thrown in.

With all the new adjustments Kenia is making to her new environment, I wanted to know if there were any tips she would give to other exchange students. "Make sure you have the proper clothing," she advises. "I wonder if (by dressing formally) I appear ridiculous. It is important to know what you should wear for the climate you are going to and also the customs the people have there." Students for whom English is a second language, speaking English all the time will benefit in the long run. "I plan to have at least one American student at the table when we are eating. That way we will practice speaking in English and will make more American friends. I think because we spend a lot of our time with our friends from home, we feel excluded from the rest of the students." Get to know an international student. Maybe their experience will help you make decisions about studying abroad yourself. At the very least, you could make a new friend.

JUNIATA COLLEGE FACULTY AND STUDENTS: 10 CLASSES FOR $25.00

Field Hockey Team Optimistic Despite Loss

Jeanine Hanohano
Sports Editor

With more than 17 returning players, including five seniors, there is no doubt that there are high expectations for the Juniata women's field hockey team. After a close loss against Shippensburg on September 1 (1-0), they are shooting for the conference title.

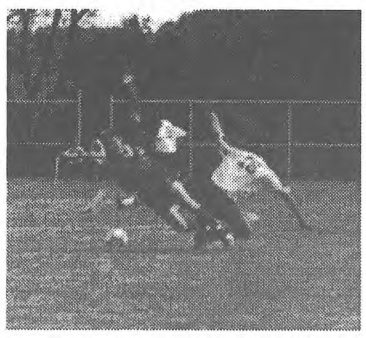
One of the players makes a clear pass in the game against Shippensburg. Photo by J. Ramquist.

With last year's record of 9-9 overall, and 5-2 in conference, this group of athletes has all the talent and determination to win the MAC title. The core of this year's team is made up of seniors Danny Young, Becky Koch, Amy Bollock, Candy Sanders, and Ally Kenyon. The team is also composed of many sophomores and a few freshmen.

This year, the team's focus is on beating Messiah and Lebanon Valley (their only two losses in conference last fall), which are, unfortunately, away games and thus will not have much home support. Another important game they have this year is against Suquehanna, here at Juniata on October 19. This would be an excellent opportunity to show our support of the field hockey team on its quest for the MAC championship.

To strengthen their offense, Coach Caroline Gillich is using a 3-2-3-2 formation. With this strategy, she is forcing the backs to start shooting instead of hanging back.

Her ultimate goal is to bring all the talent of this team together to win the MAC title. With last season's formidable record, the lady eagles are trying to make this season their breakthrough year.



Soccer Game Against King's College Results in Loss

The men's soccer team played a hard match this past Saturday, September 4. At the account of a small but crucial defensive error, King's College scored the only goal of the game within the first 45 seconds of the second half. However, the teams had been playing equally well before, and after, the goal.

The soccer team battles King's College for the ball. Photos by K. Garner

The freshman goalie keeper, Joel Abe, did a commendable job of defending the goal against the Monarch shooters. The Juniata strikers also made many attempts at King's goal, but were not as fortunate. As time dwindled down in the second half, the eagles tried to make more and more shots hoping to increase the opportunity to score, but in the end, King's College still had the only goal made.

Juniata College Sports Round-Up

Bub Parker
Sports Information Director

WOMEN'S SOCCER

(1-0): Sept. 10, Pitt-Bradford; Sept. 12, Dickinson.

For the first time in the history of the women's soccer program at Juniata, the Eagles posted a victory in their initial game of the season. The College Hill booters traveled to Thiel on Sunday and posted a 4-0 win with four goals in the first half. Freshman striker Jen LaCount (Westmont Hilltop/Johnstown) scored two goals for the Eagles, while freshman Rose Bender (Cambria Heights/Carrolltown) and junior midfielder Beth MacAleer (William Tennent/Warminster) each found the back of the net one time. Junior goalkeeper Marybeth Markiewicz (Derry/Derry) made four saves and got credit for the shutout.

WOMEN'S VOLLEYBALL

(2-2): Sept. 14 at Susquehanna w/Moravian.

The Eagles split their first four outings of 1999 when they traveled to the Wittenberg Invitational and placed third. Juniata fell two times on Friday, marking the first time since 1990 that the program began the year with an 0-2 mark. The College Hill squad lost to Emory in the initial match of the tournament 5-15, 17-15, 8-15, 15-13, 15-9. Senior middle hitter Kristin Hershey (Dallastown/York) had 20 kills, 10 digs and seven blocks, while senior outside hitter Carrie Zeller (Laguna Beach/Laguna Beach, CA) recorded 12 kills, 25 digs and three aces. Sophomore outside hitter Brandy Workinger (Dallastown/Dallastown) posted 10 floor-finders, 10 digs and four rejections. Senior setter Colleen Carver (Lakeland Regional/Ringwood, NJ) passed out 54 assists and came up with 20 digs. The Eagles then fell to Georgetown (KY), 15-9, 15-9, 15-7. Hershey had 13 kills, seven digs and three blocks, while Zeller recorded 13 kills and 20 digs. Workinger posted 12 floor-finders, seven digs and four rejections. Senior middle hitter Jennie Lizun (Emmaus/Emmaus) had six blocks and six kills. Carver dished out 40 abets and had 12 digs. On Saturday, Juniata came back to post two victories. The Eagles defeated Hope, 15-12, 15-9, 15-8, behind the play of Hershey, who had 12 kills and five digs. Workinger continued her fine play with 11 spikes and 10 digs, while Zeller produced 14 digs, nine kills and three aces. Carver added 40 more assists to her totals in the tournament. Juniata closed out the weekend with a 15-9, 15-9, 15-11 decision against host Wittenberg. Hershey led the blue and gold with 16 kills, while Workinger had 11 finishers and 10 digs. Zeller registered 25 more digs and seven kills, while Carver distributed 41 assists.

WOMEN'S TENNIS

(0-1): Sept. 7 at Penn State-Altoona; Sept. 11 at Elizabethtown.

Juniata fell to Division II Clarion on Thursday, 7-2, to open the year with an 0-1 record. Freshmen Elizabeth Osche (Acton-Boxborough/Acton, MA) and Ann Shetter (Chambersburg/Chambersburg) won their initial collegiate singles matches at fifth and sixth singles, respectively. Osche posted a 6-3, 4-6, 6-3 victory in the fifth spot, while Shetter won 6-2, 1-6, 6-1 in the sixth singles outing.

WOMEN'S CROSS COUNTRY

(0-3): Sept. 11 at Lebanon Valley Invitational.

The Eagles lost to Messiah, 15-50, St. Francis, 18-43 and Gettysburg, 15-49. The best time on the 3.1-mile course was turned in by K. Zoberts from Gettysburg, who checked in at 21:24. Juniata got its top performance from freshman Michele Palmer (Littlestown/Littlestown), who was 17th overall in a time of 23:30. Senior Sarah Oakman (McConnellsburg/McConnellsburg) took 28th in the field of 44 competitors (24:47), while freshman Tasia Kavalek (Upper Moreland/Hatboro) was 39th overall with a time of 26:51.

MEN'S CROSS COUNTRY

(0-3): Sept. 11 at Lebanon Valley Invitational. Juniata was forced to forfeit all three of its decisions. The Eagles have four competitors on the roster and need one more to have a full-scoring unit. The top finisher on the day was M. Murray of St. Francis who posted a time of 28:36. The best Juniata time was turned in by freshman Noah Fredette (Weedsport/Weedsport, NY), who was clocked at 31:35 and placed 15th in the field of 42 runners. Junior Scott Hobbie (The Hill School/Duncannon) took 36th on the day and posted a time of 35:42.

Nobody asked me, but . . .

Chris Byland
Staff Writer

--Kordell Stewart had better buy a really fast car with the eight million-dollar bonus he received when he signed a contract extension this summer. Why? Because if his play this preseason is any indication, he had better be ready for fans to throw more than beer at his head. Steeler fans are not known for their patience, and a rough start for Stewart could spell the end of his days in Pittsburgh.

--Think all the excitement generated by the home run races has fixed all the ills of baseball? Well, you are wrong. Wait until the winter following the 2001 season, which happens to be exactly one year after the Pirates will have moved into their new home at PNC park in Pittsburgh. That is when a lockout or strike will occur, and most insiders say it could be a deep labor freeze of monumental lengths. The problem is pretty simple. The owners want a salary cap and the players do not. This potentially lengthy impasse will turn off fans again and knock baseball's popularity down to that of Arena Football and Major League Indoor Lacrosse.

--The biggest test for Penn State on its quest for an undefeated season is not the usual gauntlet of Big Ten opponents like the University of Michigan, Ohio State, and Michigan State. Instead, it will be the trip to Miami to face the Canes. They are so heavily loaded with overall team speed, especially their receivers, that the Nittany Lions will not be able to experience it against Wisconsin and Purdue. Moreover, Miami's mobile quarterback Kenny Kelly should give them fits and make for quite a show.

Towne Brings Science and Religion to Show and Tell

By Eric Hammar
Staff Writer

On September 14, 1999, J. Omar Good visiting professor, Margaret G. Towne, conducted a Bookend Seminar entitled "Science and Faith: Duet or Duel." Bookend seminars allow professors to share scholarly works and interests that do not always correspond to what they teach in the classroom. The event was well attended, mainly by faculty and administration.

Towne's presentation discussed one of the most essential philosophical and practical questions known to a liberal arts student: Can science cooperate with religion and vice versa?

Physically, our campus reflects such division. Brumbaugh Science Center and Good Hall are separated by a fair stretch of pavement. However, Towne attempted to shorten the distance between the two. Interestingly enough, her bridge was history.

Towne illustrated science and religion's centuries-old feud by briefly covering an historic overview of the relationship between the two. Despite her decidedly Christian perspective, Towne clearly crystallized the debate. One discipline has always held an edge over the other. They have never been treated as equal, as both being necessity and valid. They have never believed one to be an assistant to the other. But as the millennium approaches, Towne believes we have reached a crossroads.

In the past, science has been plagued by an inherent need for stability, certainty, and determinism. Every question received its due answer. Every cycle followed its correct course. However, research has challenged science's rigid appetite. Biologists have discovered natural cycles less predictable than originally thought. Astronomists, physicists, and mathematicians stand in awe of the pictures relayed from the Hubble Telescope. Galaxies polka dot deep space. The vastness of the universe compels scientists to ask: Are we alone? Science's sudden confrontation with its scope of ignorance has had the most profound effect on its own way of thinking. Many new fields of science have developed, including astrophysics, astrobiology, and astrotheology. Science now reflects on its own humanity.

The church must pace with science and vice versa in order for us to gain a truer understanding of our chaotic universe.

Much lively debate ensued after Towne's talk, clearly proving that the answers are harder and harder to find.

Contact Improvisation and Dance

By Megan Brown
Co-Editor in Chief

On September 3-5, Juniata College students had the opportunity to learn about the theory and practice of Contact Improvisation, as taught by K.J. Holmes.

Approximately 30 students participated in the workshop. Each session was three hours of rolling, falling, rising, and interacting with others physically.

The theory of Contact Improvisation relies on the interaction of body energies between two people and kinesthetic knowledge of one's own body.

The dancer is trained in small parts of movement and is expected to put these parts together when he or she creates movement.

The dancer is expected to sense the presence of others, and to interact with them without the use of words. K.J. Holmes discovered Contact Improvisation in 1981.

Two Juniata students at the workshop. Photo by A. Belser.

Holmes studied tap, jazz, and ballet as a student. However, she lost interest in dance, and was about to leave it behind, when she attended a workshop for Contact Improvisation. She found the workshop to be a place where "people were just exploding with ideas," and where people "were thinking while they were dancing."

Contact Improvisation also includes ideas from the martial arts, fencing, and Tai Chi. It has been used to train the movement and thoughts of dancers, writers, actors, musicians, and football players. Contact Improvisation can also be used as a sort of physical therapy for people with disabilities.

Students stepped away from this workshop with a better sense of their own movement and of their interaction with others.

K.J. Holmes teaching workshop. Photo by A. Belser.

Holmes believes that the participants in her workshops learn how to move through space better. They need to move in a "more circular, less linear" way. She notices that students are more inhibited about not sounding or appearing graceful.

Holmes moves differently than most people because of her training with Contact Improvisation. She describes the differences in her behavior and movement as her nervous system being "a little more aware" and ready to respond. She is also aware of more opportunities and possibilities in her movement.

Holmes hopes that she will be able to take Contact Improvisation to new levels of performance.

She will return next year to lead more workshops for students. For more information on Contact Improvisation and K.J. Holmes contact Andrew Belser.

Brick Walk

Bridget O'Brien
Staff Writer

New students to this campus may not have known the joys of 18th street: dodging cars on the way to class, nearly running over pedestrians, or crossing a dark street on the way back from studying late at night.

I don't miss a single one. The new brick walkway that replaced 18th street has many of its own joys--real ones. It gives our compact campus an inviting center that encourages people to walk right through the heart of campus. Students can walk to lunch or dinner without holding up, or being run over by, incessant traffic. They can stop and talk in the middle of the walkway with no need to look around for cars. They can look around and see some of the most attractive buildings on campus, Cloister and Founders, and the continuing grass and trees.

The area is much more attractive, now, with a kind of unity. Rather than a street filled with parked cars cutting down the middle of campus, beautiful red bricks and dim lights integrate the area with a sense of unity. Sometimes, I find myself deliberately walking a little out of my way to walk down it, because in the midst of a fast-paced, ever in motion campus, it's beautiful, inviting, open, and almost serene.

We're Not Twistin' the Night Away Anymore

Jaime Lewis
Staff Writer

"This ain't no disco. This ain't no country club, either." This is Juniata, where dance attendance has gone significantly downhill. Attendance at the last dance was rumored to be around twelve people, and not all of them were there at once. The question to ask is not "who were those people?" but rather, "why were they the only people in attendance?" Why are dances failing so miserably on this campus?

There are many reasons offered on the decline of dance popularity. Let's examine some of them.

First, to even attend a dance, one must have money. Admission costs usually around $2 per dance. Many think this is too much to pay to socialize with 12 people. Dance sponsors are usually clubs on campus, trying to get money for projects. However, with a campus the size of Juniata, most people actively support the organizations of their choice by volunteering. Why pay them also?

Secondly, dances have much to compete with. Most dances are held on the weekends. Besides people leaving the campus for weekends, many dances must contend with more popular events, like private parties, etc.

Dances may be in decline for one final reason as well. The popular trend at Juniata is a "big bang" theory. Everything is becoming a one-shot deal. Small bands used to play on weekends, movies were shown, comedians were quite frequent. Now, the major concert is Fuel, the major movie is at Lobsterfest, the major formal is Madrigal. Small dances are being phased out by the trend of the one-shot deal.

Is the failure of dances ideal? No. Clubs are losing money and getting kicked in the teeth by Student Government funding procedures as well. In order for clubs to be funded, they must show a pursuit of fundraising. But the dance isn't working anymore.People are becoming more anti-social and withdrawn. But the real kicker will come at Madrigal and the Fuel concert. When the Juniata students try to cut a rug, most will leave only rust stains on the carpet.

Driving Infractions

Adam Smithee
Staff Writer

Today I was nearly dead. Made dead, I should say, as just "dead" implies that it was somehow my fault; that my demise, or my near-demise, came in some natural form or another, as if I ate at a bad salad bar or fell off a stool reaching to swat one of those doped late-autumn flies that invade the house every year. I know this is very dramatic, and some of you don't even want to hear about the jackass who nearly committed vehicular homicide on my person. You don't want to hear about this jagoff in a '78 Benz who took an illegal right on red as I entered the walk to get across Capital Street. You don't want to know about the cloud of diesel filth he spewed on my shaken frame as he gunned it up to - you guessed it - the next red light at Ellsworth 30 yards away. Nah, let's talk about Satanists or Hillary's haircut or the FCC or tacos or something.

Let's address a few of the more common infractions: Failure to obey the "no right turn on red" sign. Traffic engineers are hired by local governments to place these signs at dangerous intersections, because they are professionals who know something about engineering traffic. You, my young yippee, know nothing about this. Do not, then, lie on the horn when I am in front of you and stopped at a red light bearing such a sign. Do not, as some clown did the other day, pull around me to make a right on red from the center lane.

But we're not finished with the highway. Merge, and her twin sister, Yield, are two members of the family with whom the majority of licensed bozos are completely unfamiliar. How many times have I come to the bottom of the on ramp to find an imbecile stopping at the yield sign? I'm not going to answer that, because we already know the answer. Conversely, just as many times have I witnessed the near collision of the speed freak in front of me careering onto the freeway and the little old man carefully attempting to exit. Freeway interchanges are about compromise; when you have the yield sign, approach the interchange with caution, but at the same time, be looking for a gap into which you can gently accelerate and reach highway speed.

Other deviant behavior that will end if I were elected:

Shoulder Backers: Backing up on shoulder after missing an exit should be federal offense. You missed it pal; go to the next exit and turn around!

Right-Turn-Only For Any-body Besides Me: These cretins feel that they can use the right- (or left-) turn-only lane as a means for scooting up and cutting off everybody going straight. Again: Wait turn like everybody else, pal.

The Real Burner: Running Red Lights. Do like I do: stop at yellow lights. This really irritates these weenies who seem to be getting away with this transgression with an alarming frequency.

There are more despicable behaviors by the common-sensibly challenged that I can't even begin to get into. These are just the ones that are bugging me today. Nobody reading this has ever participated in this kind of behavior, have they? Well, have they?

Send us your opinions! Email juniatian@juniata.edu, or mail them to box 667.

Juniata's Eagle Net Problems

By Jennifer Bartimole
Staff Writer

The Internet on campus sometimes doesn't cooperate and causes problems.

Sometimes, certain sites are unavailable, and other times the Internet just isn't available at all. This leads to frustration among heavy users and occational users as well.

Art Manion gave a short description of how Juniata changed Internet Service Providers (ISPs), and why the Internet sometimes doesn't work properly.

Over the summer, Juniata changed their ISP because the previous provider had several problems during spring semester last year.

The current provider is ATX Telecommunications. They are notably faster and less expensive than the school's previous ISP.

This server has only been in place since July, and a few months are not enough time to judge for sure.

Errors have occured when accessing Exchange through its website, saying that the server is too busy. There seems to be no explanation for this.

This has been happening for a couple of years, and nothing that has been done has corrected this.

Students working from a computer on campus should not use Exchange via its website whenever it is possible to avoid it. It is provided for people not on campus who have no other means of checking their e-mail.

Earlier in the semester, certain websites (such as Apple and MCI) were unavailable. This was due to a problem with Juniata's Domain Name Service (DNS), and was fixed.

No site should be unavailable. If it is, notify the help desk. Chances are that the network tech crew does not know of this.

Significant improvements have been made to the Internet on campus. If problems occur, they are only temporary. After all, nothing can work perfectly all the time.

New doctor at Health and Wellness Center

By Nicole Bower
Staff Writer

Dr. Laura Siems, who will be replacing the midwife, is new to the Juniata Health and Wellness Center this semester.

She will also be providing regular service hours for check-ups concerning the common cold and other illnesses.

Some of the tasks that Siems will offer include yearly sexual health examinations, tests for STD's, and prescriptions for birth control.

Some of these services can be beneficial for both men and women on the campus.

She will be on duty Tuesdays. She will be available to perform STD tests or birth control by appointment only. Call the wellness center at ex. 3410.

Every student on campus can take advantage of these services by making an appointment with Siems to be tested for such STD's as chlamydia or gonorrhea.

The prices for students needing a yearly Pap smear will be $21 dollars. The combination Pap smear/STD test will cost $50 dollars.

Siems will also write out birth control prescriptions. She will discuss the options for different types of birth control. The prices of each type will vary.

Blow the Shofar and Break Out the Honey: Rosh Hashana Has Arrived

Cynthia Cato
Photography Editor

Rosh Hashana, the Jewish new year, occurred last week. It is a holy day, in contrast to the midnight-drinking-confetti-throwing-football-watching bash that is widely used to welcome in the secular new year. This year, 5760 by the Jewish calendar, Rosh Hashana began on Friday, Sept.10 and lasted through Sunday, Sept.12. It is a solemn day, for it is the time in which the world is judged for the coming year.

Rosh Hashana marks the beginning of the Ten Days of Repentance, during which time one must evaluate him/herself and ask for forgiveness and reconciliation from God and his/her peers.

The customs involved with Rosh Hashana are symbols of celebration of the new year. Traditionally, a horn known as the shofar is blown during the synagogue services in commemoration of the birthday of the world. Honey is used to sweeten apples and traditional bread as a symbol of starting a sweet new year.

The tenth and final Day of Repentance is known as Yom Kippur, which means The Day of Atonement. This day is the most solemn time of the year, for it is the last day to change the judgment decided during the Days of Repentance. Yom Kippur is a day of prayer and fasting, during which one must not bathe, wear leather shoes, or have sexual relations.

More people attend synagogue on Yom Kippur than on any other day of the year. The synagogue service starts in the morning and lasts until nightfall. It begins by reciting a prayer asking for forgiveness from God. The service ends with the blowing of the shofar, the horn also blown during Rosh Hashana. This year, Yom Kippur began at sundown on Sunday, Sept. 19 and lasted through the next evening.

If you are interested in attending synagogue, there is one at the following address:

Juniata Tradition: Storming

By Nicholas Stanslowski
Staff writer

Jason Gregorie faces off with Jacob Dickerson. Photo by I. Petranek.

The Storming of the Arch happened at 7:00 p.m. Thursday, Sept. 9.

The tradition at Juniata College happens every fall when any freshman interested tries to make it through the arch in Cloister through a heavy guard of two rugby teams and any other upperclassmen who have stormed before and still want to defend it.

The football team is not allowed to participate, however, because they are in season.

About 45 freshmen Stormers were preparing themselves for Storming of the Arch this year.

A crowd awaits the stormers. Photo by J Ramquist.

Some were taping cut up foam sleeping pads to their body, forming a soft kind of armor.

Some were applying shampoo, or anything else slimy to their bodies. A few made shirts for the event while others were busy taping their shirts to their bodies.

Freshman Matt Wolfe hid his intent with a sign that read "Official Juniatian cameraman- DO NOT TACKLE".

At 6:30, 'before' photographs were taken, and the rules for storming were given.

Brandon Zlupko collects donations. Photo by J. Ramquist.

Once someone was tackled, the person would have to stay down, and should anyone get far enough, they would have to go through the stairs, no going around.

The opposition would begin once the group crossed the road, the boundaries marked by lines of spectators.

The group marched down to the road represented, chanting "Oh Shit."

The defending crowd of about 60 or 70 yelled "Freshmen suck!", a response to the banner the stormers carried that said, "Freshmen rule!"

The signal was given and the first rush began. The horde of freshmen ran in towards the arch. While some actively avoided getting knocked down, a few were seen to run straight into Defenders.

There were five runs for the arch, and the stamina of the stormers was measured by the distanced walked before breaking into a run for the arch.

After five runs, donations were taken from the crowd, and four more runs ensued. This was to be the end but the stormers, eager for one more, lined up for a last attempt.

Finishing the last run, the attackers gathered against the wall as nicknames were given.

Brandon Zlupko went from person to person asking for suggestions from the crowd

New Organic Chemistry Book

Ejlal Alalawi
Features Editor

Down in the creepy corner of the lab boils a genius's brain... Dr. Dave Reingold is writing his organic chemistry textbook that students are using this year as it comes out fresh, chapter by chapter, on the P drive. He has never written a book before, and he didn't really want to write it anyway! What's the story behind that?

Let's first have a brief look at Dr. Reingold's history. He went to school at Dartmouth, did graduate work at the University of Oregon, where he got his Ph.D., and then did some postgraduate work at the University of Alberta, Canada, and the University of Chicago. He spent twenty-two years in teaching. He taught for a year at Haverford College, seven years at Middlebury, two years at Louis and Clark, and came to Juniata in 1988, where he has spent twelve years teaching.

He received several awards, did a lot of organic chemistry work, held several positions, and is still a member of some notable organizations, like the American Chemical Society. He's not only a chemist--he has a life as well! He "shot a birdie" the past weekend, and he plays tennis, racquetball, and goes skiing. He also sings. He composes the songs himself!

Back to the main question, why is he writing the book? First of all, our college goes by a unique curriculum, especially in chemistry. Almost all schools nationwide offer organic chemistry as the sophomore year chemistry course. But here it is the other way around. Some great minds thought that it would make more sense to start with carbon chemistry. That way, students would not repeat what they did in high school, or jump right into the more comprehensive inorganic chemistry. Organic chemistry will give students who will take more advanced chemistry courses a better start. Because very few schools follow this philosophy, there are no good books that fit the Juniata chemistry curriculum.

"Our chemistry shouldn't be so hard," says Dr. Reingold. Most chemistry books either assume that students have already taken chemistry and know it well or that the readers are kindergarten kids. Therefore the books are either very difficult to comprehend or too basic, as in last year's book. "So the perfect idea was to make a book instead of trying to find a best one or a nearly best one." He made the proposal and final decision of writing the book.

If it was the "perfect idea" for him to write a book, why did he not want to write it? In previous years, every teacher would ask the students to read a chapter in the book and they would go through it in class on the next lecture day. That way, the students would get a couple of views on the topic--their own comprehension and the teacher's insights. That was useful in some sense.

Next year, instead of having both insights, the students will only get to hear his views. He is going to repeat the entire work since it's his own words. Not even his tone will change, since he uses a very informal style and writes everything just the way he talks.

The College is not paying Dr. Reingold for the book, but he has a grant from the National Science Foundation. He is hoping to publish it. Two weeks ago he had a meeting with the publisher. There are great expectations for other schools that have adopted this system to buy the book. Dr. Reingold calls this system "the better way, the good way."

Dr. Reingold doesn't go search for what he needs to write but writes as the ideas come to mind and when he's in the right mood. He writes about 5 to 10 pages a day. Data is available everywhere--for tables and graphs, for example. Such books as the Chemistry and Physics Reference Book are also handy. When asked about writer's block, he said, "every once in a while you'll see me doing this," and then he was on the computer, playing Minesweeper!

In the meantime, (well at the time of the interview at least) Dr. Reingold is writing chapter 14, and it's around 23 pages. He got over 20 suggestions from each of chapters one and two. Many of them were good suggestions. He also receives feedback from 30 professors nationwide.

Even though he values the professors' ideas, he thinks that the students' suggestions are most important. He wants to appeal to both audiences, but he needs to keep in mind that the sole purpose is for students to have in hand something they can read and understand. Last year, he would say something again and again. Whatever he said cannot be reconstructed unless written down. Now, however, students have it and they can go back to it whenever they want to.

He emphasizes that "more and more feedback" is what he needs. He invites chemistry students to email him with suggestions on the book.

Watch for The Juniatian on Oct. 8th.

Juniata-Accessible or Not?

Tatiana Zarnowski
Co-Editor-in-Chief

It is common knowledge that a person with a physical disability would have a difficult time maneuvering on Juniata's campus. For one thing, some of the buildings are not accessible at all, and many have whole sections that someone riding in a wheelchair cannot reach. From the lack of ramps to the width of doorways, there are many ways in which Juniata is not accessible.

What constitutes accessible for handicapped persons?

There are several features that must be in place for persons with physical disabilities to move around easily. There should be parking spaces near buildings that are clearly designated for handicapped people, and the sidewalks should slope down at corners and near handicapped parking spaces. The entrances of buildings should have a ramp up to the door. The exterior and interior doors should be wide enough for people with wheelchairs, crutches, or walkers to fit through. The standard size of these doors is 33 inches wide. Drinking fountains should be low to the ground so that persons in wheelchairs can reach them. There should be some way to get from floor to floor-either a stair lift or an elevator. For a restroom to be considered accessible, it should have wide stall door, and have bars inside for the person to hold onto. Also, the toilet should be lower than regular a one is.

In terms of a university, the law says that the university does not have to make all of its buildings accessible if enough of them are so that students can take all of their required classes and a "reasonable selection" of their elective classes.

Who has to comply with laws regarding accessibility?

All public institutions must comply with the laws regarding accessibility for handicapped persons. Since Juniata does not receive federal funds, it is not considered to be a public institution, and does not have to comply with the laws.

Even though there is not a large number of students with disabilities here, there is always the possibility that someone who is physically normal could suffer an injury that might require them to use crutches or a wheelchair for a certain amount of time. Even if that disability were not permanent, it would still be difficult or even impossible for one to maneuver as one normally does.

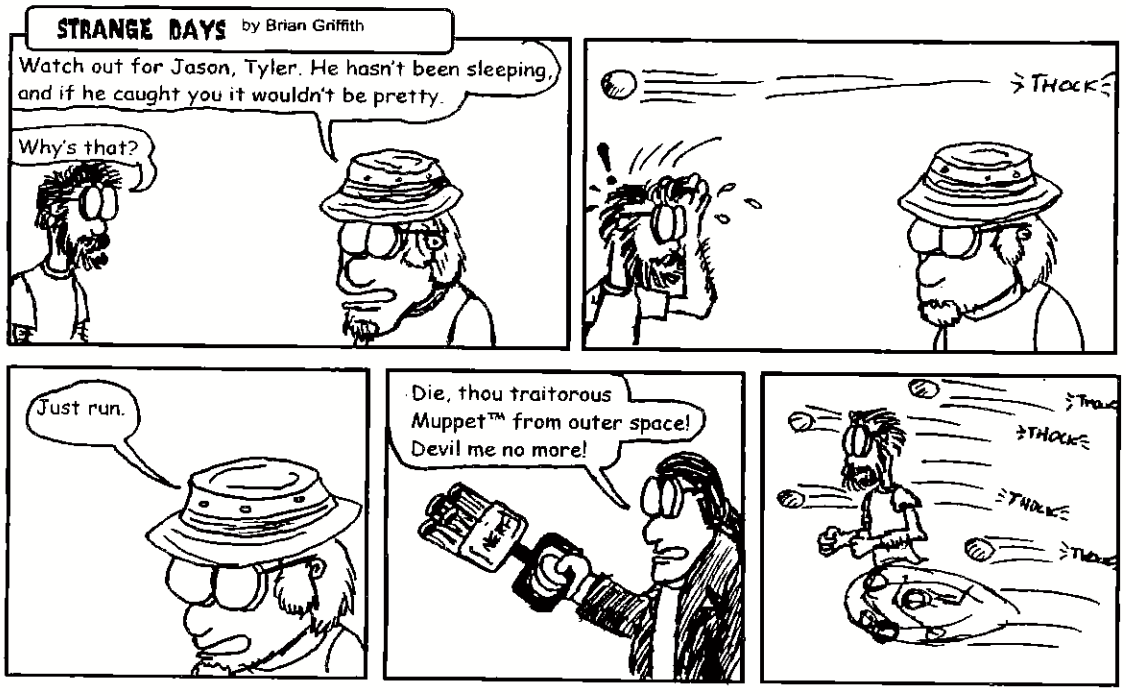
How does accessibility rate in the residence halls?

If a student on campus were to suffer a disabling injury, the first thing she might have to do is move to a different room. Lesher, South, and Tussey Hall, for instance, are completely inaccessible. Every entrance has stairs leading up to it.

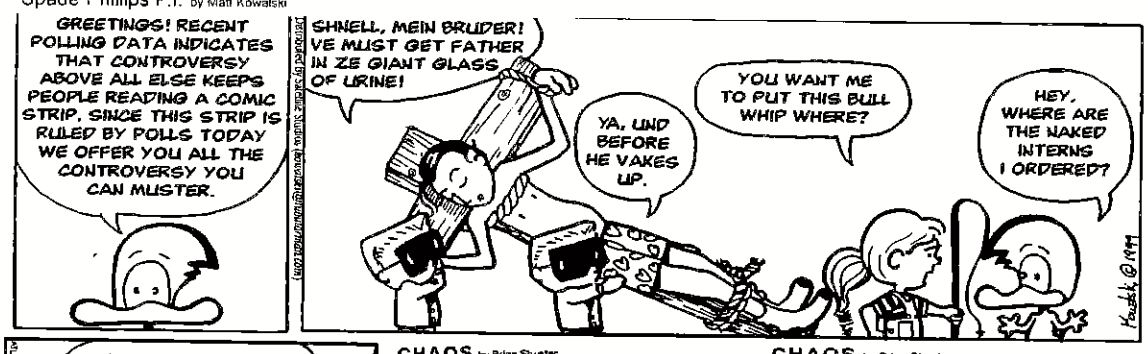
Cloister is slightly more accessible. It has one accessible entrance. There is a parking space designated for disabled people near the entrance. Some of the interior doors are 33 inches wide, and others are only 29 inches wide, slightly less than standard. There is a chair lift to the basement, where an accessible bathroom and drinking fountain are located.

The first floor of Sherwood, and the first and second floors of the west wing of Sunderland are designated accessible. The entrance doors are 29 inches wide, and the doorways to rooms are 33 inches wide. There is a stair lift to the basement in Sherwood and one between the first and second floors in Sunderland.

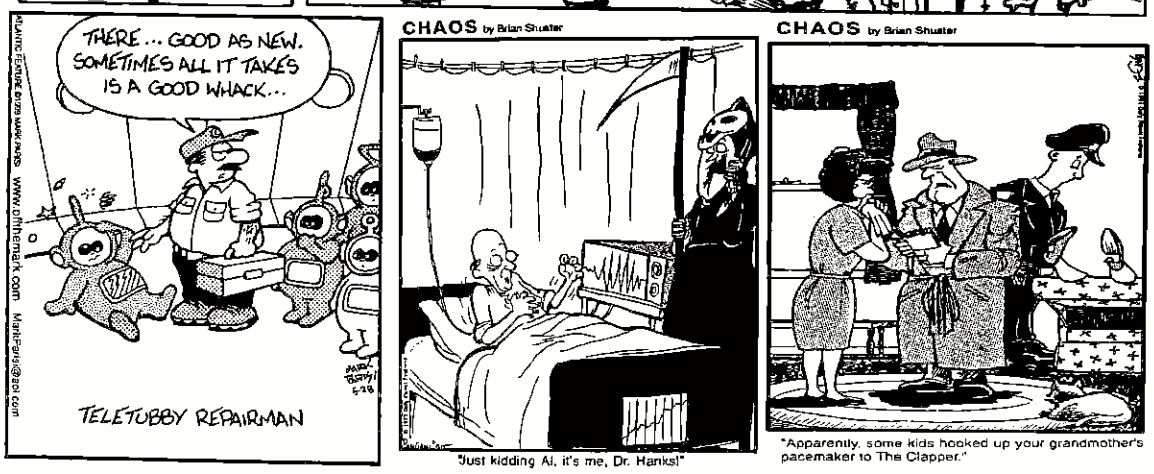
There is an accessible entrance near the lounge of Tussey and Terrace, although the doors are only 27 inches wide. There is also an accessible restroom there. It is possible to go up the ramps to the first floor of Terrace. There are also two parking spaces behind TnT for disabled people to park in, and an entrance nearby with 33-inch doors.



Each residence hall has its own situation where accessibility is concerned. A student who had to be in a wheelchair would not have a big selection of rooms to choose from, but he would be able to survive on select floors of certain residence halls.



How accessible are the classroom buildings?



Good Hall looks to be accessible from the outside, since it has two ramps leading to it. However, several things are missing inside. There is no elevator in Good, so someone could only attend classes on the first floor. The main entrance door and the classroom doors on the first floor are standard size, so a wheelchair could fit through them easily. Going to the bathroom and getting a drink are two impossible things in Good Hall if one is disabled. The only bathroom on the first floor is for women, but it's not accessible anyway, so the apparent sexism doesn't apply. The water fountain is too high to be accessible.

Brumbaugh Science Center has more accessible floors than Good

Juniata Artist Series #1: The Zhongmei Dance Company

Ruth Bernhardt
Cultural Editor

Last Friday night at 8:15 in Oller Hall the community was treated to a unique experience: the Zhongmei Dance company came to Juniata. How can an article fully describe their performance? It can't.

The New York based company melds traditional Chinese and modern dance and creates something altogether incredible. The music was inspiring, the costumes stunning, and the dances moving.

The program began with a

Zhongmei Dance Company: Flying Apsaras

Zhongmei Dance in Chinese

Zhongmei Dance Company: The Butterfly Lovers

more traditional dance from the Qin Dynasty, The Dance of the Sorcerers, followed by Flying Apsaras. Ms. Li played the part of Apsaras, a Buddhist goddess from the T'ang Dynasty. Emperor Qin calls on His Soldiers depicts the Terra-cotta army of the first emperor in Chinese history. The thousands of terra-cotta soldiers were buried for the Emperor to accompany him into the afterlife. The more martial rhythms and movements of this piece contrasted perfectly with Flying Apsaras before, and Spring River of Moonlight after. Grand Ceremony displayed the magnificent court costumes of the Qing Dynasty and the ceremonies associated with them. Finally, The Butterfly Lovers transforms the Ming period novel, Liang Shanbo and Zhu Ying Tai, into a ballet. Shanbo and Yingtai is the tragic story of forbidden love. Unable to be together in life, the lovers unite in death and are "magically transformed into butterflies."

The founder and Artistic Director of the company is the talented Zhongmei Li. Ms. Li was born in China where she attended the Beijing Dance Academy. Today she is recognized as one of China's most talented dancers. Her goal is to bridge the gap between the East and the West through dance. She delights audiences around the world with her versatility. For more information on the Zhongmei Dance Company please see www.uschina-trade.com/zhongmei/.

Benoit Paepegaey

Erika Grimminger
Staff Writer

Benoit Paepegaey is an international student from Lille, France. In France, Benoit attended a private college called The Institute of Superior Agriculture. He is studying biology, agriculture, farm techniques, food science, and the environment. Benoit also studies German and English.

Back in France, Benoit participated in soccer, tennis, and table tennis. He also likes the music in France.

What he misses most about home are his parents, his friends, and the food, especially the cheeses. Besides his parents, Benoit has a younger brother, who is eighteen. He has a large extended family, because his father had nine siblings. So needless to say, he has many cousins.

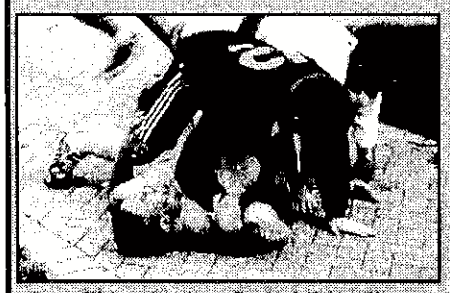
Benoit had a choice between Juniata and a college in Texas. He chose Juniata, because the warm weather in Texas did not appeal to him. The weather here is more to his liking.

Benoit has found many differences between France and the U. S. He said that everything here is bigger, the roads, the cars, even the cities. At the college in France, students are not allowed to choose their own classes, like they can here. Also, Benoit learned to speak British English, so he finds it hard sometimes to understand American English.

What Benoit likes about the

Benoit Paepegaey

U. S. is the concern for the environment that citizens have. Also, he thinks that the people are friendlier.



"The people here at Juniata make it easier for international students to fit in," Benoit said.

The Arch Has Been Stormed!

Matt Wolfe
Columnist

How many of you were at the latest Storming of the Arch? Do you remember the guy who had the big orange signs that said "Official Juniatian Cameraman DO NOT TACKLE"? Well, that was me! It was a great ploy and almost everyone fell for it. I got all the way to the steps untouched and I would have gotten through all the girls if one of them, who shall remain nameless (Joni), didn't yell, "No, he's a freshman! Don't let him up!" So close, yet so far.

Brian Waltz takes down Fredrick Taber. Photo by I. Petranek

My first attempt being a failure, I decided to just run with the rest of my fellow tackling dummies and vainly attempt the impossible. The second run ended with a rugby player planting me into the ground. I think my shoulder still hurts. I learned a very important lesson: go AROUND immovable objects, not through.

The third time I tried to go down the cement path, thinking that I might get further towards the steps since no one would dare tackle someone on concrete. I think a couple hundred brain cells must have been damaged on the storm before because that logic is just insane. Good thing I landed on someone and they cushioned my fall or I would have to stand in order to type this.

The fourth time I went on the side with the tree. I did a kind of Barry Sanders spin move to avoid one guy and got past the tree, only to be gang tackled by four people. I still managed to get a few more yards before they got me down. Obviously none of them were rugby players.

The rest of the times kind of blur together. They all ended the same way, which I'm sure you can figure out. I think it's the closest to being in a soccer riot that I've ever been. Although I don't remember much before age six so you never know...

What lessons have we learned from this little experience?

o Don't try to hold down a rugby player who has tackled you. It makes him angry.

o Don't tell ANYONE any secret plans you may have for the Storm. You would think it would help to have allies but then they turn on you.

o Take Advil BEFORE you Storm, not after. Trust me.

o Don't wear any kind of padding. It just makes them hit you harder.

Oh, by the way, my Storming nickname is 'Flash,' which you can call me if you'd like. It's because of my blinding speed, not the fact that I had a camera, really...

Juniata College-Accessible or Not?

(Continued from page 4)

does, but there is a lot of run-around involved. The most "accessible" entrances are at Alumni Hall and one in back of the biology wing. "Accessible" describes them best because although they do not have stairs up to the entrance, the doors only allow for 25 inches of space, and are weighted so that they close very quickly. Anyone riding in a wheelchair or using crutches would have trouble fitting through these doors, which are a full 8 inches less than standard width.

After one has mastered the entrance to Alumni Hall, one can go to the lower level of the chemistry wing and the geology wing. One can use the chemical elevator to get to the second floor of the chem. wing. From there, the main computer lab is "accessible," since one has to go through another 25-inch door to get there. From this level, one can also get to the physics wing. There is an "accessible" door leading from the physics wing to the back of BSC, but there is not paved path leading up to it, so it might be difficult for a wheelchair to maneuver on.

The most difficult wing to access is the biology wing. The only entrance that doesn't involve stairs is located in the rear of BSC, near a handicapped parking space. That will lead someone into the first floor of the biology wing, but the second floor is inaccessible, unless there is an elevator that is not obvious to the casual observer.

Throughout BSC, the water fountains are low enough for persons in wheelchairs. The rest rooms do not meet accessibility standards, however. Also, the campus telephones in the hallways are too high.

The Humanities Center is more accessible than most of the classroom buildings. Although it does not have an elevator, it has ramps to entrances on both levels. The exterior doors are only 26 inches wide, but the bathroom doors are 29 inches and the classroom doors are a full 33 inches. Also, the rest rooms are accessible.

Carnegie Hall is one of the most accessible buildings on campus. It has ramps to both levels, the exterior and interior doors standard width, and the rest room is fully accessible. There is a handicapped parking space near the entrance.

As can be expected, most of the older classroom buildings on campus are not accessible, while the newer ones provide easier access for handicapped persons.

Accessibility of other buildings on campus:

Besides the residence halls and the classroom buildings, there are many other buildings on campus that students use on a regular basis. In some of these there are events where the public is invited.

Ellis Hall is a building where on-campus students often go several times a day. There is a stair lift to the first floor of Ellis from the outside of the building. However, in order to get the key to operate the lift, one must go up the stairs and in to the information desk. There is also an elevator inside Ellis. The rest rooms, however, are not accessible.

It would be difficult for someone who has a physical disability to eat in Baker Refectory. Certain things would be difficult for someone in a wheelchair to reach, especially bagels, the dishes on the salad and condiment bar, some of the desserts, silverware, and drinks. The small spaces between tables would limit where a person with crutches or a wheelchair could sit.

Oller Hall is the site of many performances throughout the year, many of which the public is invited to. One of the side entrances is accessible, although special arrangements would have to be made to use it, since tickets are collected at the main entrance. The rest rooms are not accessible.

The basement of Founders Hall is accessible--the entrance and rest rooms are. However, there is no elevator, so no one who has a physical disability can use the main floor, which is the most necessary for students.

With the changes made to the parking lot of the Kennedy Sports and Recreation Center, there are two handicapped spaces. There is also a sidewalk slope, which is useless because there is still a flight of stairs in front of the building.

Beeghly Library is accessible by a ramp and an elevator. The aisles are 33 inches wide--enough for a wheelchair to pass easily, but not enough to turn around so one could face the books on the shelves.

Although there are some facets of Juniata that are accessible to handicapped persons, many of the buildings that matter (Good, BSC, Founders) are surprisingly unsympathetic to the fate of someone who has a physical disability.

Zoot Concert In Cyber Cafe

Hillary LaMont
Staff Writer

On Friday, September 9, the musical duo, Zoot regaled a small Juniata audience with a brief, yet passion-fueled forty-five minute set. The Chapel Hill, North Carolina natives opened their performance with a slew of catchy tunes related to the age-old themes of unrequited love and human connectedness. Zoot doesn't fit into the same style as most of the Chapel Hill scene, including Superchunk, Archers of Loaf, and Ben Folds Five.

The band consisted of jazzy, soft riffs on acoustic guitar accompanied by a smooth saxophone accentuated the hazy parlor sound of a 1940's minimalist jazz ensemble. The vocals were trickling, seeping, talkin' blues reminiscent of lines delivered by the late blues singers of the early 20th century.

The band received a modest reception from the student body--some sat restless and walked out in disinterest, but the other half sat bobbing their heads and snapping their fingers, lost in the lilting rhythm.

The Baha'i Club: A Forum for Exploring Spirituality

Deborah Kirchhof-Glazier
Contributor

Are you a Christian, Muslim, Jew, Buddhist, Hindu, Wiccan, Zoroastrian, or Baha'i? Or are you an agnostic, an athesist, or just "independently spiritual"? The Baha'i Club provides an opportunity for you to talk about the "big issues" in a context of open discussion and in the spirit of independent investigation of the truth.

The Juniata College Baha'i Club is one chapter in a network of Baha'i Clubs in colleges and universities across the world, with our closest neighbor at Penn State. The Juniata chapter was started in 1993 by Baha'i student Ari Cornman and is open to students, faculty, and staff from all spiritual backgrounds. Current officers are Micah Morton, Laural Dziuk, and Karen Snape.

Baha'i Clubs exist to teach and put into practice the ideals of the Baha'i Faith, the most recent independent world religion, which is based on the teachings of its Prophet-Founder Baha'u'llah (pronounced Bah HAH oh LAH). Baha'u'llah lived in Persia from 1817-1892 and articulated the social and spiritual principles and requirements for world peace in the most voluminous Writings in religious history. The Baha'i Faith is the second most widespread religion geographically and is well-respected by the international community as a nongovernmental organization of the UN with consultative status. In1990 a Baha'i Chair for World Peace was established at the University of Maryland.

The central tenets of the Faith are the Oneness of God, the Oneness of Religion, and the Oneness of Humanity. Some of its core principles include abolition of prejudice of all kinds, the equality of women and men, independent investigation of the truth, universal education, the necessity for religion to be in harmony with science, spiritual solutions to economic problems, the creation or adoption of a universal auxiliary language, and a global system of world government based on justice. It teaches Progressive Revelation, the idea that all the world's religions come from the same Source and represent successive stages in the unfolding of spiritual truth as revealed through divine Messengers. There are no clergy.

With its emphasis on unity and its spirit of open discussion, the Juniata College Baha'i Club has served as a forum for all students interested in exploring spiritual issues. There are two meetings each month on Wednesday evenings at 7 PM in Sunderland Lounge. The first is a Fireside discussion on a particular topic and the second is Open Devotions, where students bring prayers, writings, songs, or thoughts to share from a variety of perspectives. Fireside topics for the rest of this semester include Love and Relationships (October 6th , led by Brian Brown and Indi Petranek), Beyond Y2K: The Baha'i Perspective on the Future of Humanity (November 3rd, led by Dr. Debra Kirchhof-Glazier), and Science and Religion (December 1st, led by Dr. Margaret Towne). Open Devotions will be October 27th and November 17th.

The Club also helps sponsor the annual International Day of Peace and a celebration of World Religion Day, has adopted a section of highway on Rte. 26 for clean-up, and sponsors events that raise awareness of the oneness of humanity. On Saturday October 9th the Club is holding a Race Unity Workshop from 10 AM-1 PM in TNT Lounge, with a follow-up Fireside that evening at 7 PM in Sunderland Lounge.

The campus community is warmly welcomed to all functions and events. For more information contact the officers or the Baha'i members of the Club, which include students Brian Brown, Indi Petranek, and faculty advisor, Debra Kirchhof-Glazier.

Interested in Internships?

Krissy Lipuma
Staff Writer

Before you graduate from college, it is a good idea to gain some experience and know what you are getting into. What better way to do that than with an internship? I recently had the opportunity to speak with three students, Rebecca McClaine, Bridget O'Brien, and Tad Stouffer, about their summer internships.

Rebecca McClaine interned with Bringham and Women's Hospital in Boston, where she worked in a research lab under the direction of a Juniata College Alum. Rebecca's POE is Biology and Premedicine, and she says that the experience was definitely helpful. Through her internship, she learned that she does not want to work in research only, but would like a job where some research is involved.

Bridget O'Brien worked in the Public Relations department at the Baltimore Zoo. Some of her tasks included writing press releases, accumulating information for publicity and advertising, and escorting the media around the zoo. Bridget's POE is Biology and Writing, and her internship provided her with experience in both areas. The Baltimore Zoo has many internships available in all areas.

Tad Stouffer interned at the Al Paul Lefton Company, an advertising company in Philadelphia. His POE is Computer Science with an emphasis in Art. He worked in the creative department designing and updating webpages. Tad had the chance to learn some new computer programs, as well as form creative layouts.

Information about internships is available in the Career Services Office, but individual searching can improve the odds of finding one. Bridget found her internship on the internet, Rebecca discovered hers posted on a bulletin board, and Tad found his through his father. The best advice is to start early, as many internships require essays and resumes. It is also advisable to make contacts and establish good relationships with your professors. An internship can help you decide upon a career.

Beware: Feminists Organize!

Eric Hammar
Staff Writer

For the first time in three years, Juniata students held a woman's rights meeting and took important steps towards campus and community action. Juniors Amanda Albright, Sevie Shuman, and Rebekah Helsel, and sophomores Tatiana Zornowski and Megan Brown organized their common interests in feminism by supporting a campus chapter of the Feminist Majority Leadership Alliance. Interest for the group is strong among students, faculty, and administration, including support from Juniata's First Lady Pat Kepple.

Eleanor Smeal founded the Feminist Majority Foundation, a splinter group of the National Organization of Women. The FMF has committed their efforts to investing in young people and training the next generation of feminist leaders. Their connection with college students, faculty, and staff nationwide has prompted the formation of its innovative campus leadership program, the Feminist Majority Leadership Alliance.

The FMLA are student run, nationally affiliated groups. They form a permanent network of young feminist activists nationwide and provide members with opportunities to develop their leadership and organizational skills. By supporting the FMLA, progressive students are encouraged to utilize their skills to begin response to campus and local issues, as well as issues of national and global significance. FMLA works closely with Women's Studies, Multi-Cultural Centers, Lesbian Gay Bisexual Transgender groups, and other feminist and activist campus members to increase progressive activism on college campuses.

During Juniata's first FMLA meeting many relevant and important issues were discussed. First, a campus wide campaign has been planned to educate students, faculty, and administration as to what feminism is. Second, a letter writing campaign against gender apartheid in Afghanistan is underway. Also, a 'Take Back the Night' rally and workshops on self esteem and body image were discussed.

The FMLA meets every Thursday in the Blue Room in Ellis Hall at 7pm. For more information on the FMLA or gender apartheid in Afghanistan contact Amanda Albright at albrial7@juniata.edu or Box 3 on campus, or FMF's website at www.feminist.org.

Do you have an event that you would like to have covered in *The Juniatian*? Email juniatian@juniata.edu with the pertinent information at least one week in advance.

Bi-Lingual Eminence

Nicole Bowen

Do you remember what you were doing at the age of thirteen? Suppose that you were thirteen years old and already had your entire life ambitions set out for yourself. As a young adult you knew that teaching Spanish was what your occupation would be once you graduated college nine years down the road.

Tammy Jandrey Hertel is that unique young adult who joins the Juniata teaching staff this semester. This fall she will be teaching Spanish 110, Spanish Sound and Form, and Methods

New instructor Tammy Hertel.

for Foreign Language Education. Then in the spring she will be teaching Spanish 110 once again, Conversation and Composition, and the Advanced grammar class. She will also be supervising the student teachers in the spring.

Although small town life is sometimes hazardous for most entering students or young professors, Hertel is actually fond of the small town life. She comes to us from the small town of Chilton, Wisconsin. Being here on campus and enjoying the small town life helps her feel right at home. When Hertel taught and traveled in Mexico she also really enjoyed the small town life much more than the big cities.

Hertel has a vast knowledge of Spanish and she can also read a little bit of French. She received her B.S. in Spanish and Secondary Education at the University of Wisconsin-La Crosse. Hertel then received her M.A. in Spanish Literature

From: China, To: USA

Erika Grimminger
Staff Writer

Recently, Dr. David Atwill joined the team of professors here at Juniata. Dr. Atwill just received his Ph.D. in history from the University of Hawaii. He also spent several years at the Yunnan University of China, where he taught a few classes and conducted some research.

The courses that Dr. Atwill teaches here include: Modern China, The Golden Age of China, and World Civilizations.

Dr. Atwill chose to come to Juniata, because it is a small college, very much like the Chinese college where he worked for some time. Here at Juniata, Dr. Atwill hopes to bring a larger awareness of Asia to the students.

"Because Asia has a large percentage of the world's population, to not be exposed to Asia, is to not be exposed to a large part of the world," Dr. Atwill said. He has found a large student interest in his classes and he hopes to increase that interest. Also, he feels that students will use this information for the rest of their lives.

Dr. Atwill decided to major in history because he really enjoyed it, and believes that history is relevant to one's daily life. He chose Asian history because he loves it and loves to interact with the Asian culture.

Hiking, volleyball, international soccer, and Chinese cooking are a few of Dr. Atwill's interests. He also enjoys playing Monjongg, which he learned to play in China, with his wife's family.

Dr. Atwill's met his wife in China and their son, Peter, was born in China. The Atwills want to bring their son up bilingual, but right now he only knows Chinese. Dr. Atwill's wife is an English major, but she and Dr. Atwill speak Chinese at home. Besides Chinese, Dr. Atwill knows French and Italian.

and Linguistics from the University of Wisconsin-Madison. She believes that every day there is something more to learn. Eventually she would like to further her knowledge of languages and learn to speak Portuguese.

When she is not teaching, Hertel is playing tennis, running, or diligently writing and researching for her dissertation at Pennsylvania State University. She has been tediously working on this dissertation officially for about a year. She has known for a while exactly what she wanted to do for her dissertation. It focuses on the second language acquisition of an aspect of Spanish word order by native English speakers.

Hertel really enjoys teaching here at Juniata because she likes the positive atmosphere of the student/teacher relationship. When asked what one piece of advice she would give to the students here at Juniata, she replied, "To always keep an open mind, because you can never learn enough." She also commented on how she is amazed at the great effort Juniata has taken to keep the Spanish program active. She likes the weekly activities that the Spanish club offers such as movies, the field trips, La Mesa Hispanica, and many more activities. She would like to see further advancements to the Spanish department. For example, for the Spanish club at Juniata to work in conjunction with the Spanish club at Penn State. Hertel is willing to help in this development because she knows the Spanish advisor at Penn State.

Cultural Movements

By Heather Diehl
Contributor

Zhongmei Li presented a workshop/masterclass Thursday, September 16 to about two dozen participants and observers. Zhongmei, as one of China's premier dancers, bestowed quite an honor by running the workshop here at Juniata College. Not only did she demonstrate dance techniques, but she also explained the theory and cultural practice behind the movement of the dancers. The aspects of Chinese dance that were demonstrated encompassed many of the basic movements, upon which others built to become the grand performance many of us witnessed in her Artist Series Performance.

for a simple logo.

Do you have any cool ideas for the logo? Pick up contest rules at the TLT beginning Monday, September 27.

The TLT needs a logo! Who better to design it than the students who will be using the TLT?

(That's on the top floor of Ellis, where the International Programs Office used to be.)

All entries will be judged by the TLT management team. Employees of the TLT are not eligible to win.

Eagles Lose Opener

by Andrew Radomsky
Sports Writer

The Juniata football team dropped their season opener on September 11 to Division III powerhouse Lycoming 19-13, despite outgunning the Warriors by over 100 yards.

Lycoming, who holds a #3 national ranking in Sports Illustrated's Division III Preaseason Poll, got all they could handle from the Eagles, who beat the Warriors statistically in both rushing yards (119-62) and passing yards (217-164).

The Juniata running game got a boost from Drew Onkst, a transfer from Millersville University, who netted the first 100 yard rushing game for a Juniata back since Ross Stoico, who accomplished this feat 15 games ago. Onkst carried the ball 24 times for 116 yards and added a 73-yard touchdown reception from senior quarterback Joe Montrella who tied the game at 13-13 with less than 12 minutes to play in the 4th quarter.

After being down 13-3 with a little over a quarter remaining, Brad Hahn picked off a Lycoming pass to change the momentum of the game. The offense failed to get a first down after the pick, but kicker Bill Reddinger came through for the second time in the game with a 34 yard field goal, cutting the defecit to seven.

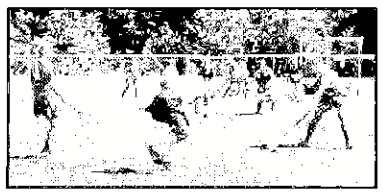
Drew Onkst completing a first down for Juniata College. Photo by J. Ramquist

After the ensuing kickoff the Eagle defense, which looked tough all afternoon, forced Lycoming to punt after three plays. On third and nine from his own 27, Montrella hit Onkst near the home sideline on a short swing pass. Onkst turned on the jets and raced 73 yards to the endzone. Reddinger's extra point tied the game at 13 with under 12:00 to play.

A ten play, clock-eating drive by Lycoming ended with a touchdown reception by Lycoming's Tim Dumas with 8:00 to play. The extra point was blocked, and Juniata trailed by only six points. Junior Dan Brady gave the Eagles hope when he recovered a fumble on the Lycoming 43, but Juniata coughed up the ball near midfield with 2:23 on the clock, giving Lycoming the opportunity to run more time off the clock. Juniata had one last chance with under a minute left, but Montrella's hail mary pass fell into Lycoming hands, ending the Eagles' chances of knocking off the favored Warriors.

Juniata takes the field. Photo by J. Ramquist.

"That's just a tough way to lose a football game. I think we were the better of the two teams, but we just didn't make some plays when we needed to. If we get another shot at Lycoming in the playoffs I think it will be a different story," Brady said.



Notes: The Eagle defense gave up only 226 yards in the contest, 200 yards less than they averaged in 1998. Ed Pfursich was named to the Middle Atlantic Conferece Honor Roll after his performance. The junior netted 14 tackles, two of which were for a loss, and a broken-up pass. Kicker Bill Reddinger's two field goals marked the first time an Eagle had hit to kicks in the same game since 1992, a span of over 60 games. Sophomore Josh Seiders got two sacks from his inside linebacker spot.

Sports Round-Up

Bub Parker
Sports Information Director

WOMEN'S TENNIS (3-2, 1-1 MAC Commonwealth): Sept. 22, Susquehanna; Sept. 25 at Moravian. The Eagles went 2-0 on the week, including a 5-4 triumph on Wednesday against Division II Indiana (Pa.). Sophomore Lisa Dumansky (Nutley/Nutley, NJ) won at second singles, 6-0, 6-1, and then paired up with junior Jessica Wess (Forest Hills/Summerhill) for an 8-4 pro-set win at second doubles. Freshman Elizabeth Osche (Acton-Boxborough/Acton, MA) was victorious at third singles, 6-2, 6-2, and was freshman Jennifer Thompson's (Pittsford Mendon/Pittsford, NY) partner for an 8-4 win at third doubles. Thompson posted a 6-4, 6-3 triumph at sixth singles. On Saturday, Juniata won at MAC Commowealth foe Messiah, 8-1. Senior Erica Sussman (Williamsport/York) was a 6-1, 6-2 winner at first singles and earned an 8-5 decision at first doubles with Osche. Dumansky won at second singles, 6-3, 6-1, and second doubles with Wess, 8-3. Osche moved her singles record to 5-0 with a 6-3, 3-6, 6-2 victory at third singles. Wess posted a 6-7 (4-7), 6-4, 6-2 triumph at fourth singles, while Thompson recorded a 6-3, 4-6, 7-5 win at fifth singles and paired with sophomore Bethany Eisemann (Ephrata/Ephrata) for an 8-5 decision on the third doubles court.

FIELD HOCKEY (3-4, 1-0 MAC Commonwealth): Sept. 21 at Dickinson; Sept. 25, Moravian. Juniata got back into action on Saturday following a one-week break and opened MAC Commonwealth play with a 1-0 win at home against Albright. Senior forward Danny Young (Eastern York/Craley) tallied a goal with 9:03 remaining in the first half and the Eagles made that score stand up. Senior midfielder Amy Bullock (Allentown/Cream Ridge, NJ) was credited with the assist for Juniata. Junior goalie Kara Elias (GAR/Wilkes-Barre) made eight saves to record the shutout for the Eagles.

Amy Bullock assisting against Albright. Photo by J. Hanohano

WOMEN'S VOLLEYBALL (7-3, 2-0 MAC Commonwealth): Sept. 22, Messiah. The Eagles, ranked 15th in the initial American Volleyball Coaches Association (AVCA) Division III poll, opened the MAC Commonwealth portion of their 1999 schedule with a 15-13, 15-6, 15-11 win over Moravian and a 15-1, 15-12, 15-7 victory against Susquehanna in Selinsgrove on Tuesday. Against the Greyhound, senior outside hitter Carrie Zeller (Laguna Beach/Laguna Beach, CA) had 10 kills, 11 digs and two aces, while senior middle hitter Jennie Lizun (Emmaus/Emmaus) posted seven kills and four blocks. Sophomore outside hitter Danny Murphy (West Chicago/Winfield, IL) had five kills and seven digs. Sophomore outside hitter Brandy Workinger (Dallastown/Dallastown) led

Eagles Are Ready to Run!

Lee Garner
Sports Writer

Juniata College cross-country is running in the right direction for the 1999-2000 season. After only a few meets the Eagles are showing much promise. The women's team has a nice combination of returning runners and several up and coming freshmen. Led by seniors Casey Kline, Sarah Oakman, and Dody Smith, the team seems to be well set for experience. Three juniors are also slated on the roster for the Eagles this year that include Jennifer Boesmiller, Sara Davis, and Megan McGinnis. Finally, the only two freshmen on the team include Tasia Kavalek and Michele Palmer. These two freshmen have been taken under the Eagle's wings and will soon be stars. Of course like any team there is the constant problem of injuries, but Coach Jon Cutright feels that once these injuries heal, the team will be ready for a great season.

This year Juniata has also formed a men's cross-country team. This the first year, so the runners, as well as the coach, are "feeling their way through it." Even though it is the first year, the team shows a lot of talent. With only four runners, the team cannot compete in group races where the requirement is five runners, but they can still race individually. Junior Scott Hobbie and sophomore Damon Walton lead the team. Also on the roster are two freshmen, Stavros Pavlides and Noah Fredette. Coach Cutright is very excited about the potential that this newly formed team holds.

Overall Cutright is very pleased with the teams so far, with both teams having good leaders and star potential. Both teams are in action again on September 25 at the Messiah Invitational.

Sports Round-Up

(Continued from page 11)

the Eagles versus Susquehanna with eight kills and four digs. Freshman middle hitter Niki Mueller (Bishop Guilfoyle/Altoona) had six kills, two blocks, three digs and an ace for Juniata. On Friday and Saturday, the College Hill squad traveled to the highly-competitive Washington University (MO) Invitational and placed second in the five-team field. Juniata opened play with a 14-16, 15-8, 15-12, 14-16, 17-15 win against fourth-ranked Ohio Northern, in a match that lasted over three hours. Senior middle hitter Kristin Hershey (Dallastown/York) had 31 kills for Coach Larry Bock's squad. The Eagles then knocked off 10th-ranked Washington, 15-6, 15-11, 12-15, 15-12. Zeller tallied 24 kills, while Lizun came up big with 14 blocks, including 12 solo rejections. On Saturday, Juniata lost to defending NCAA Division III champion and the number-one ranked squad, Central, 15-9, 15-6, 15-12. Hershey posted 12 kills and six blocks, while Workinger recorded 12 kills and Zeller had 11 kills and 23 digs. Lizun came up with five blocks against Central. The Eagles closed the weekend with a 15-13, 15-11, 15-11 victory against Illinois Wesleyan. Lizun smacked out 11 kills and posted five rejections. Senior setter Colleen Carver served up four aces and Zeller reached double figures in digs again with 16. Lizun and Zeller were named to the all-tournament team for their efforts.

MEN'S SOCCER (0-6-1): Sept. 25 at Albright. The Eagles snapped a five-game losing streak with a 0-0, overtime tie at Pitt-Greensburg on Wednesday. Sophomore goalkeeper Joel Abe (Archbishop Hoban/Akron, OH) made 11 saves and recorded the first shutout of his collegiate career. On Sunday, Juniata lost at home to Alvernia, 3-1. Junior back Todd Fabian (Manheim Township/Lancaster) tallied the initial goal of his career with 22:00 left in the second half. Abe had two saves on the day.

David Pearsall dribbling. Photo by J. Ramquist.

WOMEN'S CROSS COUNTRY (0-3): Sept. 25 at Messiah Invitational.The Eagles placed 18th out of the 18 teams on hand at the Penn State Invitational on Saturday. Juniata tallied 564 points to place 18th, while Michigan won the outing with 30 markers on the day. The top finisher for Juniata for the third straight week was freshman Michele Palmer (Littlestown/Littlestown), who placed 144th on the day with a time of 21:15.44. Freshman Tasia Kavalek (Upper Moreland/Hatboro) was 176th in 22:55.01, while senior Sarah Oakman (McConnellsburg/McConnellsburg) was 178th at the outing and clocked in at 23:01.40. A total of total of five Division I schools and four Division II teams were on hand for the 5,000-meter race.

MEN'S CROSS COUNTRY (0-3): Sept. 25 at Messiah Invitational. Juniata placed 21st out of 22 teams at the highly-competitive Penn State Invitational on Saturday. The Eagles totaled 676 points, while James Madison won the outing with 46 points. The Eagles got a time of 28:33.97 from freshman Noah Fredette (Weedsport/Weedsport, NY) on Saturday. He placed 129th in the field of 257 runners and was the top Eagle finisher for the third straight week. Junior Scott Hobbie (Hill School/Duncannon), who took 250th, was clocked at 34:03.83 on the 5.2-mile course at Penn State.

Women's Soccer Wins (and Losses)

The Juniata Women's soccer team had an even output this past week and the weekend before. They first defeated Pitt-Bradford on September 10, with a score of 2-1. After trailing Bradford by one goal in the first half, the Eagles' Beth MacAleer, assisted by Jen LaCount, came up with one to even the game in the second half off of a corner kick. The second goal made by April Schneider was headed in off another corner kick, which led the team to its victory.

The eagles then faced Division II Dickinson College on Sunday, September 12. They lost the game with a final score of 2-4. One goal made by Amber Bryers from almost midfield within the last 10 minutes of the game.

Diana Coulson wins the ball from Dickinson. Photo by J. Ramquist

On Tuesday, September 14, the team played its first Middle Atlantic Conference game against the Elizabethtown powerhouse.

Amber Bryers clears the ball against Dickinson. Photo by J. Ramquist.

They lost with a score of 0-5.

Despite the loss, the Eagles came back on Sunday, September 19, to beat Alvernia College 7-0. Jen LaCount marked three goals, Cindy Sokolowski with two, April Schneider had one, and Diana Coulson scored a goal and was credited with an assist.

The Eagles' overall record this season so far is 3-2, 0-1 in MAC. Their next two conference games are on September 21, against Susquehana at home, and on September 25, - facing Albright on its own territory.

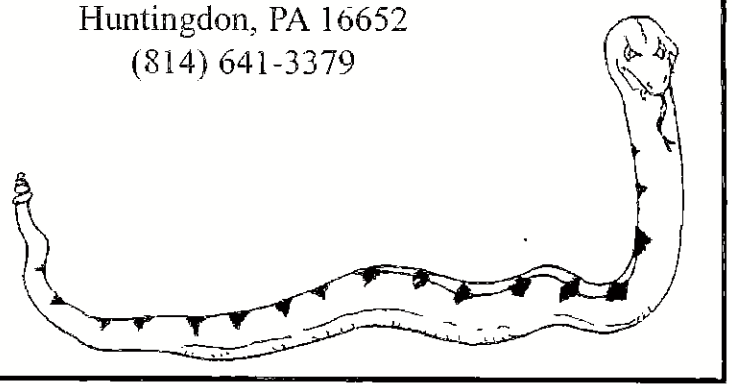
Eagles Rebound Against Dutchmen!

Andrew Radomsky
Sports Writer

The Juniata football team evened out its record to 1-1 with a 36-3 victory over Lebanon Valley last Saturday.

Sophomore, quarterback Jamie Campbell stepped in for an injured Joe Montrella in the game's first series and got the job done, completing 73% of his passes for 225 yards and 3 touchdowns. Matt Bowers, Jeff Craft, and Matt Eisenberg were on the receiving end of Campbell's scoring strikes. Bowers had one of the more spectacular touchdowns of the day, catching a short pass near the sideline, breaking one tackle, and then diving past a defender at the front corner of the endzone for the score.

"After the first tackler missed I looked upfield and saw a lot of room. The safety had an angle on me so I just stretched out and tried to get the ball across the line," Bowers stated.



The new-look Juniata defense was solid for the second week in a row, only giving up 3 points in the game and 186 yards of total offense. Ed Pfursich led the attack with 9 tackles, a broken-up pass, and a sack. Senior linebacker Justin Samra picked of two passes, and added five tackles to pace the secondary.

Eisenberg, who was held to only two receptions against Lycoming in week 1, got more involved in the offense against the Dutchmen. He caught 8 passes for 109 yards and scored to lead all receivers. Tailback Drew Onkst netted 75 yards rushing and scored Juniata's first touchdown of the day on an 8-yard run.

Juniata will be back on the field this Saturday against undefeated MAC opponent Wilkes. Kickoff is set for 1:30.

Notes: Juniata now shares the lead in the MAC Commonwealth League thanks to Saturday's win. Kicker Bill Reddinger hit two field goals (39, 37) to make him 4 for 4 on the year. Freshman wide receiver Nate Leach caught his first collegiate reception, a 41-yard bomb from Campbell in the third quarter. Defensive end Dan Brady's fumble recovery was his second of the season.

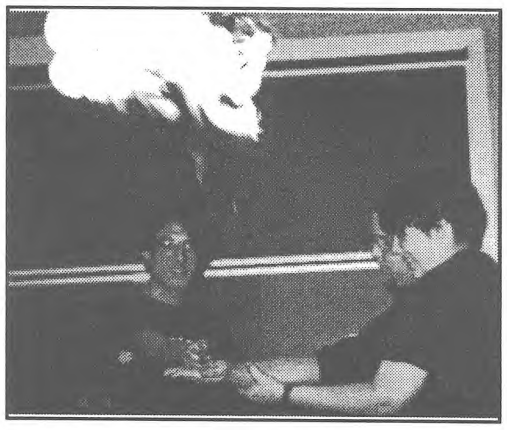
Physics Phun Night!

Indi Petranek
News Editor

Physics Phun Night was held in Alumni Hall on Saturday, September 25 to demonstrate the more explosive side of physics to parents and students during Family Weekend festivites.

In the packed auditorum, physics students showed off the fun side of their learning to entertain the parents and all the non-physics students who came to see the show.

"Physics only works 50% of the time" seemed to be the trademark of the evening as a general disclaimer for any experiments that failed to work, which out of the 17 demos, only one noticably failed.



Included in the evening's events were several experimnets involving wine glasses and sound waves and applied forces. Also a simultated nuculer melt down and an impotance test invoving center of mass.

Educational value was minimal, but humor value was high in nearly every demonstration with jokes being cracked on everyone, more often than not Humanities majors.

The students got the audience memebrs, especially the kids, involved in many of the experiments. Everything from centerfugal force with coat hangers and nickles to a small brown-haired girl upstaging the students with the center of mass demonstration.

The highlight of the night was the closing act, with Dan Savino shattering a cinder block over Dr. Reingold's chest as he rested on a bed of nails.

The physics students even got to do some fundraising at the very end by selling popcicles frozen by liquid nitrogen.

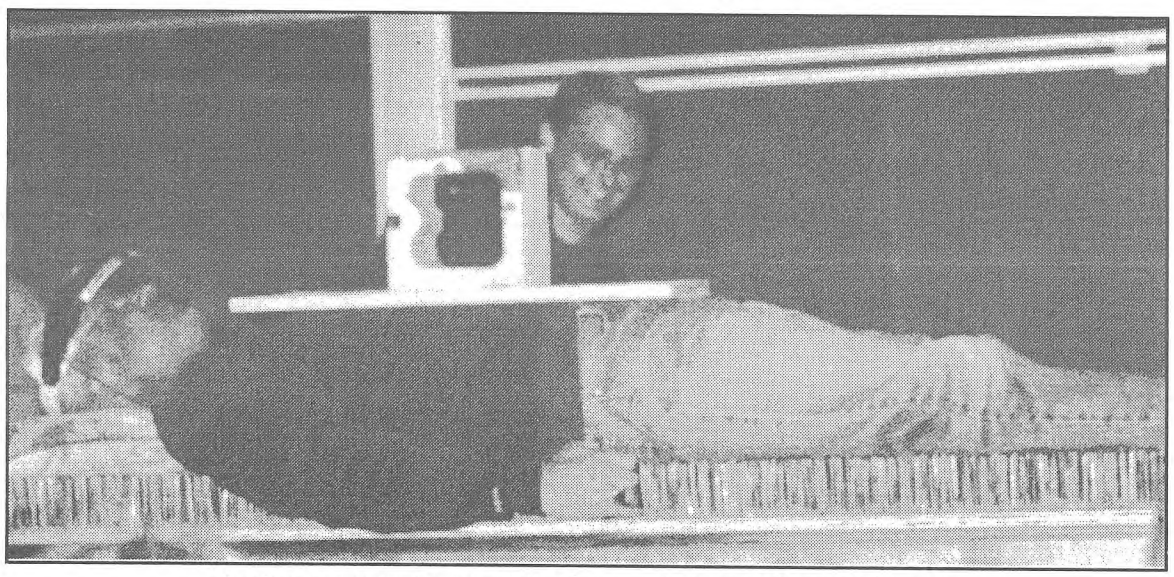
Huntingdon Borough Focus Group Meets

Tatiana Zarnowski
Co-Editor in Chief

On Tuesday, September 28, 1999, at 11:30 a.m., a meeting was held in the ballroom of Ellis to discuss ways to improve Huntingdon's downtown area.

There were over 30 people in attendance, including the Huntingdon borough manager, community consultants, owners of several area businesses, and representatives of the Arts Council, the Historical Society, and the Chamber of Commerce. There were also several administrators and students representing the College, including President Kepple, James Lakso, David Gildea, Gail Ulrich, Erin Frazier, Ann Parry, and Tatiana Zarnowski.



There was much discussion on how to improve the downtown. The community planners divided the downtown area into six parts, and discussed each separately (see table). They said that there have been studies done in the past that have focused on improving Huntingdon. The purpose of the meeting was not to do more studies, said Sherry Fogerty, a community planner, but to establish priorities for what to improve.

Most of the people who attended the meeting thought that Juniata College students and Huntingdon residents are likely to spend the most money in downtown Huntingdon, rather than Huntingdon workers and tourists to the Raystown Lake area. This is significant because some studies have focused only on how to get more business from the Raystown visitors, while ignoring other groups.

While the group discussed each area, a few concerns were raised. Nancy Shea of the Historical Society said that parking in the downtown is a problem. The group discussed the opposing needs for long-term parking (for employees of downtown businesses) and short-term parking (for customers). Employees park on streets without parking meters, which makes it nearly impossible for anyone to find short-term parking on these streets.

Please refer to the table for the specific improvements that the group brainstormed for each area of the downtown.

Boys Will Be Boys

Adam Smithee
Staff Writer

Gotta love some of the excuses the white man has come up with: "Your Honor, this fuckin' fag made an Unwanted Homosexual Advance toward ME, a red-blooded American heterosexual; therefore I killed him to show that such presumptuousness will not be tolerated in this great freedom-loving land of ours." Or words to that effect. The first time I ever heard the UHA defense was in a movie-John Sayles' cynical "City of Hope".

City of Hope came out in 1991 and foreshadowed a decade in which the UHA defense became a nationally known legal strategy. Apparently, in the minds of some straight men it is so profoundly humiliating to be hit on by another man that only the most outrageous, violent response seems appropriate.

There was Alabaman Steven Eric Mullins, who says he got so angry at Billy Jack Gaither for propositioning him that he beat Gaither to death with an ax handle and burned his body with kerosene. There were Matthew Shephard's killers, whose girlfriends allegedly encouraged them to cry faggot.

Thankfully, in none of these nationally known cases has the UHA defense worked as the perpetrators intended-no one has received a get-out-of-jail-free card. I'm sure somewhere out there, there's a fair number of good ol' boy judges who think a proposition from one man to another is perfect justification for torture, murder.

Personally, I look upon these cases with an embittered consciousness about the sexual double standards they reinforce. My point is emphatically not that there's an equivalence between the violent excesses of a few scary homophobes and the commonplace interactions between men-as-sexual-aggressors and women-as-prey. But if the average hetero guy thinks it's somehow disempowering or destabilizing to be the object of unwanted desire, think of how your average attractive woman feels when she's being hounded on a regular basis.

True, some women seem flattered by and grateful for whatever attention comes from any jerk on the street but I think a lot of women are secretly divided about it.

They depend on some level of sexual attention to feed their self-worth, but they also feel disempowered when a man comes on strong and rude. Yet the world tells them, "Relax hon, and enjoy it. Sure, you don't have the power to choose where, when, and by whom you're going to be chatted or felt up, but as a woman you have the power to ignore them or to say no."

And if a woman is not only reasonably attractive but arguably beautiful, forget it, she gets no sympathy: "Stop complaining, bitch-most women would kill to get that kind of attention." I'm sure Camille Paglia, and a bunch of other social theorists would chide me, saying there's no point to this discussion since male and female sexual behavior is biologically based and can't be changed through politics, education or legislation. Whatever.

Though I have my contrarian suspicions, I don't have the wherewithal to argue against the conservative scientific consensus. But the next time I hear some "red-blooded American" complaining about being hit on by a gay man, I'll just say, "Relax hon, and enjoy the attention."

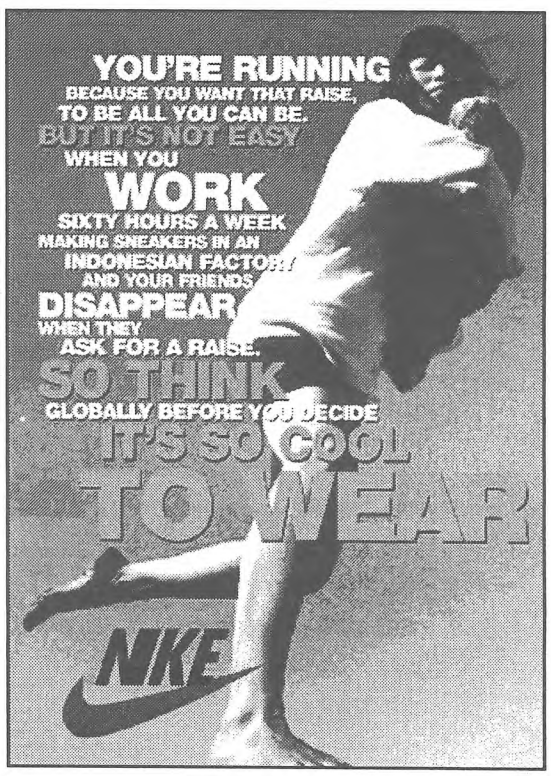
Stalker Net

Adam Nelson
Opinion Editor

We are all on it. Everyone uses it. Most are uncomfortable with it. What could this possibly be? The Juniata College student directory widely known as "stalker net".



It is fashionably called this due to the fact that anyone with a Juniata connection can look up any Juniata student at anytime. Not to mention those outside the college with any sort of hacking ability that are minimully interested in the people who occupy this tiny corner of the earth.

So, say someone, we can call him John Q. Psycho, is interested in a poor naive little Juniatian like my boss Megan Brown. Well, John Psycho doesn't really have to do any work to find information about Megan, all he has to do is dial up "stalker net" and he not only has her phone number and photo, but her Juniata address and permanent home address--for those serious tri-state stalkers.

Who at Juniata gave explicit permission to have our pictures posted on the internet. I know I didn't. At no time was I ever asked, "Mr. Nelson, would you mind your personal image being shown to the rest of humanity along with all of your personal contact information?" Let's all guess what my answer would be.

The other day I solved this problem for myself and went through the process of having my face removed from the intranet. It wasn't too much Juniata red tape, but during this episode I spoke with with Rocco Panosetti, Head of Juniata Security, who advised me how much of a bad idea he thought stalker net was also.

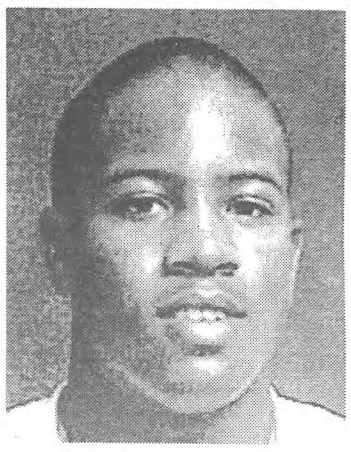
So, if the head of our own personal security force is against this idea, shouldn't this be a concern. I say, kill stalker net! Let's actually have some sort of privacy at Juniata. If you would like to have your image removed from the Juniata College Stalker Net, contact Kris Clarkson, Dean of Students. He is very amiable about this request.

Kenny Cooper wins Mr. Juniata

By Matt Wolfe
Staff Writer

On September 24 the third annual Mr. Juniata contest was held in Oller Hall. The night started off with the guys running up through the audience, jumping onstage one by one, and doing a dance number complete with a kick-line and lots of cheers from the ladies. At the completion of the dance number the guys turned around to spell out "Mr. Juniata '99" on the backs of their t-shirts. This was done using blacklight effects.

Next, the guys each got a chance to introduce themselves and say a line or two. Some guys dedicated the night to relatives or loved ones, while some of the guys used the opportunity to crack a joke. Dale Mowrey did the Fat Bastard "Dead sexy!" quote from Austin Powers and got a big laugh. Kenny Cooper said, "My POE is pleasing the ladies!" which got the most screams from the women in attendance.



The next part of the event was the talent competition. Craig Solensky and Aaron Amick went first and did a rendition of the "Call Me Al" video, with Craig playing Chevy Chase's role. Next, Steve Beiber, Matt Eisenberg, and Kenny Cooper did a little dance number to Will Smith's "Wild Wild West," although Steve merely lay on a couch during the song. He admitted that he did not have any talent so he got the easy part of the sketch.

Luke DeJohn and Jim Krug were the next act, portraying two cheerleaders. They got into the act well, at one point purposely falling off stage for a laugh. Brian Brown was next, doing the "I'm a Lumberjack and I'm OK" song from Monty Python. He was the first person to go onstage alone and it took courage to do so.

The next performers were Dale Mowrey and Jeff Bellomo. They did an interpretation of the dance scene in "Dirty Dancing," with Jeff playing Jennifer Gray's part. This sketch received a lot of laughs, the high point being when Jeff lifted Dale off the ground while dancing. The nice person was Nick Bower, who did a nice saxophone solo. This was the only serious part of the talent competition. The last person to go was Jeff Kotz, who did a comedy routine. No one can forget him sticking a toothpick up his nose and having an audience member pull it back out. He was also the only person to have volunteers from the audience help him on stage.

Eric Bauer and Mike Deskevich put together a slide show of the guys pictures, both current and when they were babies. The slides were appropriately set to Green Day's "Good Riddance (Time of Your Life)." This gave the guys enough time to change for the next part, the formal wear competition. Each guy was escorted down the middle of the stage and then was allowed a minute or two to present himself to the audience, with most guys doing funny antics. Jeff Kotz was escorted by twins, which to one he gave the key to his heart and to the other a role of duct tape. Matt had the most memorable moment when he was escorted by "Colleen," a guy in drag, and gave "her" a MTO from Sheetz. It was devoured rather quickly.

After the formal wear event, the finalists were announced. They were Dale, Kenny, Jim, Jeff Bellomo, Luke, and Matt. Each finalist was asked a question, and they had thirty seconds to think it over before answering. Jim was asked if he was stranded on a dessert island and could have one person and one food, what would they be. He would take his Mom to do his laundry and ramen because it's got him through college so far. After all the questions were asked,

Kenny Cooper.

the winners were announced. Taking second runner up was Dale. First runner up went to Jim. Kenny Cooper was proclaimed Mr. Juniata '99. While he was being crowned (his crown was from Burger King), the Bluestones played the theme from Star Wars. From the amount of loud hooting and cheering from the women in Oller Hall, they approved of the judges' choice.

Bub Parker M.C.ed the event. The opening music was performed by the Bluestones. President Kepple had the honor of crowning Mr. Juniata '99.

Open Forum for New Science Center

By Brian Griffith
Graphics Editor

On Wednesday, September 8, President Kepple called an open forum, held at 4:30 p.m. in Ellis Hall's ballroom facility. This forum, the first of a series this year, was held to discuss the now nearly finished draft for the William J. Von Liebig Center for Sciences, a building focusing on life sciences which is part of the construction plan for campus. The Liebig Center, planned to occupy the land between Founders and South Halls, including what is presently Oneida hall, will be 76,000 square feet in area. Its construction is anticipated to enhance the central area of campus greatly, and is scheduled in conjunction with a renovation of the Brumbaugh Science Center. Once its doors open in Fall of 2002, significant portions of the Biology and Chemistry departments will be moved to the new building.

The new building will include roughly 23,000 square feet for labs, including an aquatics lab in the basement level. The remaining space will be divided amongst lecture rooms, lab support, preparation rooms, and chemical storage. No space has been allocated for computer labs, but the lab space planned will have computer workstations and instrumentation installed. A student lounge will be open on each floor of the three floor complex, as well as a social area in the lobby sporting a coffee bar similar to the existing Cyber Connection. 17th street will be expanded to provide greater access and parking to the building, as well as handicap access.

Interestingly enough, the building will not serve as just a place for science classes. Interdisciplinary activities are planned to take place in the new building, allowing various departments access to the facilities.

In his inaugural speech on April 10, President Kepple stated his ideas on the Liebig Center's use, "The completion of the William J. von Liebig Center for Sciences in early 2002 will eventually give us the opportunity to move academic departments out of several nearby houses. Perhaps teams of students will gain the opportunity to live in these marvelous facilities by successfully competing for them with innovative year long projects."

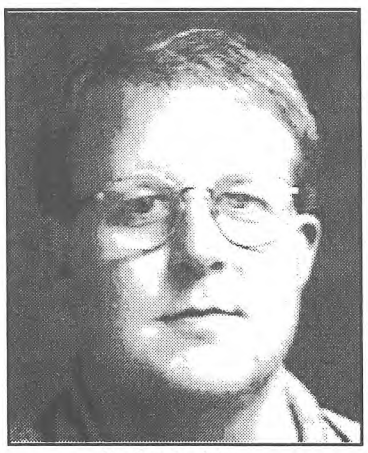
The Liebig Center has been designed to match the area of campus it will reside in, with a stone foundation and brick construction, similar to Founders Hall and The Cloister. However, the architects say it will be a "green building", using recycled and recyclable materials, often from previous buildings. Plans for heat recovery to save on utility costs, as well as equipment with power saver modes which shut themselves off when idle have been made. Energy efficiency was a large concern in the design.

Another concern, though, voiced by students and faculty alike, is that of the plot of land which the Liebig Center will be built on. Situated in one of the oldest sections of campus, the proposed building will require the tearing out of several trees which have grown there for decades. The architects have stated that the design process considered many factors, including the trees, but ultimately could not avoid them. Opinions are mixed.

Junior Suzanne Zimmerman states, "The new building is badly needed, and though that isn't where I would put it, it seems to be a necessary evil. True, tearing down trees is never an environmentally sound policy, planting more is always

(Continued on page 9)

Linking Engineering to the Environment



Erika Grimminger
Staff Writer

Dr. Dennis L. Johnson joins the team of professors as the Assistant Professor of Environmental Science. He earned his B.A. in Natural Science from Lock Haven University and his B.S., M.S., and Ph.D. in Civil Engineering from the Pennsylvania State University.

Before coming to Juniata, Dr. Johnson worked as a visiting scientist with the National Weather Service and he also worked as a contractor to the Army Corps. "I enjoyed the work because it was interesting. It is good to work with government agencies," Dr. Johnson said.

Dr. Johnson chose to come to Juniata because of its small size and he likes Pennsylvania.
"Professors are more in touch with the students here," he said.

Dr. Johnson chose to become a professor because he believes that education is a link between the next generation and current trends. He chose hydrology because it was a way for him to link engineering and the environment. Also, he likes the concepts of the water resources.

Dr. Dennis Johnson.

"Water is a part of everyone's life. We all depend on it," Dr. Johnson said.

What Dr. Johnson finds most interesting about the environment are the complexities of nature.

"We have to realize the impact our current decisions will make on the future," he said.

Dr. Johnson is married and has two children, a son and daughter. His interests include any type of outdoor activity.

The advice given by Dr. Johnson to future environmental scientists is to have fun and enjoy what they do.

Dr. Johnson said, "Whether you are an environment science major or not, we all have to think about the environment."

New Special Education Program Underway

Nicole Stahl
Events Editor

With plans to help expand the new special education teacher certification program, Ellen Long joined the Juniata Staff this semester, replacing Dr. Lamey.

The unified program is a new option for students interested in Education POE's. Students may opt to study elementary and special education; early childhood and special education; or elementary, early childhood, and special education. Students in this program would receive certification to teach in these areas and according to Long, be more competitive when applying for jobs.

Long is teaching Introduction to Students with Exceptionalities, Computers in Education, Adolescent Development this fall. In the spring, she will also teach Methods for Teaching Students with Low Incidence Disabilities. She will begin to advise students with education POE's next fall.

Ellen Long grew up in Wellesley, Massachusetts. She is the sixth child in a family of seven. She attended Assumption College, a small, private Liberal Arts school, for her Bachelors and Masters Degrees. She worked in South Carolina as the Co- Coordinator of Services for Students with Disabilities at Trident Technical College. Long received a leadership grant to earn her Ph.D. in disability programs. She will complete her program this December at Penn State.

Presently, she lives in State College with her husband Mike. She is the mother of two boys, Joseph, age four, and Daniel, age two.

Does she like Juniata this far? She loves it! "The faculty and students are so welcoming, I am very impressed with the quality of students, and the positive attitudes of students in my classes," she stated.

Long came to Juniata because she felt that this position was "the ideal opportunity for me." She knew that she wanted to teach at the college level while still being involved with students with disabilities. The environment of Juniata is very similar to that of Assumption College. It makes her feel at home.

Five Fun Facts:

1. Favorite Food- Ice Cream from the Creamery- Moose Tracks or Keeney Beany

2. Best Book You've Recently Read- Bub or the Most Wonderful Thing by Natalie Babbit

3. Special Talents- Scrapbooking

4. Favorite Color- Yellow

5. Favorite Movie- "When Harry Met Sally"

Creator of Mr. Juniata

Matt Wolfe
Staff Writer

Julia Helstrom brought the idea for Mr. Juniata from her high school, where they had a similar contest. I had the pleasure of interviewing her about Mr. Juniata:

Juniatian: What exactly is Mr. Juniata all about?
Julia Helstrom: It is a male beauty pageant done in jest. A few guys go through a talent portion, a formal wear portion and everyone generally has a good time. Plus all the proceeds go to charity.

J: Where does the money go that is raised by Mr. Juniata?
JH: It benefits IDD, which stands for Iodine Deficient Disorder. It's a big problem in third world countries because their salt is not iodized like ours is. Over 1.5 billion people are affected.
J: How are people nominated and do you think it is a fair process?
JH: Every person on campus gets five votes. A table is set up in Ellis to collect those votes. I think this is the best way to do it.
J: Do you have trouble convincing any of the nominees to participate?
JH: Sometimes we do, but we always try to talk them into it because it's a lot of fun and the guys don't regret doing it.

J: What is your role in this year's Mr. Juniata?
JH: I'm more of a consultant and I give lots of advice, but I don't actually hold any position this year.
J: How do you think Mr. Juniata will do after you graduate?
JH: I think it will do well because there are other people to keep it going. I hope it does continue because it's a lot of fun.

Ladies Night

By Matt Wolfe
Columnist

The annual Mr. Juniata contest has come and gone, thank goodness! Now, don't get me wrong, it was a lot of fun. My only problem with the whole ordeal was sitting in front of a whole row of women. By all the high-pitched screaming and hooting and some of the things they yelled out, I don't think they've seen a guy in years. Not anywhere, not on the street, not in class, no where. They probably believed that the male species was just a myth until that night. The estrogen level in that room was higher than the Eiffel Tower. I'm surprised it wasn't oozing out onto the floor. Well, maybe that's why the floor was sticky… Anyway, it's quite OK to get into the spirit of things, but don't yell things like, "Take it off!" and "That's a nice piece of ass!" Would men do that at a beauty pageant? Wait, don't answer that…

Now, it's my understanding that a lot of people went after drinking. I have no problem with that, but maybe next year there should be a section set aside for "influenced" people. That way the rest of us don't have to put up with loud, obnoxious people yelling in their ears. If that's not possible, maybe Circle K could sell earplugs at the door. What a wonderful capitalist-pig idea! It could raise even more money for the charity of their choice.

I have to congratulate the guys for having the courage to get up on stage and basically be a piece of meat. I think the image of Jeff Bellomo in a pink dress is permanently etched in my memory. I was disappointed that the guys missed an easy South Park spoof: "Oh my God! They killed Kenny Cooper! You bastards!" At least they had another good spoof to do. Where else can you see two guys slap each other's butts while dancing to Will Smith's Wild Wild West?

For everyone reading this who didn't go to Mr. Juniata this year, you missed a fun event. I hope that you will go next year. For everyone who went drunk, you missed a fun event. I hope that you will not drink as much before you go next year. For every guy who went and was sitting with mostly women, there is a meeting with Dr. Smith at the Health and Wellness center this Thursday at 9:00. He promises to get our hearing back or else free beer for everyone!

Career Pathways

By Darwin Kysor
Director of Career Services

Summer Internship Program Growing

For many years, students have sought ways to gain valuable work experience while academically preparing for careers. Juniata students are no different in this regard. Many have completed internships as a means of clarifying career goals, acquiring practical hands-on training, and developing a network of professional contacts. In fact, Juniata College's Internship Program has grown by leaps and bounds over the past several years as an increasing percentage of undergraduate students seek an "edge" in the competition to obtain admission to the best graduate/professional schools and employment with top employers following graduation.

"Graduate Surveys" from the past three years have indicated that the percent of students completing internships has varied little, between 63% and 66% of alumni completed at least one internship while they were a student. However, it is expected that over the next couple of years this percentage will increase significantly because the number of students completing internships annually has increased. Specifically, over the past three years, the number of credit internships has increased by 26% while the number of non-credit, transcript notation internships has increased by 100%.

Not only are more students doing internships, but students are doing great things! Last year, students worked at such places as the PA Department of Environmental Protection, the White House, Oak Ridge National Laboratory, Argonne National Lab, National Drug Intelligence Center, T. Rowe Price, Pricewaterhouse Coopers, U.S. Fish & Wildlife Service, Brigham and Women's Hospital, First Night Pittsburgh, Wetherhill Associates, Baltimore Zoo, Baylor University, and many more. Although not all internships are highly visible, most can assist you in gaining the "edge." Don't be left behind your classmates and students at other colleges and universities, plan today for your internship next spring, next summer or next fall. Stop by the Career Services Office to learn more about the Internship Program and how it works.

Two Juniata Students Spend Three Weeks in Delhi

By Tatiana Zarnowski
Co-Editor-in-Chief

In a slum in Delhi, India, Akiyo Kaga and Kayo Nishiguchi lived and volunteered for three weeks last summer. They told students and faculty about their experiences in a presentation held in the faculty lounge on September 21, 1999.

Akiyo and Kayo are students from Japan. Kayo is a junior Peace and Conflicts Studies student. Akiyo, who has an art POE, is a senior.

They went to India in order to volunteer, and to learn about a culture in a developing country. Since they are from Japan and go to school here in the U.S., this was a completely different experience.

They learned a lot about the economic problems in Delhi. The people who live in the slums have usually searched unsuccessfully for employment. Many are rural people who came to the city looking for work. Akiyo and Kayo said that there was a huge difference in the city between the section with the modern buildings, like the presidential building and the Embassy, and the slum. The roofs of the homes in the slum are made of trash. The rooms are small, and several families live in the same house.

Only 5% of the people living in Delhi have modern conveniences like refrigerators and telephones, Akiyo and Kayo said.

Transportation is a big issue in Delhi, because cows, which are sacred in Hinduism, walk in the middle of the street. Also, Kayo said that beggars approach motorists at red lights. Other homeless people live in the train station. The people who use public transportation have money to spare, so it is the only hope for homeless people.

Akiyo volunteered by teaching English to children of the slum. She described the building where she worked as having 1200 students total, broken up into small classrooms.

Kayo worked for Concerned Action Now (CAN), creating a database of organizations that help people. CAN provides training for people in the slums, and helps people

Akiyo Kaga, left, and Kayo Nishiguchi pose in India. Photo supplied by K. Nishiguchi.

with disabilities. According to Kayo, there are 19 million people in Delhi who have physical disabilities, including those with visual and hearing impairments, the mentally ill, and the mentally retarded. There are not enough facilities to take care of these people, and they can't get jobs.

Kayo and Akiyo seemed excited to talk about their trip and to answer questions about it. With smiles, they noted that there is good Chinese food in Delhi.

'99 Study Abroad Fair

By Jen Bartimole
Staffwriter

On Tuesday, September 21, the Study Abroad Fair was held in Ellis Ballroom. This gave students who are planning to study abroad a chance to find out more information on the countries where they want to go.

Other Juniatians were on-hand to discuss their experiences in such places as Spain, France, Greece, and England. Students who were unsure if they wanted to study abroad had the chance to browse and find out more information on what Juniata offers.

Students considering studying abroad were not only able to talk to returned Juniatians about the countries where they studied; they were able to obtain information on the types of courses that are offered, and what the schools themselves were like. The students who went abroad brought their photo albums and brochures from the colleges to give interested students more information about the school they were considering.

Unlike last year, the Study Abroad Fair was not held during the evening; rather, it was held during the afternoon, from 10 a.m. until 3 p.m. The day before the Fair, Dum Dums were put on the tables for dinner at Baker. Attached to their sticks were little banners saying, "Study Abroad Fair 10-3, Ellis Ballroom Tuesday Sept 21."

All in all, the Study Abroad Fair seemed to be a success, as many students attended. The students who studied abroad also seemed to be enjoying talking to interested students about where they studied abroad and what their experiences were.

United Cultures of Juniata College

By Mali Kambandu
Staff writer

Kwaanza, Lift Ev'ry Voice, Eid el Fitr, Rosh Hashanah and Earth Week. What do these single events have in common? They are all geared towards increasing consciousness and awareness about their various issues. They all have a cultural component to them. They are all activities organized or sponsored by student clubs, more particularly sponsored by the United Cultures of Juniata College (UCJC), a student organization that promotes cultural awareness through a variety of activities and events on campus.

UCJC is a club with members who have various cultural backgrounds. Student members are from Zambia, Cameroon, Iran, Egypt, Trinidad and Tobago, Japan, Germany, Ethiopia and the US. The purpose of UCJC is to inform and educate the student body and the Juniata College community about different cultures and traditions, and to expose them to many different cultural experiences through student activities. The club has its roots in the former African-American Student Association (AASA), another multicultural-oriented club. AASA changed its name to UCJC in 1996 when many students of different heritage joined.

Club Action

Since that time, UCJC has been a very active organization, with energetic members, putting together a wide variety of events. Activities are spread throughout the year with two major events per semester-- Kwaanza in the Fall and Eid in the Spring. The first event of the year, held in August, is usually a Spanish Fiesta, to honor the Spanish or Puerto Rican students in the group. This is a small, informal gathering where students and staff advisors sample the Spanish dishes prepared. In September the club celebrates Rosh Hashanah, the Jewish holiday that celebrates creation. Later in the Fall semester, UCJC also holds a music night, where a band comes in from State College to play music from different regions around the world. To end the semester, they celebrate Kwaanza. It is usually the last event of the semester and is held in December to tie in with its calendar date.

Following the Winter Break, the students rush to begin preparations for Eid, the Muslim celebration. Eid is probably UCJC's biggest event and it has become more popular since the first time the celebration was held in February 1996. This is partly because there are more Muslim students on campus, and the celebration includes dancing, which the club-members and those watching enjoy.

The Spring semester proves to be busier than the Fall semester because UCJC is involved in the Black History Month program, Lift Ev'ry Voice. This year, for the first time, UCJC cosponsored Earth Week activities with Conservation Club. As part of the activities, the clubs held a panel discussion and a major letter-writing campaign challenging numerous national organizations about their environmental policies.

Achievements and Accomplishments

UCJC activities have always drawn a good following. For the past few years, Eid dinner tickets sold out days before the event, and many people gather to hear to literature of African descent read at Lift Ev'ry Voice. Because of the success of the Eid dinner, UCJC was chosen to be Student Government's Spotlight Club of the Month for March last year, and UCJC was also recognized at the annual Leadership Banquet for its outstanding programming.

At a club meeting held this semester, Dan Cook-Huffman, Assistant Dean of Students and UCJC advisor, said, "The administration really appreciates what you students do through the club and we are very glad to have such a group on campus."

The Next Generation

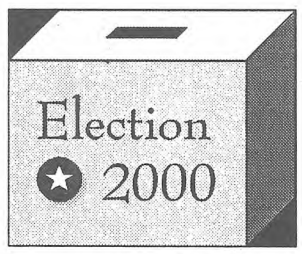
Last year, the future of the club was uncertain. With three of its members graduated and seven studying abroad for the academic year, it remains to be seen how UCJC will continue organizing its events. "It's going to be hard next year because so many good people are leaving us," said Khaled el-Zahar last semster, a junior member who fully participates in all club events. As a member remaining at JC for this year, Khaled hopes many more people will show interest in the club and become members.

For its short history, United Cultures of Juniata College has established itself in Juniata students' activities and has accomplished much. The members only hope that the flame will be carried to incoming students.

Quayle Drops Out

By Krissy Limpua
Staff Writer

"There's a time to stay and there's a time to fold. There's a time to know when to leave the stage. Thus today I am announcing that I will no longer be a candidate for president of the United States." With these words, Dan Quayle, vice-president under George Bush, withdrew from the race. Quayle was seeking the Republican nomination for president in 2000.



It was the lack of funds and support in an already crowded Republican race that caused Quayle to withdraw. Opposition included the wealthy publisher Steve Forbes, former Red Cross president Elizabeth Dole, Senator John McCain of Arizona, and the front-runner, Gov. George W. Bush of Texas, son of the former president. Quayle did not have the funds to compete with George W. Bush and Steve Forbes. So far, he raised only $3.2 million, while Bush, with record breaking fund raisers, could have nearly $100 to spend. Forbes is financing his own campaign.

Quayle's problems began when Bush entered the race, losing the support of many conservative Republicans. Though the two men share similar ideological goals, many Republicans doubted Quayle could be elected. While serving as vice president, Quayle received much attention for misspelling potato, verbal mix-ups, and criticizing the television character Murphy Brown for being an unwed mother. Generally, the public found him an easy target to laugh at. Confirmation of low support came last month when Quayle finished eighth in Iowa's Republican straw poll.

Former Republican Presidential Candidate Dan Quayle

Despite his disappointment, Dan Quayle vowed to help unite the Republican party and support their nominee for president.

Absentee Ballots Allow Students to Stay Involved

By Justin P. Miller
Politics Editor

There is a chill in the air in the early evening. A light breeze carries upon it hints of a change. Once again, as regular as the seasons, election time is upon us. For College students, this time has a special significance. For many young people, college is their first real exposure to campaigns, voting, and the electoral process. The vast majority of college students do not have the luxury of returning to their hometowns to cast their ballots. The only alternatives are to not vote at all or to vote by means of absentee balloting.

In the state of Pennsylvania, a voter who can not be present at their polling station on the day of the election must apply for an absentee ballot. This can be accomplished by calling, writing, or emailing your county election board or local chapter of civic groups such as the League of Women Voters, many of whom are listed on the Internet and in your local phonebook's governmental agency listings. The process is somewhat complex, but the election board workers are more than willing to provide assistance and instructions as needed. The deadline for absentee ballot requests in most municipalities is October 26, but the ballots must be returned by October 29, so do not delay.

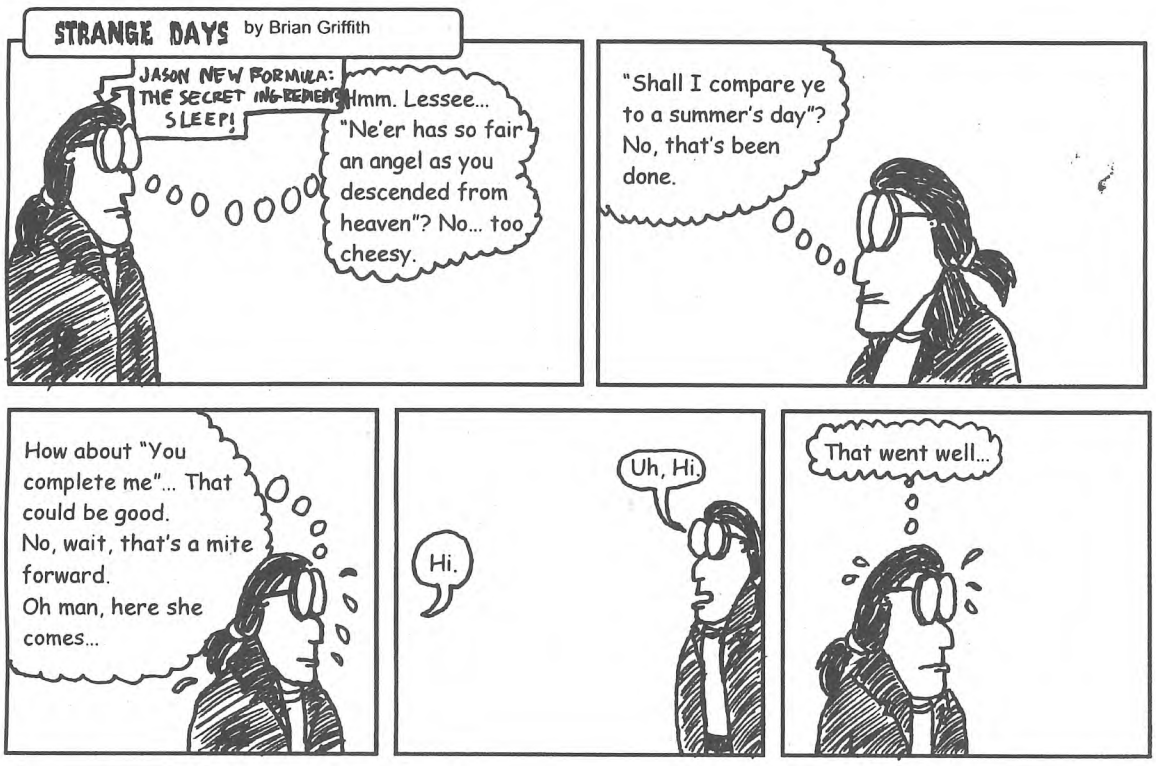
Voter apathy has been a problem in recent elections, with fewer and fewer voters actually exercising their right to choose their leaders. This trend is particularly severe among the 18-25 year old group. While this may be, as many pundits have suggested, an expression of the attitudes of today's youth, another plausible explanation being presented by a number of people is that the lower voter turnout in this age bracket is due to many of these potential voters being away from home during these years. Pennsylvania recently passed legislation to allow greater access to absentee balloting, but college students living outside their municipality have had the right to vote in this way for a long time. It is now a question of whether students will exercise their right, take the initiative, and cast an absentee ballot.

Election 2000: What You Should Know

By Brian Griffith
Staff Writer

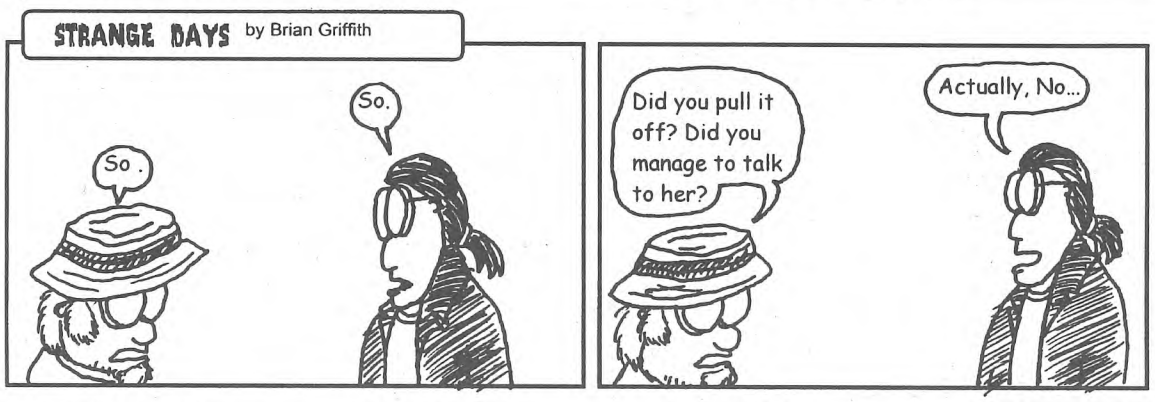
The election in November of 2000 may seem a long way off to many people. However, this election is of importance to a great many people at Juniata College, as it will be, for most, the first presidential election they are able to vote in. In the spirit of keeping informed, here's a run-down of what the booths may be seeing come next year.

This coming election season may see a more heated race than has been witnessed in a long while. With Elizabeth Dole and George W. Bush both carrying significant favor in the Republican Party, and Bill Bradley gaining on Al Gore in Democratic polls, even the major party nominations are in doubt. Combine this with a highly organized third-party presence in the form of Ross Perot's Reform Party. Notable candidates seeking the nomination for the Reform Party include Pat Buchanan, and, recently, the possibility of Donald Trump running for president under the Reform Party.



The Republican Party on the issues: George W. Bush is campaigning on a platform of educational reform, and has garnered large amounts of support from this. He supports the Voucher System, also referred to as "Opportunity Scholarships". This system, already implemented on a state level in several areas, allows for funding for home schooling and private schools. How this works is the money that would normally be spent per student in a state is presented to the parents of children in the form of a voucher, to be given to the school the child attends. If the child attends public school, the school receives the funding they would normally be allotted upon redeeming the voucher with the state government. If the child goes to a private school, the redeemed voucher goes towards their tuition, while home-schooled students have their voucher values put towards educational materials such as textbooks. Bush is arguably amongst the best funded candidates. Elizabeth Dole is also campaigning on education issues, as well as a strong emphasis on family values, agricultural issues, and small business support. Steve Forbes has also sought out the nomination, emphasizing his Flat Tax proposal, which would do away with income-based Federal taxes. He has also proposed returning the United States to the Gold Standard, under which all national currency would be backed up by the National Reserve's supply of gold bouillon.

The Democratic Party on the issues: Bill Bradley seeks the Democratic Nomination on several big-ticket issues, such as campaign finance reform, health care reform, pro-choice, and gun control. His main thrust in his campaigning is that one can become president without having to compromise one's own values. Al Gore is also campaigning on a pro-gun control platform, as well as supporting such issues as the V-chip, and stressing environmental issues heavily.



The Reform Party on the issues: Pat Buchanan has drawn a lot of fire for his recently published book, A Republic, Not an Empire, which brought forth the idea that entering World War II was perhaps not in the United States' best interests. This book generally reflects Buchanan's campaign strategy. With his slogan of "America First", he is running on an isolationist policy, which focuses on solving the country's problems as a priority over international problems. Donald Trump recently entered the arena, considering seeking the nomination himself, and with the support of former professional wrestler and present Minnesota governor, Jesse Ventura, also of the Reform Party. Ross Perot, the perennial third-party candidate, also seeks the nomination of the Reform Party, which he helped found.

New Science Center

(Continued from page 3)

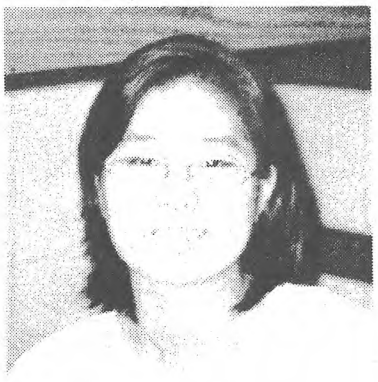
good. Juniata has done a good job at planting trees. As long as the architect has done minimal damage, I'm for it."

Other concerns include the fact that as a result of the relocation, portions of many of the science departments will be split amongst several buildings. A split in the Biology department will occur between the field research biology, which will reside in the field station and the Brumbaugh Science center primarily, and the physiological biology, which includes the medical program and will be housed entirely in the new building. Professor William Russey of the Chemistry department voiced disappointment with the arrangement, as it "disconnects" the various branches of the sciences.

Juniata Abroad

Angela Short
Contributor

It's nearly fall break, and everyone is finally settled in. For some students on campus, "settling in" is more than simply moving in a few belongings and talking with old friends. For our International Students on campus, "settling in" is making new friends, and adjusting to a whole new environment and culture. This year, Juniata has International Students from twenty-seven different countries staying on campus, and some of them had some very positive things to say about our campus.



Tim Cook visiting us from Reading, England is really enjoying his stay here at Juniata. "The campus is geared toward students more, and there are so many better facilities here for sports and even the computer network is better than at home. I think that helps give the students a better student life."
"The workload here is tougher than back home, The professors have been good. If there was anything I wasn't sure of, they've been really helpful. You get to know how the professors work, while at the same time they get to know how you work."

Mercedes Sierra-Ramirez. Photo by A. Short.

Mercedes Sierra-Ramirez, who comes to Juniata from Barcelona, Spain has found Juniata's atmosphere very relaxed and friendly. "This is a small school. I think it is really nice that you get to know everybody on campus and everyone is so nice to me, and they talk to me all the time. That's really the difference because I come from a big city, here it's more personal. I like the atmosphere. I was surprised by the fact that your advisors call you, they pay attention."

Mi hye Kim, who is originally from Korea, has also found Juniata's atmosphere very friendly and very relaxed. "I like living in the dorms. There are so many friends that you can hang out with at any time. There are so many people to share your same interests." Mi has also found the professors very helpful. "I sometimes have problems in my understanding of the language, after class I can ask the professor what I may have misunderstood. When I have questions I can always talk to them. I think that they are really open to helping you."

Mi hye Kim. Photo by A. Short.

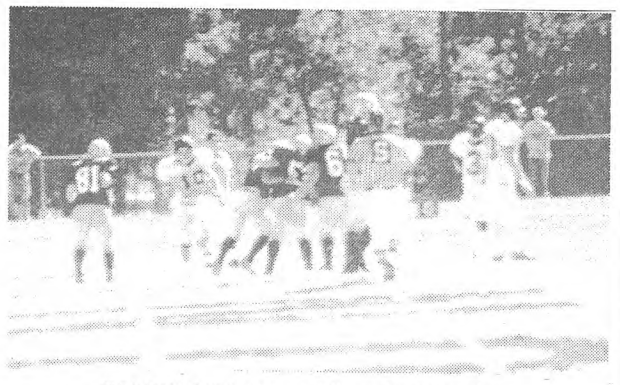
Blitzed!

Andrew Radomsky
Sports Writer

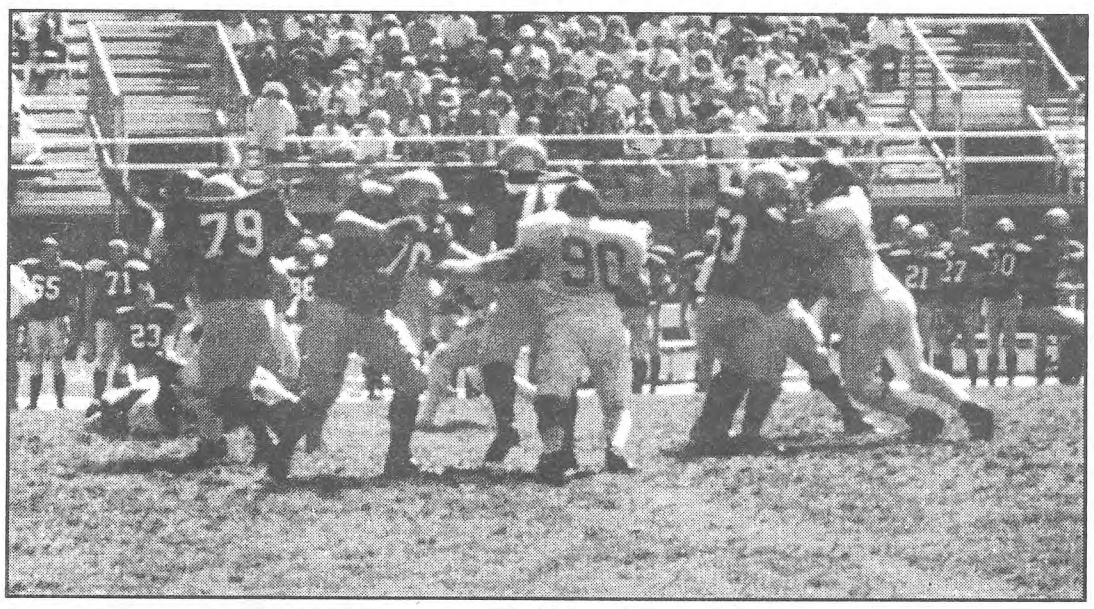


Big plays and defensive pressure led Juniata to a 38-21 defeat of Wilkes University on September 25, putting the Eagles at 2-1 for the year and ending a five-game losing streak against the Colonels.

After a scoreless first quarter Juniata got the ball in the endzone four times in the second, with two of those touchdowns covering more than 90 yards. With 4:00 off of the clock tailback Drew

Joe Montrella on the offense. Photo by J. Hanohano.

Onkst took an inside handoff from Joe Montrella, got some great blocks from his offensive lineman, and dashed 92 yards for the score. Near the end of the stanza receiver Matt Eisenberg caught a pass from Montrella, broke one tackle, and outran the remaining Colonels for a 95-yard touchdown. Saturday marked the first time in Juniata's history that the Eagles scored twice on plays of over 90 yards.



TOUCHDOWN!! Juniata! Photo by J. Hanohano.

The Eagles were just as explosive on the defensive side of the ball, blitzing their way to an incredible 11 sacks. Senior Jason Evans led the onslaught with three sacks, and Jeremy Patterson, Joe Grassi, and Dan Brady notched two each. Juniata's defense has not allowed over 300 yards of offense in a game this season, and is ranked first in the Middle Atlantic Conference as of week 3.

Montrella got his first 300 yard passing game of the season (22-38 330yds 4td), as he hooked up with Eisenberg eight times for 187 yards and two touchdowns, and Jeff Craft nine times for 112 yards and two more scores. Onkst's 131 yards on the ground marked the second time he has eclipsed the century mark in three games.

Notes: Kicker Bill Reddinger hit a 29 yard field goal to remain a perfect 5-5 on the year...
Linebacker Ed Pfursich led the Eagles in tackles for the third straight week (11)...
Onkst's 92-yard run tied the school record set by Jim Berrier in 1957...
Juniata's offensive line of Scott Schriefer, Ray Ghaner, Steve Bieber, Colin Gillen, and Randy Williams dominated Wilkes, giving up only one sack in 38 pass attempts...
Montrella was named MAC offensive player of the week for his performance.

Juniata blocking against Wilkes' defnese. Photo by J. Hanohano.

Sports Round-up

Bub Parker
Sports Information Director

WOMEN'S VOLLEYBALL (13-3, 3-0 MAC Commonwealth): Oct. 6 at Princeton; Oct. 8-9 at Lock Haven Invitational. The Eagles, ranked sixth in the September 29 American Volleyball Coaches Association (AVCA) Division III Poll. The Eagles were in action on September 22 and defeated visiting Messiah on Wednesday, 15-10, 15-10, 15-1. Sr. middle hitter Jennie Lizun (Emmaus/Emmaus) had 11 kills and six blocks (three solo), while sr. outside hitter Carrie Zeller (Laguna Beach/Laguna Beach, CA) posted 11 kills, 11 digs and three service aces. Sr. middle hitter Kristin Hershey (Dallastown/York) had nine kills and two aces, while so. outside hitter Danny Murphy (West Chicago/Winfield, IL) added 10 kills and two aces against the Falcons. Sr. setter Colleen Carver (Lakeland Regional/Ringwood, NJ) passed out 36 assists. Juniata won its 219th straight conference match with the victory. They began this week with a 15-11, 15-3, 15-13 win at Gettysburg, the third-ranked team in the NCAA Mid-Atlantic Region, on Tuesday. Juniata was paced by sr. middle hitter Kristin Hershey, who had 13 kills and six blocks. So. outside hitter Brandy Workinger (Dallastown/Dallastown) had 12 kills, while sr. outside hitter Carrie Zeller posted 12 kills and 15 digs. Fr. middle hitter Niki Mueller (Bishop Guilfoyle/Altoona) had five blocks on the night. Sr. setter Colleen Carver had 41 assists against the Bullets. Juniata hosted the 17th annual ASICS Collegiate Invitational on Friday and Saturday and captured the tournament crown for the seventh straight season. On Friday, the Eagles began play with a 15-12, 15-1, 15-7 win over 16th-ranked Ithaca. Zeller came through with 16 kills, 19 digs, two aces and one block, while Hershey provided 19 kills on 31 hitting attempts and added five digs, two aces and two blocks. Workinger also reached double figures in kills (14) and had eight digs. Carver passed out 53 assists. Juniata closed play on Friday with a 15-3, 15-2, 15-3 victory against 13th-ranked Wellesley, a program that defeated the Eagles in last year's NCAA Division III consolation match. Zeller led Juniata with 19 kills, five aces and four digs, Workinger produced 10 digs, four kills and an ace and Carver distributed 28 assists. Mueller had four kills and one block against Wellesley. On Saturday, the blue and gold high-netters defeated 11th-rated Cortland, 15-3, 15-13, 14-16, 15-6. Hershey led the Eagles with 18 kills, four digs, two aces and a block. Zeller came through with 18 digs and 14 kills, while sr. middle hitter Jennie Lizun had 12 kills and two blocks. Carver had 40 assists in the match, and Mueller was responsible for eight kills and two aces. Juniata ended the weekend with a 4-15, 15-7, 15-10, 15-8 victory against Division II California (Pa.). Zeller continued her fine performance with 19 kills and 18 digs. Hershey had 17 kills, 12 digs five blocks and two aces. Lizun contributed 10 kills, while Workinger added 15 kills and Carver handed out 63 assists. Mueller added in six kills and two rejections. Hershey and Zeller were named to the all-tournament team for their two-day performance.

MEN'S SOCCER (1-8-1, 0-2 MAC Commonwealth): Oct. 6, Messiah; Oct. 9, Allentown.
The Eagles lost on September 25, but did find some offense in the process. Juniata lost at conference foe Albright, 5-2, on Saturday, to open Middle Atlantic Conference Commonwealth action in 1999. Fr. striker Nick Wolfe (McConnellsburg/McConnellsburg) recorded two goals in the game and now has three for the season. Sr. midfielder Doug Norrie (Springfield/Flourtown) added an assist on Wolfe's second net-finder. So. goalkeeper Joel Abe (Archbishop Hoban/Akron, OH) faced 17 shots against the Lions and made seven saves. The College Hill booters lost at Middle Atlantic Conference (MAC) Commonwealth power Elizabethtown on Tuesday, 7-0. The Eagles were down, 4-0, at intermission. So. goalkeeper Joel Abe faced 21 shots on the day and made 13 saves. On Thursday, Juniata snapped a 15-game winless streak dating back to last season with a 3-1 triumph over visiting Waynesburg. It marked the highest-goal output by the Eagles since a 4-1 win over Villa Julie in the 1997 season (a span of 27 games). The blue and gold took a 2-0 lead at halftime on goals by jr. striker Scott Kucharchik (Clearfield/Clearfield) and sr. midfielder Nick Gray (Northern Potter/Mills). After the Yellow Jackets cut the margin to 2-1, fr. striker Nick Wolfe scored his team-

Let's Make Some Changes

Andrew Radomsky
Sports Writer

In the day of multi, multi-million dollar contracts, players with team loyalty no better than Benedict Arnold's, and uniforms so tacky a pimp wouldn't wear them, it's easy to see what has gone wrong in professional sports. The pros aren't the only ones, however, that need to make some changes. Simply taking a glance at recreational sports across the country shows that the "average joe" has some irritating habits that need to be taken care of . . . quickly. Here are the top five:

5) Shirts and skins - This is one of the greatest tragedies in America today. Everyone at one time or another has been involved in a pickup game where one guy called out "all right, who's going skins?" It never fails that the skins team consists of three decently built people, but the rest have more body fat than Shamu (Have you ever posted up on a guy's love handle?). End the madness. Carry both a white and a black shirt with you at all times.

4) Protective equipment - Weekend athletes seem to believe that the level of their performance rises with an increase in padding, i.e. elbow pads, knee braces, wrist braces, ankle wraps, nasal strips, headbands, wristbands, mouthpieces, back braces, etc. Believe it or not, I am not making this up; I once saw a man power-walking with a helmet on. A recent study indicated that 98.4% of all recreational athletes wear a knee brace. Why so many? During this study that same question was asked and 94.1% claimed to be preventing future injuries or protecting past injuries to their (fill in the blank) _____. ACL, MCL, meniscus, PCL, patella tendon, and/or knee cartilage. Oddly enough, only 6% of the respondents could point to their area of affliction and spell it properly. The new rule is as follows: a) Braces are only allowed on body parts where a scar from a previous surgery is clearly visible. b) Nasal strips are prohibited in all recreational sports unless your name is Jerry Rice. c) Back braces will only be worn by Wal-Mart employees who forget to take them off before competition.

3) Mountain bikes with full suspension - Now here is a problem. The important word in this phrase is mountain. Another national study concluded that 98.9% of Americans have purchased a mountain bike within the last two years. Of those studied, only four have actually gotten their tires dirty. Yes, mountain bikes are great on tough, rocky, muddy, hilly, teeth-chattering terrain, but you don't need one to ride to the 7-11 to pick up a 2-liter bottle of Shasta and a box of Mike and Ike's.

2) 1-pound dumbbells - Weightlifting is an incredibly rewarding activity for people that do it correctly. However, when you use dumbbells that are roughly the same weight as piece of pizza your chances of sculpting the perfect physique are pretty slim. "Light weights" should save themselves a lot of money in gym memberships and weightlifting equipment by buying a couple of Zagnut bars. These will give you roughly the same amount of resistance as a 1-lb. weight. If you find the weight a little bit too challenging just take a bite out of each.

1) Basketball shorts - 90's basketball "shorts" show us just how far Americans can stretch the English language. Each area playground basketball court routinely has the same amount of mesh as a Chinese fishing boat and more inseam than Wilt Chamberlain. This problem could be easily rectified by using this simple equation: inseam = shoe size/2. (However, if a player can dunk without jumping off of a chair and/or a teammate's back he may increase his inseam by 1/2 inch.)

Sports Round-Up Continued

(Continued from page 10)

leading fourth goal of the 1999 campaign off an assist from Kucharchik. Abe recorded seven saves in the outing.

WOMEN'S SOCCER (4-5, 1-4 MAC Commonwealth): Oct. 7, Washington & Jefferson; Oct. 9, Allentown

Juniata lost at home against Susquehanna on September 21, 6-0. The Eagles were out-shot 30-3 in the game. Jr. goalkeeper Marybeth Markiewicz (Derry/Derry) had 18 saves on the day, while fr. goalkeeper Emily Coyle (Fort Hill/Cumberland, MD) came off the bench to make six stops in 25 minutes of action. The Eagles bounced back on Saturday the 25th and defeated Albright, 1-0, for the fourth straight year. Juniata has never lost to the Lions and owns a 4-0-1 lead in the all-time series. Fr. striker Jen LaCount (Westmont Hilltop/Johnstown) scored a goal, her team-best seventh of the year, with 27:24 to go in the second half and the Eagles made that score hold up. Markiewicz recorded six saves in the outing and had her third shutout of the year. Juniata slipped in two Middle Atlantic Conference Commonwealth outings during the past week. The Eagles opened the seven-day stretch on Tuesday with a 9-0 loss at home to conference power Messiah. The Falcons owned a 5-0 lead at halftime. Markiewicz played the first half and posted seven saves, while fr. net-minder Emily Coyle competed in the second stanza and registered eight saves. On Saturday, the College Hill booters lost at Widener, 4-1. The Lady Pioneers were up, 3-0, at intermission, and 4-0, before the Eagles got on the board. Fr. striker Rose Bender (Cambria Heights/Carrolltown) tallied her second goal of the year off an assist from fr. striker Jen LaCount. With the assist, LaCount added to her school-record scoring season. She now has a program single-campaign standard seven goals and 16 points in 1999. Markiewicz and Coyle split the goalkeeping duties again with 13 and two saves, respectively.

WOMEN'S TENNIS (6-3, 4-2 MAC Commonwealth): Oct. 9, Widener.

The Eagles split a pair of outings on September 22 and 25 and in the process had their three-match winning streak snapped. Juniata began with a convincing 9-0 decision at home over Susquehanna on Wednesday, September 22. Sr. Erica Sussman (Williamsport/York) was a 6-2, 6-2 winner at first singles and paired up with fr. Elizabeth Osche (Acton-Boxborough/Acton, MA) to win, 8-5 in a pro-set, at first doubles. Osche posted a 6-0, 6-2 triumph at third singles. So. Lisa Dumansky (Nutley/Nutley, NJ) earned a 6-0, 6-1 victory at second singles and was teamed with jr. Jessica Wess (Forest Hills/Summerhill) at second doubles with an 8-1 triumph. Wess was a 7-5, 6-2 winner at fourth singles, while fr. Jen Thompson (Pittsford Mendon/Pittsford, NY) recorded a 6-2, 7-6 (7-2) victory at fifth singles and fr. Ann Shetter (Chambersburg/Chambersburg) posted a 6-1, 6-2 win at sixth singles. Thompson and so. Bethany Eisemann (Ephrata/Ephrata) had an 8-5 triumph at third doubles. On Saturday, September 25, Juniata fell at conference power Moravian, 6-3. Sussman won at first singles, 6-1, 5-7, 6-3, and at first doubles with Osche, 8-6. Dumansky and Wess recorded another doubles win on the second court, 8-5. The Eagles posted a pair of 5-4 wins on the week to get back into Middle Atlantic Conference playoff contention. Juniata started off with 5-4 win at Lebanon Valley on Thursday. Lisa Dumasky posted a 6-4, 6-1 win at first singles and paired with jr. Jessica Wess for an 8-6 pro-set triumph at first doubles. Jr. Victoria Hilosky (Great Valley/Malvern) was a 6-2, 6-4 winner at fourth singles. Freshmen Jen and Ann Shetter were victorious at fifth (6-0, 6-1) and sixth (6-

4, 3-6, 6-3) singles respectively. On Saturday, the blue and gold low-netters battled for a 5-4 win over visiting Albright. Sr. Erica Sussman earned a 6-4, 6-2 decision at second doubles and was teamed with fr. Elizabeth Osche for an 8-6 victory at second doubles. Wess won in her fourth-singles outing, 6-4, 6-2, while Hilosky registered a 6-2, 6-3 win at fifth singles and Thompson recorded a 6-2, 6-3 triumph in her sixth-singles showing.

FIELD HOCKEY (4-7, 2-1 MAC Commonwealth): Oct. 6 at Lebanon Valley; Oct. 9, Widener. Juniata had a tough, 1-0, loss at Dickinson on Tuesday, September 21. The Red Devils tallied a goal with 2:39 remaining in the game to record the triumph. Jr. goalie Kara Elias (GAR/Wilkes-Barre) had five saves and faced 14 shots on the day. On Saturday, September 25, Juniata raced out to a 2-0 lead over visiting Moravian, but had to come from behind to earn the 4-3 victory. It was the fourth-straight year that the Eagles knocked off the Greyhounds. Sr. forward Candy Sanders (Biglerville/Biglerville) and jr. forward Kara Ciliotta (Fairfield/Fairfield) had first half goals to give Juniata a 2-1 lead at intermission. Sr. forward Danny Young (Eastern York/Craley) tied the outing, 3-3, in the second half, before sr. back Becky Koch (Cumberland Valley/Camp Hill) found the back of the cage to put the hosts ahead for good with 2:27 remaining in the contest. Elias had seven saves in the outing. Juniata took on a pair of strong squads in the region and dropped both of its games in the process. On Tuesday, the Eagles took on an undefeated Gettysburg squad in southern Pennsylvania and lost, 2-1. Sr. back Rebecca Koch gave the blue and gold a 1-0 lead in the first half. Jr. forward Kathy McCann (Bishop McDevitt/Glenside) was credited with the assist on the score. The Bullets tied the outing before halftime and scored the game-winner with 12:26 remaining in the game. Jr. goalie Kara Elias had 22 saves and faced 25 shots. On Thursday, Juniata lost for the first time in the Middle Atlantic Conference Commonwealth this fall. The Eagles fell at Messiah, 3-0. The Falcons were up, 2-0, at intermission. Elias recorded 19 saves in the outing.

WOMEN'S CROSS COUNTRY (0-3): Oct. 9 at Dickinson Invitational. Juniata traveled to Messiah College for an invitational on Saturday, September 25, and placed seventh out of the 10 teams on hand with 195 points. Messiah won the outing with 25 markers on the day. The top finisher for the Eagles for the fourth straight week was fr. Michele Palmer (Littlestown/Littlestown), who placed 26th in the field of 73 competitors with a time of 21:49. Sr. Sarah Oakman (McConnellsburg/McConnellsburg) was 48th at the outing and clocked in at 23:36, while sr. Casey Kline (Altoona/Altoona) returned from an injury and took 52nd (24:00). The Eagles journeyed to the Connecticut College Invitational on Saturday, October 2, but did not field enough runners to post a team score at the 11-team outing. Fr. Michele Palmer was the top finisher in the Juniata camp for the fifth straight weekend. She clocked in at 22:18 and placed 13th among the field of 70 runners. Fr. Tasia Kavalek (Upper Moreland/Hatboro) was 37th on the day (24:11) and So. Jennifer Boesmiller (Miss Hall's School/Huntingdon Beach, CA) was 48th (25:19).

MEN'S CROSS COUNTRY (0-3): Oct. 9 at Dickinson Invitational.

The Eagles journeyed to the Messiah Invitational on Saturday, September 25, but did not receive a place finish with just three runners competing on the day. Juniata got a time of 28:23 from Fr. Noah Fredette (Weedsport/Weedsport, NY). He placed seventh in the field of 60 runners and was the top Eagle finisher for the fourth straight week. Jr. Scott Hobbie (The Hill School/Duncannon), who took 34th, was clocked at 31:30 on the course at Messiah. Juniata sent three competitors to the Conn. College Invitational this past Saturday and did not record a place finish at the nine-team event. Noah Fredette continued to shine in 1999. He was the top Eagle runner for the fifth consecutive week and posted a time of 29:59 to place 21st in the field of 77 athletes.

cott Hobbie took 46th in a time of 33:04.

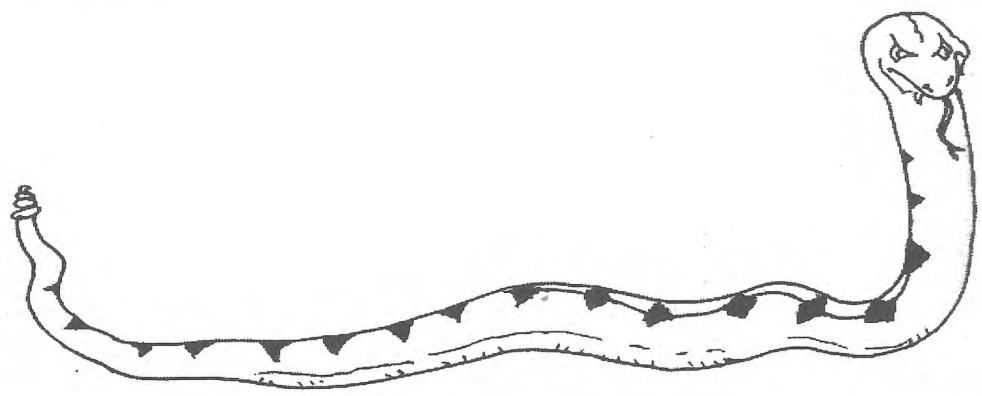
Juniata Winning Streak Up to Three

Andrew Radomsky
Sports Writer

The Juniata football team extended their winning streak to three games, their longest since 1990, with a 45-24 victory over Albright.

The Eagles (3-1) found themselves trailing 21-7 near the end of the second quarter, but the Lions couldn't hold the Joe Montrella to Matt Eisenberg combination in check. Eisenberg caught 14 passes for 314 yards and four touchdowns - all school records. Montrella finished with 437 yards and five touchdowns through the air with no interceptions.

Juniata trailed 21-7 with 0:16 left in the first half when Montrella threw a touchdown pass to Eisenberg for the second time on the day, putting Juniata down by seven at intermission. At the start of the fourth quarter the Eagles were still trailing, now 24-17, when the floodgates opened. Montrella hit Eisenberg again to tie things up, passed to Lucas Kelleher three minutes later for another score, ran the ball in himself from one yard out, and then finished up by connecting with Eisenberg once more.



In the last two games Montrella has thrown for 807 yards and nine touchdowns. Eisenberg has caught 22 passes for 501 yards and six scores.

In the second half the Juniata defense stepped up, allowed only three points. Of the Lions' eight second-half drives six ended with a punt and another was stopped on downs. Jeremy Patterson paced the defensive unit with two sacks and eight tackles, five of which were for a loss of yardage.

Juniata meets Susquehanna in a MAC Commonwealth game on Saturday. Kickoff at Knox Stadium is set for 1:30 p.m.

Attend Homecoming Games! Check www.juniata.edu/athletics for more information!

Famous Paleontologist Coming to Juniata

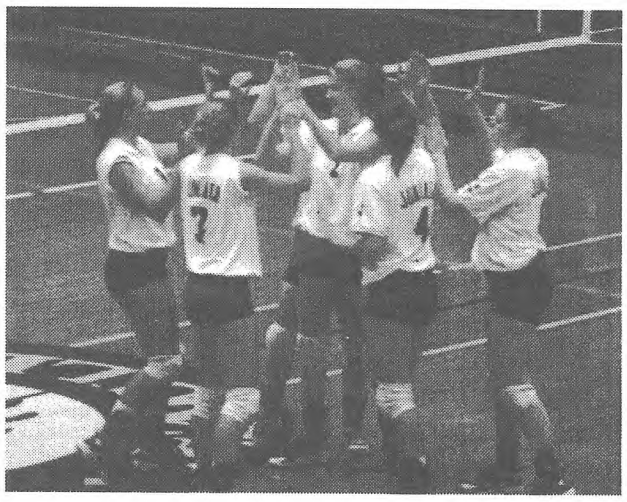
By Tatiana Zarnowski
Co-Editor in Chief

This Monday, November 15, at 7:30 p.m., Dr. Jack Horner will give a lecture entitled "Dinosaur Behavior" in Oller Hall. It will be free to the public and college community.

Dr. Horner is a very well known paleontologist. He discovered the first dinosaur embryos ever, and the first dinosaur eggs in North America. He also discovered and named the Maiasaura (which means "good mother lizard" in Greek), a dinosaur that cared for her young in nests like birds do.

Horner worked to make the movies Jurassic Park and The Lost World more realistic in their depiction of dinosaur behavior.

Jack Horner. Photo courtesy of Bruce Selyem,, Museum of the Rockies.



Horner is the Curator of Paleontology at the Museum of the Rockies at Montana State University. Dr. Margaret Towne, J. Omar Good Visiting Professor, met him there when she was working on her doctoral thesis. The Trustees of the J. Omar Good Fund are financing Horner's visit.

Dr. Towne is friends with Horner, and says that he is "a very easygoing person." He is also very interested in children, and enjoys answering their many questions about dinosaurs. He will get a chance to do this here when 800 schoolchildren from area schools visit Juniata for Horner's lecture "Would T-Rex Really Eat Ya?"

Students may have other chances to hear Dr. Horner speak during his stay here. Dr. Phillip Earenfight and Dr. Paula Wagoner are organizing a video presentation of "The Curse of the T-Rex," which is about the controversy surrounding the largest Tyrannosaurus Rex skeleton ever found. It will be shown on Monday, November 15 in Alumni Hall. Following the video Dr. Horner will be available to answer questions. Dr. Horner will also visit a few classes on Monday and Tuesday in order to give lectures.

Following his visit here, Dr. Horner will travel to Penn State University to give a lecture.

Congratulations to the Women's Volleyball Team!

Juniata Students Join SOA Protest

By Rebekah Helsel
Contributor

This Friday, November 19th through Monday, November 22nd, 35 Juniata College students and professors will travel to Ft. Benning, Georgia to join 10,000 others in the largest non-violent protest since the Vietnam War. The demonstration to close US Army School of the Americas (SOA) will draw people of all ages from across the US, Canada, Latin America, and elsewhere. The SOA is combat training school for Latin American military.

The November 20-21 event marks the 10th anniversary of the brutal massacre of six Jesuit priests their housekeeper and her 15-year-old daughter in El Salvador. The United Nations truth Commission report cited 26 officers responsible for the massacre. Nineteen of the officers cited were graduates of the School of the Americas.

Last year more than 7,000 people gathered in solidarity outside the gates of Fort Benning. Over 2,000 crossed onto the base in a solemn funeral procession bearing symbolic coffins and crosses with the names of victims of SOA violence. In the past, those who have crossed onto Ft. Benning property have been arrested, and some have served federal prison sentences for non-violent civil disobedience. This year, over 5,000 people are expected to risk arrest, including a number of people from the Juniata group.

The US Army School of the Americas has trained over 60,000 Latin American soldiers in commando tactics, military intelligence, psychological operations, and other civilian-targeted warfare. The School has been dubbed the "School of Assassins" by a Panamanian newspaper due to the well-documented trail of blood and suffering in every country where SOA graduates have returned. Legislation to close the School is pending in the US Congress.

The Peace and Conflict Studies Club is sponsoring the SOA trip for Juniata students and professors. Those attending the protest have met to organize and prepare since early September. The group has completed non-violence and civil disobedience training, taught by Professor Andy Murray.

Goodbye, Trees?

By Andrew Magaro
Contributor

Trees. Where would we be without them? They provide oxygen, homes for animals, and enrich the soil they stand on. Why is it, then, that Juniata can't seem to get trees of any decent size to grow on its campus?

Perhaps it is because as soon as it looks like the trees are going to be a decent size, they are cut down to make room for 'progress'. This seems to be an ongoing trend for the college, and it is a shame. There are many examples in the recent history of this college of a disrespect for trees. Last year, the new athletic fields were constructed on Winton Hill, which used to be covered in trees. South Parking lot, which was done up over the summer, has taken the place of several trees that used to grace the lawn outside of South.

That brings up another point. Sher*wood*. This dorm is in fact named after the defunct forest that used to be in its place, but is now just a casualty in Juniata's relentless search for 'progress'.

And now, as we stand on the brink of the 21st century, the third millennium, Juniata is preparing to cut down more trees. The lawn outside of South, with its beautiful old trees, is next to get the Juniata ax (or chain saw, perhaps).

Now, saplings are one thing. But the trees that are going to be demolished by the construction of the science center are worth saving! These are old, beautiful trees, the kind that add character to our campus and oxygen to our lungs.

Surely our benevolent administration realizes that a campus is not just about buildings. A campus is a sense of community, and this community has to extend to our arboreal friends as well as our academic ones.

If you care about the oxygen you breathe, the squirrels that pelt you with acorns in the fall, and the Juniata community as a whole, don't let this science center happen! We need to show the administration that enough is enough, we will not stand for the further deforestation of our beautiful campus.

"Guns or Drugs: You Choose"

By Alan Smithee
Staff Writer

The bumper sticker read, "God made man equal, but Col. COLT made some more equal than others."

Most amusing. Especially in light of the Colt's Manufacturing Co.'s recent announcement that it will no longer manufacture handguns for consumers--thus marking the official beginning of the end of America's love affair with guns.

We are talking here about the company founded by old Sam Colt, inventor of the six-shooter known out West as the "Peacemaker." We are talking about the guy whose fancy pearl handles and silver inlay wooed the hearts of presidents and kings.

Colt helped make some more equal than others all right. Thanks to Col. Colt Ulysses S. Grant became president of the United States instead of Sitting Bull. Noble Third World warriors, armed with flintlocks and spears, were subjugated for decades to the better-armed bravado of both the Old World and the New.

Now, Colt's Manufacturing Co. wants out. Executives say the company will close seven of its consumer lines--accounting for approximately 30 percent of its sales--and focus mainly on the law-enforcement and military markets. It is doing this because of the financial uncertainty created by the growing number of pending class-action lawsuits against gun makers.

There are 28 such suits pending as local jurisdictions and organizations such as the NAACP attempt to use the same legal strategy that brought the tobacco industry to heel against the firearms industry.

Similar charges against Big Tobacco seemed ludicrous when they were first leveled. But when lawyers began digging into the industry's files they found evidence that tobacco companies targeted young people, spiked cigarettes with addictive nicotine, and lied repeatedly about the safety of their products.

What will lawyers find when they begin rooting through the gun industry's files?

Will they find that some manufacturers consciously target urban gangbangers while others shoot for the paramilitary crowd in the suburbs? That some manufacturers pay for product placements in movies, just as auto manufacturers and the soft-drink industry pay to have their products conspicuously displayed? That the industry conducted secret research that concluded that the growth market for gun makers was not with collectors and sportsmen but drug dealers? That, my children, will be the end to peacemakers on the streets. Maybe then we will have real peace.

Alfarata's Gross Mistake

Let's face it, some clubs on campus have it easier than others. Some clubs have to worry about the physical safety of their members, while others don't.

AWOL (Alternative Ways of Loving) the Lesbian, Gay, Bisexual, Ally group on campus is one of those groups that does have to worry about things like safety. AWOL, in the face of extreme criticism from the intolerant student body, has strived to make itself known at Juniata.

Last year, AWOL took its biggest step ever in holding a "Speak Out" on the steps of Ellis Hall. The purpose of the event was to make a point of the mass number of hate crimes that had been happening recently. Seniors Susan Topping, Brett Shull, and Jessica Wilson had the opportunity to see the semi-clandestine club they had joined as freshmen finally making itself noticed. It was the proudest moment AWOL had ever seen. Now, other clubs, to the delight of AWOL, are even imitating the "Speak Out" style for their own causes.

The problem comes in this year's Alfarata, the Juniata College yearbook. Somewhere toward the middle of the yearbook is a double page spread that gives full credit of the AWOL "Speak Out" to the Communications Club. While AWOL appreciates the Communications Club, they didn't put in the time and effort, nor the substantial risk in organizing this event. Once again, AWOL has been subjugated in its efforts.

AWOL sees this as a mistake on part of the Alfarata staff, especially Jessica Yutzey, the sole person in charge of this edition of the Alfarata. AWOL, unlike other groups, will be unable to look fondly on their collegiate accomplishment in the future, because they were not given credit for this event.

The college yearbook staff has a responsibility to accurately document the academic year, through pictures and written pieces. When it fails at this task it then has a responsibility to fix those faults.

As Co-Presidents of AWOL, we are asking that

(Continued on page 3)

Letter to the Editor

Printed the October 8, 1999, edition of The Juniatian was an article I found quite intriguing.

The facet of the article that initially caught my eye was the fact that it wasn't an article at all, but a list of information I had to piece together in order to determine the significance. The article of which I am speaking is "Juniata Crime Stats," by Nicole Bowen.

Several aspects of this "article" invited me to respond. As I already stated, the mere list of information was the first thing I noticed. As an educated person, I look to newspapers, magazines, and television news programs to give me detailed information about news and to inform me of why said news is meaningful to me. I expect the journalist to organize the information in a coherent fashion, not simply list it and allow me to make the connections.

This article means nothing to me. It simply announces the "crimes" that have occured at Juniata College in the past month. At no point does the journalist attempt to put these facts into perspective by comparing them to those of other colleges or the Juniata College crime scene of the past.

The haphazard list of information leads me to believe that this journalist, and the editors for that matter, had a bulk of interesting information, but had no idea how to use it. Thus, the raw data was printed, and the audience was asked to interpret it at will.

The second part of the article that caught my attention were two of the "crime stats" listed in the data. The first: "9-9-99; Cloister Hall; one injury from storming of the arch consisting of a cut above the eye--male." The second: "9-23-99; South Hall; student passed out after giving blood--female." Perhaps I am not as educated as I would like to believe, but at no point in my experiences have I understood that participating in Storming of the Arch and donating blood were crimes. And if they are, maybe we should beef up security at Storming and Blood Drives to ensure that would-be participants are arrested upon engaging in these activities.

I am appalled at the state of our college newspaper. I pride myself on knowing that I go to a college consisting of bright, intelligent people who I know will be the leaders of tomorrow. But it is difficult to convey that idea to outsiders when our newspaper can't even take accurate facts and compile them into a logical and informative article.

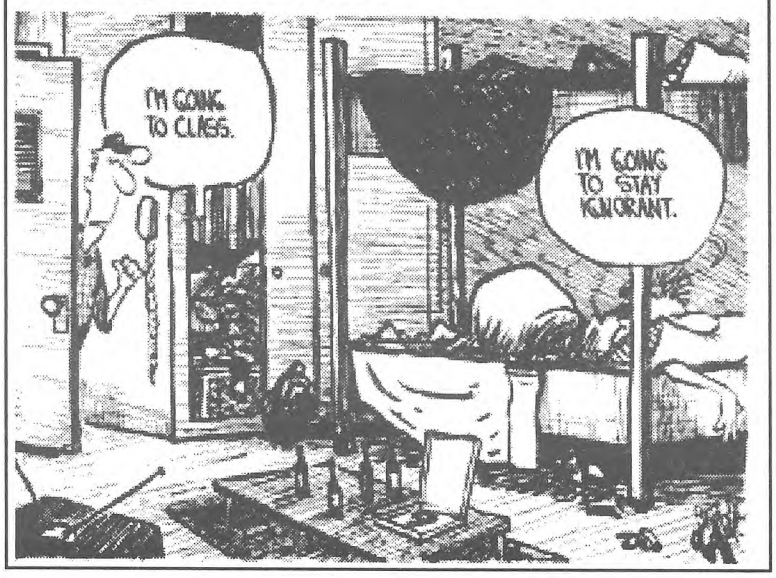
Colleen McLaughlin
Communication-Management POE
2001

(Editor's response follows.)

Editor's Response

Colleen,

Thank you for reading and responding to *The Juniatian*. We welcome your opinions.



The article entitled "Juniata Crime Stats" is intended to resemble a Police Report, similar to what you might find in newspapers from larger schools. It was not meant to be an article. We told Nicole to gather the information and present it in a readable form. It is intended to be a feature in every issue of the paper. Perhaps in the future we will have enough people to do a full article on Crime at Juniata College.

Not every event that goes through the Security Office is a crime. However, we think that medical emergencies are still worthy of being noted in this section. The title appears to be misleading. We will change that in the future.

As a Communications and Management POE, perhaps you would be interested in coming to one of our meetings. Alot of effort is put into the creation and publication of this paper, and we would appreciate your input on a regular basis.

Megan Brown
Co-Editor-in-Chief

Cartoon by Patrick O'Connor

Errors Found in Yearbook

(Continued from Page 2)

Ms. Yutzey and the Alfarata staff do this. We would like to see some sort of reparation to the yearbook in the form of an insert, along with the copy of a written apology to the members of AWOL. We do not feel that this is too much to ask after the gross mistake that the Yearbook staff has performed.

Sincerely,
Adam Nelson
Megan Brown
Co-Presidents of AWOL

Alfarata's Response

The Alfarata staff works diligently every year to produce a quality yearbook for the Juniata community. We try to cover as many events, academic departments, sports, and organizations as completely as possible.
Upon receiving last year's book, members of AWOL confronted the Alfarata staff about the way their organization was covered. AWOL believes that the Alfarata has wrongly credited their Speak Out event to the Communications Club and has asked us to remedy the situation.

On behalf of the Alfarata staff, I would like to clarify our position on this issue. After examining the page that AWOL believed there was an error on, the executive staff decided that no mistake was made. Because of the limited space in the book and the number of organizations at Juniata, we are unable to dedicate a double page spread to each club. As a result, we disperse the club coverage throughout both the academic and organizations sections.
The article on the page AWOL is referring to was written by a member of the Communications Club. She mentioned their participation in the Soap Box speeches and Bailey Oratorical, but made no reference to their club sponsoring the Speak Out event. Photos of Speak Out were included on this page because the event's focus was to effectively communicate opinions, not because it was to be credited to another club, as AWOL accuses.

Additionally, in the past, AWOL has asked to not be explicitly included in the book and until now, that request had not been changed. Each year, club presidents receive a notice from the yearbook encouraging them to schedule a group photo and also provide the staff with a calendar of events so that we can cover them properly. Without this information, it is virtually impossible for us to effectively detail each club's activities. It should be noted that last year, AWOL did not respond to this request. We urge every organization on campus to take these actions, so that this reaction does not occur again.

The Alfarata did not mean in anyway to wrongly recognize AWOL or its purposes. As requested by AWOL, letters have been written to the club and its advisor. The Alfarata staff thanks AWOL for bringing our attention to this issue so that we can properly recognize the organization and their efforts in future books.

Sincerely,

Jessica Yutzey
1998-99 Alfarata Editor

Student Government Cancels Eid Dinner

By Rosalie Rodriguez
Contributor

Refusal of the Student government to allocate funds to United Cultures of Juniata College means that many of the well-attended cultural functions they put together will not be taking place this year.

United Cultures of Juniata College (UCJC) has established themselves as one of the most active clubs on campus. Activities such as Kwaanza, Rosh Hashana, Africa Day and Eid Dinner are beginning to become Juniata traditions in themselves. All of these are put together by members of the club for the entire campus to enjoy at a low cost, or none at all.

Eid dinner alone provides a full evening of entertainment from dinner and dancing to art and traditional prayers for over one-hundred and fifty members of the Juniata community. This festival, which takes about two full months of preparation from every member of the club, also brings in guests from around the country, including Grier school and Penn State, as well as much media attention.

Last year UCJC was awarded a certificate from student government--being the "club in the spotlight"--as well as a place in the Huntingdon newspaper and a spot on the nightly news for its multi-cultural efforts.

Despite all of the praise, the very same student government is refusing to allocate sufficient funds to the club because their budget was turned in a few hours late.

The form, which was ready for submission that morning, was awaiting one last signature from their adviser, Dan Cook-Huffman. Cook-Huffman was in meetings all day and was unable to be reached. After several attempts to reach him, Co-president, Rosalie Rodriguez, was told to leave the form with his secretary and it would get turned in.

Later that evening Dan Cook-Huffman phoned Dawn Scialabba and informed her of the situation and assured her he was bringing the form himself.

Despite affirmations from Scialabba, student president, Brandon Zlupko, refused to consider the budget, claiming that Cook-Huffman was "just making excuses" for the "irresponsibility" of the club's officers. He said that he could not accept the form also because it would make student government appear "weak" and "lax in its rules."

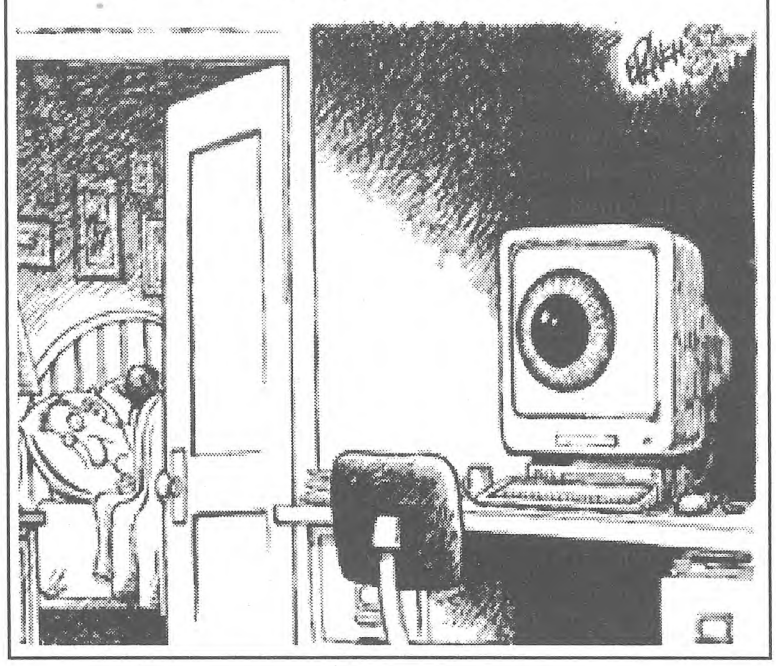
After much debate UCJC was told they could petition for funds this year, of which they received less than a quarter of what it would cost to run Eid dinner alone.

As a result the festivities that normally draw much needed cultural diversity to Juniata's campus will not be taking place this year. You can thank your Student Government president for that.

Student Government's Response

Last March, campus organizations that wished to receive Student Government funding were required to submit budget request forms, which were reviewed by the Student Government Executive Board. The Executive Board then recommended an allocation to the Senate based upon set criteria, including need, intended activities, and contribution to fund-raising. The Senate then discussed and approved all allocations. All but nine clubs completed this process and received a Student Government allocation last spring.

This fall, Student Government offered a new opportunity for campus organizations to receive funding. In September, the Executive Board decided to allow the nine remaining clubs to present budget requests and receive allocations. In fairness to the organizations that submitted budgets on time, the nine clubs were warned that they would be allocated less money than they would have been given in the spring. Also, the clubs were required to explain their budget requests to the Executive Board by preparing twenty-minute presentations of their goals and intended spending. In addition to the criteria mentioned previously, the Executive Board based their allocation decisions upon the organization and enthusiasm of the presenters.



In total, campus organizations requested over $100,000 for this academic year, while Student Government is allocated $50,000 to divide among clubs. Obviously, the process of determining an amount for each club is subjective, but the Executive Board was elected to make these decisions. The goal is not to judge or punish clubs, but to allocate money in a fair and organized manner to responsible, active groups. Each individual organization contributes to Juniata's community, and Student Government makes every effort to assist clubs, financially or otherwise. Active clubs may receive additional money from Student Government by applying to be a Spotlight Club or by requesting Student Government's assistance in finding money from other sources.

The Student Government Executive Board was elected to represent Juniata students and welcomes constructive criticism from students to improve their function. However, the Board consists of four individuals, listed as authors of this letter, all of whom contribute equally to decisions. Each member brings distinct values and opinions to discussion and this diversity helps the Board to make decisions representative of the student body. We make choices as a group, we are praised for our accomplishments as a group, and we expect to be criticized for our decisions as a group.

If you have concerns, questions, or suggestions, please visit the Student Government office, e-mail any of the Board members, or call x3313. Your contributions will help the Executive Board to represent you as effectively as possible.

Unlock Your Voice

By Indi Petranek
News Editor

Unlock Your Voice, an annual event put on by the Women in Literature class, was held on Thursday, November 4 in the faculty lounge.

The event had standing room only as several students read moving pieces of work written by themselves or by well-known women authors such as Maya Angelou and Amy Tan.

The whole class participated in the project, though only a few people spoke in front of the crowd.

Homemade treats were in abundance, and the participants ended up bringing many of them home.

Many moving pieces brought several people in the room to tears, and although the group was mostly female, a fair number of men were present as well.

The event brought awareness to the campus about many women authors who the people who attended might not otherwise have heard.

The History of Mountain Day Revealed

By Megan Brown
Co-Editor in Chief

Before Juniata College had a President, a Board of Trustees, or anywhere near 1,200 students, Juniata College had Smallpox. Classes were closed and students were sent home until the epidemic ended. Thus began Mountain Day.

According to *Truth Sets Free*, a history of Juniata College written by Earl Kaylor, Classes were cancelled from January 12th, 18__ until February 25th, 18__. Three students were not able to return home to their homes in Ohio. To escape from the Smallpox epidemic in Huntingdon, they took up residence in an old house in what is now Trough Creek State Park.

The Mountain Day, as it currently exists, is a pleasant surprise. All students think that they know the formula for deciding when it is going to be. They watch the forcasts, they check the sports schedules, they try to figure out when Dr. Kepple is going to be in town. According to Dawn Scialabba, Director of Campus Activities, it does not have to be on any specific day of the week, nor does the President have to be on campus. The only predictor of Mountain Day is the weather.

Mountain Day was not always a spontaneous event. Prior to 1984, the day was set from year to year. Due to slackening attendance because of too many drunken celebrations the night before, the planning was changed.

Mountain Day, this year, fell on October 7th. Students, faculty, administration, and staff gathered at Canoe Creek State Park for a day of flag football, ultimate frisbee, sunbathing, and talking.

Students Speak at "Soapbox Speeches"

By Megan Brown
Co-Editor in Chief

The eighth annual Soapbox speeches were held on October 28 at 4:00 PM, on Detweiler Plaza. The theme was "Fear and Enchantment." There were 13 speakers, whose topics varied from the fear of growing up to children's worlds of enchantment.

Parisha Shah speaks. Photo by M. Brown.

The speakers were introduced by Dr. Grace Fala, professor of Communications, and Theresa May, the President of the Communications Club.

Students Jeffery Bellomo and Sarah Worley, both Seniors, presented themselves as the incarnations of Fear and Enchantment. Stephanie Durnford, class of 2003, spoke on the fear of the unknown, particularly the religion of Wicca.

Parisha Shah, class of 2001, spoke on embarrassment of appearing fearful, and encouraged the audience to enjoy the thrill of being afraid. Bernadette Joslin, a senior, shared her fear of the future and the loss of her college friends.

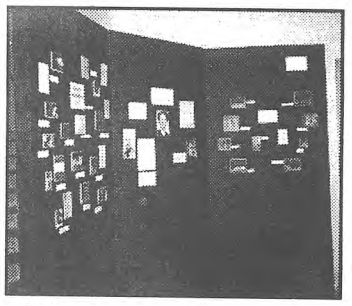
Loni Fultz, a freshman, spoke of her mother's Multiple Sclerosis and her fear of losing her. Salvatore Casanas, a senior, spoke on a fear of involvement and persuaded the audience to get involved in campus activities. Matthew Peters, a junior, warned the audience about assuming that something has a higher quality because of a larger price tag.

Stephanie Durnford speaking. Photo by M. Brown.

Kristen Fallen, class of 2003, spoke of her grandmother's fear of recovery after an accident. Carissa Giglioti, class of 2000, spoke of Stevie Nicks songs, and how well they voiced fears of loneliness and fears of growing and changing.

Bernadette Joslin speaking. Photo by M. Brown

Loni Fultz speaking. Photo by M. Brown.



Nathan Sobel, a sophomore, told us how to overcome our fears. Colleen McLaughlin, class of 2001, spoke on combining our adult worlds with the enchanted worlds of children.

Erika Drosnock, a senior, read a speech written by a friend of hers. It was about a fear of not finding inner happiness because of uninformed choices and always living for the future.

The soapbox speeches were created to give students a chance to voice their opinions on campus. The topic for next year will be Politics, because it will be a presidential election.

The Senior Women beat all other contenders to become Champions of the Tug-of-War. Scialabba said that since the women began to compete with the men, the women have won every time.

The tradition of Mountain Day is also shared with Smith College, MA; Mt. Holyoke College, MA; Berry College, GA; Williams College, DC; and Berea College, KY. They range from being similar to Juniata College's Alumni Weekend to all students getting a day off to climb a mountain and have lunch on top of it.

At this year's play, there was a reception for Esther Doyle, who directed plays at Juniata for many years. This display was made to honor her. Photo by M. Brown.

As Your Mom Likes It

By Indi Petranek
News Editor

William Shakespeare's "As You Like It" was the fall show this year at Juniata college. Directed by James Elliot and designed by Cathy Norton, the show was a modern interpretation of the classic comedy.

The set was an abstract design, with a simple angled dais with a four-foot drop in the back. Single bulbs from cords from the grid to act both as lights in the city and trees in the forest. Other abstract props included umbrellas and balloons.

The long hours at rehearsal and performances brought closeness to the cast after eight weeks of rehearsal.

Different chants became common place in Oller hall, where practice was held. Harley-Davidsons became a topic that was shouted across the auditorium. Along with "As your mom likes it" as an ice-breaker before performances.

The show got good reviews from most everyone though some had problems with the minimalist set.

The show was also entered in a competition between colleges in Pennsylvania. The results from this competition will be known in early December.

Suddenly, Two Years Ago

Nicole Bowen
Co-Events Editor

Approximately two years ago Eric Hammar wrote a final paper for his class Rhetoric of Film, which won him a second place in a student writing competition.

The Speech Communication Association of Pennsylvania also known as SCAP, held a student writing competition for undergraduates and graduates. This year the 60th annual convention was held in Bloomsburg, PA on October 15, 1999. Eric went to this convention to present his paper as a part of a panel discussion. In his discussion to the board he talked about his paper in a variety of ways. For example, if he were to revise his paper now what would the changes be and why. The theme of the conference was Communication for a New Millennium: Our Art, Technology, and Pedagogy.

Eric took an in-depth look at the film Suddenly, Last Summer, starring Liz Taylor and Katherine Hepburn. This movie was created from a play that Tennessee Willams wrote. It is about the life of a gay man who was portrayed as a monster in the movie. They never showed his whole body, just parts, like his arms and hands.

This is the second time that Eric submitted his rhetorical paper that was titled "Suddenly, Last Summer: Hollywood's Not So Secret Agenda." Dr. Donna Weimer, who is professor of Rhetoric of Film, was the one who persuaded Eric to submit his paper.

Eric who is very humble about his award is at the same time very pleased with the recognition of his hard work and devotion to writing. He hopes that in the future to find employment with a news radio show in Philadelphia, or basically something that has to do with public broadcasting or theater. If in the future he is employed in the field of public broadcasting he hopes to create questions for interviews on the show, or writing compositions for the program. Here at Juniata Eric is in his fifth year picking up Communications and theater as his P.O.E. While attending college Eric is involved in the theater program, and is currently in the production As You Like It. He is also involved in Kvasir and writes as a staff member for the Juniatian.

Class Competitions Prove Fun Successes

Nicole Stahl
Co-Events Editor

"Think, evolve, act," the Juniata College motto, was the theme of this year's Homecoming. Classes competed in three ways.

The classes were all asked to make a banner based on this theme. The banners were judged and the winners were as follows, first place went to the sophomore class, second place went to the freshman class, third place to the senior class, and fourth place went to the junior class.

The next competition was the Canned Food Drive. This is a yearly event for students. The cans are collected and then donated. The winning class was the seniors. Following the seniors were the freshman, juniors, and sophomores, respectively.

The main class competition for Homecoming week is the Lip Sync Competition and Pep Rally. Senior, Miranda Gresko was the MC of the night. This year, Jamie White, Physics Professor, Margaret Towne, Evangelical Christianity Professor, and Residence Directors, Sarah Walsh and Shannon Price judged the performances.

The senior class acts out their skit. Photo by J. Ramquist.

The competition was based upon criteria including lip synching ability and number of participating students.

The senior class won the Lip Sync competition followed by the juniors, sophomores, and freshman.

The winning class of the Lip Sync Competition was then asked to perform their skit at the half time show of the football game. Also during half time, winners of the Community Service Awards were announced and the cheerleaders performed.

During the Pep Rally and Lip Sync, sports team captains and representatives said a few encouraging words about their teams. The cheerleaders and Dance Ensemble both entertained the audience.

U.S. Supreme Court To Hear Student's Case About Fee Use

Anthony Jewell
Knight Ridder Newspapers

MADISON, Wis. -- A lawsuit by a student who objected to the use of his student fees to support liberal campus groups at the University of Wisconsin could change the way fees are spent on college campuses nationwide.

The U.S. Supreme Court, which is to hear the case Tuesday, will decide whether public universities can use mandatory student activity fees to subsidize campus groups that pursue political goals.

"The decision will affect, literally, every college and university in this country," said Brady Williamson, who teaches constitutional law at the University of Wisconsin-Madison.

The suit was filed in 1996 by then-law student Scott Southworth. A federal trial judge and the 7th U.S. Circuit Court of Appeals ruled in his favor that the subsidies unlawfully force some students to subsidize views they find objectionable.

If the high court upholds those rulings, it could bar schools from using student fees to pay for politically active groups, or it could issue a less sweeping remedy allowing students to opt

What's Skip Gotta Say?

By Matthew Berry
Staff Writer
(A creation of Howard Stern running over Dear Abby)

Question:
Dear Skip,

What do I do if I ever fall in love with one of the "card-swipers" that works at Baker? I'll give ya a little hint of who it is; her name starts with "M", ends in "Y", and has two letters in between (and one of them is a vowel). Her beauty totally enthralls me every time my stomach drags me to her working destination and I am witness to her sight. And when she swipes the card……oh, oh,….. my Lord!! I can't even say what happens to me!!!

Please, oh dearest Skipper, I need your help as I have never needed any others!!! What should I do?

Yours truly,
A concerned Juniata student

Response:
To my devoted peer,

The words that you write of are ones concerning the grandest of all sensations; you speak to me of the great emotion known to us as love. It is funny, for as I know of nearly everything there is in this small world of Huntingdon, your concern dwells into one subject matter of which I know very little (if anything) about. But alas, in your time of trouble and desperation, you have written to me, asking my assistance. And for you, my peer, for you, my equal, I shall attempt to reason forth an answer.

You tell me of this fair angel and all I can think of is beauty. I know reasons not, but images of grace and spectacle can not help but to spring to my mind. I picture these representations and my mind tells me of whom you speak. Whether it due to the sheer amazement of my intellect or of pure luck when guessing, I know that you speak of Mary. But fear not my friend, for I too have felt these feelings toward her sight. Amazed with her beauty since my first day at this learning institution four years ago, I can only say one thing; I've been there. I know of what you mean; I can, how you say, "sympathize."

But alas, I must tell you the sad truth; your quest for her beauty, anyone's quest to obtain her, is utterly hopeless. Of what I have learned in my existence at Juniata, few things I am absolutely certain of, but one is this: no man has been born that can win the heart of Mary. She is too grand, her beauty is too great.

My friend, I am sorry to tell you, but, simply put, Mary's beauty places her above mankind.

To ask Skipper a question: Send all questions to the Juniatian via box 667 or e-mail juniatian@juniata.edu.

New Professor Joins the Psychology Department

By Erika Grimminger
Staff Writer

A recent addition to the professional staff, Dr. David R. Widman, joins as an assistant professor of Psychology. He received his B.S. in Psychology from the University of Wyoming and his Ph.D. in Biopsychology from the University at Albany, State University of New York.

Dr. Widman decided to become a professor because he wanted to have contact with students, especially undergraduates. He noticed that at his old college, the professors did not act as mentors to the undergraduates. Therefore Dr. Widman decided to create that status with his students.

Psychology was an early choice for Dr. Widman. In fact he made the decision in junior high school. At first he wanted to work at a clinic, but then changed his mind. Dr. Widman enjoys Biopsychology, and really enjoys working with lab rats.

"I enjoy learning about human behavior, especially the things that we do that do not make sense," Dr. Widman said.

Dr. Widman is married and has a ten-month-old daughter. His favorite hobby includes playing with the computer. Dr. Widman comes originally from Wyoming. In his opinion, the best thing about Pennsylvania is the fall. He said that in Wyoming, fall lasts only about three days.

His advice to students entering the psychology field is to have dedication and to prepare to go beyond undergraduate.

"It is a long process, but it is well worth it in the end. Make sure that psychology is what you want to do," Dr. Widman said.

U.S. Supreme Court To Hear Student's Case About Fee Use

(Continued from Page 6)

out of giving money to groups they find objectionable.

University spokeswoman Sharyn Wisniewski said the school appealed the rulings because the fees help pay for a system that gives students a forum to discuss and deal with issues that might not exist without fee-supported groups.The fee in question is $15 per semester for each of the 38,000 students. The money is distributed through student committees elected by the student body.

Southworth and several other law students with conservative political views had challenged the funneling of the fee proceeds to 18 organizations on the Madison campus. Among groups they objected to were International Socialist Organization; Campus Lesbian, Gay, Bisexual Center; and an AIDS support network.

"We didn't believe that any student should have to pay fees that went to groups that they objected to on a personal, ideological or religious basis," said Southworth, now a lawyer and an aide to a state senator.

"It's inconsequential whether they're liberal or conservative," he said. "We'd support liberal students who object to their fees going to conservative groups."

"This affects everybody on campus," said Adam Klaus, chairman of the Associated Students of Madison, the group that distributes the fees to campus groups.

The Supreme Court ruled in 1995 that public universities and colleges couldn't create a "public forum" for students and then refuse to subsidize some student groups because of their viewpoint. That decision said the University of Virginia wrongly refused to subsidize a student-run Christian magazine.

Based on that ruling, the 7th Circuit said in the Southworth case that it is imperative that students not be forced to pay for political and ideological organizations "if the university cannot discriminate in the disburse ent of funds."

R.H.A. Rocks the Vote

Nicole Bowen
Co-Events Editor

Since 1998, residents of Juniata College Residence Hall Association, in an order to meet the needs of students on campus, have tried to find a way to install hand dryers and soap dispensers in the residence hall bathrooms.

Last year R.H.A. wrote a proposal to Kathy Collins, the Director of Residential Life and Assistant Dean of Students. It then was sent to Jack Linetty, the director of facilities at the time.

The proposal was denied because Linetty assumed that the proposal wanted a soap dispenser for each sink and a hand dryer for each bathroom. With the most economical cost of hand dryers being $200 each, it was estimated that the total cost for the hand dryers would be $6,800. The cost of soap dispensers being $25 each, the total cost would amount to $4,175.

The price of the installment not including the labor cost was too expensive of an investment for the college.

Although the proposal was denied last semester, students still persistently asked for the installment of these items this semester.

Due to the concern of the students, the residence hall association formed a committee in order to address the situation. As a result of the committee meeting it was decided to have a campus-wide vote.

After receiving 24% participation of votes from the student body, the conclusion proved to be in favor of both hand dryers and soap dispensers.

With a total of 266 replies, 248 students replied "yes" to soap dispensers and 17 "no". A total of 212 students replied "yes", 2 "unsure", and 52 "no" to hand dryers.

RHA is currently still discussing what the next step will be for the committee. Any student who is interested, please e-mail rha@juniata.edu, or attend the R.H.A. meetings, Tuesdays at 9pm in the faculty lounge.

Adventures In Recycling

By Matt Wolfe
Columnist

Being a new member to the college student demographic, I figured it was time I started acting more like a college student. You know, taking up idealistic causes that you will abandon after you turn 30. Therefore, I decided I would start recycling more. I've always recycled aluminum cans, glass, plastic bottles and newspaper, but I've never recycled the more abstract things like cardboard, paper and people. Wait, not people. Sorry, I was just watching that Charlton Heston movie Soylent Green.

Anyway, every time I went to put something in my trashcan I stopped to see if it was something that I could recycle. Pepsi can, recyclable. Broken window from my room, recyclable. Note from Kathy Collins wanting a meeting, recyclable. Now that I had sorted all of my trash, life was good.

But wait, something was wrong. Sure, I had single-handedly saved the environment (or so I was told), but now I had piles of recyclables everywhere. I was just about to throw in the towel when my RA walked past and said, "Hey you idiot, but those in the proper receptacle!" (Yes, my RA really does sound that technical.) No wonder, I had forgot the next step: Take the recyclables to the end of the hall!

So I grabbed the glass pile, cut myself a few times, and made my to the end of the hall. I was just about to put the glass in the bin when Wanda asked, "Uh, you did wash those out, right?" Doh! Flagged at the last moment.

So I walked down two flights of stairs to the basement kitchen, in order to wash out what used to be considered garbage. One cut finger and two soapy eyes later the task was done. I carried them back up to my floor and put them in the correct bin. Then I realized that I could have put them in the bin on the first floor. Doh! Doh!

Well, so far my little tryout of recycling was a complete wash. Next I decided to take care of the towering stack of papers that resided on my floor. The only problem was there is no bin for paper on my floor. The only bin for paper is in the main lounge of North, which is a floor down. I picked up the stack and started down the hall, ducking hall sports as I went. Going down the stairs was even more fun, since someone was carrying up a couch and I ran square into it. The papers scattered everywhere.

After playing 52 paper pick-up, I violently threw them into the bin and stormed upstairs. I took the rest of the 'recyclables', threw them in the trash, and screamed out the window, "Recycling is evil! Don't do it! Recycling is evil!"

I guess the moral of the story is, recycling is too hard. No, recycling is evil. No, that's not it either. I guess there really is no moral to this story, just like the best writing of all time, Maxim!

What is Recycling?

By Jennifer Bartimole
Staff Writer

Not all materials are able to be recycled with the technology available now, and not all materials have characteristics that make them valuable in recycling. However, for those materials that are valuable in recycling, there are many different ways to recycle them. They include drop-off centers, curbside collections, and buy-back centers.

In recycling by curbside collections, household residents separate their recyclable materials from their non-recyclable materials, and place their recyclable materials on the curbside.

Buy-back centers and drop-off centers are very similar. They facilities where residents can bring their recyclable materials, and deposit them into separate bins. They are usually located in public or commercial parking lots, transfer stations, or landfills. However, there is one major difference between the buy-back and drop-off centers. Buy-back centers pay for they recyclables dropped off, usually based on the total weight of the individual materials dropped off. Drop-off centers, on the other hand, are usually unattended, relying on consumer goodwill.

There are different methods for recycling different materials. For example, paper can be divided into four different categories for recycling.

--**Corrugated paper** includes brown paper grocery bags, old corrugated boxes and shipping sacks. This category represents 55% of all the paper recovered.

--**Newspapers** are separated from other types of paper, and then recycled. It is important that the newspapers are separated from other paper because when they are mixed, they have much less value as a recyclable material.

--**High-grade papers** are copying machine papers and other high quality papers that are collected from printing plants. They can be used to produce the highest quality of recycled paper.

--**Mixed papers** are different grades and colors of paper used in tissue, writing papers and recycled paperboard.

Recycling aluminum is so efficient that the process of collecting the cans, melting them and making them into new cans ready for distribution can take place in as little as 90 days. Each year, nearly 100 billion aluminum beverage cans are manufactured just in the U.S., and approximately 64% of these cans are recycled. Each aluminum can that is sold on the market has about 54%-recycled aluminum. Other aluminum products that can be recycled are foil, pie plates, and lawn chair tubing.

Another method of recycling is composting, which is a natural form of recycling. Living microbes combine with oxygen to cause the materials in the compost to decompose, resulting in a nutrient-rich soil additive. A common form of compost is yard waste, such as grass clippings and leaves. Many materials are able to be recycled and there are many methods of recycling them. Methods such as curbside collection, which do not involve leaving your home, make recycling simple.

Why Should we Recycle?

By Jenn Bartimole
Staff Writer

When trash is disposed of, most of it is deposited into landfills. However, because there is such a large amount of trash generated, landfills are quickly running out of space. This is not the only problem. Landfills that are not properly managed can pose serious health risks because they can pollute the ground water and the soil. They are also the breeding grounds for disease-carrying animals such as rats and lice (http://www.history.rochester.edu/class/recycle).

Landfills are not the only manner in which trash is disposed of. There are also incinerators. They reduce the amount of landfill space required by 60-70% and they can be used to generate steam and/or electricity. However, this method of waste reduction is very expensive, and the ash produced is toxic (http://www.history.rochester.edu/class/recycle).

In order to resolve this, we must recycle. According to the Environmental Protection Agency's website (www.epa.gov/epaoswer/non-hw/muncpl/reduce.htm), recycling converts materials that would otherwise be wasted into valuable resources. There are many benefits to recycling. Recycling conserves resources for our children's futures, saves energy, reduces the need for new landfills and incinerators, and creates jobs.

Recycling also diverts materials away from landfills and incinerators. In 1990, recycling diverted 34 million tons of material away from landfills and incinerators. In 1996, recycling diverted 57 million tons, a 67% increase from 1990. Also in 1996, more than 7,000 curbside collection programs served about half of our country's population. These curbside programs, combined with drop-off and buy-back centers, resulted in a 27% diversion of the nation's solid waste.

Recent Environmentalism at Juniata

By Nick Stanislowski
Staff Writer

The goal for this community to become more environmentally aware and responsible is shared by several groups within Juniata. Though small, these groups have accomplished much both recently and in the past.

Until last year, it was believed that recycling was not a problem at all within Juniata. It was with rumors that recycling was not going on, and the formation of the Recycling Committee two years ago that the problem of recycling was addressed. The recycling committee began by proving that recycling was not actually happening and going to President Thomas Kepple, and William Alexander. A proposal was written, telling of the current amount of recycling bins around the campus, the fact that most materials were being stored but not recycled (cardboard aparently, was recycled), and the need for actions to fix the problem. More recycling bins with signs were needed, and recycling materials would need to be taken from storage to a recycling center. A faculty education program was also in the proposal, with speakers Jennifer Lawrence, Joshua Bower, and Elaine Kneller (the current president of the recycling committee). With the proposal, new bins were ordered and the physical plant was to have recycling ready by the start of the new school year. Currently the recycling committee is working on increasing the amount of types of materials that can be recycled, a waste audit, which means a survey of what is being recycled and whether it is contaminated, recycling competitions between floors, the recycling of various objects like batteries, paint, and hazardous materials, discounts at Muddy Run and the Cyber Cafe for bringing your own mugs, and a budget, as there is little money right now. It is also uncertain whether glass or plastic is currently recycled.

The Conservation Club, led by Ann Parry, works for similar goals. It is responsible for the cleanups of Muddy Run and other natural areas. Unfortunately, there has been little participation from students during these cleanups. Students seem to be interested but generally noncommital, as most of the garbage polluting Muddy Run is a result of students. The Conservation Club is also working to turn the area behind the field hockey field into a wetland. This would stabalize the river with the plants absorbing water, providing flood control. The Conservation club is also working to include environmental issues into the school mission statement.

Currently, both organizations are involved in something called the Environmental Task Force. It seems that the amount of members in each group is relatively small compared to other clubs. Though these groups have accomplished much, they need more participation. Students are needed to do more than merely be interested.

Discussion Held about Six Billion Day

By Tatiana Zarnowski
Co-Editor in Chief

In honor of Six Billion Day, a PBS documentary entitled "Six Billion and Beyond" was shown on October 13, 1999 at 8 p.m. The documentary gave facts about the population growth in several countries.

Following the documentary there was a discussion led by Dr. Paula Martin of the Environmental Science and Studies Department. Dr. Andy Murray of Peace and Conflict Studies and Dr. Doug Glazier of the Biology Department also participated in the discussion. Participants were invited to share their opinions.

Sometime during the month of October, the population of the world reached six billion. There has been more population growth since 1950 than in the history of man, the documentary said. Despite this fact, Dr. Paula Martin said that in the 1960s, the population was projected to increase much more than it has, so six billion is actually good news compared to the previous predictions.

Even so, Dr. Doug Glazier said, the more people there are on the earth, the less freedom we will have. According to Glazier, some people think that increasing the population can improve the economy. But it also leads to more consumption, which hurts in the long run.

Consumption of resources, especially in the U.S., was a topic of much concern at the discussion. Martin said that there is not enough production in the world to allow everyone in the world to eat like Americans do.

Junior Amanda Albright feels guilty that Americans consume so much. "I almost feel like I'm being unfair to the world," she said.

Senior Diane Brannon does not feel guilty about American consumption. She said, "In my society, I am permitted to work for" these things. She added that although she will consume as much as she wishes to without guilt, she is not going to add to the population growth because she does not plan to have children.

Glazier simplified the struggle to keep the population under control by reducing it to a question of sex. "I think it's a battle between our minds and our gonads."

PBS Documentary Focuses on Population Growth

The PBS special "Six Billion and Beyond" that was shown on October 13, 1999, highlighted some of the problems of population growth that certain countries are seeing, and steps that they are taking to remedy those problems.

In Kenya, there is a radio show for young people to get information and advice about issues such as pregnancy. According to the documentary, one in six young adults in Kenya have HIV. However, there are so many other problems, such as poverty, that it is difficult to get young people to pay attention to HIV education.

India has education programs for pregnant women, many of whom are illiterate. India is expected to surpass China in population within the next forty years.

China's one-child per family policy was the focus of the documentary's portion on China. The young woman who they interviewed said that most people in China agree with the one-child policy. The penalties for those who do not follow it are heavy. The fine for having an extra child is about twice the annual income of a family in China. The Chinese officials who they interviewed for the special denied that selective abortion of females occurs in their country. However, infant boys are more common than infant girls are.

Italy's problem is the opposite of many countries. A change in the status of women means that many are marrying later, and having children later, if at all. There is a shortage of young people in Italy.

For the United States, one of the most widespread problems is consumption. People in the U.S. consume much more than their share of the world's resources. Browsville, Texas, is the fastest growing city in the U.S.

The documentary said that the choices made by young people ages 15 to 24 (especially young women) will determine how much the population continues to grow.

Old Traditions Continued as New Traditions Begin

By Nicole Stahl
Events Editor

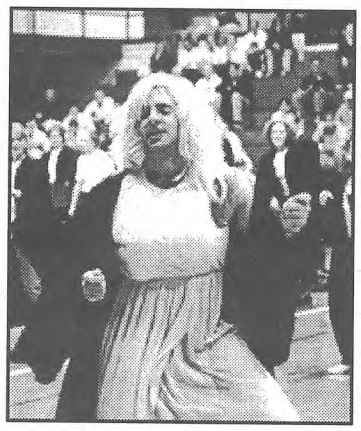
What do you remember most about Homecoming 1998--Lip Sync or a dance? Were your answers mostly those that are college traditions? What do you remember most about Homecoming 1999? Hopefully many more responses come to mind.

A highlight of many people's Homecoming Weekend was seeing Fuel in concert. Photo. T. Zarnowski.

Homecoming 1999 was a great success. Numerous students contributed their time and talents to help the Juniata community have an enjoyable week.

The Juniata Activities Board (JAB) is in charge of the Homecoming Committee. This committee plans and coordinates activities for the week. This year, in addition to the Homecoming Committee, JAB also had a Concert Committee to bring in FUEL.

The Homecoming Committee brought the student body Baker Free Food and Fun Night, Wednesday October 6th. Baker was open for an extended hour, from 10 to 11 p.m., for free food, games, and music. Game winners included the majority of Second Floor Tussey Hall who won a game of Pictionary. Many students also played Twister.



Thursday, October 7th was the traditional Lip Sync and Pep Rally in Memorial Gym. All of the classes competed in this event.

Another tradition of Homecoming week is the Annual Campus Ministry Coffeehouse. This yearly event is held the Friday of Homecoming week.

The Saturday of Homecoming week is the main day for college sports. This year, the majority of fall teams were home. The women's volleyball team and the cross country teams were the only away games.

The football team took on Susquehanna. At the game, representatives from the JAB Homecoming Committee handed out candy to those in attendance. Fans for all other sporting events also received candy.

Saturday Night, October 9th, brought a new event to the Juniata campus. A major concert was held in Memorial Gym. FUEL, with special guests Fuzzland and Bif Naked, was brought on behalf of both a student demand and the new student activities fee. The concert was a near sell out thanks to the many students, alumni, and friends in attendance. Many students were pleased about this year's Homecoming. Many old traditions were continued and hopefully many new traditions were started.

JoAnn deArmas Wallace: JC's First Dean of International Programs

By Ruth Bernhardt
Social/Cultural editor

As many JC students are now preparing their applications to study abroad in the coming year they will soon get to know the staff at the International Programs Office. A new addition to the IPO this year is Joann deArmas Wallace. Ms. Wallace is the first ever dean of international programs here at JC. Previously, a faculty member held the position of head of the IPO for three years before passing it on. This year, however, Ms. Wallace will fill the role more permanently. The change marks a new commitment to expanding the opportunities extended toward students.

Ms. Wallace's qualifications include experience as a director of international education programs at Right State University, Antioch College and DePauw University. She also writes lectures and organizes workshops on such topics as liability and international education exchange, cross-cultural orientation, women's issues in international education, and many others.

During the first semester here at JC, Ms. Wallace will mostly be determining the capabilities of the program before making any changes. According to Ms. Wallace, Juniata has many positive attributes that other small colleges lack. JC is very fortunate in the level of faculty interest in study abroad. The faculty is one of the greatest influences in the students' decision to study abroad. The college also has many connections abroad to a variety of places. Because of these connections more students from other countries know about Juniata and come here to learn.

In very simplified terms, the role of the IPO is to find ways to broaden the horizons of the students. "My dream would not be that everybody goes abroad, but that no student gets out of Juniata without at some point or another either being the "other" or encountering the "other" in a really significant way," says Wallace. Experiencing the "other" means coming in contact with people who are, or being the person who is, different. It means recognizing another way of thinking and acting.

Succeeding in a world culture requires the ability to deal with people who are different. Even if that difference is just between someone who grew up in a rural environment and someone who lived in a city, the need to understand others is vital.

Ms. Wallace would like to encourage all students to stop by the International Programs Office and discuss the options available in study abroad.

Race Unity Forum Held Homecoming Weekend

By Ruth Bernhardt
Social/Cultural Editor

While many people were enjoying the football game Homecoming weekend, a small group met in the Faculty Lounge of Ellis Hall for an open discussion about racial issues of the campus and community. Two gentlemen from Schenectady, New York, led the forum and the race unity workshop earlier that day.

John Gomez, a member of the Baha'i faith, and Franklin Whitson, a security designer who has worked with special education students for several years, are founding members of the Zebra Club. The Zebra Club is simply a group of friends of many different races and backgrounds dedicated to celebrating all ways of life. The two men have been leading discussions on race unity for many years, and the Juniata College community was honored to welcome them.

In attendance at the event were such JC faculty and staff as Debra Kirchhof-Glazier, Doug Glazier, Kris Clarkson, JoAnn deArmas Wallace, and others. Members from the community also participated, such as Esther Trice, the regional chapter president of the NAACP.

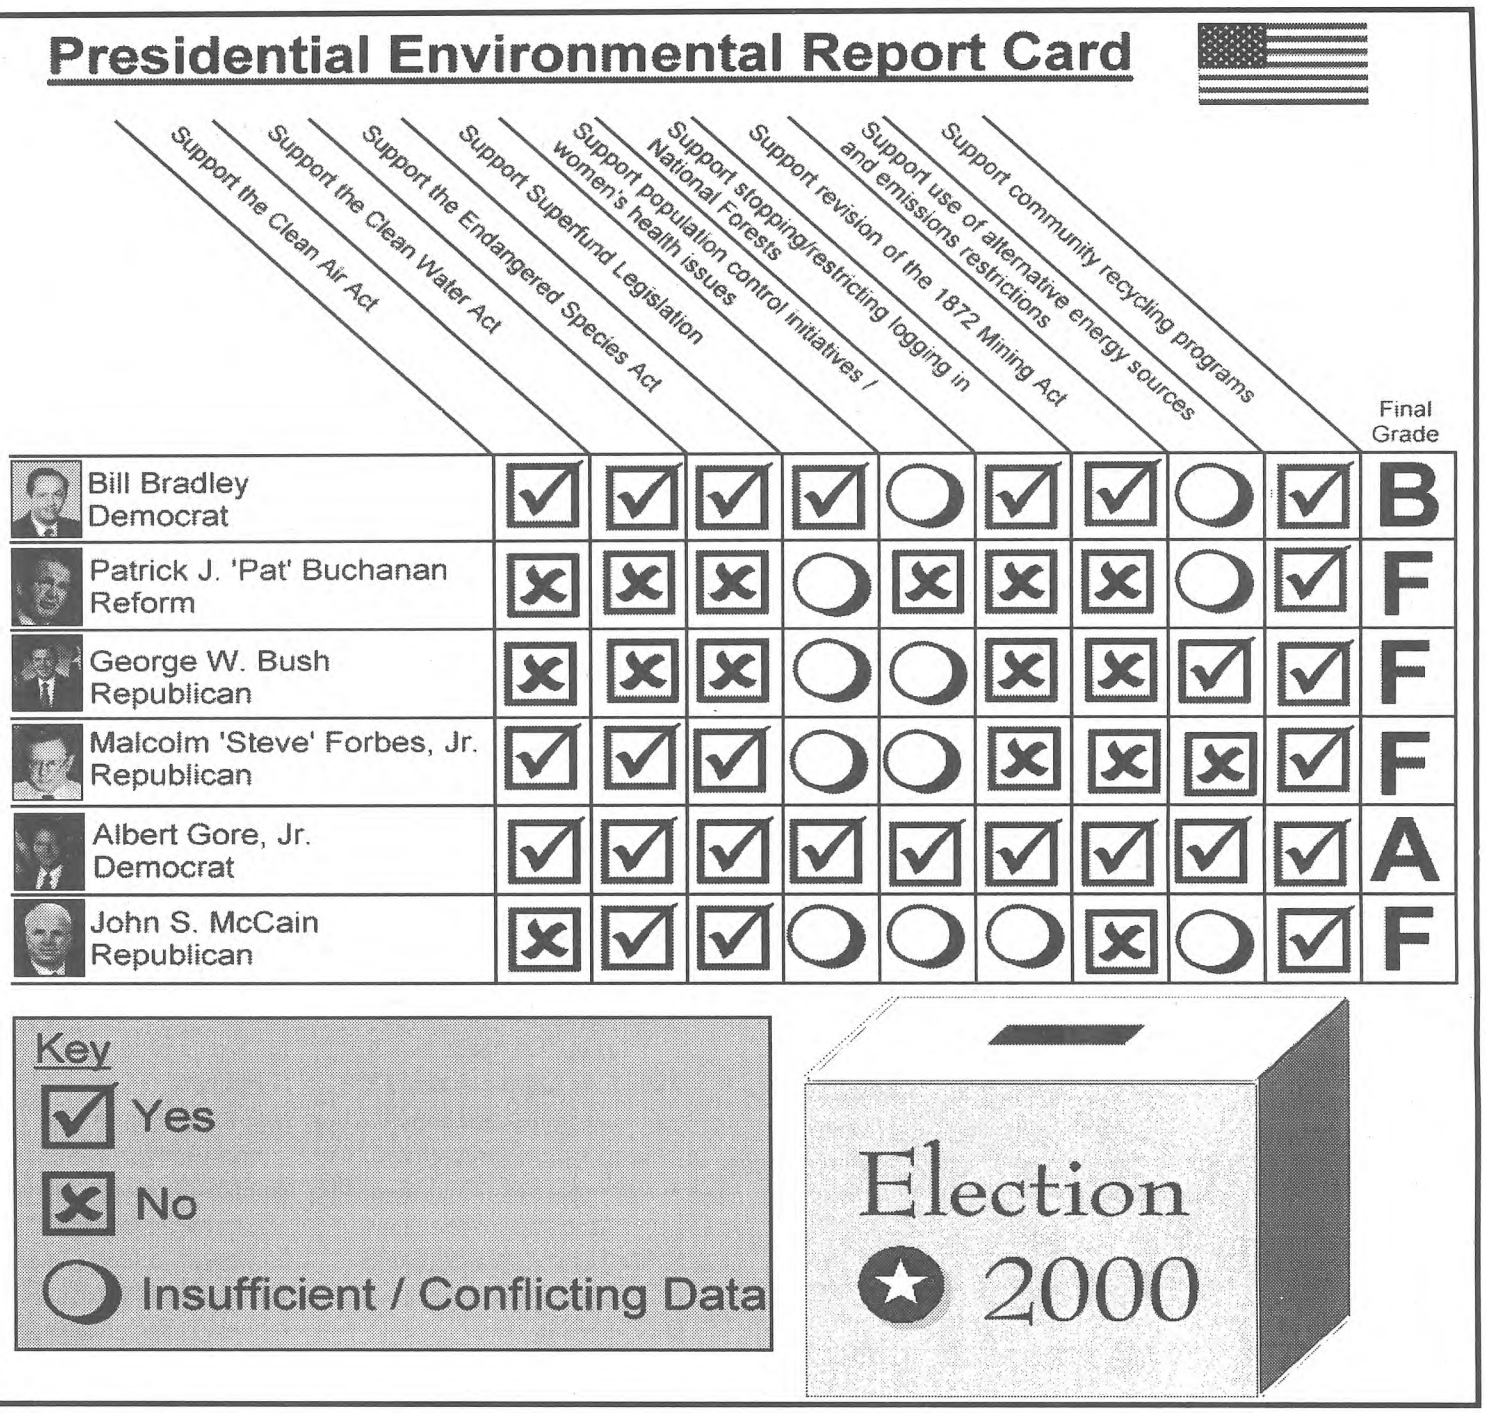
The purpose of the forum was to explore practical ways to promote race unity at the college and in the community. The group first brainstormed goals for JC, such as tuning the content of the cultural analysis courses to reflect more diversity, forming a conflict resolution team for the campus, having a greater visibility of minority professors and promoting an environment supportive of diversity. After prioritizing these goals the group was challenged to find ways to implement them.

Race unity is an issue for the entire community, not just a few individuals with the inclination to do something about it. Perhaps not many are aware of the problems minorities face here in Huntingdon. Organizations such as the Baha'i club and AWOL are designed to educate those who do not. However, these organizations require the participation of the community to make changes in the way we view others. The challenge to improve the relationship between members of the community goes out to all. Show your support and participate in these organizations.

Self-Segregation Less Likely On College Campuses These Days, Study Finds

TMS Campus

PONTIAC, Mich. (TMS) -- College students are less likely to segregate themselves according to race than they once were, according to a study recently released by the Ford Foundation.



Heightened campus diversity and programs supporting a variety of cultures and ethnic groups have helped prompt many students to cross barriers in academic, political and social situations, states the report, titled "Campus Diversity and Student Self-Segregation: Separating Myth From Facts."

"A racially and ethnically diverse university student body has far-ranging and significant benefits for all students, non-minorities and minorities alike," Patricia Grin, a psychology professor at the University of Michigan, states in the report.

Students of similar race and ethnic or cultural backgrounds still tend to cluster on campuses to deal with unfamiliar surroundings -- but those bonds don't prevent them from reaching out to others in different communities, researchers said.

Donald Johnson, director of Wayne State University's student center, said the report supports many of his own observations.

"One of the things that has always amazed me about this building is the civility between people," he told The Oakland Press of Pontiac, Mich. "It's not that students don't segregate. Still, that is normal behavior. But it's not unusual to find three different cultures sitting at the same table arguing, discussing, studying or walking in groups."

(The 2000 Presidential Election is more than a year away, but it is not too early to begin evaluating the candidates. As the first part in a series of features analyzing the candidates and their positions on the issues that most concern college students, The Juniatian Politics page presents the first in our series of Presidential Report Cards: the Environment.)

Ridge Unveils $500M Environmental Program

Krissy Lipuma
Staff Writer

Pennsylvania Governor Tom Ridge recently unveiled a $500 million program to help preserve Pennsylvania's environment. The new program, Growing Greener, is design to protect watersheds and open spaces, reclaim abandon mines and wells, invest in parks and other forms of environmental recreation, and discourage urban sprawl. The plan calls for municipalities to take action, and the share their duties and expenses.

Growing Greener grew out of Ridge's 21st Century Environment Commission, an assembly of people ranging from environmentalists to business leaders, who work together to improve the environment. The commission began in July 1997, with the purpose of recommending methods and policies to improve environmental quality and measure its results. It provided the governor with the basis for Growing Greener.

Growing Greener is one of the first new environmental initiatives in Pennsylvania in nearly thirty years. The program focuses on protecting resources and using them wisely, rather than attempting to correct past abuses. It is supported by a variety of organizations, ranging from the Conservation and Natural Resources Advisory Council to the Pennsylvania Electric Association to the Pennsylvania Coal Association.

The Environmental Task Forces

By Ejlal Alalawi
Features Editor

The Environmental Task Forces are processes designed to economize the use of energy on campus and thereafter in the nation. It was a bunch of ideas in the beginning that got pulled together last semester into a definite goal.

"We are looking for a different way that Juniata can manage the environmental system," said Dr. Paula Martin, Associate Professor of Environmental Sciences and Chair of the Environmental Science & Studies Department. Here at Juniata, it started as a student interest. Irene Mulvihill, one of the group leaders, directed activities last year. She had experience in that area. Attending conferences about sustainability was one of the first steps.

The school has been working on recycling, energy use, and the emission of wastes. There are a number of ways for keeping track of all this. Irene Mulvihill did several surveys on material uses on campus. One of the committees she cooperated with is the recycling committee. The college has been promoting recycling, because it is needed and is a valuable task force. The recycling at the beginning was short term and included such materials as aluminum, paper, and plastic bottles.

Many schools and universities that adopted some environmental task forces proved a success. Recycling, for example cut costs. Buffalo University is now saving about $750,000 per year of energy costs. All it needs is to focus on energy use whenever and wherever possible. "And it will reduce the cost to both the college and the environment," suggested Dr. Martin.

Environmental management is very important, and efficient material use saves a lot of money. Although it's only in its early stages, a multi-year program has begun for recycling and energy conservation. There will be consultants at different buildings for a better management. An example is the exploratory investigation that the University of Buffalo directed. "The organizers collected data on every building, from biggest to smallest on campus," said Dr. Martin. And they ran competitions too, to reduce the use of energy, which is a very smart way to encourage energy conservation. Another example is Georgia Tech University and the University of New Hampshire, which gave the sustainability initiative of environmental management. By collecting information and running tests, managers can see whether a system will work or not.

Another thing that the Environmental Task Forces is going to accomplish is communication between the different bodies that make up the college; between student, staff, and faculty for example. They are working on how to get something accomplished with the least labor involved. It will get all the different groups to talk and discuss issues: students versus staff versus faculty. "There will be coordination." And that's going to be a long time process, said Dr. Martin, considering how the student body changes every four years. That all requires will power, effort, and patience.

Juniata College to Receive $18 Million Gift

External Relations

The William J. von Liebig Foundation of Naples, Florida announced today a gift of $18 million to Juniata College. The funds will support programs in the sciences at the private liberal arts college located in Huntingdon, Pennsylvania.

William J. von Liebig, a 1946 graduate of Juniata and a member of the college's board of trustees created the Foundation to support his philanthropic interests.

According to Dr. Thomas R. Kepple Jr., Juniata's president, Mr. von Liebig's gift is the largest ever received by the college and one of the largest ever to be presented to a Pennsylvania private, liberal arts college. The gift will allow for dramatic new opportunities for students studying science at Juniata.

"Through his generous gift," President Kepple noted, "Mr. von Liebig has affirmed his support of our educational mission at Juniata, while at the same time strengthening the entire Huntingdon region by supporting one of the areas largest employers.

"Mr. von Liebig has listened vary carefully to our plan to shift the educational paradigm at Juniata from a fact-based method of teaching and learning, to an inquiry-based method," Kepple said. "In effect what we are doing is moving students beyond thinking about science in the classroom to actually becoming scientists in our classrooms and labs.

Fourteen million dollars will be used to partially fund construction of the $20 million William J. von Liebig Center for Science, which will house the college's chemistry and biology programs. The additional $4 million will be used to fund ongoing programs and faculty positions, including the William J. von Liebig Chair in Biomedical Sciences. The gift will also provide funding for continuing, collaborative research projects being undertaken by faculty and students.

"The truly unfortunate part of this very exciting time for us at Juniata College," the president noted, "is that Mr. von Liebig will not be here to see the dramatic impact that his gift will have on the college and the region."

William von Liebig died on Sunday, February 21 after an extended illness. The news of his death came to members of the Juniata community as the ongoing details of the gift were being worked out.

"We were deeply saddened by the news of Mr. von Liebig's death last February," Kepple said. "He was a remarkable man, an entrepreneur, and a risk-taker, a brilliant scientist and inventor. He was someone to look up to and admire. He was a wonderful role-model and a true American hero."

Von Liebig enrolled in Juniata's pre-med program after graduating from Huntingdon High School in 1941. World War II, however, forced von Liebig to put his college career on hold. He was called into service as a command pilot with the U.S. Eighth Air Force. He successfully completed 25 missions flying a B-24 Liberator over Germany, earning the Distinguished Flying Cross, the Air Medal with three Oak Leaf Clusters and the Presidential Citation with Oak Leaf Cluster. Following his discharge from the service, he was determined to return to Huntingdon to complete his pre-med degree at Juniata.

With the completion of his degree in 1946, von Liebig opted to forego medical school and chose instead to work toward the master's degree in textile engineering at the Philadelphia College of Textiles. He earned his degree in 1949 and went on to earn the M.B.A. from New York University in 1959.

Following a successful stint with a large corporation in New York, von Liebig went to work at the Meadox Weaving Company, at the time a small company in need of a solid manager. He was charged with developing a suitable product that would be applicable for use in the human circulatory system. He received much acclaim for his work, which aided in the 1950s development and manufacture of a woven dacron tubing for blood vessel replacement. The product was critical in the development of today's cardiac-related surgical procedures.

In 1961, von Liebig bought the Meadox Weaving Company for $25,000. The company evolved into a corporation valued in excess of several hundred million dollars. The company is internationally recognized for its production of vascular prosthesis products.

The company grew over time to include the development of cardiovascular products as well. Meadox Medicals served as the chief supplier of sewing rings for heart valves and was responsible for the development of a new heart valve, synthetic ligaments, and catheters.

With the purchase of a company in Denmark in the 1980s, von Liebig expanded the focus of his company to include an international products division, producing more than 5,000 different catheters to be used in every part of the body. An estimated seven million people are alive today because of the work of his company.

In addition to his leadership in Meadox Medicals, Inc., Mr. von Liebig established The von Liebig Foundation in 1975. The Foundation supports medical research, primarily for the treatment of vascular and cardiovascular diseases. In 1981, the Foundation established an award for Residents

Live Goes The Distance

By Matt Wolfe
Staff Writer

Live's latest album, The Distance to Here, is a return to the York, PA band's roots. Closer to 1994's Throwing Copper than 1997's Secret Samadhi, the album is 56 minutes of great rock songs.

The current radio single, The Dolphin's Cry, leads off the album. While it is a good song, it is probably the weakest track of the album. The second track, The Distance, is a trademark Edward Kowalczyk song. The lead singer writes a four-minute masterpiece that lyrically questions the meaning of life. When Kowalczyk sings, "The distance is not do-able in these bodies of clay" he's referring to his belief of the afterlife. He doesn't bog down in his personal views quite as much as on Secret Samadhi, which is a good thing. Instead he focuses on more universally appealing lyrics.

Track three is the powerful rocker Sparkle. This track is made to be blasted out of arenas (and dorm rooms). Track four is Run to the Water, a sweet rock song with a hook. Track five is one of this reviewer's favorites, Sun. This track rocks from the initial guitar riff to the final drumbeat. You can't help but move to the tune. Track six, Voodoo Lady, is a bit more introspective, focusing on how lucky people are in their lives.

Track seven, Where Fishes Go, is another great rocker with a message, this one about how people can be blind to the very thing that might help them spiritually. The next track, Face and Ghost (the children's song), is quite catching. Often the listener starts singing along without even realizing it. Feel the Quiet River Rage, the next track, features a great bridge from verse to chorus and is another song that will stick in your head for the rest of the day.

Track ten, Meltdown, is on par with The Dolphin's Cry, as a good song but overshadowed by the rest of the great tracks. Track eleven, They Stood up for Love, is quietly the best song on the album. It evokes such images of Martin Luther King Jr. and others that "stood up for love down in spite of the hate." In We Walk in the Dream, Kowalczyk again ponders our existence, looking for something more.

The final track, Dance with You, is a beautiful melody, and a great way to end a great CD. Patrick Dahlheimer, Chad Gracey, Edward Kowalczyk, and Chad Taylor have done a fantastic job in creating a remarkable CD. If you have ever loved a Live song, chances are you will like this album. If you enjoyed Throwing Copper, I know you will.

$18 Million Grant

(Continued from Page 5)

and Fellows, granted annually, to encourage and recognize research among young trainees interested in a career in vascular surgery. The von Liebig Foundation and the National Heart, Lung and Blood Institute jointly funded a grant to the Lifeline Foundation in 1998 to sponsor the Mentored Clinical Scientist Development Awards for the benefit of vascular surgeon scientists in the early stages of their research careers. The purpose of this award is to support the development of clinician research scientists.

The von Liebig Foundation has continued its philanthropic efforts and expanded its mission to affect an even broader population following the relocation of the von Liebig family to Naples, Florida, in 1990. The foundation has provided substantial gifts to the Naples Philharmonic, the Naples Art Association's von Liebig Art Center and the Naples Depot.

In 1991, Juniata awarded William von Liebig the Alumni Achievement Award for his contributions in the fields of vascular technology and international business. He was named to the college's board of trustees in 1995 and in May posthumously received an honorary degree from the college.

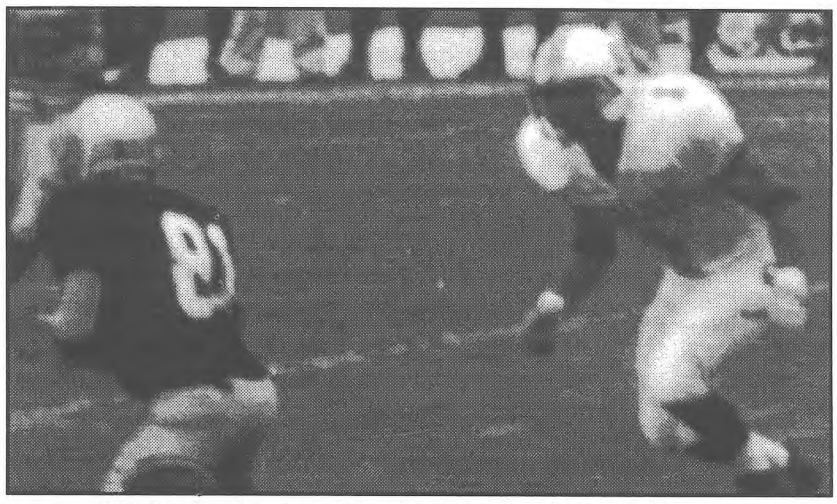
Eagles Fall to Susquehanna and Moravian



Andrew Radomsky
Sports Reporter

The Juniata football team suffered two consecutive setbacks, falling to Susquehanna 27-7 on October 9 and to Moravian 38-37 one week later.
The meeting with Susquehanna didn't live up to last year's dramatic 62-61 double-overtime loss. Juniata took the lead in the first quarter on a 10-yard pass from Joe Montrella to Matt Eisenberg to go up 7-0, but Juniata would not score again. The Crusaders scored 27 unanswered points throughout the remainder of the game to notch their fourth consecutive win over Juniata.

Although Montrella threw for 268 yards the Eagle offense never really got on track, gaining only 36 yards on the ground and converting on four of 15 third downs. The defense had similar problems, as they found themselves stymied by the Crusader's ground attack, which tallied 285 yards rushing.

The Eagles got another solid performance from Eisenberg. He finished the day with seven catches for 108 yards and a touchdown. Ed Pfursich lead the Juniata defense, posting a season-high 20 tackles, three of which were for a loss. Jeremy Patterson chipped in with 13 stops and Andy Grace netted 10.

At Knox Stadium on October 16 Juniata hoped to rebound against the 0-5 Greyhounds, but Moravian blocked an extra point in overtime, upsetting the Eagles who were 3-2 at the time. 1999 marked the fourth time in a row that the Eagle-Greyhound rivalry had gone into overtime and the fifth consecutive time the fourth quarter had ended in a tie. The overtime system was not used in 1995.

Eisenberg on the move against Susquehanna. Photob by J. Ramquist

Juniata held a 21-7 lead midway through the third quarter but Moravian battled back, tying the game at 21 and later at 28. Moravian went on top by three with 30 seconds left in the fourth, but Bill Reddinger's last-second field goal sent the game into overtime. Moravian got a touchdown from their first possession and the Eagles had to match it to force another overtime. On third and goal from the 21 yard-line Montrella hit Jeff Craft across the middle for the touchdown, but the extra point was blocked, finalizing the game at 38-37.

"We just didn't seem ready to these last couple of weeks. I think we've had the better athletes and the better team, but we just didn't get it done when it counted. They're tough losses, but we're going to learn from them and then focus on the four games we have left," senior safety Andy Brown stated.
Joe Montrella passed for 277 yards and three touchdowns, two of which went to Eisenberg (8-141). Montrella moved into fourth on the all-time passing yardage list at Juniata (4,626) and sixth on the career completions list (306). Ed Pfursich led the defense once again with 12 tackles. Linebacker Josh Seidors added nine.
Notes of the game: Senior **Joel Peppetti** grabbed his first interception of the season in the second quarter versusu Suquehanna, and **Andy Brown** got his first against Moravian. Receiver **Tim Lonesky** caught a nine-yard pass against the Crusaders, the first of his career. Sophomore **Kenny Cooper** gained 70 yards on seven tries and scored his first touch down of his career on a 20-yard run versus Moravian.

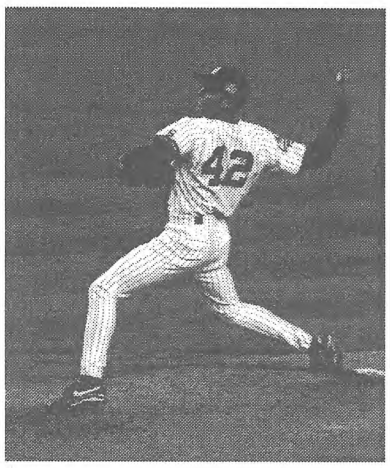
Nobody asked me but...



Chris Byland
Sports Writer/Columnist

--The Steelers Monday Night game against the Falcons is huge if they want to sneak into the playoffs. The Falcons are limping into the game at 1-4 without Jamal Anderson, and are ready to be beaten. The Steelers are playing solid defense, and although Kordell Stewart and the offense in general continue to struggle, their schedule is weak enough that they could win nine games and garner a Wild Card birth. Let's face it, the AFC Central Division contains three of the worst teams in football in Cleveland, Cincinnati, and Baltimore, and it is also no mistake that the Steelers three wins have come against these three woeful opponents. At least Cleveland has the excuse of being an expansion team. I'm not sure if the best football team in the state of Ohio is Ohio State or Mt. Union. The Steelers are lucky enough to get the Browns, Bengals, and Ravens again this year, so all they need to do is find a way to win four more games to get to the ten win mark and a Wild Card. One of those four potential wins comes into Three Rivers this Monday Night.

-- So it's the Yankees and the Braves in the World Series. Well whoop dee do. Who would have ever guessed at the beginning of the season that the teams with the $85 million payrolls would get to the World Series? It's George Steinbrenner against Ted Turner. This reminds me of the Simpsons episode when the Mr. Burns and Shelbyville's rich power plant owner face off in the softball championships, and Mr. Burns buys a team full of ringers. Ted Turners wealth amazes me. Who would've thought that you could get rich by starting a cable network and showing the series of Rambo three times a week? Pure genius. And don't even get me started on Steinbrenner. He actually had the guts to criticize the Red Sox fans for their behavior. Granted, their actions were reprehensible, but I don't think anyone from New York should be able to criticize fan behavior, especially Steinbrenner who is the master of the tantrum.

Steelers Earl Holmes and Orpheus Roye tackling Falcons Ken Oxendine. (AP)

Rivera pitching for the NY Yankees and named MVP for the series. (AP)

Eagles are Back on Track

Andrew Radomsky
Sports Reporter

The Juniata Eagles got four touchdown passes from senior quarterback Joe Montrella on their way to a 42-6 victory over Delaware Valley on October 23rd. The win ended the Eagles' three-game losing streak and put their record at 4-3 for the season.

The incredibly muddy field conditions may have slowed the Eagle running game a bit as they netted only 68 yards, but the passing of Montrella and the stingy Juniata defense were more than enough to stop the Aggies. Montrella hit on 21 of 33 attempts for 285 yards and the defense held Delaware Valley to a single touchdown in the third quarter while picking off three passes and recovering four fumbles.

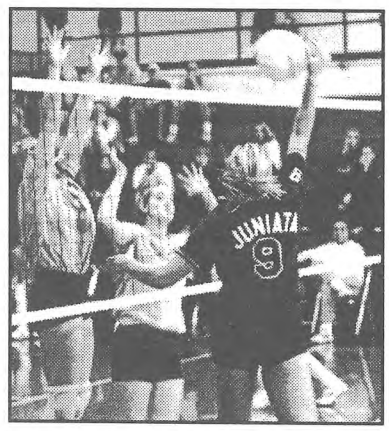
Junior wideout Matt Eisenberg notched his sixth-straight 100-yard game (6-109 2TD) and became just the fourth Juniata football player in history to tally over 2,000 yards receiving in his career.

Juniata went up 7-0 on the first drive of the game when Drew Onkst scored from six yards out. Onkst went wide again early in the second quarter to put Juniata up by fourteen. Two minutes later the top quarterback-receiver duo in the MAC, Montrella to Matt Eisenberg, did what they do best as Montrella connected with the junior for a 48-yard score. Jeff Craft closed out the first-half scoring, and gave the Eagles a big 28-0 lead, with a 20-yard touchdown reception just before the half. In the second half

"Our defense deserves a lot of credit for this one," junior wideout Lucas Kelleher stated. "They played with the pride and character that they had established during the first few weeks of the season."

Notes of the game:
Montrella threw scoring strikes to **Eisenberg** and **Craft** in the second half. **Jeremy Patterson, Scott Sweitzer, Steve Harbaugh, and Matt Bowers** all recovered fumbles for Juniata. **Josh Seidors, Brad Hahn,** and **Neil Stone** each had an interception. Linebacker **Jason Evans** broke up three Aggie passes. Receiver **Jeff Craft** caugh a game-high nine passes for 93 yards.

Sports Round-up



Bub Parker
Sports Information Director

Women's Swimming: Nov. 17, Albright; Nov. 20 at Elizabethtown.

Juniata was in action two times during the week week of November 1st. The Eagles lost their first dual-meet of the year, 116-83, at Penn State-Altoona on Wednesday, November 3rd. The outing was tied at 63-63 with four events remaining. Freshman Alissa Schneider (Mililani/Mililani, HI) placed first in the 200-yard freestyle in a school record time of 2:03.95. She was also first in the 100-yard freestyle (57.16). Freshman Cindy Long (Emmaus/Emmaus) took top honors in the 50-yard freestyle (26.53) and the 100-yard butterfly (1:03.77). Individuals placing second in the meet were junior Leslie Stewart (Tyrone/Tyrone) in the 1,000-yard freestyle (12:58.9) and junior Jennifer Lawrence (Stowe/Stowe, VT) in the 100-yard breaststroke (1:21.15). On Saturday, the Eagle women placed sixth out of nine teams at the co-ed Middle Atlantic Conference (MAC) Relays at Albright. Long established a Juniata College record in the 100-yard butterfly (1:02.88) at the outing.

Women's Volleyball (32-4, 7-0 MAC Commonwealth): Nov. 11-13, NCAA Regionals at TBA.

Juniata, ranked fourth in the latest American Volleyball Coaches Association (AVCA) Division III Poll, won its 19th straight Middle Atlantic Conference (MAC) championship on Saturday with a pair of victories at home. The Eagles knocked off Lycoming in the semifinals, 15-2, 15-1, 15-8, on Saturday morning. Senior middle hitter Kristin Hershey (Dallastown/York) and senior outside hitter Carrie Zeller (Laguna Beach/Laguna Beach) had six kills each. Freshman outside hitter Lory Baker (McConnellsburg/McConnellsburg) chipped in with six digs, while Hershey added three aces to her totals. In the championship match on Saturday evening, Juniata knocked off Moravian, 15-6, 15-10, 15-10. Hershey paced the Eagle attack with 16 kills, five digs, one ace and one block, while Zeller contributed 11 kills, 15 digs and four aces to the effort. Sophomore outside hitter Brandy Workinger (Dallastown/Dallastown) had 13 kills on 21 attempts with just one error, while senior setter Colleen Carver (Lakeland Regional/Ringwood, NJ) passed out 47 assists and had three digs and two aces. With the two victories, Juniata has now won 225 straight MAC matches (dating back to 1981). Over the weekend, Zeller moved into second on the single-season digs list (542) and senior middle hitter Jennie Lizun (Emmaus/Emmaus) went to ninth on the single-season blocks chart (126), while Carver is now 10th on the yearly assists ledger (1,449).

Next Year Tennis Team Has High Expectations

Shigeyuki Saito
Sports Reporter

Juniata had its last home tennis match on October 13th. The team overall did very well this season. Everyone was in good shape and throughout the season the players improved their game. One particular player was Jessica Wess. For this match, the number 1 and 2 players didn't play, so Jessica played the number 1 position. Her play was most suitable to play as the #1 player. She was superior to her opponent, especially in her service game, which led her to win the match.

This match showed next year's aspirations. The Juniata tennis team will come back in as good as shape as this year.

Jessica Woods practicing before the match.

Coach Ann Houck is ambitious for next year's team. "I really look forward to next year. I think we could play pretty well. I hope to do just as well next year, and I think we might go all way next year. We are sure that the Juniata team will do the same as it did this year."

Juniata Students Chosen for *Who's Who*

Press Release

The 200 edition of WHO'S WHO AMONG STUDENTS IN AMERICAN UNIVERSITIES AND COLLEGES will include the names of 39 students from Juniata College who have been selected as national outstanding campus leaders.

Campus nominating committees and editors of the annual directory have included the names of these students based on their academic achievement, service to the community, leadership in extracurricular activities, and potential for continued success.

They join an elite group of students from more than 2,300 institutions of higher learning in all 50 states, the District of Columbia, and several foreign nations.

Outstanding students have been honored in the annual directory since it was first published in 1934.

Students named this year

TriBeta Braves West Virginia's Elements

By Bridget O'Brien
Staff Writer

In the midst of studying for biochemistry exams, applying to grad schools, and studying for MCATs, nine TriBeta members took an adventure to the mountains of West Virginia. On the weekend of October 23-24, they ventured into nature's domain to explore some of its beauty.

At 5 a.m. Saturday morning, the sleepy-eyed crew piled into a van and drove down to Cass, West Virginia. Here they rode four-and-a-half hours on the Cass Rail Road in a covered, open-window train. They reached the second-highest peak in West Virginia, Point Bald Knob. Here at the top, the mountain was becoming covered with two inches of snow. "It was quite a surprise," says Dan Gallo, presi-

Student Forum Addresses Changes

By Kristine Lipuma
Staff Writer

The Student Forum was held at 7:00 p.m. November 18 in Alumni Hall. Two representatives from each club were required to attend, but the forum was open to all students who wished to voice their concerns or ask questions about campus life.

The panel for the forum consisted of eight members: Mark Notaro, Interim Director of Facilities; Kris Clarkson, Dean of Students; President Tom Kepple; Rocco Panosetti, Director of Campus Safety & Security; Kathy Collins, Director of Residential Life; Dawn Scialabba, Director of Campus Activities; James Lakso, Provost & Vice President for Student Development; and William Alexander, Vice President for Finance & Operations. Members of student government were also present to answer questions.

Students raised a variety of issues, from the price of meal plans to problems with washing machines. The main focus of the evening was the improvements and renovations planned for campus. Over winter break, Memorial Gym will be repainted, and a new four-sided scoreboard put in place. In addition, steam lines to the dorms will also be repaired. Long-term goals include the building of the new science center, renovating Founder's Hall, a new theater center including technical staff, and renovating Brumbaugh Science Center. With the new space created, the hope is to convert the Humanities Center, Quinter House, I. Harvey Brumbaugh House, and H.B. Brumbaugh House into student housing as the student body expands. Using these buildings for housing would keep students on campus, as well as provide the possibility for special interest housing.

There is also a chance that housing will be available at the Raystown field station, allowing students to live there while studying the environment. Other possible changes include utilizing Ellis Hall, making it function as a student union building, and updating the identification card system.

The impact of the new activity fee was also a topic of discussion. The $50,000

Rumors of Angels are True

By Matt Wolfe
Web Page Editor

On December 3, 1999, a new musical entitled "Rumors of Angels" was performed. The story behind the musical is the story of Mary and Joseph at the time of Jesus' birth. It is a new twist on an old story. The musical featured a 29-piece orchestra that played the music for each song, as well as setting the mood during each step of the story. Holly Lechien was an excellent flute player.

The interesting thing about this musical was that most of the people involved have something to do with Juniata, either as students, alumni, faculty, or administration. Few people were professionals. The musical was performed wonderfully by everyone involved, which is a credit to the talent of the cast and orchestra. Mary and Joseph were played by Kim Murray Simmons and Brent Hurley. Another notable was Jim Tuten, who devilishly played Herod. He obviously had fun playing the villain.

The musical was written by Steve Engle, a graduate of Juniata in 1966. This was the premier of this musical. The production was only practiced twice before the December 3 performance, so it was amazing to have the production performed as smoothly as it was.

The audience gave the performers a standing ovation at the end of the performance, and it was well deserved. For all those that missed the per-

Ways To End Heterosexism

By Adam Nelson
Opinion Editor
This was a speech given at the Safe Zone Dinner in the Faculty Lounge, December 2, 1999:

Welcome. At some point, we have all assumed heterosexuality of someone. This is Heterosexism. I hope to give 10 suggestions for ways in which we, as students, administrators, and faculty can create a campus more open to diversity of sexual orientation and fight against all of the forms of heterosexism.

1. *Guarantee Equality*

Gay and lesbian members of the community need to know that their school values equality and that they are protected against discrimination. Schools should add "sexual orientation" to their non-discrimination statements in all school publications as a way to communicate their commitment to equal treatment for all.

The Black triangle is used as a symbol of Lesbian, Gay, Bisexual, Transgendered Pride. Image by R.I.A.

2. *Create a Safe Environment*

Every member of the community has a right to his or herself without fear of harassment by peers: it is the school's obligation to take pro-active measures to ensure this right. However, in too many schools, physical and verbal harassment against gay and lesbian people is the norm. Schools must make it clear that neither physical violence nor harassing language like "faggot" and "dyke" will be tolerated. Clear harassment policies, which include sexual orientation as a protected category, must be developed and then publicized to the entire school community, so that the consequences of and procedures for dealing with such behavior are clear to all.

3. *Provide Role Models*

Studies consistently show that personal acquaintance with gay and lesbian people is the most effective way of reducing homophobic bigotry. Both gay and straight students benefit from having role models such as openly gay teachers, coaches, and administrators: straight students are offered an alternative to the inaccurate stereotypes with which they have been raised, and gay students get the chance (often for the first time) to see healthy gay adults, which gives them hope for their own future. Schools need to create the conditions necessary for gay faculty to feel safe in "coming out," just as heterosexual faculty "come out" daily.

4. *Provide Support for Students*

Peer support and acceptance is the key to any student's feeling that he or she "belongs" in the school. "Gay-Straight Alliances" have been the key to creating such an atmosphere in many schools. These groups welcome membership from any student interested in understanding issues of homophobia and sexual identity, regardless of sexual orientation.

5. *Provide Training for Faculty and Staff.*

School staff need to be equipped to serve all the students with whom they work, including gay and lesbian ones. Understanding the needs of gay and lesbian youth, and developing the skills to meet those needs, should be expected of all teachers. Schools must provide the ongoing training necessary for the faculty to fulfill this expectation.

6. *Reassess the Curriculum.*

Teachers need to incorporate gay and lesbian issues throughout the curriculum. This can be done in three ways. First, incorporating new scholarship in fields such as gay studies can now be done easily, due to the proliferation of such material in recent years.

Second, teachers can address the impact of sexual identity on works by gay and lesbian people already included in our curriculum, such as the novels of Virginia Woolf, the music of Tchaikovsky, or the poetry of Walt Whitman.

Finally, teachers can undo the "hidden heterosexism" of the curriculum, such as the exclusive use of opposite-sex couples in math word problems and foreign language exercises.

7. *Provide Appropriate Health Care and Education.*

While being gay is not a "health issue" (any more than being heterosexual is), health education on sexuality and sexually transmitted diseases should sensitively address the particular issues of gay and lesbian people in this field. Counselors and other health staff should be particularly careful to make their sensitivity to gay issues clear, as the history of psychiatric "cures" for homosexuality has led to a climate of distrust between many gay people and the health care profession.

8. *Diversify Library Holdings.*

Often, the library is the first place students turn for accurate sexuality information. Too often, few or no works on gay and lesbian issues are found there. Librarians and media specialists need to be sure their holdings are up to date and reflect the diversity of our world.

9. *Broaden Entertainment Programs.*

"Extracurricular" activities often set the tone for the community. Programs such as "film nights" should regularly include gay and lesbian content that reflects the diversity of our nation.

10. *Do Not Assume Heterosexuality.*

The constant assumption of heterosexuality renders gay and lesbian people, youth in particular, invisible. Such invisibility is devastating to the individual's sense of self. Both the school as an institution and its professionals as individuals must be inclusive in their language and attitudes. Inviting "spouses" instead of "friends," offering health care only to heterosexual families, and encouraging students to describe opposite sex partners, are all inappropriate manifestations of heterosexism. By reminding themselves that gay and lesbian people are found on every staff, in every classroom, and on every team (which they are), faculty can "unlearn" heterosexism and become more inclusive in both word and action.

Free Trade: At What Cost?

Anjee DiSanto
Indiana University of PA

Police confront protesters disrupting a meeting of the World Trade Organization in downtown Seattle on Tuesday.

Unless you've been living under a rock, you've probably noticed that some chaotic events have been coming out of Seattle. This week, the city, ironically rated one of the safest in the country, is host to the World Trade Organization's talks on internatonal free trade--not to mention the wealth of violent and nonviolent protests surrounding these talks.

Globalized free trade. A good idea in theory, no doubt. But just what are we willing to sacrifice for such a thing? Food safety? Endangered species? Human rights? The environment of our planet?

Dozens of labor unions and public interest groups from across the country have come out to speak their minds on how the W.T.O. should go about its business--or if it should be allowed to at all. Most all of these groups come bearing a good cause and peaceful motives, making it even more unfortunate that their actions were interrupted by the needless rioting of anarchist groups and the now constant involvement of the National Guard.

No matter how noble the W.T.O. may try to make its cause seem, the organization cannot ignore the issues that these protesters suggest. Here are just a few:

-- Steel workers seek to keep the W.T.O. from allowing foreign steel to be "dumped" into the United States at prices below the market.

-- Labor unions want issues such as child labor and labor rights to be resolved before free trade is allowed with some of the world's poorer countries.

-- The W.T.O. forced the United States to amend a ban on imported shrimp. The original rule required that shrimp boats use nets, which allow sea turtles to escape.

-- The W.T.O. puts free trade above food safety in issues such as the one in which it ruled that Europe could not ban importing of U.S. hormone-treated beef.

These are just a few of the issues at hand, but perhaps the most heavily disputed factor is the secrecy with which the W.T.O. performs its business. An organization with this much power and this much global impact should have its decisions and decision-making process constantly open to the public.

The notion by some protesters that the W.T.O. should be dissolved is perhaps a bit too drastic, but without a doubt there needs to be some reforming of the organization's practices.

Not to mention some thought on just how much we're willing to sacrifice for free trade.

The Editors of *The Juniatian* wish everyone a happy holiday season.

Administration Needs to Address Students

By Tatiana Zarnowski
Co-Editor in Chief

The Von Liebig science center, the Oller extension, renovations of Brumbaugh Science Center, Founders Hall, and Ellis are all projects that the administration has planned to "improve" Juniata. Although some of these changes are necessary, I believe that the way the administration has handled these changes has left students feeling like they are the lowest priority.

As President Kepple said during the open forum on November 18, there are many projects planned, and we have to decide what our priorities are. He was referring, I believe, to a student's question about turning Ellis into a student center. His point, nevertheless, is a good one. I would like to think that the priorities of the administration take the students' needs into consideration, but clearly that is not the case. Academic buildings should be high priority--after all, that is the students' primary reason for being here. However, I don't think that students have any say in the changes here. I am not aware of students being part of a committee that decides how money should be spent during construction.

Because they are not involved in any of the decisions, many students feel powerless during the planning for construction.

It seems to me that these new buildings are the administration's toys. The administration is more excited about the science center than a child is on Christmas morning. Kris Clarkson can brag about the campus changes for hours on end, but if asked about the funding of academic departments (and the fact that some get a lot less than others), he will skirt the issue and probably even change the subject. Clarkson's title is Dean of Students, but by talking to him, one realizes that he is really Dean of External Relations. Like the other administration members, Clarkson will only tell about good things, and right now those good things are the toys. One gets the feeling that the changes on campus are mere public relations tools--any value that they have for students is just a coincidence. The true purpose of the changes is to attract more prospective students to the school, and to look more like an Ivy League college.

This is most clearly seen in some of the renovations that took place over the summer-most notably, the replacement of cement sidewalks with brick ones. This beautification scheme was not carried out for the benefit of students. Cloister residents and their parents can testify to this, with 18th Street gone. This was done to make Juniata look like an Ivy League school. I saw Harvard's campus over the summer, and was amazed by how much Juniata is trying to look like Harvard and other Ivy League colleges, by building a Quad. At Harvard, there is a center walk that has other sidewalks branching off of it. This is exactly what Juniata is doing.

Another reason for building brick sidewalks is to appeal to prospective students. If trying to copy other (better) colleges weren't bad enough, Juniata has to change the campus to make it more tour-friendly. Although this might boost enrollment, do we really want to attract students who choose Juniata based on the brick sidewalks? Why don't we abandon the "Think, Act, Evolve" campaign in favor of the "Look, Swoon" campaign?

The College is spending a lot of money to make the campus beautiful. While beauty is a noble cause, I would rather see some of that money spent strengthening the academic departments, and hiring more professors in areas where there is growing demand. I think that would make the students feel like they are actually important to the administration. If students were involved in the decision-making process during the renovations and construction of new buildings, there might be more student interest in these things.

If students' needs are not reasons enough to change the administration's priorities, perhaps stronger programs in the humanities and social sciences would attract more prospective students to the College. It might even get us closer to the Ivy Leagues.

Do you have an opinion or an issue that you would like to see addressed here? Write to *The Juniatian*, box 667, or email juniatian@juniata.edu.

The School of Americas Protest: Juniata Students Shout "Presenté!"

By Cynthia Cato
Co-Photography Editor

The sixties are over, along with legalized segregation and the Vietnam War. With all those great causes gone, what constitutes a good protest these days? A bunch of annoying hippies picketing the latest causes, damning the man, and chaining themselves to brick walls? A chaotic mob filled with angry protesters, flying nightsticks, and random arrests?

To tell you the truth, the School of Americas protest was my first experience with political activism and I half-expected the aforementioned scenarios. Yet I discovered a well-organized program of speeches, songs, and proclamations catered toward a huge group of peace-loving people gathered together to proclaim their beliefs.

Protesters line up outside the base. Photo by K. Wilson.

The School of Americas protest occurred on the weekend of November 21st, drawing over 12, 000 activists from all over the country. In addition to 26 Juniata-affiliated students and faculty, everyone from Franciscan nuns to newborn babies to war veterans gathered in Fort Benning, GA to protest the SOA.

The SOA is a branch of the U.S. Army that trains Latin American soldiers in combat. Its ultimate goal is to teach democracy to other countries, yet it has been accused of many human rights abuses.

On Saturday, November 20th, a vigil was held prior to the protest. Speakers and performers held the attention of those in attendance. Training for those who intended to cross the line onto the military base in order to protest was given as well. This line-crossing was significant because it is a federal offense to step onto the military base. Additionally, those who intended to be Peacekeepers were instructed as to their duties. The Peacekeepers acted as liaisons between police and protesters, and made sure that the protest was going smoothly in general.

On Sunday the protest began. Once again, speeches were given and songs were sung; choruses of "We Will Not Rest" rose up from the mass of people. After a morning filled with words of protest, the demonstration began. A moment of silence was requested, during which all 12,000 protesters maintained a powerful silence.

Those who intended to cross the line onto the military base lined up in organized rows of ten across. This line, comprised of 4,408 people, was set up as a symbolic funeral procession, with caskets representing specific people killed by SOA graduates leading the way. The line-crossers carried crosses with names of others killed in SOA-related deaths. As they processed across, the names of these people were sung, and the crowd raised their crosses and proclaimed "Presenté!" in unison in order to signify their presence.

Once on the military base, the line-crossers were given the choice to be bussed off the site by military personnel or to remain on base, for they were not allowed to walk back out the way they came in. A majority of people stayed initially, but individuals gradually left. These people were transported approximately a mile away and allowed to walk back to the protest.

The crowd across the line dwindled, but many stayed and had to be dragged onto buses by military personnel.

TriBeta Visits West Virginia

(Continued from page 1)

dent of TriBeta. "We weren't expecting snow when we started the trip." After the ride, the chilly, wind-blown travelers had a late dinner in the nearby town of Elkins and then headed back to their hotel in Seneca Rocks.

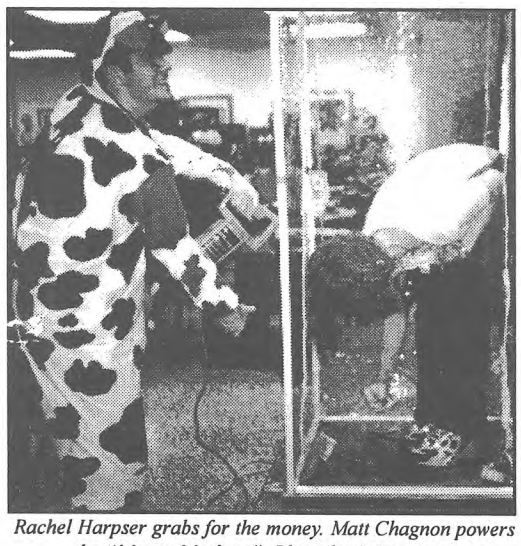
Sunday morning offered a whole new adventure. They climbed to the summit of Seneca Rocks for a beautiful view of the highest peak in West Virginia. "It was great," says Gallo of the scene. "Midway up the mountain it changed from no snow to snowcaps." After another meal in Elkins, the group hiked and explored Black Water Falls State Park. Here they could see the Black Water Falls themselves and the park's lodge.

The trip was a great way for some of the members to get away from their studies and to get to know each other. "We shared stories and past experiences," says Gallo of how the group became closer. "It was a lot of fun, and I still hear the members talk about the trip in a positive way."

TriBeta plans to continue its trip-taking tradition, which began last year with an adventure to Washington, DC. Last year's excursion included a behind-the-scenes tour of the entomology department of the Smithsonian Museum of Natural History. Possible plans for next spring include a canoe trip. "Trips are a great way to bring the club together," says Gallo with high hopes for next semester's travels.

Business Students Raise $450 for The Salvation Army

External Relations
Press Release



Four hundred and fifty dollars can go a long way in a toy store.

And thanks to eight Juniata College students, the Salvation Army has that much more to spend on toys for holiday giving for Huntingdon County's less fortunate families. Participating students were: Matt Chagnon, Jim Connolly, John Kawchak, Joe Kihm, Scott Kucharcik, Krissy Lipuma, Jen Ramquist, and Nikki Smeal.

The students, who are all taking a Juniata course called "The Management Process," were charged by management professor Randy Rosenberger with setting up a fundraising program. The project required students to completely manage the execution of a fundraising program. Rosenberger said the project gave them an appreciation for how difficult it is to manage even a small fundraising program.

"It takes a lot of effort from a lot of different people," said Kristine Lipuma, one of the eight participating students.

Lipuma, a sophomore studying politics and public administration, said the students started by visiting local businesses and asking for donations of gift certificates.

Rachel Harpser grabs for the money. Matt Chagnon powers the "Money Machine". Photo by J. Ramquist.

The students thank the following Huntingdon-area businesses for their participation: The Original Italian Pizza, Burger King, McDonald's Restaurant, Wendy's Old Fashioned Hamburgers, Juniata College Bookstore, Walt's Cafe, Huntingdon Cinema's Clifton 5, Juniata College Activities Board, Domino's Pizza, Holiday Bowl, Advanced Auto Part Corporation, Dairy Queen, Muddy Run Cafe and Moonlite Tattoo & Body Piercing.

After collecting the gift certificates, students sold raffle

Jack Horner Speaks to Packed Audience

By Ruth Bernhardt
Socio/Cultural Editor

On Monday night, November 15, Oller Hall was packed with hundreds of dinosaur enthusiasts, young and old, eager for the opportunity to hear Jack Horner speak. Horner is a world-renowned paleontologist from Montana. He is the Curator of Paleontology at the Museum of the Rockies at Montana State University, has found more fossils than anyone in history and is an expert on dinosaur behavior. Dr. Horner also served as the technical advisor for Jurassic Park and The Lost World and the upcoming Jurassic Park III.

Dr. John "Jack" Horner spoke on many aspects of his work, including how we classify dinosaurs, which have more in common with birds than they do with lizards. Early paleontologists

Jack Horner lectures on dinosaur behavior. Photo by J. Ramquist.

believed that dinosaurs were related to lizards so strongly that they broke fossil skeletons in places to fit the concept of a giant lizard dragging its tail on the ground. Dr. Horner shared his theories about the Maiasuara ("good mother" in Greek), a duckbill dinosaur that he believes cared for its young in nests. Horner found the evidence for this theory in northern Montana. An adult dinosaur skull was found near the remains of many nests, which held the bones of baby dinosaurs. The size of the babies varied from a foot and a half long to three feet long, indicating that time was spent in the nest instead of leaving just after hatching, as lizards do. This means it is probable that a parent cared for the babies in the nest until they were old enough to join the adults.

Horner has had an interest in dinosaurs since he was eight years old when he found his first fossil in his own backyard. "I like dinosaurs. I like to dig holes. I like to discover things," he says to the countless children in the audience. Throughout his talk and during the question-and-answer period that followed, Dr. Horner encouraged the young people in attendance to pursue their interest in the field. "What are you doing for grad school?" he asked one boy after a particularly insightful

raised was split between student government and JAB.

The money was used for staffing support, expanding and improving the guest artist and guest lecturer series, a new radio tower, the Fuel concert, and the return of the winter formal, to be held in February.

Rugby Plays Formally

By Karen Garner
Contributor

On a warm Saturday afternoon, a large group of student athletes gathered at the East field to meet the women's rugby team from University of Pitt Johnstown. In their 2nd annual women's Rugby Formal, the Juniata Hellbenders filtered onto the field in an array of eveningwear.

Both teams were required to wear dresses while playing in this annual tournament. "It was a juxtaposition in cleats," commented onlooker Brandon Zlupko. The Referee Ronald Schlecht, and touch judges Aaron Martin and Robert Colletii were dressed in suits and ties. Eightman, Jill Dusak, better known as Posh added, "The rugby formal was so much fun. It's quite an interesting feeling to play a somewhat violent sport and get tackled, all while wearing dresses. It just goes to show that you can dress us up and take us out!"

Juniata triumphed over UPJ 55-0 in wave of tris scored in the first half of the game. The powerhouse of scores came from Amy Eardley, Suzanne Krance, Abbie Gongloff, Karen Garner, Meredith Deluzio, and Ginger Beegle. Dominating UPJ in every aspect of the game, the wing line was particularly strong in the first 30 minutes of the game. There were no scrumdowns until a quarter of the way through the second half.

The team is sad to think of losing seniors Kristine Wiegand and Amy Eardley. "[Eardley's] determination to succeed and be the best that she can has been a huge model for the younger girls. Her dedication, skill and funky personality will be greatly missed," stated Scrum Captain Meredith "Barbie" Deluzio.

Anti-Sweatshop Student Groups Fighting Gap, Nike

Jennifer Lin
Knight-Ridder Newspapers

In a poster going up on college campuses across the Philadelphia area, the dour face of an older Asian woman is displayed in what appears to be a Gap ad for vests.

Until you read the headline: "My name is Chie Abad. I used to work in a GAP sweatshop."

For a hip retailer trying to get everyone to wear cords, sing "Mellow Yellow" and swing-dance in khakis, that stings.

But this poster and others, as well as a coast-to-coast college speaking tour by Abad, are the latest salvos in an expanding campus crusade against sweatshops. At more and more colleges across the country, students are speaking out against U.S. companies such as Nike and Gap that buy goods from overseas factories.

The anti-sweatshop groups, which have cropped up in the last several years, are trying to draw attention to low wages and harsh working conditions. They also are pressuring universities to stop licensing college logos to companies that employ sweatshop labor.

Student organizations are getting help and encouragement from labor rights groups and unions. Global Exchange, a San Francisco human rights organization, for example, paid to print 4,000 anti-Gap posters and ship them to campuses. It also organized the speaking tour for Abad.

"Our campaign has really taken off," said Miriam Joffe-Block, a 21-year-old Penn senior who helped to start Penn Students Against Sweatshops in the spring. "It's a very complicated issue --global economic justice-- but this is a very tangible way for students to see themselves connected to the issue."

In other words, money talks.

Gap is one of the largest and most profitable clothing companies in the world. Campus chic is its stock in trade.

Gap Inc., which also runs the Banana Republic and Old Navy chains, posted a 32 percent gain in earnings for the third quarter, ended Oct. 30. The San Francisco company had a profit of $315 million, or 35 cents a share, on sales of $3.05 billion. In the 1998 period, it had earnings of $237 million, or 27 cents a share, on sales of $2.4 billion.

New York... The Wildest, Busiest, and Most Adventurous City.

Ejlal Al-Alawi
Features Editor

Juniata Activities Board (JAB), organized a trip to New York City, which took place Saturday, November 20.

As has been the tradition, the organizers looked to see if they could book a block of tickets for a show. Surprisingly, tickets were available this year, but unfortunately they were very expensive, so they ended up not booking a show for the students to see.

The trip went very well. "I expected more complaints or less attendance on the trip, but as usual we had a full crowd. It made us (Ellen Gormley, assistant chair, and me) very happy!" said Parisha Shah.

The tickets were priced at $25, and there were no complaints about that.

This is how the trip went: Two buses took off from campus at 6 a.m. Some people had the plans of what to do and where to go ahead of time while others figured these out on the bus. Some options were the Statue of Liberty, the Empire State Building, the zoo, Central Park, museums, shows, or shopping.

A lot of people took a nap on the way. The bus stopped at McDonald's for breakfast. More people got to meet and larger groups formed.

The buses arrived in NYC at 12 noon. They dropped the students off at Rockefeller Center.

Those who planned to go to the Statue of Liberty had to dedicate their entire time for only that one trip. It takes a lot of time to get there, the line is long, and there is a ferry that takes you to it.

Among other places that students visited were Times Square, the World Trade Center, the Natural History Museum, and the Metropolitan Museum of Art.

There were hundreds of restaurants, too. Students ate at such places as Jekyll and Hyde, Carnegie Deli, Boathouse Café, Official All-Star Café, Hard Rock Café, Planet Hollywood, Mars 2112, Brooklyn Diner, Ellen's Stardust Diner, Harley-Davidson Café, and tons more.

Students got special discounts at some places like museums. (One advantage of being a student!)

At the end, at around 6:45 p.m., everyone met at the promised spot and the buses took off at 7 p.m.

JAB is planning a trip for the spring. "We are tossing around some ideas right now and hopefully after the spring semester starts, we will have enough ideas to ask the students where they want to go," said Parisha.

Thanksgiving Break

Matt Wolfe
Columnist

Thanksgiving break has come and I find myself pondering the things I'm thankful for...

I'm thankful I got all my Christmas shopping done, since I won't be leaving here until December 22nd. We must be the only school in the country that is getting out this late.

I'm thankful for the women's volleyball team.

I'm thankful for CWS. No final, only one class left, and a five credit A. What a racket!

I'm thankful for my new DVD player. You haven't seen South Park until you've watched it on DVD. The hell scenes with Kenny look great!

I'm thankful for my iMac. Just seeing all the problems my friends have with Windows makes me very happy to own a Mac.

I'm thankful that I had a ride back home. Thanks Pattie!

I'm thankful for a club called Maui in Philly. If you're ever in Philly, stop in at this club!

I'm thankful for The X-Files. Without that show I would never have realized that aliens created our entire civilization and Y2K will bring the end of the world. Thanks Chris Carter!

I'm thankful that a Target opened up near my hometown. I will shop there over Wal-Mart any day.

I'm thankful I used three-ply toilet paper at home. A welcome break from the tree-bark textured paper at school.

I hope everyone had a good Thanksgiving and didn't eat too much turkey. Since this is the last issue of the year, merry Christmas as well!

Internet Shopping

By Matt Wolfe
Web Page Editor

Tired of getting caught in long lines at the local mall? Can't believe it when the store advertises an item in the Sunday paper and doesn't have it in stock by Tuesday? Stop the hassles and shop smarter; shop the Internet.

This is the first year that Internet shopping is truly feasible. Virtually anything you could want to buy for yourself or as a gift is available online. The following are among the best places to buy from on the Internet.

Computers: If you're looking for a computer or any kind of computer accessory, Outpost.com (www.outpost.com) is the best place to find it. They have a huge catalog of items and most things are in stock or will be in stock shortly. The best thing about Outpost.com is that they have free overnight shipping. That's right, free! Whereas other retailers charge up to $30 for overnight shipping, it's free at Outpost.com. The prices are very competitive as well, sometimes the lowest available anywhere. For any kind of computer-related item, go here first.

Books: Two great places online for books are Amazon.com (www.amazon.com) and Barnes and Noble (www.barnesandnoble.com). Prices for each site are very competitive, usually within a dollar of each other. Both normally charge shipping but sometimes they have free shipping promotions. Make sure to check each site for prices and availability before placing an order.

Electronics: There are many electronics sites out there but the best are Buy.com (www.buy.com), Amazon.com and 800.com (www.800.com). These three sites carry the most extensive product lists and have the best prices. Since electronics are constantly updated by manufactures, great deals can usually be found in the clearance sections of these retailers. Be sure to check all three for prices before placing an order. Also, Outpost.com had recently started carrying electronics. With their free overnight shipping this could be the best price online. They do not have as large a selection as other places, though.

Toys: The best place to shop for toys right now is

(Continued on page 10)

World AIDS Day

Jennifer Bartimole
Staff Writer

On December 1, 1999, the 12th annual World AIDS Day took place. "World AIDS Day emerged from the call by the World Summit of Ministers of Health on Programs for AIDS Prevention in January 1988 to open channels of communication, strengthen the exchange of information and experience, and forge a spirit of social tolerance" (http://www.avert.org/worldaid.htm). The purpose of this first AIDS campaign was to emphasize that AIDS is not cause for concern just one day a year. The World AIDS campaign starts early each year, ending with World AIDS Day on December 1.

Since its beginning, World AIDS Day has received support from the United Nations, the World Health Assembly, and governments, communities and individuals around the world, and it is the only international day of coordinated action against AIDS.

A Red Ribbon is an international symbol worn to symbolize people's care and concern for AIDS awareness. It is increasingly being worn all year round to demonstrate care and concern for HIV and AIDS, and to remind others of the need for support and commitment.

Each year, there is a specific theme for World AIDS Day. This year, the theme was "Children & Young People: Listen, Learn, Live". Themes from past years have included "One World, One Hope" (1996), "Children Living in a World with AIDS" (1997), and "Force For Change: World AIDS Campaign With Young People" (1998).

While it is important to remember the young people around the world with AIDS, it is also important to remember the adults who are trying to fight this epidemic, as well as those with HIV. AIDS education must continue in all countries and the diverse range of people affected must be considered.

Safe Zones Inducts New Members

Tatiana Zarnowski
Co-Editor in Chief

Alternative Ways of Loving (AWOL) recently invited 26 new members into its Safe Zones Network, a program designed to be a campus-wide network of support for lesbian, gay, bisexual, transgender, and asexual (LGBTA) people.

To be selected for the network, interested students, faculty, and administration were required to complete an application to demonstrate their support and acceptance of LGBTA people.

As members, these people are expected to do several things, which Megan Brown, Co-President of AWOL, outlined in a speech to the group on December 2, 1999.

--They are expected to believe that the campus benefits from having people with diverse sexual orientations in the student body, on the faculty, and in the administration.

--They are expected to be willing to talk about LGTBA issues in a non-judgmental manner. Some of these issues are: domestic partnerships in health care, hate crimes, politics (such as which candidates are accepting of LGBTA people), and other current events.

--They must be willing to help students get more information if they are confronted with issues that they are not knowledgeable about.

--They must maintain confidentiality at all times.

--They should not assume heterosexuality.

Brown said that the Safe Zones network was created to "foster a knowledgeable community of support for students who have questions about sexuality and sexuality-related issues at Juniata College." It should make Juniata a safer place for LGBTA students, according to Brown.

"It will create a much-needed open dialogue on subjects that are normally kept quiet."

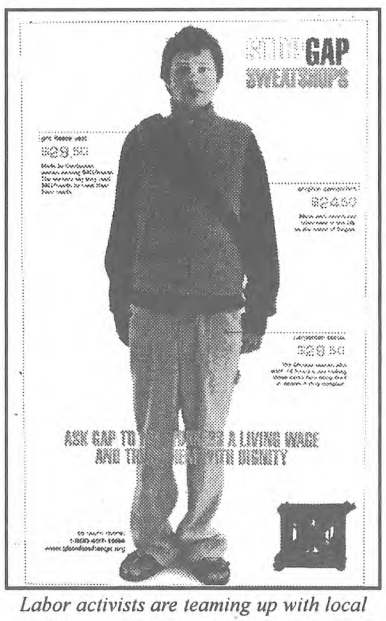
(Continued from page 4)



tickets for the items and offered a grand prize of one minute in a money machine. Altogether, the students raised about $550. One hundred dollars of that was placed in the money machine and a name was drawn for the grand prize. The winner, student Rachel Harpster, got in the money machine and as the $100 swirled around, she managed to grab $93.

That left about $450 that the students presented to Lt. Judi Bernardi of The Salvation Army.

"What an unexpected blessing," Bernardi said. "It's just awesome."

Student Groups Fighting Gap, Nike

(Continued from page 5)

Labor activists are teaming up with local college campus groups to take on Gap with posters. Photo by Ron Tarver.

Alan Marks, a Gap spokesman, said the company employed 40 monitors--soon to increase to 60--who travel around the world, inspecting the company's 2,000 suppliers every three months to make sure they are abiding by Gap's formal code of conduct.

"What's important is to understand what we're doing to address this issue, and we're doing quite a bit," Marks said.

He said that if a factory violates the company's code of conduct, it could lose its Gap business. He would not elaborate.

"Sweatshop factories are problem factories," Marks said, speaking generally. "It doesn't make sense to do business with those kinds of factories."

Chie (pronounced Chee) Abad paints a different picture.

In 1993, the now 39-year-old Filipina moved to Saipan, the largest of the Northern Mariana Islands in the western Pacific. She was hired at a South Korean-owned garment factory, Sako Corp. Of the 500 workers, most were Chinese and Filipino women who had paid upward of $3,000 to middlemen to secure their jobs.

Abad said that Gap and its sister chains were the main customers of the factory. She remembers being shocked that polar fleece vests made by her factory were being sold at Banana Republic for $78. Abad started work as a seamstress earning $2.15 an hour--the island's minimum wage at the time--before getting her hourly wage increased to $3.05 an hour.

Even though Saipan is a U.S. commonwealth, it can set a lower minimum wage than the states. It also does not have to abide by U.S. immigration laws. Garment factories can import their entire work forces from Asia, pay them less than the U.S. minimum wage and still sew "Made in the U.S.A." into their products.

Abad said the factory where she worked flouted U.S. regulations that protect the rights of workers. She said the factory routinely fired workers if they became pregnant. When workers complained, the factory made a concession: It stopped firing pregnant workers, but they had to pay for their own medical expenses.

"All of us were aiming to save money and go back home," Abad said. "Especially for workers from the Philippines, we studied American history. We saw the United States as the champion on basic rights. I didn't expect to face such terrible conditions."

Abad said Gap monitors visited the factory but had little effect. "I admire the Gap's code of conduct for vendors, I really do," she said. "But workers don't understand it."

She said at her former factory, there was only one copy posted by the manager's office and it was printed in English. Most of the workers spoke Chinese.

Marks, the Gap spokesman, said he could not comment about conditions at the Sako factory. "I do not have specific knowledge of her complaint," he said.

In June, the Equal Employment Opportunity Commission filed two lawsuits on behalf of Abad and fired pregnant workers. In a separate action, Gap and 17 other companies were named in a class-action lawsuit filed in January on behalf of Saipan workers who allegedly were denied overtime pay.

Nine retailers and clothing companies involved in related litigation have agreed to settle complaints. Gap continues to fight.

Abad said Gap was singled out for the campus campaign launched in late October because it was the largest customer of Saipan factories.

The campus movement against sweatshops began building three years ago with backlash against Nike Inc. At the time, the footwear company was dogged by charges that contractors in Vietnam and Indonesia ran unsafe factories and underpaid workers.

Still the target of labor and campus activists, Nike said in November it was offering students the chance to inspect its contract factories during spring break.

Meanwhile, the pressure against Gap is heating up. "It's just another way that companies try to rip us off," said Emily Pope, a 20-year-old junior at the University of Delaware who helped to start the Student Labor Action Committee. "We shouldn't let this happen."

The Spring And The Fall in Huntingdon, PA and in DaLian, China

By Cici, ChengShaohua
Contributor

I have traveled many places in the world. Among all the places I have been, Huntingdon, PA and DaLian, China are most impressive. The breathlessly wonderful scenery cannot be sufficiently described in words, though I cannot help trying to write them down to share with all of you.

The Spring in Huntingdon is poetic. There is so much green and so many leaves and so many trees. I stop by a house with a small garden. Although I do not see Spring coming, I know she is there. She is in the dew on the grass. She is on the branches of the pear trees. She is behind the rows of hedge. She is on the swing and the slide. The rose bugs, of the same green as the stem on which they thrive, are again in evidence. Earthworms again make their appearance by throwing up little clusters of mud in the garden beds. Birds begin a concert with their sweet and agreeable voices in the trees. And even those branches chopped up into little pieces and lying in a heap in the yard perform a miracle by putting forth green and merry leaves.

The Spring in DaLian is as beautiful as in Huntingdon. Unknowingly, her steps have lightly tripped over the lawn. Her fingers have caressed the ivied walls. Her breath has touched the weeping willow branches. Her figures have been dancing with the shadows of leaves on the ground on a sunny day. When thousands of raindrops strive to be the first to the ground, the whole city is in a shroud of rain. The faintly visible skyscrapers are enjoying a scouring. The straight streets are getting silver gray again. The grass is drawing nourishment from the first spring rain.

After a hot summer, the Fall comes quietly. The Fall in Huntingdon is magical. The leaves change color from green to red, gradually, first orange red and then fire red, which reminds me of the evening glow in the sky. With a good breeze, the trees rustle in the shining blue sky and the leaves drift down gracefully. The vast farmland is also a symbol of the Fall--the hay rippling in the breeze tells people it is time to harvest. It is pleasant to see children walk on the piles of fallen leaves and go trick-or-treating on Halloween. It is common to see playful squirrels chasing and searching for acorns for their hibernation.

In DaLian there are not many colorful leaves. After the leaves fall off, they will disappear overnight because street cleaners collect all the leaves to keep the roads clean. There is no farmland in DaLian. There is no Halloween in DaLian. There are no squirrels in DaLian. So, does that mean the fall in DaLian is less exciting? Of course not! In early fall the flowers of pagoda trees are amazing. Seen in a distance, they are like a white cloud sheet. When closer, they are like snowflakes. Only under the trees, with their light fragrance, they are flowers. And the sea is another gift that nature confers to DaLian. The sea likes to play a joke and gives you her two faces. On sunny days, the sea opens her arms to welcome people, calming them down with her tender hands, while in a rainstorm, she gets angry and yells to people with the thunder of the surge.

Now the cold winter is taking away all the beautiful flowers and leaves. When I am trembling in the chilly wind, I miss the warm spring and fall in both cities. Though we have had the first snow, Spring is not far away, just hibernating under the melting snow. When it comes again, I can seek out the green of the Spring of Huntingdon. I can walk on the soft golden sand with bare feet in DaLian. I can step on the piles of fallen leaves and chase the squirrels on the grass. I can listen to the music of the waves crashing on the rocks and enjoy all the scenery...

My Classes at UDLA vs. My Classes at Juniata

By Kenia Arellanos
Contributor

My classes at Juniata are different from my classes at the Universidad de las Américas-Puebla (UDLA), Mexico, in many ways. I want you to know how different they are from my point of view.

Regarding academic subjects, the quality of them is the same. The difference is that the content of the subjects here is structured in a more complex way than in UDLA. For example, I can learn two times more here in one semester than in UDLA. That may be because here there is more efficient time management. Although I thought that at UDLA many subjects were hard, I found that here I have to be more awake in class and I have to give more of my free time to my classes.

Professors play an important role in my classes. My professors at UDLA have as much education and knowledge as here because it is a requirement. In both colleges they are always willing to help me. Sometimes, what makes them different is their appearance. While here it is normal to see a professor in tennis shoes, in UDLA those professors are the exceptions to our concept of the well-dressed professor. But I think it is changing. The biggest difference for me is my relationship with them. At UDLA, I have a strong relationship with them, almost personal in some cases. Can you imagine a professor telling me about his feelings toward his wife, or saying hi to me with a big hug and a kiss? That is UDLA. In contrast, here I just have a professor-student relationship. My classmates are another big difference. Many of them at UDLA are my friends, and some of them are my best friends. By comparison, here I do not even recognize most of my classmates out of the classroom. It's unbelievable. Sometimes I feel bad when I find one classmate in Baker and he or she doesn't say hi to me. I want to think that it is because I have had more time to get to know my classmates in UDLA and here I just have one semester. Another difference is that my classmates in UDLA love to work in groups even though we don't have to. In UDLA we are used to "sharing" our knowledge, but here sometimes it is not allowed by professors or by the system itself.

My behavior here is also different from my behavior at UDLA. Here, I'm always so quiet that sometimes I'd like to break the ice in class by talking with someone. But people are so concentrated on the lecture and may be so conscious of what would happen if he or she talks that I prefer to just to leave them alone. Also, in UDLA, I am used to participating in class, but here I do not. The reason is because here I feel like my classmates or even the professor is going to be bored, waiting until I organize the language-knowledge-mess in my head. Also, sometimes I think that I don't understand what my professor asks, although I often realize that I understood almost everything.

In conclusion, you can see that although my classes at Juniata are different in some ways from my classes at UDLA, I am really enjoying being here and also I am learning so much that I am seriously considering the possibility of coming back next semester.

Pęople in New York's Penn Station in the United States vs. People in Quito's train station in Ecuador.

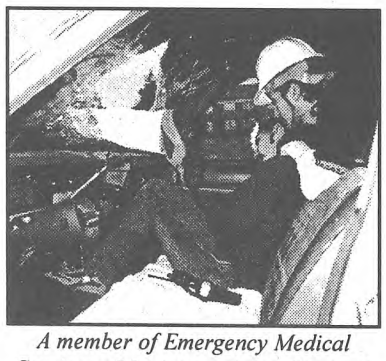
By Valeria Ochoa
Contributor

People reflect the ambiance and the customs of their own country. That is why comparing people in New York's Penn Station in the United States and people in Quito's train station in Ecuador is an amazing experience for anyone that has had the opportunity to spend time in both stations. There are many aspects that produce interesting behaviors in people in New York City and people in Quito. Some of those aspects include: the size and service of the stations, the architecture of the stations, the importance of taking the train and the concept of time that people

(Continued on next page)

People Penn Station vs. People in Quito's Train Station

(Continued from page 8)



have.

The first difference between people in New York's Penn Station and people in Quito's train station is the public's attitude related to the size of the station and the services provided. Penn Station is the biggest train station in the whole United States. It has at least three different kinds of trains, which are commuter trains, subways, and metro-north. Thus, people, according their necessities, can choose one of these trains and go to anywhere in New York City or surrounding suburban areas or even in the whole United States. People in New York's Penn Station have to pay attention and be sure to take the right train, otherwise they could get lost and miss the train. By comparison, the train station in Quito is much smaller, at least 100 times less than New York's station. There is only one train a day for traveling around to the most important cities in Ecuador. For this reason, people in Quito are so relaxed and happy to take the train.

The architecture of the stations in New York City and Quito is really good. Their decoration with a lot of details and original features reflect the traditions of each country. In other words, the buildings by themselves make the stations interesting places, but at the same time so different from each other. For instance, in New York City restaurants paint the station with beautiful colors. Comfortable furniture and an elegant construction remind you this is the main station in the United States. A huge electrical monster stands up in the middle of the station and gives the number of the train and the gate to people. When it comes into view, for a short while, time doesn't follow its course and everyone looks at this schedule screen and waits for its answer. In Quito, it's so different. The old building built in the 1920's is alone most of the time. The last snack bar left 10 years ago and just one bench has stayed there all the time. It looks at people only for 30 minutes once a day, before they take the train. An interesting contrast between people in New York's Penn Station and people in Quito's train station is the importance of the train itself. People in New York City conceive of the train as the most important kind of transportation. It is an efficient network and they don't waste time driving. People in New York's Penn Station have their hands full with either suitcases or bags or cellulars. Long coats, formal clothes and wonderful smells dress up people in New York. Because of their occupations, taking a train is not an adventure for them; rather it is a routine. On the other hand, people in Quito use the train for traveling and enjoying the landscape. It is rudimentary equipment that reminds you of the history and customs of 70 years ago. As a result, taking a train in Quito isn't important for mobilizing, but rather, it is the beginning of an amazing adventure. People in Quito's train station are so excited about their trip. The happiness of taking this machine is reflected in their wonderful smiles. Comfortable clothes, tennis shoes, sunglasses, camera, etc. are indispensable things for this exciting activity.

Another difference between people in New York's Penn Station and people in Quito's train station is their concept of time. People in New York's Penn Station walk so fast around the building. They run into each other and their watches are ringing all the time. They are usually young adult and adult people, rarely do you see kids there, whereas, people in Quito's train station look at their watches twice during the entire trip, which are at the time of departure and at the time of arrival. In general, people in Quito spend much time traveling, approximately 8 or 10 hours on the train. Mostly, they take the train as a group, which means family, friends, and elementary schools, among others.

In conclusion, people in both stations are human beings with similar feelings and emotions. But, they are raised in different countries, with other cultures and points of view, which have changed their life. People in New York City and people in Quito are the result of their atmosphere and culture and they have to fit in. Therefore, people in New York's Penn Station have to take the train as an obligation and necessity, not as a pleasure. In contrast, people in Quito train station take the train for entertainment. They are aware that it will be an unforgettable and wonderful experience, and it will remain in their mind forever.

SOA Protest Draws 12,000

(Continued from page 4)

Another group of protesters defied military instructions and recessed as a unit back out to the protest.

The SOA protesters, as a whole, created an example for civil disobedience action in their ability to maintain their peaceful outlooks on closing the School of Americas.

Thanks to the hard work of Rebekah Helsel, Juniata affiliates comprised a fraction of this group. As the song goes, "We who believe in freedom shall not rest until it comes."

Protesters prepare to cross the line. Photo by K. Wilson.

Jack Horner Gives Lecture

(Continued from page 5)

question Horner was unable to answer.

In addition to his work as the Curator of Paleontology at the Museum of the Rockies where he spends countless hours studying the tons of fossils in the museum's basement, Horner writes for scientific journals, travels internationally giving speeches, and spends his summers digging for more fossils. Horner has received a MacArthur Fellowship, the American Academy of Achievement Award, the American Association of Petroleum Geologists Award for Research, the American Geological Institute Award for Outstanding Contribution to Public Understanding of Geology, the Templeton Award, and an Honorary Doctorate from the University of Montana for the contributions he has made in his field. Juniata College was honored to receive Dr. Horner on November 15.

Stone Temple Pilots Rock Once Again

By Matt Wolfe
Web Page Editor

Stone Temple Pilots' fourth album, appropriately titled No. 4, infuses new life into the rock genre. Starting the album off with the current radio single Down, STP lets the listener know this album is not going to be like their previous two. Down is a rocker from the opening chord. Followed closely on the rock scale by track two, Heaven & Hot Roads, and track three, Pruno, this album sets the tone early.

The fourth track, Church On Tuesday, is a very catchy tune with a singable chorus. Track five, Sour Girl, is more mellow than the first four tracks, focusing more on the bass and percussion than searing guitars. No Way Out, track six, returns to STP's more natural hard rock. It starts out sounding almost Mediterranean, then switches into heavy, industrial rock. This switch is done with skill and is one of this reviewer's favorite tracks.

Track seven, Sex & Violence, is actually very introspective into lead singer Scott Weiland's of life and the recent drug troubles he has been through. It's still a serious rocker despite its material. The eighth track, Glide, is a showcase for Weiland's vocal talents. His shows his range on this track and creates a masterpiece in the process.

Track nine, I Got You, is in the same vein as Sour Girl. It's a nice melodic interlude between the pulsating rock. The next track, MC5, returns to the rock standard. This is a quick little song that revs from start to finish. The last track, Atlanta, is very Doorsish. This was the only track on the album that I was disappointed with, not because it's not good, but because it feels like it doesn't belong on this album.

Overall, this is a great STP album. It's been a long time since a good rock album has hit my ears. Thank you, Stone Temple Pilots.

Shopping on the Internet

(Continued from page 6)

eToys (www.etoys.com). They have the best selection and the best prices. Toys R Us has recently created a web site to compete with eToys, but as of this writing the site is hard to connect to and is very unreliable. If Toys R Us wants to compete in the online arena they will have to iron out their problems before Thanksgiving.

Flowers: Flowers are a great gift for people who are far away and the best places to get them are FTD.com (www.ftd.com) and 1 800 FLOWERS.com (www.1800flowers.com). Both sites have unique arrangements and products only available on their site, so check out both before deciding. The best thing about ordering flowers over the web is you can see a picture of what they look like. That was the biggest disadvantage of ordering flowers over the phone. The only problem with flowers is that they are still expensive, especially for college students!

Music: Online record stores have multiplied in the past year. The best are CDNow (www.cdnow.com), Tower Records Online (www.towerrecords.com) and 800.com. Not one of these sites consistently has the best price, so be sure to check around. If you preorder a CD, CDNow and Tower are the best places to do it. They will ship the CD on the day it's available in stores.

Sports: If you're looking for sports gear, two places stand above the rest: Fogdog.com (www.fogdog.com) and dSports (www.dsports.com). Fogdog.com has a better selection but dSports has prices similar to what Fogdog.com has. If Fogdog.com is out of stock, try dSports.

Lingerie: For the guys who want to get something a little different for their significant others, two sites are the best. Venerable Victoria's Secret (www.victoriassecret.com) and Frederick's (www.fredericks.com) have the best selection available anywhere. Since people's tastes vary, be sure to visit both sites before deciding.

Apparel: This is the only area in which it's still better to go to the store than shop online, simply because you can't try the item on over the Internet. Unless you are absolutely positive it will fit, go to the store and find out.

A few tips keep in mind while doing you're shopping online:

--Many places have free shipping promotions or coupons that they allow for a certain time, keep your eyes open for these offers.

--If the item is a gift and you are not sure if it is exactly what the person wants, find out what the return policy is before placing an order. Some places do charge a restocking fee, which can be up to 15%. A lot of regular stores, like Best Buy and Circuit City, charge this as well, so this tip goes for any place you shop.

--Make sure the site you are ordering from is using a secure server. Your web browser will alert you if the site has a secure server at the time of ordering. If the site doesn't have a secure server, don't give them your credit card number. While it's uncommon for the number to be intercepted and used for fraudulent purposes, it is possible. If the site has an 800 number for placing orders, call them instead of taking a risk.

One last tip: if the site is someplace you have never heard of, use caution. Ask others if they have ordered from the site. Check out different Internet retailer ratings. Use common sense and shopping on the Internet will be a great experience.

Demonstrators Close World Trade Organization Opening in Seattle

Jim Landers & Paul Pringle
Knight-Ridder Newspapers

SEATTLE -- Thousands of demonstrators chanting anti-trade slogans shut down the opening ceremonies of the World Trade Organization meeting Tuesday, prompting authorities to call in the National Guard and declare a curfew.

Police in riot gear fired tear gas, pepper spray and concussion grenades in an effort to disperse the most aggressive protesters, whose human chains and window-smashing rampage cast a pall over the gathering of trade ministers from 135 countries.

As darkness fell, authorities declared a state of emergency and put most of downtown Seattle under a curfew. Washington Gov. Gary Locke said that two National Guard units, with 200 soldiers, would be on the scene Wednesday morning. He said 300 additional state police officers would help with crowd control.

Authorities said about a dozen people were injured, none of them seriously. They included some bus drivers who were assaulted by protestors who got on their buses and one county police officer.

President Clinton traveled to Seattle Tuesday night and address the trade organization on Wednesday as planned.

The Clinton administration had hoped to use the meeting -- the largest of its kind ever held on U.S. soil -- to push for another round of global talks aimed at lowering trade barriers. Instead, the demonstrations spotlighted the divisions -- even within the United States -- over freer international commerce.

Before Tuesday's confrontations, Clinton told reporters in Washington, "I think we should strengthen the role and the interest of labor and environment in our negotiations."

A small number of protesters, most of them clad in black commando-type outfits, went on a rampage of vandalism in the downtown shopping district. They used crowbars to smash windows out of a McDonald's, a Gap store, banks, jewelry stores and a Starbucks coffeehouse. They also flattened car and bus tires and spray-painted obscenities on building fronts.

Police reported about 20 arrests, but otherwise the authorities decided to let the demonstrators control the streets.

Tom Hayden, the 1960s anti-war icon who is now a graying California state senator said the

Black-clad protesters in Seattle. Photo by Amber Lewis.

demonstrators accomplished their aim of focusing attention on the trade organization. "People are going to wake up tomorrow and say, 'What's this WTO? It doesn't sound like anything good,'" he said.

"It's a bit of a zoo, isn't it?" said Malcolm Bailey, an agricultural trade envoy from New Zealand. "They'll make a lot of noise, but they won't stop the real business of the meeting."

Mr. Bailey said crucial agricultural talks pitting the United States, New Zealand and others against the European Union and Japan were being mediated by Singapore's trade minister, George Yeo. He said Mr. Yeo was shuttling between hotels, working on language in the WTO's formal agenda document to narrow differences between the groups.

Students Participate in Model United Nations Conference

By Justin Miller
Politics Editor

On November 11, 1999, fifty-two Juniata College students traveled to Philadelphia for the 33rd annual University of Pennsylvania Model United Nations Conference. The students, represented such countries as The Netherlands, Honduras, Iceland, Kazakhstan and Syria. The four-day conference included intensive discussions and debates on such varied topics as international security, rights of indigenous peoples, human rights, humanitarian aid in peace-keeping missions, biological weapons, and many more. To effectively participate in a conference of this magnitude, each student had to spend hours in preparation.

The Model United Nations program at Juniata College is rapidly growing into one of the most prominent student groups on campus. "I am continually impressed by the enthusiasm and dedication of the students," commented Model UN advisor Dr. Emil Nagengast, assistant professor of Politics at Juniata College. Over the three years of the club's existence, their activities have expanded to include not only participating in conferences, but hosting speakers on campus and organizing forums with other clubs to facilitate the understanding of international relations. In the near future, the club will add running their own conference for high school students to their repertoire.

The United Nations is a global organization comprised of most of the peace-loving countries of the world. Among the UN System's various organizations are the Security Council, the Economic and Social Council, the World Health Organization, the International Atomic Energy Commission, the UN Development Programme, the International Court of Justice, as well as numerous Regional Summits and a simulation of the North Atlantic Treaty Organsation's North Atlantic Council.

"Such activities give the students a chance to get the next best thing to hands-on experience in international relations by participating in these conferences" notes Nagengast. This became even more true this semester as he for the first time offered a one-credit course entitled "Model UN" in which students prepared for the conference. The culminating event of the course came November 11-14, when the students from the course, along with a number of other Model UN club members who did not opt to take the actual course, attended UPMUNC and finally put their skills to the test. Observed Nagengast afterwards, "Overall, I feel the course was a success. It still has room for improvement, but I think we all learned something valuable from the experience."

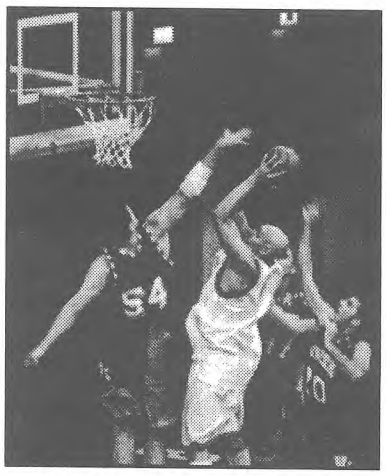
Women's Basketball Up One Win, Men Down One

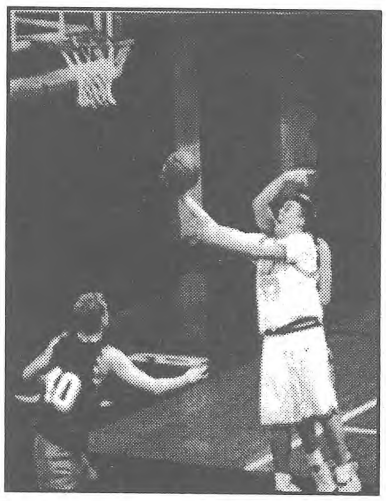
Andrew Radomsky
Sports Writer



Juniata's women's basketball team was able to notch a victory in their home opener on December 1 versus Albright, but the men weren't quite as fortunate.

The women raised their record to 3-1 with a solid 65-58 performance. In the match-up the Lions battled back from a 6-point deficit to tie the game 26-26 at intermission. In the second half things started falling in place for the Eagles and they raised their lead to 10 nine minutes through the half. Kelly Grove had the hot hand in the second, hitting a trio of three-pointers and two free throws to carry Juniata. The Eagles had a commanding 62-47 lead with 3:47 left, but a late Albright run brought the Lions within seven as time expired.

Senior center Molly Lyman tallied 14 points and seven rebounds. Grove finished with 11, all in the second half, and sophomore guard Kelli Young added ten. The Eagles' leading scorer, sophomore Brandy Preslovich, was held to a season-low eight points but dominated the boards with 12 rebounds.



In the men's MAC opener the Eagles couldn't overcome Albright's hot shooting, and fell by a score of 78-50. Albright hit on 61 percent of their shots from the field in the game. The Eagles (0-4) held a 19-17 lead at the 8:00 min. mark in the contest after Dave Reddick nailed two free throws, but it was all downhill from there as Albright put together a 14-3 run over the last remainder of the first half to go up 31-22. Reddick lead the Juniata offense in the first half by hitting four field goals and two of three free throws.

Juniata found themselves trailing by 16 five minutes into the second half, never gettting any closer than 12. Reddick paced the Eagles with 21 points, eight rebounds, and three assists while Pat Sowerby added nine. Senior Tim Lonesky added five in his first game back for Juniata. He now needs just 13 points to hit the 1,000-point mark in his career. Sophomore guard Brian Dietrich, who had led the Eagles with 17.3 points per game, was held scoreless on the evening.

Dave Reddick on the offense. Photo by J. Ramquist

The men will be hosting MAC rival Lebanon Valley on December 7. The women will be at home against Lebanon Valley on the 8th.

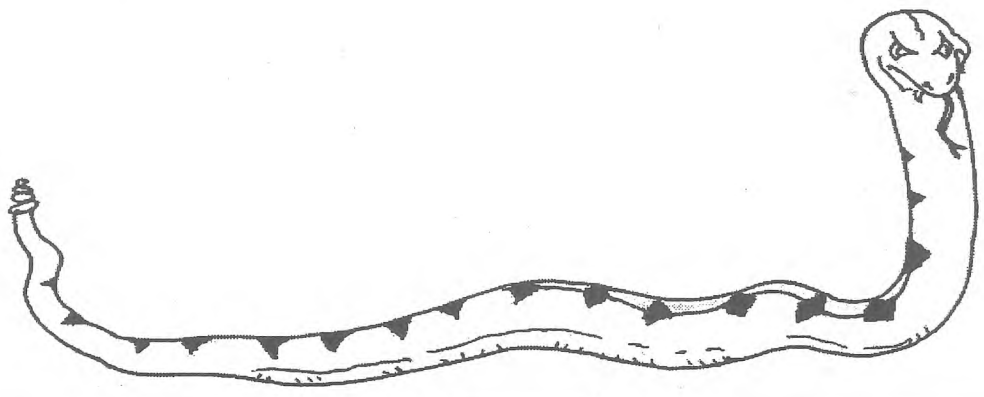
Juniata Hosts 1999 NCAA National Women's Volleyball Championships

Jeanine Hanohano
Sports Editor

On December 3rd and 4th, Juniata College hosted the 1999 Division III Women's Volleyball National Championship tournament for the second year in a row. The teams in this year's final four were Muskingum College (OH), Trinity University (TX), Central College (IA), and host Juniata College (PA). The playing commenced on Friday evening with the third ranked Trinity tigers against the muskies of Muskingum. Being the first game in the final four, the tigers were putting it all out for the muskies. The tigers won with a 3-0 victory with scores 16-14, 15-11, 15-10. Juniata played the nationally ranked #1 fighting Dutch of Central College for the next semi-final game. The Dutch won the match 3-1 with Juniata putting up a worthy contest. The scores were 15-11, 12-15, 15-2, and 15-5.

Danny Murphy passin'em straight. Photo by J. Ramquist

Colleen Carver setting'em straight. Photo by J. Ramquist



The eagles went to play the muskies in a five-game match on Saturday for third and fourth place. Juniata took a strong lead by winning the first two games, but Muskingum fought back to win the next two games, which led to a rally-score, fifth game. The muskies scored the first point by a Juniata rotation error, and that seemed to set the momentum for the rest of the game. The final scores were 11-15, 2-15, 15-6, 16-14, 15-9. The Central Dutch defeated first time finalists Trinity tigers in a 3-0 sweep, 15-8, 16-14, 15-6. Although playing the first ranked team, the tigers put up a valiant fight to try to capture their school's first NCAA Division III Women's Volleyball Championship.

The players named to the all-tournament team were Carrie Zeller of Juniata College, Kerry Gilligan of Muskingum College, Alisha Farley of Trinity University, and Angie Nielsen, Candace Wilson and Abbie Brown of Central College

"Mr. Juniata" Passes Away at 88

(L to R) G. Matty, H.B. Brumbaugh, J. Kruzman as students. External Relations Archives.

External Relations

Harold Bennett "H.B." Brumbaugh died early Tuesday morning at Altoona Hospital following an extended illness. He was 88.

H.B. spent four years receiving an education at Juniata, and a lifetime - 63 years - in devoted service to the liberal arts college. As was best stated by the Juniata Alumni Association in 1971, H.B. lived "a life of service that will ever remain one of the brightest jewels in Juniata's crown."

Without any immediate family of his own – H.B. never married – the college community became his family and many faculty, staff members and students took H.B. on as a surrogate uncle, brother and father. Most of all, he was a good friend. His connection to the college wasn't only through his education. H.B. was related to one of the college's founding families. He was Juniata through and through, earning the title of "Mr. Juniata," and going so far as to display his Juniata pride on his Cadillac's license plate that read, "JC33HB."

"H.B. Brumbaugh IS what it means to be Juniata College," said Juniata President Thomas R. Kepple Jr. "His continued dedication to Juniata and the Huntingdon community for more than 60 years was an extraordinary blessing. H.B., Mr. Juniata, will ever remain in the hearts of those who knew him."

Born in Woodbury, Pa. on May 23, 1911, H.B. graduated from Altoona High School in 1929 and attended Juniata, graduating in 1933. From 1933 to 1935, he taught at Woodbury High School, Woodbury, Pa., and from 1935 to 1936, served as the principal at New Paris-Napier High School, Fishertown, Pa.

H.B.'s legacy at Juniata began in 1936 when he returned to the college to become the assistant to President Charles C. Ellis. He was responsible for admissions and fund raising. When H.B. accepted the position, he

Martin Luther King Jr. Convocation

Indi Petranek
News Editor

Rev. C.T. Vivian, a close friend of Rev. Martin Luther King spoke Thursday, January 20th at the convocation for Rev. King held in Oller hall.

Rev. Vivian is a Baptist minister who worked firsts on his own and then with Rev. King for a non-violent solution to the civil rights issue.

Rev. Vivian's speech was entitled "Martin King, New Millennium Man" and he spoke on topics like jail time and the need for dignity. He told of a time, while in jail, where him and his fellow black inmates maintained their dignity and were served their food instead of walking up in a line "like dogs" for their meal.

Vivian spoke of Rev. King as a friend, which is very different from the class room teachings. He spoke of a man, a father, a husband, and a friend, not the legend.

Vivian did prove King's greatness, "We come to celebrate a man who walked among us, who allowed us to be a new people." Vivian said.

The event was in lieu of the traditional holiday. This upset some students who felt that aside from a day off school, felt that Rev. King needed honoring in the more traditional sense.

Also, the Persuasions, an acappela group from Brooklyn, NY sang several; numbers and opened for Rev. Vivian.

The Persuasions became an acappela group because they could not afford instruments, so by blending their voices, they solved the problem.

The event was effective in making students realize what Rev. King was really about, versus simply having a day to sleep.

Despite Seton Hall Tragedy, Fire Alarms No Cause For Alarm

Alex Ross
Tulane University

I don't do fire alarms.

Before my illustrious college days, fire alarms scared the dickens out of me. Fire alarms meant tornadoes (I live in Colorado - right next to Kansas.), fires, or fire-spewing tornadoes. We'd huddle under our desks or evacuate the building and that was that. Pretty scary for an 8 year-old whose concept of destruction is derived from news footage of cows spinning in funnels hundreds of feet in the air and fire-engulfed skyscrapers.

I did fire alarms then.

But I don't do them now.

I'm in Louisiana at Tulane University now, and tornadoes aren't exactly native to the area. Yes, we have snakes, we have gators, and we have country bumpkins who wear Confederate flag underwear and think a meal consists of a few dips of Red Man chewing tobacco and a shot of Jim Beam. But no tornadoes.

So canceling out tornadoes, that leaves me only in danger of fire and flooding. Flooding is for the fish, you see, and I have inflatable furniture so I'm not concerned.

That leaves only fire.

Fire has always been a very real danger on college campuses. Take cigarettes, lighters, incense, and a million outlets and chords and add in furniture so old it was confiscated by the British in 1812, dormitory wiring which consists of coat hangers and shoe laces, and dormitory buildings that welcomed Eisenhower into office. What do you get? An inferno waiting to happen.

And an inferno is exactly what happened at Seton Hall last week when a fire broke out at Boland Hall, a dormitory housing approximately 600 freshmen. Investigators speculate that a couch in the third-floor lounge caught fire at 4:30 am. The cause? Probably a cigarette.

One would think that with a tragedy such as this in the news, I would rethink my no fire-alarm policy.

Wrong.

It's horrible that so many kids were injured and killed at Seton Hall. It's a tragedy, and God only knows what those kids and parents are going through. I sympathize; it's flat-out a terrible situation. But I'm still not going to evacuate the next time a fire alarm is pulled.

I'll die from cancer, from AIDS, from heart disease before I die in a dormitory fire. I'll die in a car accident (which I almost have twice), in a plane crash, in a nuclear assault before a fire takes me. I think I'll worry a little more about being crushed by those spinning cows in that funnel before I take the time out of my life to genuinely worry about a fire.

Like I said earlier, this is a relatively new policy of mine. It only took 40 false fire alarms last year, five this year, and seven in one night before an 8:00 a.m. final for me to change my ways. Frankly, I got sick of being the butt of a fraternity pledge's joke, I got sick of evacuating from a second-story room whose window sill is only 10 feet off the ground, and I got sick of having a bad week because of fire alarms.

Common sense says I should be wary, that fires are a very real danger. But I'm more concerned about the punishment I'm going to receive from Tulane's Housing and Residence Life for not evacuating during a false alarm last semester than I am about a dormitory fire.

Not to mention the spinning cows.

Confederate Flag: A Symbol That Divides

The Daily Illinois

South Carolina has a wonderful opportunity to make a giant leap into the 20th century. But it's up to them to decide.

All the state has to do is take down the confederate flag that currently graces (or blemishes, depending on your point of view) its state house.

Most students are probably only acquainted with the confederate flag from watching too many reruns of The Dukes of Hazzard. But the confederate flag in the South carries much meaning. It reminds southerners of their heritage and of their one-time independence, some southerners say. But that heritage isn't remembered by everyone quite so fondly.

The confederate flag is also synonymous with the Civil War and slavery. The NAACP, for instance, has boycotted the state for its reluctance to take down the flag. The issue has become so controversial, in fact, presidential candidates have been asked their feelings on the South Carolina flag debate.

Certainly, the South has a rich history behind it. But this flag, this symbol of their state legislature, only adds insult to injury in the minds of those who were affected by slavery.

Which bespeaks the question: When symbols are more trouble than their worth - when symbols divide rather than unite -- what's the point in retaining the symbol? There are many ways to honor South Carolina's heritage that do not include insulting a sizable portion of its state population. There are history museums and historical sites all over South Carolina. In these institutions, a confederate flag can be explained in the right context. It is irresponsible for citizens of South Carolina to forget their history, however they need not wave it in the face of others who might find the same history painful.

Channel 61???

What do you think of the new "College Television Network"?
Is it a great push for increased entertainment options at JC? Or does it suck?

Teen's Death Sheds Light On A Volatile Party Drug

Sue Ellen Christian
Knight Ridder Newspapers

DETROIT--Fifteen-year-old Samantha Reid, nicknamed "Hammy Sammy" for her love of the camera, and two girlfriends left for a Saturday night out on Jan. 16, 1999. They said they were going to a movie with two boys from their high school.

But in a move typical of many adolescents, the group skipped the movie, cruised around in a van, got peach Slurpees at a 7-Eleven and ended up in an apartment belonging to a friend of the boys. Some smoked pot, some drank alcohol. They watched "Saturday Night Live" and the movies "Jackie Brown" and "Superfly," according to court documents.

At one point, Samantha asked for a Mountain Dew, and even though she remarked it tasted "gross," she drank it. Within minutes, the 9th-grader was asleep on the sofa. A while later, she began vomiting. The others put her on the bathroom floor alongside her friend Melanie Sindone, then 14, who had gotten ill after sipping a cocktail made for her.

The last thing Melanie recalls of the evening was "being numb." When Melanie regained consciousness hours later, she was in a suburban Detroit hospital bed. As for Samantha, she never came out of a coma; she died of poisoning from a volatile party drug called GHB, or gamma hydroxybutyrate.

Opening arguments begin Monday in what prosecutors say to their knowledge is the nation's first manslaughter trial for poisoning by GHB. Four young men, all of whom have pleaded not guilty, are charged with manslaughter and poisoning and could face life in prison. One defendant will have a separate jury because he confessed to putting GHB in the drinks and has implicated other defendants.

The case and Samantha's death put a face--in this case, a young face with an infectious smile--on the problem of GHB use. A fast-acting depressant of the central nervous system, it is a colorless, odorless liquid with a salty taste. It is illegal but is no longer relegated to all-night "raves" and the underground party scene. Instead the drug is growing in popularity among white, suburban adolescents and college students, some of whom are addicted to its quick effect of euphoria.

Authorities fear that users don't realize the danger of the compound, which contains the same ingredients as floor stripper and industrial cleaner. According to Drug Enforcement Administration figures, GHB has been linked to at least 58 deaths since 1990 and more than 5,700 overdoses.

Monday's trial opens amid a host of legislative and federal initiatives to educate teens and parents about the dangers of GHB and other so-called club drugs. President Clinton is expected to sign legislation passed by the House last week that puts GHB in the most tightly regulated category of drugs with the strongest penalties for misuse.

The National Institute on Drug Abuse recently boosted research funding and joined other organizations to launch a public education campaign about club drugs such as GHB and Rohypnol, which often are characterized as "date-rape" drugs because they can produce amnesia and incapacitate people, leaving women susceptible to sexual assault.

Samantha Simmel, age 14.

Recipes for GHB and gamma butyrolactone, which metabolizes into GHB when ingested, are available on the Internet. GHB has been sold in health food stores as a dietary supplement and used as a steroid alternative by body builders. In 1990 the Food and Drug Administration began investigating the drug after numerous cases of illness were reported. The agency, however, has approved the use of GHB in the study of treating narcolepsy, a sleeping disorder.

Particularly frightening to public health experts is that the same dosage of GHB can affect people in wildly different ways. The drug can cause vomiting, dizziness, tremors and seizures.

Because it is short-lived in the body, the drug is difficult for doctors to detect. Federal figures report that emergency room visits resulting from GHB use increased to 762 in 1997 from 20 in 1992, with a total of more than 1,600 episodes.

As Samantha's mother, Judi Clark, raced to the hospital, she was not thinking about GHB, but about recent reports of teens binge drinking. "I was planning her punishment; I was going to ground her until she was 20," said Clark, 38.

But when she saw her daughter on a respirator, "I asked, 'What could have done this?' " Clark recalled.

The family's suburban Rockwood home is filled with photos of Clark's grinning, gregarious daughter. The same wide smile greets visitors to a new Web site designed by Samantha's family and friends, who are driven to make something meaningful emerge from her death.

Foreign Careers

(continued from pg 1)

Office of Commercial, Legislative and Public Affairs in the Dept. of State's Economic Bureau, and Special Assistant to the Assistant Secretary.

In 1990, he received the State Department's Superior Honor Award for his work in Rangoon.

He also speaks French, Mandarin Chinese, and Spanish.

According to Adair, it is hard to find a career anywhere that does not require some knowledge of international affairs. Careers in this arena are divided into four basic employers: the government, the private sector, non-governmental organizations, and international organizations, with the State Dept. being the largest employer. Other, more specialized jobs can be found with nearly every other department, ranging from the Dept. of Agriculture to the EPA, from the CIA to the Dept. of Treasury.

People wishing to pursue a career with the Foreign Service must be able to serve anywhere in the world, and expect to spend over sixty percent of their careers overseas in a variety of countries.

The Foreign Service is divided into five specializations: economic, political, consular, administrative, and public diplomacy.

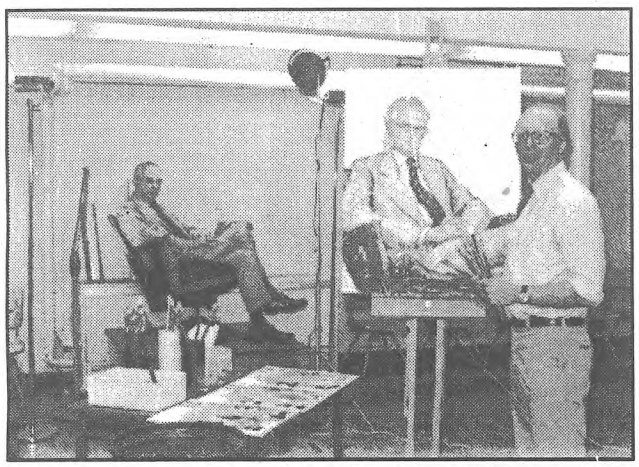
The Foreign Service's job is to represent America abroad; "its business is the business of diplomacy" according to Adair.

Private sector employers include the major corporations, such as General Electric, Microsoft, and Boeing, as well as the media.

In addition, many metropolitan areas have international offices, where students wishing to remain in the United States can find a job. Non-governmental organizations include such groups as the Sierra Club, Amnesty International, and Doctors Without Borders. These groups can gather and provide information for the government.

The fourth category is the international organizations, such as the International Monetary Fund and the United Nations, though a graduate degree is often required.

Adair's own advice is to find what you are interested in and pursue it; you can always find a place for it in the international realm.



Adair recommends studying as many languages as possible because they strengthen the mind, as well as being useful for their own sake.

His best advice: don't get discouraged if the career looks too risky, too difficult, or too competitive. It may just be the right job.

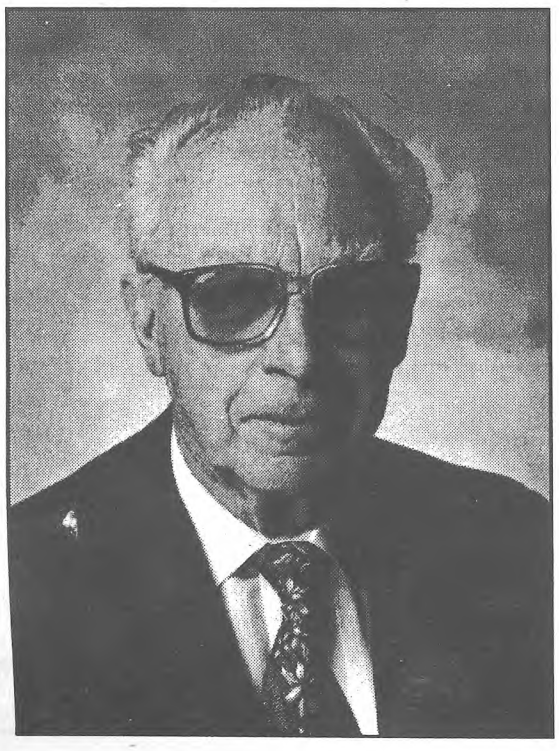
H.B. Brumbaugh Dies at 88



H.B. Brumbaugh posing for a portrait. The Portrait is hanging in Baker.

(Continued from page 1)

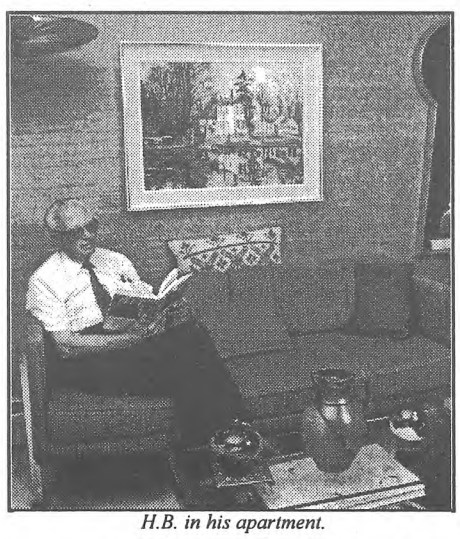
also accepted the offer of campus housing and moved into The Cloister, a residence hall on campus. He lived there for 35 years until he moved into a small apartment in the college's Tussey-Terrace residence hall building. While living on campus, he regularly ate meals at the dining hall, kept an eye on the students and regularly imparted a story of Juniata's history to willing listeners. His move out of the student resident hall and into the retirement community, Westminster Woods – only three minutes away – attracted international media attention in 1993.

From 1939 to 1962, H.B. served as alumni secretary during which time he instituted the Juniata National Alumni Association. He became director of development in 1962. In 1963, he became vice president for development and the curator of the Juniata College museum. That same year, the American Alumni Council honored H.B. "for a quarter century of outstanding service to the cause of higher education and the advancement of alumni interest." He served as president of the Middle Atlantic District, American Alumni Council from 1968 to 1970 during which time he was credited with establishing a consultation service for new council members. He was commended for his service to the AAC in 1970. Other honors came from US Steel. He won an award from that company for contributions to higher education. In 1971, he was cited by the Juniata Alumni Association for his devotion to the school.

H.B. was honored with an Honorary Doctor of Humane Letters degree from Juniata in 1975. One of the many accolades he received at the awards ceremony: "H.B. stands as the highest example we have of devoted, effective service to the institution... For Harold, Juniata College has always meant people, Juniatians, and no single person has ever known more of them or worked harder to see that they were the institution – past, present and future." Juniata President John N. Stauffer conferred Brumbaugh's degree. "Bearing a great name in Juniata's history, and otherwise known as Mr. Juniata, he has given 40 years of single-minded dedication to his beloved alma mater, adding untold strength to her first century and helping to enhance the promise of her second," Stauffer said.

H.B. retired a year later and was named vice president for college advancement emeritus. When he retired, the college named a house on Mifflin Street after him and commissioned an artist to paint his portrait. He maintained an office in that building and for more than 20 years came into work every morning. His efforts to stoke the Juniata fire in the hearts of alumni continued to be tireless during those years.

The Juniata College Board of Trustees welcomed H.B. as a member in 1979, an opportunity



H.B. relished. He served as a trustee for 16 years, always anxious to help shape the future of the college. When he retired from the board in 1994, he was named trustee emeritus.

Other honors include the Juniata College National Alumni Association Alumni Service Award in 1991 and the John C. Baker Award for Exemplary Service to Juniata College in 1999.

"H.B. defined Juniata in a way that no other individual has done," said Andy Murray, director of The Baker Institute for Peace & Conflict Studies. "His institutional memory, his almost endless network of friends and his tireless devotion to the "right, little, tight, little college" on the hill, have shaped us in wonderful ways that we will never completely comprehend or appreciate. Most of all, his steadfast care for the people who have been a part of the college has set us a true course; one that will take us well into the future."

He has been active in myriad organizations through the years. He was past president of the Middle District Men's Work Council of the Church of the Brethren, former chairman of the Commission on the Ministry at the Church of the Brethren, past president of the Rotary Club of Huntingdon and past director of the Huntingdon County United Fund. He was also the president of Huntingdon's Weimer-Oller Travel Agency Inc. and then served as a consultant to Gateway Travel. H.B. also served as a trustee of the Huntingdon County Library, a member of the Huntingdon County Historical Society, a board member of the Pennsylvania State Council of Churches, past president of the Huntingdon County Tourist Promotion Agency and a member of the Pennsylvania Folklore Society. In 1987, he was named "A Friend of Education" by the Huntingdon County Education Association and in 1993, he received an honorary membership from Rotary International.

He is survived by his brother, Leonard Bennett Brumbaugh who lives in Lancaster County, his nieces and their husbands, Arlene and Arlan Pittman of Roaring Springs, Joyce and John Criswell of Everett, and his nephew and his wife, Wilmer and Christine Lashley of Breezewood. He was preceded in death by his parents, Mr. Alva S. Brumbaugh and Mrs. Nancy L. (Bennett) Brumbaugh, his sister, Anna Brumbaugh Lashley and his brother, Daniel Bennett Brumbaugh.

H.B. in his apartment.

Services will be held at 2 p.m., Saturday, Jan. 22 at the Stone Church of the Brethren, 7th and Moore Streets, Huntingdon. Friends will be received from 2 to 4 p.m. and 7 to 9 p.m. Friday, Jan 21 at the John B. Brown Funeral Home, 417 Washington Street, Huntingdon. A special memorial service will be held at Juniata College during Alumni Weekend, May 20. Memorial contributions in H.B.'s memory may be made to the Harold B. Brumbaugh Scholarship Fund at Juniata College.

Take Back the Night is Planned

Kristin J. Wilson
Contributor

Although no date has been set yet for Phi Alpha's "Take Back The Night," plans have been in the works for months. "Take Back the Night" is an event that is held at numerous colleges and universities throughout the country to increase awareness of and decrease the occurrence of violence against women and men. Usually events such as a candlelight vigil and guest speakers are key in the event's success.

Juniata's "Take Back The Night" week-long occasion will include speaker Katey Costner who attended William and Mary College and was a victim of acquaintance rape. She brought her case to the judicial board at W&M, but despite her efforts, her case went unrecognized. Because of this chain of events, Costner has dedicated her life to the education of students and adults across the country. Another speaker that Phi-Alpha has plans to host is from Penn State. She, too, has had a personal experience with violence against women.

Along with speakers, "Take Back The Night" will include a candlelight vigil and participation by other clubs on campus who will design their own way to be a part of this event. Phi-Alpha and Phi-Chi are currently in the process of ordering tee-shirts for the event, and they will be available to students for an optional small donation to help defray the costs. On the front of the shirt will be the theme for "Take Back The Night" (a drawing by sophomore Lindsay Briggs' mother) as well as the title of the event and statistics of violence against women and men. On the back will be the names of sponsors of the event who have donated $25 or more.

If you would like to make a donation to Phi-Alpha to go toward "Take Back The Night," or if you'd like more information concerning the event, please contact Leslie Slingsby or any member of Phi-Alpha. More information on "Take Back The Night" will be available soon - watch for signs around campus and the community.

GPA Drops Campus Wide

Indi Petranek
News Editor

Last semester, a campus wide drop in the overall GPA of the school has sent administration scrambling to find a solution.

The average GPA, was 3.081, a significant drop from spring semester.

Only Pink apartments had a cumulative GPA of over 3.5 and held the lead of highest GPA by over a tenth of a point.

Cloister had the highest GPA for a dorm, a 3.22, with the 3rd and 4th floors being the highest floors on campus with a 3.386.

The lowest dorm on campus was Sherwood with a 2.748 and the lowest floor was Thunder Alley with a 2.382.

The off campus apartments, Pink, Mission and Hess did the best over all, Hess was the lowest, but they still had a 3.105.

The cause of the drop in GPA's is largely open to speculation.

Some say it is due to higher incidences of alcohol poisoning this year.

Other chalk it up to higher numbers of breaches in the academic integrity policy.

And those who are more skeptical just say people are lazy.

There are a number of students who still maintain over a 3.6 and do very well in all their classes, its the ones who chose not to keep up in their work that bring the averages down.

Borgardt Claims: "There is No Objective Reality!"

Eric Hammar
Staff Writer

Despite measurable inches of snow laying its soft blanket across Juniata's quiet campus, Dr. Jim Borgardt delivered the first Bookend Seminar of the Millennium titled "Is the Moon really there when no one looks?: The Paradoxes, Realities, and Mysteries of Quantum Theory" on January 25th, 2000. A large audience of administrators, faculty, and students peeling off layers of winter bulk gathered in Good 202 to hear the assistant professor of Physics and University of Arizona Ph.D. speak. Borgardt detailed the history of quantum theory and reflected on the issues raised by such radical thought.

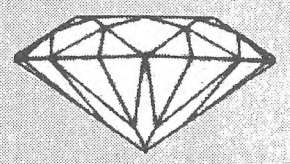
At the turn of the century, physicists were on the verge of bringing to light various nuclear phenomena. Much like Isaac Newton's work, their experiments would change the world. However, they were unable to explain their results.

In 1905, a Swiss patent clerk, Mr. Albert Einstein takes a stab and produces three seminal works. In one short year, he established the existence of atoms, explained the photo-electric effect (awarded the Noble Prize 1921), and submitted his special theory of relativity to the scientific community. Physics charged onward.

The road ahead was not without its bumps. Light was presumed to be a wave. However, experiments showed light behaving as a wave and as a particle. In 1924, Louis deBroglie proved that particles can also be made to manifest wave properties. Therefore, everything is both a wave and a particle. Wave-Particle duality became the foundation for quantum theory.

Niels Bohr developed the implications of quantum theory in the "Copenhagen Interpretation". Bohr concluded that Nature, at its most fundamental level, is indeterministic and probabilistic. Nature lacks causality and is inherently uncertain. Einstein remarked, "God does not play dice with the universe." Thus, Einstein sparked the Bohr/Born-Einstein debates that carried on for roughly 25 years.

In 1935, the debate reached a pivotal point. Einstein, Podolsky, and Rosen introduced their paradox which charged Bohr's "Copenhagen Interpretation" as an incomplete description of reality. They maintained that there is some form of underlying clockwork that keeps the universe running and only gives the appearance of uncertainty and unpredictably at the quantum level. Bohr countered, "renounce any pretension to impose upon Nature our own preconceived notion of what 'elements of reality' ought to be."



Bohr's ideas hinged on his understanding of measurement. To measure an object, you must interact with it. On a macroscopic scale, the influence of an experimenter's interaction is insignificant. Unless your ruler is a hatchet, a six feet long table remains six feet long. However, at the atomic level, the experimenter's effect is profound. Bohr held that, "any observation necessitates an interference with the course of the phenomena, (and requires) a final renunciation of the classical ideal of causality and a radical revision of our attitude towards the problem of physical reality."

In 1976, the Aspect Experiments put Einstein and Bohr's thoughts on Nature to the test. The Aspect Experiments refuted Einstein's position. Further, they provided precise numerical confirmation of Bohr's predictions. At the atomic level, there is no objective reality.

As the 21st century begins, Bogardt believes that, "Science (must) be aware of what landmark theories have. Quantum Theory is an instance where scientists made great empirical progress, although there was, and is, very little understanding of what the theory says about the nature of the world it is purported to model." What is reality? Do experiments reveal reality or simply create it?

Bogardt felt that many students could benefit from understanding the philosophical implications of the theories they learn in class. Bogardt remarked, "in a science class you focus on the practical uses of the theory - it's important to understand the broader issues as well."

Juniata Looks Back: The Civil Rights Movement

Adam Nelson
Opinion Editor

Black history month is a time for remembrance of the struggle for African-American equality. It is a time to celebrate the achievements by those notable figures that made America face its racist policies. America exploded with racial unrest in the 1960's. Protests against the conflict in Vietnam, and for Black Rights', and Women's Rights' were a daily occurrence on Capitol Hill. All of these events occurred before we present Juniatians were even thought of. Our ancestors, former Juniatian's, were very involved in the movement. Juniata was actually a hotbed of racial activity, with symposiums on racial equality and protests throughout the country, through the height of the Civil Rights era. In observance of Black History month we look back to those former Juniata students who fought for racial equality.

In the Fall of 1964, Juniata held a 3-day racial symposium on campus. This would be only the start in a line of events connecting the Juniata student body to some of the nationally recognized events of the time. The discussion described itself as "an effort to present a fair and complete picture of race and race relations...arranged to present

Pam Clemson, a Juniata alum, shows a student's wounds to the photographer.

varied view points, biases, and prejudices on all sides of the subject." Throughout the 3-day event the school presented the 'integrationist' viewpoint, led by faculty members and the Dean of Juniata at the time. The school also brought in a lawyer and Senator from Virginia, a self-described 'segregationist', to present his views. This was sanctioned approach by the college to addressing the racial issues facing the United States at the time. In the following Spring of 1965, the students of Juniata would themselves start to sanction their own response.

During the week of March 12, 1965 student organizers from a Penn State group called SURE, Student Union for Racial Equality, helped Juniatian's Harriet Richardson; Jim Lehman, a Class President; Mike Marzio; and Gary Rowe organize a group at Juniata. In the next week 94 Juniatian's would protest in Washington DC and Selma, Alabama.

Washington DC

The following week, a group of 64 Juniata students and faculty went to Lafayette Park in Washington, DC to attend a protest sponsored by SNCC (Student Non-violent Coordinating Committee) and the NAACP (National Association for the Advancement of Colored People), two of the largest proponents of equal rights at the time. The Juniata students carried placards with slogans like "Freedom Now" and "Did the moral conscience of the nation die with President Kennedy?" For the most part, this protest was calm and met without violence.

Selma, Alabama

Selma, Alabama is recognized today as one of the most notable Civil Rights spots in American history. 21 Juniata students, including Harriet Richardson and Galway Kinnell, the Poet in Residence at Juniata, drove to Selma, Alabama to continue Dr. King's voter registration movement. During a non-violent march in Selma,

Harriet Richardson applies a cloth to a wounded Kinnell

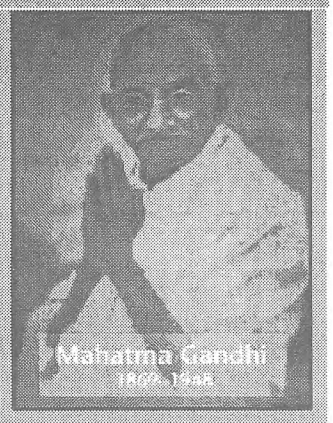
Dating on a College Level

By Matt Wolfe
Columnist



Dating can be so frustrating. Is there anyone out there who hasn't felt frustration from dating? College dating is completely different too. It's a whole different paradigm.

In the real world, usually you take that special someone to an event; for example, the movies or dinner. At college, you see them around campus and say hi. You see them at Baker and talk for a few minutes, then go back and eat with your friends. You don't go to the movies, you borrow a movie from a friend. Something romantic, if possible. Contrary to popular belief, watching The Matrix is not the best date movie. Sorry guys!

In the real world, there is usually a sequence of dates before you, uh, 'advance.' I'll try not to use the standard baseball metaphor. On a tangent, sometimes I think the only reason baseball is the national pastime is so everyone understands the metaphors for dating. "Did you get to third base?" "No, but hopefully I will next date!" Back to the topic at hand, at college you throw out the baseball metaphors and bring in the current slang. "Did you get some?" "Well, she didn't sleep in her bed last night!" And hand slapping abounds.

In the college world, dates are reduced to 'hanging out.' You go over to his/her room and hang out. Talk about classes that day, things about home, things about other people that you both know, etc. At some point you actually talk about yourselves and what your values are, but not that blatantly. Through these conversations, the boy and girl gradually realize that they either want to sleep with their counterpart, or they are disgusted with them.

The pace at which college relationships proceed amazes me. I know a few couples that have slept together after only a week. Not that it's a bad thing, it just doesn't happen anywhere else in the world but college. Or if it does, I've been going to the

wrong parties. If only there was an East in the real world. Ah, bliss…

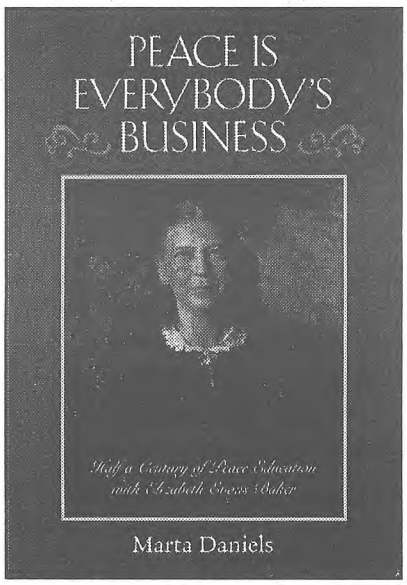
So why does dating happen this way? One reason is because college students generally have no money, dinero, pesos. This is a bad thing, of course. Any money that we do have goes to books and alcohol. Don't get me started on books. Maybe that rant will be next issue's column… Anyway, money is always an issue in dating. Going out to dinner in a college relationship is a special event. Not so in the real world, where it's the norm.

Another reason, at least this is my theory, is because couples spend so much time talking and getting to know each other, since there is very little to do otherwise. During all this talking, the two fine young college students can make a quicker judgement on a person than they could in the real world. This leads to faster paced relationships than normal and cause people to quicken their pace. I guess that's the reason that the reputation of college chicks is what it is. Ask any male, and they will tell you the best age for women is the college age. If they don't say that, they are lying.

So what's the secret to college dating? If I knew that, I would have a girlfriend! No, I would say it's meeting as many people as possible and have fun. You can meet the person of your dreams if you look hard enough.

Oh, one last thing; February 4 was my birthday, so wish me happy b-day! Buy me gifts if you want! :-)

New Book Examines Legacy of Elizabeth Evans Baker



By Justin Miller
Politics Editor

Look anywhere at Juniata College and you will find some influence of Elizabeth Evans Baker and her husband, John Calhoun Baker. Their influence can be felt at meal times in Baker Refectory, when meditating at the Elizabeth Evans Baker Peace Chapel, and in the center for Peace and Conflict Studies that bears their name. It is this last aspect of the Baker's legacy that Marta Daniels addresses in her new book, Peace is Everybody's Business - Half a Century of Peace Education with Elizabeth Evans Baker.

Commissioned for the 30th anniversary of Mrs. Baker's original letter to then Juniata President John Stauffer suggesting the college create a peace studies program and the 25th anniversary of the start of Juniata's Peace and Conflict Studies program, Daniels' book covers 50 years in the lives of Elizabeth Evans Baker and her husband. Beyond describing the history of peace studies in the U.S. and the peace movement, it also explores the relationship between art, nature, beauty, and the meaning of life.

The book is divided into three sections: Peacemaking, the Baker Legacies in Peace Education, and several appendices, which include many original writings by Elizabeth Evans Baker. The cornerstone of the entire work is Mrs. Baker's work at Juniata College. Peace programs at Bethany Theological Seminary, Ohio University, and Dartmouth College are also examined in detail.

Daniels, a 1970 alumna of Juniata College, writes with an accessible style, uncluttered and elegant prose style. Her description of Mrs. Baker's thirty-year quest to create the Peace Chapel is particularly stirring. If the reader did not know that Mrs. Baker was successful in persuading the College to eventually build the monument, Marta Daniels does not give it away until the end.

Peace is Everybody's Business

Interspersed throughout the book are quotations and excerpts from Mrs. Baker's personal writings. These passages give us an intimate glimpse into who Elizabeth Evans Baker really was.

Overall, Peace is Everybody's Business is a fascinating, insightful read. One I would highly recommend to anyone who has an interest in Peace and Conflict Studies, the history of Juniata College, or simply wants to read about a renaissance woman who changed the world around her for the better.

Peace is Everybody's Business is available at the Juniata College Bookstore for $7.95.

JIF is Building...

Kathy Wilson
Contributor

Juniata Instructors of the Future (JIF) is the education club on campus. The members represent all areas of certification: early childhood, elementary, special, and secondary education. This year the club is in a building stage. Membership has grown as we try to do more for the students here on campus. As a club, we have set various goals and are in the process of accomplishing them.

To begin this semester, we want to invite everyone to join us at our meetings. The day and time has changed for this semester due to conflicts in schedules. JIF will meet every other Wednesday evening at 5:30 in the Lesher Carpeted Lounge. The club is sponsoring guest speakers to come and talk about education related issues. Celia Cook-Huffman will be one speaker who we hope will attend this semester. More information about when she will be coming will be announced later. If anyone has ideas about speakers or other issues, please feel free to let any of the officers know.

The club members who have signed up for the National Teachers Exam (NTE) will continue to organize study sessions to better prepare for the tests. Extra help with lessons and practicum work are available since upper and underclassmen have experienced similar classes and work. The network of support is helping to build cooperation, which is important in any school district. Also, students can order books through Scholastic and Troll Book Clubs to increase their personal libraries. Information about these book orders is available from Rachael Hollen.

We are associated with Pennsylvania State Education Association (PSEA) which keeps members updated on education legislature in Harrisburg and provides insurance coverage by the state while in the classroom. One does not need to be a member of PSEA in order to be a member of JIF. Individuals make that decision.

Increasing community involvement is another important goal that the club has set for itself. We are in the process of contacting various organizations and groups to help us make Pennsylvania Learning Dolls. This project is designed to provide homeless children with a special friend. Through these dolls, the children will develop skills such as learning basic colors, body parts, and colors of a traffic light. By handling the dolls, the children will learn how to use a zipper and snaps from the doll's clothing. Various students have already completed the dolls if anyone is interested in seeing them as an example. This project is open not just to anyone in the club, but also to anyone on campus who would be interested in helping. To receive more information, contact any of the officers or advisor of JIF.

(continued on page 7)

Stottlemyer Collection Opening at Carnegie Hall

By Ruth Bernhardt
Cultural Editor

On Friday, February 4, The Juniata College Museum of Art opened its doors for the first public exhibition of selections from the Worth B. Stottlemyer Collection.

Art lovers among the students, professors, and the community attended the event, which Director Phillip J. Earenfight called "an important milestone since the creation of the museum."

Everyone was pleased with the turnout, noting that the response to the exhibition was quite good. An estimated ten to fifteen percent of the campus were in attendance.

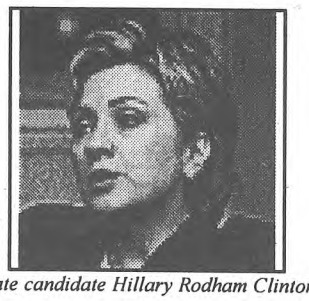
Tait's With Friends, on display in the Juniata College Museum of art

The works displayed in Carnegie Hall are a few of the collection donated by Mr. Worth B. Stottlemyer's son, a Juniata alum class of 51, and a part of the museum's permanent collection.

The installment holds many diverse works of art including a Rembrandt etching and numerous portrait miniatures.

The roughly seventy miniature watercolor portraits on ivory are some of the most fragile pieces of the collection.

Only about fifteen percent of Juniata's collection is on display at this moment. However more pieces from this collection and others will supplement or be exchanged with those in the gallery and provide specialized shows from within the collection.



Clinton Announces Senate Run

Justin Miller
Political Editor

PURCHASE, NY -- Earning the distinction of being the first president's wife to run for office, Hillary Rodham Clinton launched her Senate campaign Sunday, saying "I may be new to your neighborhood, but I'm not new to your concerns."

Democratic Senator Daniel Patrick Moynihan is not seeking reelection, thereby vacating his seat. Clinton is likely to face Republican New York Mayor Rudolph Giuliani in what could be one of the most expensive Senate races in the nation's history. As of December, Clinton had raised $8 million and Giuliani had raised nearly $12 million.

Reminiscing on a speech she gave at her college commencement at Wellesley in 1969, Clinton said: "I often

Senate candidate Hillary Rodham Clinton

return to one thing I said back then, that politics is the art of making possible what appears to be impossible. I still believe that today. We can do what seems impossible if we have the vision and the passion and the will to do it together."

If Clinton wins the election, not only will she be the first president's wife to run for office, but she will make history in another way. No woman has ever been elected to statewide office in New York.

Juniata Instructors of the Future

(continued from page 6)

JIF is being shaped as students on campus feel it should be. We are using student input to make this club prosper. We hope to follow the path of last semester in setting and accomplishing goals over the spring semester and for building JIF for the upcoming years. For additional information or ideas that you have to share, feel free to contact the officers or advisor. We hope to see everyone at our next meeting.

Bush Speaks At College That Prohibits Interracial Dating

Ron Hutcheson
Knight-Ridder Tribune

GREENVILLE, S.C. -- Texas Gov. George W. Bush portrays himself as a candidate who reaches out to minority voters, but he was the featured speaker Wednesday at a Christian school that prohibits interracial dating.

Bush's visit to Bob Jones University here underscored the lingering complications of racial politics in the South, a vital region for Republicans in national elections. In going to the school, the Republican presidential hopeful reached out to southern conservatives at the possible risk of alienating moderates, independents and voters of color in other parts of the country.

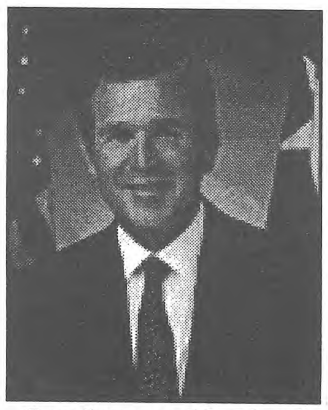
The visit was viewed as politics as usual in South Carolina, where racial tensions are focused on the Confederate battle flag that flies over the state capitol. Even the NAACP took a pass when given the chance to comment on the Texas governor's appearance at the school.

At a news conference after his speech, Bush said he opposes the ban on interracial dating, but said he sees no conflict between his visit and his inclusive campaign message. Bush often presents himself to voters as a candidate who can appeal to all races and ethnic groups.

"I went there to see 7,000 people. I went there because I was invited to go," he said. Bush's speech replaced the normal Wednesday chapel service, which is mandatory for students.

Although Bush's visit to the racially separatist campus did not cause any noticeable backlash, the school and its policies have stirred passions in the past.

The university, founded in 1927 by the Rev. Bob Jones Sr., a popular evangelist and leader in the prohibition movement, lost its tax-exempt status in the 1970s for refusing to admit blacks. The school has since abandoned its segregationist admissions policy, but continues to prohibit dating by blacks and whites.



In defending the ban on interracial dating, school officials point to the Biblical story about the Tower of Babel, where God divided the tower builders by their different languages. Some segregationists have interpreted the story as a warning against mixing races.

It was unclear if the prohibition applies only to blacks and whites -- and not to Hispanics or Asians, for example -- and school officials did not return phone calls seeking clarification.

Interracial or cross-cultural dating and marriage is becoming more and more widespread in the United States, particularly in places with diverse populations such as California, Texas, Florida and New York. Census figures from 1998, the latest available, show that 5.6 percent of married couples in the United States identify themselves as interracial, up from 4 percent in 1990.

In 1998, school officials threatened to arrest a gay alumnus for trespassing if he came on the grounds, prompting a demonstration by gay rights activists.

The university's mission statement declares that the rules guiding student life flow from a literal interpreta-

Texas Governor and Presidential Candidate George W. Bush

tion of the Bible -- "whatever the Bible says is so." The school's goal is to produce graduates who are "Scripturally disciplined; others-serving; God- loving; Christ-proclaiming; and focused above."

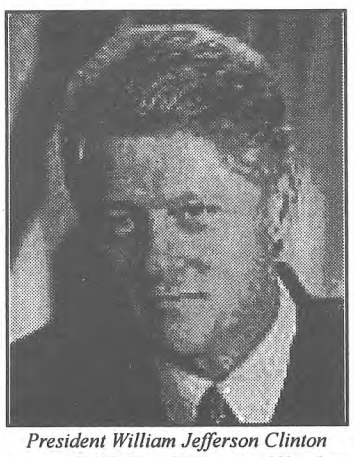
Despite its sometimes controversial policies, the university is familiar turf to Republican presidential candidates. At least two of Bush's rivals, publisher Steve Forbes and radio commentator Alan Keyes, are expected to visit the campus and its 5,000 students before South Carolina's Feb. 19 primary. Keyes is African American.

"Republicans and Democrats have been going to that campus for years," said former Gov. David Beasley, a Bush supporter. "They're good folks, they're good people, and they have strong views that they don't play politics with. They're not trying to impose that view on any of the candidates running for office."

A spokesman for Bush's chief rival, Sen. John McCain of Arizona, declined to say whether McCain would accept an invitation to the campus.

"Sen. McCain does not support that policy or that viewpoint," spokesman John Weaver said of the interracial dating ban.

President Making College Affordable



Justin Miller
Political Editor

WASHINGTON -- President Clinton's announcement today of a $30 billion, 10-year initiative to make higher education more affordable for millions of the nation's college students.

The "College Opportunity Tax Cut" will give each family up to $10,000 for tuition, fees and training. First Lady Hillary Rodham Clinton, a candidate for the Senate from New York, and Sen. Charles Schumer, D-N.Y., joined the president in the announcement. Making college more affordable was a campaign pledge of Schumer in his bid to defeat incumbent Sen. Alfonse D'Amato in 1998.

A similar proposal by Schumer was narrowly defeated last year.

Additional funding to the

President William Jefferson Clinton

tune of #35 million will also be available for the college Completion Challenge Grant program, which is designed to spur college dropouts to return to school, as well as $40 million to help minorities pursue five-year dual-degree programs in fields in which they are under-represented. $716 million will also be available for Pell Grants.

McCain Defends Campaign Funding

Justin Miller
Political Editor

WASHINGTON -- Sen. John McCain (R., AZ), who is campaigning across the country on a platform promising to break the grip of special interests on politics, Sunday found himself fending off allegations of accepting contributions from such groups. McCain's rival Governor George W. Bush of Texas has been critical of McCain engaging in what he called "Washington double talk" by attacking special interests while accepting their support.

On CBS' "Face the Nation," Bush's chief strategist Karl Rove said "Senator McCain sees himself and portrays himself as an advent of campaign finance reform, as somebody who is cleaner than anyone else around the table, and yet he has accepted contributions and sought contributions from people with legislation pending before his committee."

McCain is the McCain of the McCain-Feingold Acts that have aimed to reform the system of campaign contributions seen by many to be corrupting American politics. Both times the act has been defeated in Congress.

Sen. Feingold (D., WI) narrowly won reelection in the last election, running on a campaign of not accepting any special interest monies.

Said McCain on ABC's "This Week," "I welcome the support of anyone in the form of $1,000 contributions, but they know clearly well where I stand, they know clearly I want to break the iron triangle." Federal election rules restrict Presidential election campaign donations to $1,000 each.

The Bush strategy leading up to the South Carolina primary is to draw distinctions between the reforms he has

Arizona Senator and Presidential Candidate John. McCain

made in Texas and the lack of progress by Washington politicians. Characterizing McCain as a Washington politician is a significant element of the Bush campaign strategy since last Tuesday when McCain defeated Bush in the New Hampshire primary.

Commenting on his battle for recognition in a campaign against a candidate who is the choice of the GOP establishment, McCain characterized himself as being "like Luke Skywalker trying to get through the Death Star."

Juniata and the Civil Rights Movement

(continued from page 6)

Juniata student's and many others were met by a posse of law officers who beat the protester's with clubs, inflicting injuries on several of the Juniata delegation. At the time Ms. Richardson told the Juniatian that her purpose for attending the protest was "to show the Alabama people that other Americans are concerned about the struggle."

Pam Clemson, Juniata alum, comes to the aid of a hurt student.

The Juniatian was unable to reach Ms. Richardson (now Michel), but has learned that she is a present Trustee of the college and works for a group called National Minority Supplier Development Council in NYC. Galway Kinnell presently lives in NYC and Vermont, where he continues to publish poetry for Houghton & Mifflin Company.

In celebration of Black history month, we remember these students and the others who fought for the rights of Americans who had none.

Beck, the New Weird Al?

Matt Wolfe
Web Page Editor

Beck is back with a new album, Midnite Vultures, the follow-up to 1996's successful Odelay. He has brought his sarcastic wit to full bloom with this album. Unlike Weird Al, who goes for obvious parody, Beck is a bit more low-key, often his jabs aren't apparent until multiple listenings of a song.

Track one is the current radio single, Sexx Laws. This is one of Beck's catchiest tunes to date (By the way, the chorus is "I want to defy, the logic of all sex laws" not "I want to define…"). This is a great way to start of the album. The second track, Nicotine & Gravy, is a bit more mellow than the first track, but still carries the playful feel that Beck has created so far.

Track three, Mixed Bizness, Is the next radio single after Sexx Laws. With lyrics like "I'm mixing business with leather," how can you not like this song? Another catchy success for Beck. Track four, Get Real Paid, takes stabs at the current state of rap, both with the lyrics and with the music. The title begins Beck's mockery and the lyrics complete his views. The next track, Hollywood Freaks, continues with the same idea, this time expanding his targets to include Hollywood types and people that let notoriety change their lives.

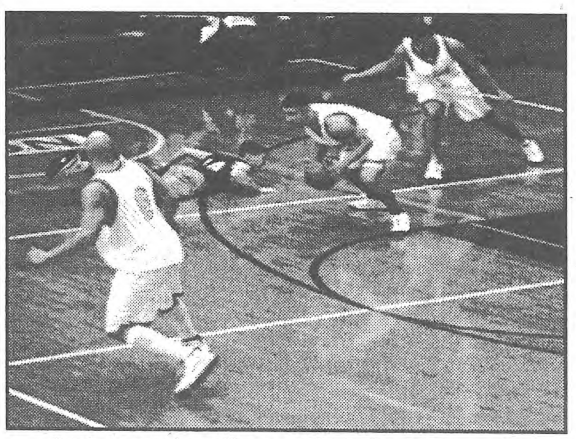
Track six, Peaches & Cream, starts off with a great guitar riff, then settles down into a great Prince-like style, including singing. Even the lyrics could be passed off as a Prince creation. Track seven, Broken Train, actually tackles a tough subject. Beck sings about how corporations can lay off workers yet give their high-level executives raises and bonuses. The music is simple and effect for the subject matter.

Beck lightens it up again in the next cut, Milk & Honey. At least, he does until he starts singing. In this track he sings about the strife in other nations, particularly war-torn nations, while we live in the land of milk and honey and pay no attention to anything else. From the upbeat tempo of the song, the lyrics never hit you unless you listen very carefully. Track nine, Beautiful Way, slows the pace down a bit. Beck sings about relationships and how people can have something so beautiful yet have it be a complete mistake. I'm sure most people have had a relationship like that.

Track ten, Pressure Zone, gets back to the harder riffs that made Devil's Haircut a hit. To be honest with you, I have no idea what this song is about, but it's very good! The tempo is great and the three-minute length is radio-friendly.

The last track, Debra, is easily the funniest track on the album. Beck sings about meeting a girl in JC Penny's and how he instantly knew he had to "get with you" and they shouldn't spend any time getting to know each other. This is such a great commentary on the type of guy who goes out looking to get laid and not for a relationship. Let's face it guys, isn't this most of the time?

Overall, Beck's latest album is a smash hit. His lyrics may sound heavy at times, but the casual listener will never notice them. They will only enjoy the great music, which everyone can do very easily.



Do you like writing? Do you want to reach a larger audience? Join the staff of the Juniatian. Call x.3379 for more info.

Sports Round-up

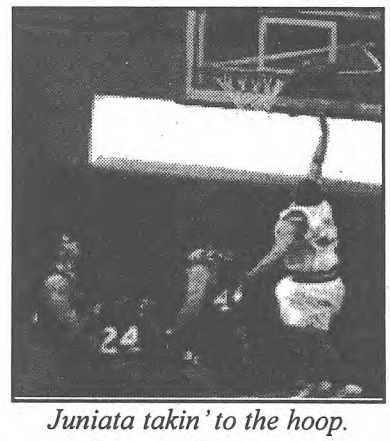
Bub Parker
Sports Information Director

WOMEN'S BASKETBALL (14-6, 6-4 MAC Commonwealth): Feb. 12, Widener.

--Juniata lost at Lebanon Valley on Wednesday the 2nd. The Flying Dutchwomen ended the Eagle's three-game winning streak with a 74-66 setback to sweep the season series. The blue and gold hoopers were down, 61-60, with 3:04 to go, but they could never grab the lead in the second half. The loss dropped Juniata into a tie for third-place in the MAC Commonwealth with Susquehanna. Lebanon Valley is one game behind with a 5-5 MAC loop record. The top four teams in the MAC Commonwealth advance to the conference playoffs later in February. Sophomore forward Brandy Preslovich (Bald Eagle Area/Moshannon) had 14 points, five rebounds and three steals. Senior forward Danny Young (Eastern York/Craley) added in 13 points, nine boards, five steals, four assists and two blocked shots. Sophomore guard Kelli Young (United/Vintondale) posted 11 points, three assists, two rejections and two steals. Over the weekend, the Eagles journeyed to the Gettysburg Tournament. On Friday evening, Juniata secured its first winning season since the 1992-93 unit went 15-7 with an 83-42 win over Notre Dame (MD). It was the most lop-sided win for the Eagles since a 90-40 victory against Widener during the 1993-94 campaign. Danny Young entered the outing needing nine points to reach the 1,000-point milestone in her career. She hit a layup at the 17:37 mark of the second half to to become the seventh player in women's basketball history on College Hill to hit the plateau, and she finished with 11 points and six rebounds against the Gators. Senior center Mollie Lyman (Conneaut Lake/Conneaut Lake) paced the way with 19 points and seven rebounds. Preslovich and freshman center Kelly Steinbeiser (Altoona/Altoona) led Juniata with 12 rebounds each. Preslovich added in eight points, while Steinbeiser posted a season-high seven points. Sophomore guard Kelly Grove (Penns Valley/Spring Mills) poured in 10 points, while Kelli Young dished out six assists and freshman guard Jen LaCount (Westmont Hilltop/Johnstown) had a campaign-best five steals. On Saturday, Juniata got 19 points, including a tournament record six three-pointers, from senior guard Dana Lichtenfels (United/Robinson), during an 83-63 win over Gettysburg to take the tournament crown. Five of Lichtenfels's treys came in the second half when the Eagles built onto their 36-32 lead at intermission. Lichtenfels was just one three-pointer shy of the school's single-game record and was six of eight from behind the arc. Lyman finished the outing with 15 points, 11 rebounds and three assists. Lyman was named the most valuable player of the tournament, while Lichtenfels earned a spot on the all-tournament team. Overall, the Eagles set a school record for the most three pointers made in a game (11), breaking the old standard of 10 which was last matched in the 1996 season. The 11 treys also marked a single-game record for the Gettysburg College Tournament. Preslovich and Grove each had 12 points, while Preslovich also had 13 boards. Kelli Young had 10 points and tied a career-high with 10 assists. Danny Young added in eight rebounds, six points, three assists, three steals and a blocked shot.

Juniata on the offense. Photo by J. Ramquist

MEN'S VOLLEYBALL (1-4, 0-3 EIVA Tait): Feb. 12, Concordia; Feb. 13, George Mason.



--The Eagles were in action the 3rd and recorded a 9-15, 15-9, 15-5, 15-11 setback at Penn State. Juniata, ranked sixth in the latest American Volleyball Coaches Association (AVCA) Division III Poll, fell to the Nittany Lions, who are ranked ninth in the Division I ratings, and lost for the fourth straight time in 2000. The Eagles posted a .356 hitting percentage in the first game, but did not hit over .240 in any of the three remaining outings. Senior outside hitter Rod Kirby (Penn Hills/Pittsburgh) had 23 kills on 44 swings for a .318 hitting percentage to lead Juniata. He also had five blocks and three digs. Freshman middle hitter Luke Manion (North Allegheny/Pittsburgh) registered 19 kills, a .406 hitting percentage, two service aces and four rejections. Junior middle hitter Jason Michael (Ephrata/Ephrata) came through with 10 kills on 18 tries and three errors for a .389 hitting mark. Michael had a match-high eight blocks. Sophomore setter Kevin Moore (Webster/Webster, NY) passed out 62 assists, picked up four digs and had two blocks. Senior opposite Jason Moore (Spencerport/Spencerport, NY) added in a team-best eight digs and he had eight kills.

MEN'S BASKETBALL (3-16, 1-9 MAC Commonwealth): Feb. 9, Messiah; Feb. 12, Widener.

--The Eagles had a hard-fought, 69-60, loss at Lebanon Valley on the 2nd. Juniata trailed by just three points, 59-56, with 1:34 to go, but could get no closer the rest of the way. Senior forward Tim Lonesky (Blacklick Valley/Nanty Glo) paced the blue and gold attack with 18 points and he pulled down four rebounds. Sophomore guard Shane Crandall (North Allegheny/Doylestown) poured in 15 markers, including three of six from behind the three-point arc. He also passed out three assists. Junior forward Nathan Hager (Franklin/Franklin) had 12 points, including three treys, while sophomore forward Dave Reddick (North Hills/Pittsburgh) chipped in with nine points and a game-high nine rebounds. On Saturday, Juniata snapped a three-game losing streak with an 80-65 win over visiting Drew. Reddick had 18 points and a career-best 18 rebounds for the Eagles. He also passed out three assists and had three steals. Lonesky posed a game-high 22 points and pulled down eight boards. Sophomore guard Brian Dietrich (Wilson/Wyomissing) also reached double figures in scoring with 12. Junior forward Justin Stephans (Gateway/Monroeville) came off the bench to record eight rebounds and seven points.

WOMEN'S SWIMMING (3-11, 0-4 MAC Commonwealth): Feb. 12, Lebanon Valley.

Juniata fell at Lycoming on Wednesday, 103-102, in a close Middle Atlantic Conference (MAC) outing. Freshman Alissa Schneider (Mililani/Mililani, HI) paced Juniata in the outing. She took first in the 100-yard freestyle (55.54), 200-yard freestyle (2:01.55) and 200-yard individual medley (2:21). Freshman Cindy Long (Emmaus/Emmaus) was the top finisher in the 200-yard butterfly (2:21.06) and the 500-yard freestyle (5:39.92) outings. She was also second (26.41) in the 50-yard freestyle. Sophomore Hannah Ainsworth (Hugh C. Williams/Canton, NY) placed second in the 200-yard breaststroke (2:50.16), while sophomore Greta Rettig (Saint Maria Goretti/Waynesburg) took the runner-up spot during the 200-yard backstroke (2:32.18). Junior Leslie Stewart (Tyrone/Tyrone) finished third in the 1,000-yard freestyle race (12:27.47), sophomore Jenn Dorsch (Gov. Thomas Johnson/Frederick, MD came in third in the 200-yard freestyle (2:11.13), Rettig was third in the 200-yard individual medley (2:34), freshman Claire Coburn (Miramonte/Orinda, CA) place third in the 100-yard freestyle (1:01.70) and sophomore Erinn Soule (Manheim Township/Lititz) turned in a third-place showing in the 200-yard backstroke (2:34.75). The 200-yard freestyle relay unit of Ainsworth, Coburn, Dorsch and freshman Elizabeth Blaine (Wyalusing/Wyalusing) placed

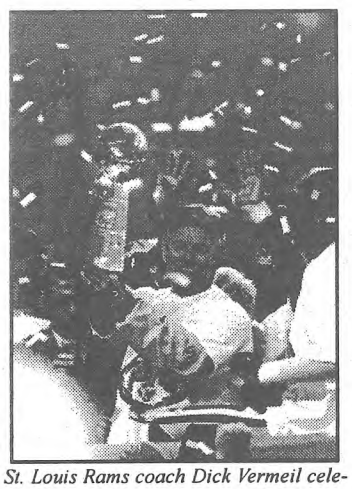
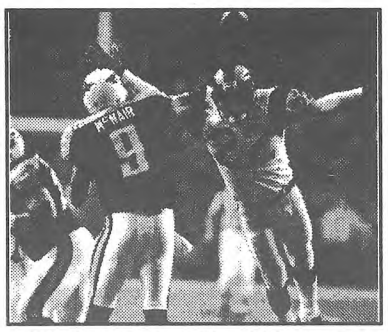
35 Things You Don't Know About The Super Bowl

Ed Barkowitz
Knight-Ridder Tribune



1. This is the first Super Bowl in which neither starting quarterback played for a Division I-A college. Steve McNair went to Alcorn State and Kurt Warner went to Northern Iowa, both I-AA schools.

2. Titans guard Bruce Matthews played in 277 career games, including playoffs, before making his first Super Bowl appearance, the longest drought among all active players (not including kickers).



3. Matthews, a 17-year pro, was a teammate of head coach Jeff Fisher at the University of Southern California.

4. Matthews has played in 39 different stadiums and blocked for four different 1,000-yard rushers, including Earl Campbell back in 1983.

5. Matthews on his ability to play for so long: "My great diet that I'm on with cheesburgers and Diet Coke."

St. Louis Rams coach Dick Vermeil celebrates with the Lombardi Trophy.

Titan's quarterback Steve McNairgets a pass off by the charging Billy Jenkins.

6. Rams owner Georgia Frontiere earned a Doctor of Philanthropy degree from Pepperdine (Calif.) University.

7. Titans offensive coordinator Les Steckel is a highly decorated veteran of the Vietnam War and a colonel in the Marine Corps Reserve.

8. Rams defensive lineman Kevin Carter majored in zoology at the University of Florida, but aspires to be a pharmacist following football.

9. Eddie George is one of only four men to rush for 1,200 yards in each of his first four seasons. Earl Campbell, Eric Dickerson and Barry Sanders are the others.

10. The family of Rams reserve tight end Ernie Conwell competes on the Washington stock car circuit as the Conwell Rácing team.

11. Titans wide receiver Chris Sanders, his wife and two children will appear in the music video of Madonna's remake of "American Pie."

12. Titans rookie tight end Larry Brown is the team's king of table tennis.

13. When Rams linebacker Mike Jones left the University of Missouri, where he also played offense, he was the school's all-time leading receiver among running backs.

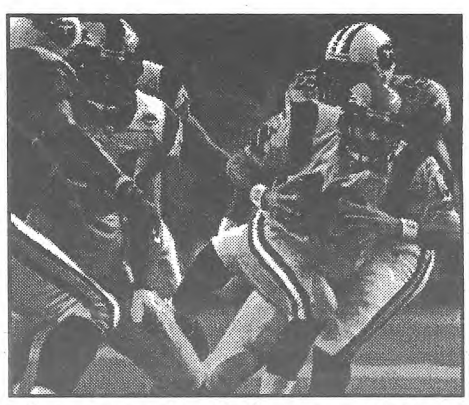
14. Jones scored three of the Rams' eight defensive touchdowns this season, only one fewer than the nine that Eagles running back Duce Staley scored.

15. Counting the playoffs, the Rams have played 18 games - 15 were on artificial turf (13 victories). Of those 15, 13 were played indoors (12 victories). Sunday's game will be played indoors on turf.

16. Tennessee is 4-0 on turf, including 2-0 indoors.

17. The Titans' Fisher is second all-time in Bears history in career punt returns and third in punt-return yardage.

18. Steve McNair (yes, the quarterback) intercepted 30 passes while playing defensive back at Mount Olive High in Mississippi, giving him a share of the state record held with current Dolphins cornerback Terrell Buckley.



19. McNair is the only NCAA player ever to gain over 16,000 yards in total offense (16,823 actually).

20. On Nov. 23, 1980, Dick Vermeil's Eagles beat the Raiders, 10-7. Two months later, they lost to Oakland in the Super Bowl.

21. On Oct. 31, 1999, Dick Vermeil's Rams lost to Tennessee, 24-21. Three months later, they are playing in the Super Bowl. Three noteworthy items from this year's earlier encounter:

22. Tennessee led, 21-0, after the first quarter.

23. The Titans' defense forced five fumbles (recovering three) and sacked Kurt Warner five times.

St. Louis quarterback Kut Warner scrambles for a gain in the first half. Photo by TMScampus.

24. Rams kicker Jeff Wilkins missed a 38-yard field goal with seven seconds left that would have tied the game.

25. Rams running back Marshall Faulk became the second player to reach 1,000 yards in both rushing and receiving in the same season. Roger Craig, who helped the 49ers win the 1985 title, is the other.

26. Faulk held out the first two weeks of training camp in a contract dispute. Eventually, he signed a seven-year, $45 million deal.

27. Al Del Greco was born the same day Wilt Chamberlain scored 100 points against the Knicks, March 2, 1962.

28. Del Greco is an excellent golfer who has an eye toward teaching golf after football. He began playing after receiving a set of clubs that had been found in the trash.

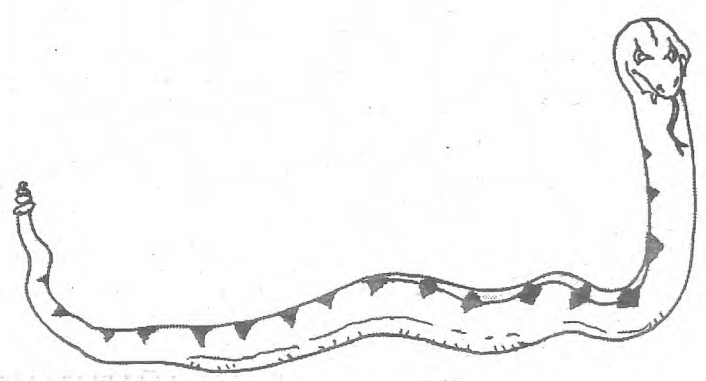
29. Atlanta, the site of the Olympic bombing four years ago, has hired up to 2,500 private officers to augment the security provided by the NFL, Atlanta and the state of Georgia.

30. The Cowboys won their second-consecutive title, 30-13 over Buffalo, in Super Bowl XXVII, the only other Super Bowl held in Atlanta.

31. Next year's Super Bowl is in Tampa, followed by New Orleans in 2002 and San Diego in 2003.

32. The Titans' Fisher is the first coach to win his first three playoff games since George Seifert led the 49ers to the 1989 Super Bowl title.

33. Only two of the previous six wild-card teams that reached the Super Bowl won it. The 1980 Raiders (defeated Dick Vermeil's Eagles) and the 1997 Broncos (beat the Packers).



34. Eddie George was born in Philadelphia and attended Abington High before transferring to Fort Union (Va.) Military Academy after his sophomore year.

35. Among the former Eagles on the Rams' assistant coaching staff: John Bunting (defensive coordinator/linebackers), Carl Hairston (defensive line) and Wilbert Montgomery (running backs).

Sports Round-Up

first with a time of 1:51.24. The 200-yard medley relay squad made up of Rettig, Ainsworth, Coburn and Blaine turned in a second-place effort (2:07.88). This past Saturday, Juniata lost to Scranton, 64-31, and to Division II Lock Haven, 55-40. Schneider led the way against both teams in the 200-meter freestyle (2:12.41) and the 100-meter freestyle (1:02.95). The other individual first place finishes from the day were from Long in the 100-meter butterfly (1:10.30) and Ainsworth in the 100-meter breaststroke (1:29.67). Long also fished second against both teams in the 50-meter freestyle (29.47) and in the 100-meter butterfly she ended up in second against Scranton (1:10.80). Stewart placed second against both squads in the 800-meter freestyle (10:45.08) and she also placed second against Lock Haven and third against Scranton in the 400-meter freestyle with the time of 5:15.56. In the 200-meter individual medley, Rettig placed third (2:53.22) against both opponents. Soule ended up third in the 100-meter backstroke (1:25.12) against both Lock Haven and Scranton. Dorsch placed third against Lock Haven in the 100-meter butterfly (1:18.10) and Coburn also placed third against Lock Haven in the 100-meter butterfly (1:08.72). In relay action for the day, the team of Schneider, Soule, Dorsch and Long took first on the day against both clubs with the winning time of 4:25.76 in the 400-meter freestyle relay.

Wilson Fellow Visits Juniata

Krissy Lipuma
Staff Writer

Earlier this month, Juniata College played host for a week to Marjorie Margolies-Mezvinsky, national winner of the Woodrow Wilson Fellowship, which celebrates life achievement.

Marjorie Margolies-Mezvinsky, after speaking. Photo by K. Lipuma.

Ms. Margolies-Mezvinsky spent the week touring campus, teaching classes, and dining with students and faculty.

The high point of the week was a lecture Tuesday night, "Bringing Women to the Table". She delivered her speech before a mostly female crowd.

Highlighted in her speech was her race for the House of Representatives from Montgomery County Pennsylvania in 1992.

Called "The Year of the Woman", Ms. Margolies-Mezvinsky was one of twenty-four women elected to Congress that year, and she was the first woman ever elected to the House from Pennsylvania.

She continued to speak about her experiences as director of the United States Delegation to the United Nations Fourth World Conference on Women in Beijing China, and of her work for Women's Campaign international.

Margolies-Mezvinsky believes that more women should be involved in political activities because they have different issues and ideas than their male counterparts.

Marjorie Margolies-Mezvinsky is a five-time Emmy award winner for her work as a humanist reporter for NBC.

She is the author of two books, They Came to Stay and A Woman's Place: The Freshmen Woman Who Changed the Face of Congress, and a woman's rights activist.

She is the mother of eleven children and a foster parent to over a dozen other children.

Juniata Students Help Local Children

John White
Contributor

Caption Here.

Every week a group of twenty Juniata students provide a much needed service for around eighty area children by participating in The Salvation Army's Ark of Learning program. This program is a tutoring and mentoring program offered to any child in grades 1-12 that wishes to attend. The program is currently in its third year of operation since it's evolution from a pre-existing homework club. The primary goal of this program is to offer educational help to children who are having problems in one or many areas of their studies. The mentoring aspect is accomplished through the

The College Student Report

Valerie Gleim
External Relations

Randomly selected freshman and seniors at Juniata soon will be asked to play a significant role in the college's future.

In two to three weeks, students will be invited to fill out The National Survey of Student Engagement project's The College Student Report. It will ask students how and where they spend their time, the nature and quality of their interactions with faculty members and peers, and what they have gained from their classes and other college experiences.

It will take less than 15 minutes to fill out, but could change how the college operates for years to come. Those students asked to participate will receive an e-mail that will guide them to the Web site survey.

Juniata will receive the results from its own students, as well as comparative data from about 275 other colleges and universities participating in The Report.

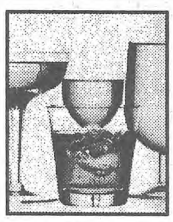
Collegiate rankings generally focus on what students are like when they start college - their entrance exam scores or high school class rank. Other categories often emphasized are numbers of faculty members, library books, and computer terminals. Unlike those studies, The National Survey of Student Engagement project is designed to refocus public discussion on the things that really matter to quality undergraduate education - what students do and what they say about their experiences.

The National Survey of Student Engagement is supported by a grant from The Pew Charitable Trusts to help colleges and universities improve undergraduate education by providing valuable information about student engagement in learning. For more information, contact Valerie Gleim at: gliemv@juniata.edu. For more information about the survey itself, visit www.indiana.edu/~nsse.

Judo Club to Compete

Adam Kyzer
Contributor

On Saturday, February 5th, the tough members of the Juniata College Judo Club competed at the second annual Slippery Rock Collegiate Judo tournament. Participants included Chris Finkbeiner (the instructor's wife), freshman Amy Slezak, senior Scotty Kyzer (club vice-president), junior Juliette Crowder (club secretary), graduate Jenn Shatzer (club president), and sophomore Megan Smith. Although only three took home medals, all of the competitors fought very well. Juniata faced opponents from Army, Navy and Mohonk Valley Community College. Other schools represented at the tournament were Wheeling Jesuit and of course Slippery Rock University.



Chris Finkbeiner, Amy Slezak, Scotty Kyzer, Juliette Crowder, Jenn Shatzer, and Megan Smith.

The Judo Club meets every Monday and Thursday from 6:30 until 8:00PM in the martial arts room right across from the fitness center. "Our club is like a family. Although "judo" is Japanese for "the gentle way," it can still be a rough sport so we try to stick together," said Scotty Kyzer, club VP. Many of the club members are testing for their next belt ranks within the next few weeks.

What does the future hold for the Judo Club? It could be you! The Juniata College Judo Club's door is always open to new members. "The more the merrier," said Juliette Crowder, club secretary. If you are interested in more information, e-mail scottyk23@penn.com, or just stop by at practice. As for tournaments, the club is planning to attend the Liberty Bell National Competition on April 8th and 9th in Philadelphia. Good luck Juniata! Kick some judo butt!

How Heterosexist is Juniata?

Ellen Smithee
Contributor

There was a time in high school when I was confused, a time when I hated myself for who I essentially was, and a time when I tried my hardest to not be "me." When an adult hears about girls going through changes in junior high and high school, s/he might envision nervous first dates, kissing, "rounding the bases," and the first time s/he tried a cigarette or drank alcohol. However, with the emergence of a strong gay culture, junior high and high school years for males and females have become more difficult times. Add the possibility of having a crush on your best friend and being forced to confront a sexuality that is unacceptable to both friends and family, and you've got yourself a set-up for suicide or social reclusion. According to Juniata College's study of the "Impact of Heterosexism and Homophobia on College Campuses: Challenges for Educators," gay and lesbian youth are "two to three times more likely to commit suicide than heterosexual young people" and 80% of lesbian, gay, and bisexual youth report severe social, emotional, and cognitive isolation problems.

Personally, I went through all of this: I had my first boyfriend, I crushed on my best girl-friend, I fell for my camp counselor, I ran away from home, and I became, sadly enough, suicidal for a short period of time. At this low point, I realized that it was time to talk to someone about what I was feeling; if I kept hiding, it was going to kill me.

During my seventh grade year, a speaker came to my high school; his name was Mike. He had AIDS, and he gave the most powerful speech I've ever heard. However, the audience that he spoke to wasn't the most accepting of his situation, and there was an air of uneasiness about the gymnasium. At that time it was "cool" to call someone a "fag" or "homo." Mike began his talk by defining a word for us: faggot, which actually means "a bundle of sticks." "Fag," to us, was a derogatory name we would use to on someone who we didn't like or who didn't fit in with our group of friends. Spitting out facts concerning AIDS and what it was like to be a queer man in the '90s, Mike made me think in a way that no one had ever done before: he made me realize that people are affected more than we think by our actions and words, and that these invisible daggers can be the most painful aspects of one's daily life.

Mike sent us off with a challenge that day: to never accept the intolerance of anyone's race, religion, sex, or sexual orientation. I knew that I, for one, would live up to his wish: I would make a difference somehow, and that difference would somehow make it easier for him to exist in a heterosexually elitist world. At the time, I wanted to do it just for him. However, a few years later I discovered that my godmother and her partner weren't just best friends that lived together, and that a close male friend of the family who never had any girlfriends was, in all reality, content with having boyfriends. Having people whom I knew and cared for suffer through similar trials as Mike made the issue something that I could personally relate to. Therefore, Mike's message soon become an important aspect of my life. It was because of these feelings that I co-founded my high school's Gay/Straight Alliance during my sophomore year. Little did I know, the GSA would be a way for me to learn about and explore my own sexuality.

When I first began looking at colleges, a demographically diverse student body and a campus that prided itself on respecting people of all different backgrounds were necessary. But somehow, when I came to Juniata and fell in love with it, I disregarded my hopes for both a diverse student/faculty body and a student/faculty culture that, as a whole, unconditionally supported individuals regardless of their race, religion, national origin, and/or sexual orientation. Instead, I came from an upper-class "white-bread" town to an upper/middle-class "white-bread" school. My need for a diverse environ-

Kicking The Smoking Habit Hard Work But Worth It

Scott Marinaro
Campus Correspondent

I feel great now that I've quit smoking.

I have better circulation, food tastes wonderful again, my girlfriend remarks how much nicer it is to kiss me and, above all, I don't feel lousy from the minute I wake up until the minute I go to bed as I did two short months ago.

But let's put this all into context: kicking the smoking habit was a really hard thing to do.

An English professor of mine at the University of New Hampshire once said that if it hadn't been for cigarettes, he probably wouldn't have made it through graduate school. But, he quickly added, if he hadn't quit smoking right after grad school, he probably wouldn't have lived long enough to even meet me.

I know exactly what he meant. I've tried to quit smoking five times in college, and each time have found myself taking that decision more and more seriously. Unfortunately, school-related stress has always brought me back to my crutch.

Not this time. And I mean it; I'm done. Y'see, my Camel-loving friends, I've seen the very real possibility of death that comes from smoking -- and I'm only 21. My respiratory system has ceased working properly not once, but three times. The most recent trouble sent me to a hospital over winter break and required surgery. Doctors basically told me I could choose to suffer through nicotine withdrawal now or face far more serious consequences later.

I "decided" to kick the habit in room 459 of Northern Westchester Hospital Center in New York state not long after I suffered a collapsed lung. No matter how many times I buzzed nurses and asked for a pack of smokes, they wouldn't give me any. At the time, I was surrounded by three men who were also craving a drag. Two had lung cancer, one had emphysema, and we all had an agreement: If anyone scored a smoke, he was to bring one back for the other guys, too.

Then, as I felt better and the immense pain and discomfort I experienced started to subside, I started to feel bad for all the other cigarette fans around me. They weren't going to get any better. And I, on the other hand, had one thing every single one of them would have given anything for: the chance to lose an awful habit before it lost me.

I miss smoking like you wouldn't believe; don't think for a second that this is an easy battle. They say that after one month of being smoke-free, you should treat yourself to something. I joke with friends that I'm going to have a Marlboro Red. And now that school stress is setting in, the temptation is growing.

Students Brave Elements for Model UN

Ryan Miller
Staff Writer

Last January JC Model United Nations sent six student delegates to the McGill Model United Nations Conference (MCMUN) at McGill University in Montreal.

Approximately 900 college students attended the conference, from Canadian as well as American schools, such as Harvard, Johns Hopkins, and Carnegie Mellon.

Freshmen delegates Kathleen Cox and Heather Stoner accompanied MUN veterans Jason Imler, Kristy Manning, Jacqueline McCarthy, and Ryan Miller to the 4-day event.

The JC students represented The Democratic Republic of Congo (which is neither democratic nor a republic) on such committees as The Millennium People's General Assembly and The Organization of African Unity.

The conference included intense debate on many pressing world topics, including displaced persons, the world's technology gap, and economic aid.

While the students reported to have had a successful conference and a good time, their trip wasn't all cream and sugar.

Late that Sunday night a very befuddled Emil Nagengast (the club's advisor) received a phone call from the students, who got trapped in Wilkes Barre PA on their trip home, due to the snow storm.

The students begged poor Dr. Nagengast to relay a request to their Monday professors for leniency from exams and quizzes that were scheduled for the next day.

The six students stayed yet another night in a hotel, before heading off after the roads cleared around 7:00am. It only goes to show that even the most complete and thorough planning is no match for Mother Nature.

Juniata's Model UN club has made great strides in its first three years of existence. Their activities have expanded to include participating in conferences, hosting speakers on campus and organizing forums with other clubs.

On March 17, the club will add running their own conference for high school students to their repertoire.

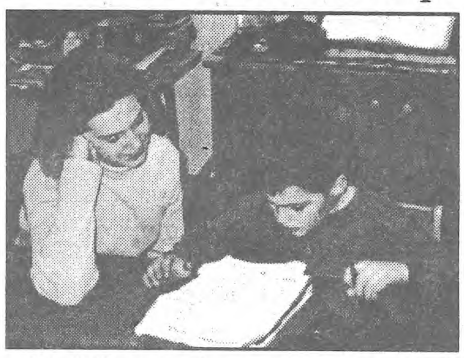
How Heterosexist is Juniata?

(Continued from Page 2)

ment was satisfied by the fact that there was an organization on campus that was exactly what I was looking for: AWOL, Alternative Ways Of Loving.

AWOL has allowed me to meet people of different sexualities and backgrounds, from straight to gay or lesbian, bisexual to asexual. I've learned how to talk about my own sexuality quite candidly, and I feel as if I "out" myself every day to someone new. Author Samuel R. Delaney, contributor to Boys Like Us: Gay Writers Tell Their Coming Out Stories, once wrote, "One does not come out once. Rather one comes out again and again and again - because the dominant discourse in this country is still one of heterosexist oppression and because it still controls the hysteria to know who's gay and who's not try." I was first frightened by this fact. However, I have come to realize that I cannot edit myself for the rest of my life -- I might as well give up doing so now.

Through AWOL I have also been given a crash-course in combating oppression. The littering of pamphlets received in mailboxes across the mailroom's floor have been blatant examples of apathy and disrespect concerning the club's mission. As a bisexual student here at Juniata, it discourages me that the sight of two girls dancing together at a party, invokes the yelling of "Alright! Lesbians! Look -- lesbians!" by the males who are present: Apparently they find the situation amusing or erotic.



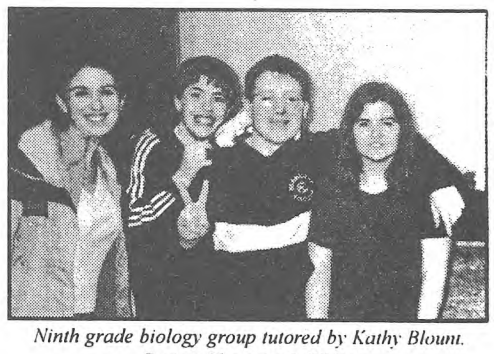
As someone who considers herself to be comfortable with her own sexuality on a campus where such a lifestyle is not always supported, I find what is allowed to happen on this campus repulsive. Individuals tear pictures of Rupaul off of a bulletin board, write "anal sex" and "fag" on flyers concerning events, and put up their own flyers mocking AWOL's informational ones.

I find it pathetic that no more than 35 people, including professors, can attend a day-long event, such as Open Hearts, Open House, for five minutes simply because of whom it is sponsored by.

Despite this oppression and disappointment, the strength that I have gained from working with AWOL has allowed me to stand up for everything that I believe in and that I want for my future. I have gained confidence and a sense of self that I have never felt before. I now let my bisexuality give me strength, not bring me down; my outlook on life has changed dramatically. I have gained a respect for myself that I did not know could have existed.

Unlike in the past, I accept the things that I cannot change with an ease that I have never known before. I have made the overall realization that I can be an open bisexual woman and be as happy and satisfied with my life as anyone. My passion lies with working with AWOL, because we are helping those who don't feel safe or who need information or support to better understand either their own or others' sexuality.

Juniata Students Help Local Children



Erin McMann, a sophomore, tutors Jacob Sharp, who is in the second grade. Photo by J. White.

(Continued from Page 1)

twice-weekly tutoring sessions and regular interactions with the tutors, who act as positive role models, and provide a sense of stability for the students. It is believed that by helping the students in their studies we can then help them to feel better about themselves which is associated with the mentoring goal of the program. Tutoring is conducted in two different methods depending on the material being covered and the students' age. For local high-school students group study sessions are offered for four hours a week in ninth grade biology and math. These sessions are conducted with at least two tutors working with anywhere from two to fifteen students, helping them review material or explaining it in more detail than their teachers do. This part of the program is actively supported by the ninth grade biology teacher and Juniata grad Pat Frasier who supplies tutors with course materials to keep them up with student work. The second method involves one on one tutoring with an individual tutor at any one of four sites in the area for one hour on two nights a week. This method of tutoring is used for younger students or any individual who needs help beyond the range of group programs. This is how most of the tutoring is done and builds a bond between the student and tutor which assist in the mentoring aspect of the program. This bond is proven by parents, students and tutors who were involved in the program the previous year frequently asking to be placed with the same tutor or student that they had the year before.

The success of this program depends on the involvement of Juniata College and its students. The college provides space for tutoring in Good Hall, and also helps by supplying tutors through the community work-study program. Juniata students this year have proven to be more involved than in any of the past years. College students fulfill the crucial position of tutors which requires the most combined time and also requires the largest number of people of any aspect of running the program. This year there has been a larger number of tutors who have been able to work more hours allowing the program to grow and serve more students than it did three years ago with only eight tutors and 30 students. The tutors are not going unrewarded for their valuable contribution they get work experience, pay, and a chance to interact with and become part of the local community. I would like to thank the Tutors for their involvement in making this years program an overwhelming success. If you have any questions about the program please contact me- John White, Program Director, at whitejg7@juniata.edu.

Pittcon 2000

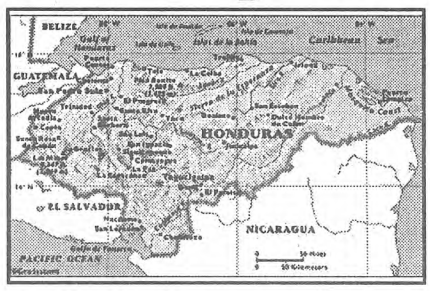
Ejlal Alalawi
Features Editor

The Pittsburgh Conference that will run from March 12-17 will be held in New Orleans this year. It is a huge Analytical Chemistry and Applied Spectroscopy symposium. As has been the tradition, a number of Juniata's chemistry students along with some faculty members are going to attend this great educational and informative event.

The students that are going this year are James Kabrhel, Earl Ashcraft, Jeff Morse, Charles Gilman, Jason Wagner, Tara Fitzsimmons, Josh Kline, and Dale Mowrey. Members of the faculty that are attending are the professors Dr. Tom Fisher, Dr. William Russey, Dr. Don Mitchell, and Mr. Mike Levett. Ms. Deborah Hissner of the campus network is joining them too.

With the exception of the one in Germany that might beat Pittcon, this conference is the largest of its kind. The convention center is so huge, it's about five blocks long as Dr. Fisher mentioned.

This year, the conference will include 2000 papers and more than 1000 companies that will take up more than 3000 booths! Many well-known chemical corporations and industries are usually present and among them are ones now run by Juniata College graduates such as Restek and Keystone Scientific, both chromatography manufacturing corporations.



Posters, new publications and chemicals, workshops, and even short courses for continuing education purposes are all part of the program.

There will also be several awards presented to previously announced winners. The main purpose of these awards is to encourage the researchers for sharing their findings and exposing their new chemical devices and technologies to other scientists and the world.

Our college has been participating in this annual conference pretty regularly ever since it stared. And for the past four years they've been attending every year said Dr. Fisher. Last year we had speakers too even though it is quite unusual for undergraduates to chip in. But that gives you an idea about the competence of our school!

Registration fees were as follows $60 in advance, $120 on-site, and $15 for students. But these weren't bad, the killers are the expenses for the airplane tickets and the hotel rooms in which they are going to stay. That's why the Chemistry Department along with our college's Chemistry Club help pay for about 50% of these expenses. This makes it softer and encourages more students to attend this very cool event.

Trip to Honduras

Jen Bartimole
Staff Writer

From March 2 through March 11, a group of twelve Juniata students and four chaperones will be participating in a Service-Learning trip to Honduras. The purpose of the trip is to learn about the Honduran culture, and to provide a service to the people of Honduras as well.

This service-learning trip was initiated by Henry Thurston-Griswold. A former student of his, Jennifer Ungemach, was volunteering at the Nuestros Pequeños Hermanos ("Our Small Brothers and Sisters") orphanage in Honduras. He approached her about this, and also Jenell Patton, both of whom responded positively. He has organized trips to Central America and Mexico in the past, and has "found them to be a powerful means to raise awareness of the challenges facing the developing world and of our moral responsibility to work for peace and justice."

While in Honduras, the group has many activities planned. They will be volunteering at an orphanage playing with and caring for the children there. Among the other activities planned for the group are touring the Mayan ruins of Copán, meeting with an advisor to one of Honduras' presidential candidates, visiting the Christian Children's Fund project and meeting with a women's organization.

The students participating in this trip are Nicole Bowen, Jen Boesmiller, Brandy Krug, Kristy Manning, Heather Stoner, Andy Watson, Thera Crane, Holly Wolbert, Ashley Myers, Jennifer Champagne, Karen Lombardi, Jennifer Bartimole and Liz Johnson. Chaperoning the trip will be Henry Thurston-Griswold, Jenell Patton, Dave Witkovsky and Jen Long.

Non-Christian Faiths Girding Their Youths Against Christian Evangelism

Jeffrey Weiss and Selwyn Crawford
Knight Ridder Newspapers

The faith and soul of a 12-year-old Jewish Dallas boy have become the latest prize in a national tug-of-war between religious traditions.

Both sides say the larger stakes are enormous: eternal salvation for one, survival of a religious identity for the other.

On one side, most famously, is the Southern Baptist Convention, with its well-publicized and controversial campaigns designed to evangelize those of other faiths -- particularly Jews, Hindus and Muslims. On the other are representatives of those faiths, who have begun speaking out about evangelism.

The story of a Dallas Jewish boy so caught up in a Christian youth ministry that he postponed his bar mitzvah reveals an unintended consequence of high-profile Christian evangelism: Some members of non-Christian faiths are crafting specific strategies to protect their youth against what they consider a theological attack.

"Maybe the Southern Baptist attention may be a blessing in disguise," said Phillip Ramsaroop, former president of the DFW Hindu Temple in Irving. "We need to educate ourselves so we can educate others."

From the evangelical Christian side, the narrative is far different -- it's the story of God's gift of salvation, which Christians are commanded to offer to all people, regardless of what they already may believe.

"Our society has become so politically correct, so influenced by pluralism, that normal New Testament Christianity now seems very much at variance with current thinking," said Jim Sibley, the Dallas-based coordinator of the Southern Baptists' Jewish ministries.

A few Jewish, Muslim and Hindu leaders are working on a national or international level to teach members how to respond to Christian evangelism. But most efforts to strengthen youth in their faith are happening at a local level.

Many non-Christians have said they also feel targeted by Christian evangelists -- and not just the Southern Baptists. Mission America's "Celebrate Jesus 2000" is dedicated to sharing the gospel "with every person in America by year-end 2000." Challenge 2000 is working to establish evangelistic groups in every middle, junior high and high school.

Last year Pope John Paul II traveled to India and called for an aggressive program of Catholic evangelism in a part of the world where Hindus and Muslims represent large majorities.

The Southern Baptists, the nation's largest Protestant denomination with 16 million members, drew particular attention last year by publishing a series of "prayer guides" intended for use during the holiest holidays of other religions. The pamphlets make it clear that, from a Southern Baptist perspective, Jews, Muslims and Hindus are in dire spiritual danger.

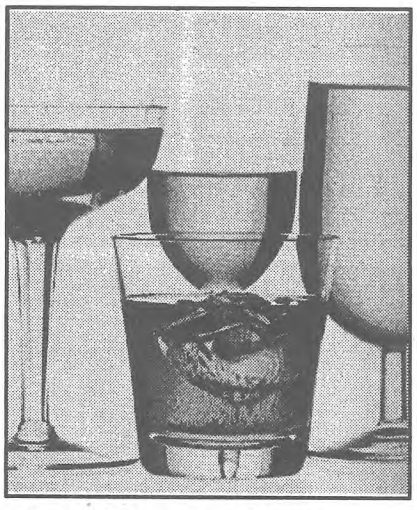
The guides have been the target of public demonstrations in some cities. In Dallas, a group of Christian, Muslim and Hindu leaders wrote a letter of protest that appeared in The Dallas Morning News.

The guides weren't "aimed" at anyone but Baptists, said Sibley, who wrote the first draft of the prayer guide about Jews.

According to the guides, Hindus are "are lost in the hopeless darkness ... slaves bound by fear and tradition to false gods and goddesses."

Muslims are tied by "chains of spiritual darkness."

Jews should realize that "that there is nothing they can do to merit God's forgiveness" and understand "the futility of repentance apart from God's provision for sin."



Since the guides were published, national and local Muslim, Jewish and Hindu leaders say they have been

(Continued on Page 7)

Alcohol on Campus: Youthful Exuberance or Shameless Excuses

Morgan Fogelman
Staff Writer

Drinking and college: for many years, the two have been very closely related. Indeed, for most, a great deal of the truly amusing memories in life have a tendency to revolve around alcohol use. Perhaps the trend of close association was set in motion by movies, such as Animal House, which glorify this youthful activity. Yet again, it could be that drinking on campus was spawned form traditional exercises in fraternity life. This seems to be a case of the old cliché, life imitates art, or vice versa. Regardless of origin, it appears as though this trend has definitely reached a cross-roads. According to a Harvard School of Public Health study on nation-wide, campus binge drinking, 44% of students confessed to having taken part in binge drinking (designated as five or more straight drinks) within two weeks of the survey. An almost staggering 73% of men, and 68% of women reported "drinking to get drunk" as their number one reason for drinking alcohol. With a growing number of drinking-related deaths and alcohol poisoning incidents, many schools across the country have decided to cut down on the possibility of such dangerous activities and label themselves as "dry campuses." Juniata is not to be left out of this dark cloud on society. Already this year, we have had more alcohol poisonings (eight - six occurring in the first semester) than in any single year in recent history. The sad fact is that while most students will not be discussing the history and life of Jack Daniel on a Monday morning, they will most certainly be talking

about their personal history with his beverage. The question, then, becomes: when has too much alcohol use on campus been pushed to its limit? Where does a school draw the line on this abuse, before it eventually determines that alcohol is disallowed on campus grounds?

The current string of poisonings and deaths could be directly related to the age constraints placed on alcohol use in our country. Twenty-four year old, English transfer student, Scott Pardoe, would certainly agree. "In a country where, at 18, you are given the right to smoke, vote, drive, and have sex, it is naïve to think that people are not going to drink before the age of 21." Pardoe also noted that, "Due to the lack of cultural freedom, with regards to alcohol, students will tend to abuse alcohol, especially with their new-found privacy from parents." Indeed, the number of freshmen documented for alcohol related incidents (not just underage possession) tripled that of seniors documented, in the fall semester. This would certainly suggest that the sudden freedom to drink leads to this trend. Coming from a British point-of-view, that would certainly make sense. After all, the legal drinking age in the UK is 18; and even that is not strongly enforced. Is it possible, then, that this early exposure to alcohol leads to a more mature use?

Others, like Sarah Walsh, RD in Tussey, would disagree with the notion that an early introduction to alcohol necessarily results in a more mature approach. Having attended Dordt College, in Iowa, for four years, and experiencing a "dry campus" atmosphere, Walsh knows what it means to not have the sudden freedom to drink thrown on you all at once. "Because of the (non-drinking) sub-culture, it was seen as disgraceful to be a drunk or a lush; but it was all right to go drinking once in a while." She also remarked that, "Sure, there were big parties and incidents off campus, but you'll never have a student body of all responsible people." So, it seems as though a problem, such as this, is not easily cleared up by forbidding the use of alcohol on campus. As we all know, there are always parties held off-campus.

It appears as though the presence of drinking incidents on our campus has a limited number of solutions. Therefore, while our country may never lower the drinking age, and Juniata will probably never proudly proclaim a non-alcohol policy to recruits, the responsibility lies in the hands of our students. Perhaps a choice and a sacrifice need to be made. After all, 43 of our students have already made a sacrifice of near $5000 (in fines) for drinking. And, though the problem may not have reached critical proportions yet, the recent trend would suggest that disaster is just around the corner.

Lambda Pi Eta Inductions to be Held

Teresa May
Contributor

March 2 will be a notable day for several individuals who will be honored with an induction into Lambda Pi Eta, the communication honor society. The event will be held in the Faculty Lounge and begin promptly at 7pm. Lambda Pi Eta (LPH) works in conjunction with SPEAK, the communication club, to facilitate the inductions.

LPH is the official communication studies honor society of the National Communication Association (NCA). As an official member of the Association of College Honor Societies (ACHS), Lambda Pi Eta maintains over 250 active Chapters at colleges and universities worldwide. Lambda Pi Eta represents what Aristotle described in his Rhetoric as the three ingredients of persuasion: Logos (Lambda) meaning logic, Pathos (Pi) relating to emotion, and Ethos (Eta) defined as character credibility and ethics. The honor society's goals include the recognition of outstanding scholastic achievement, the promotion of professional development among communication majors and the provision of opportunities to discuss and exchange ideas about the field.
Qualifications for consideration include:

- 60 semester credit hours completed
- 12 semester credit hours completed in the field of communications
- 3.2 minimum cumulative GPA
- 3.4 cum GPA in all completed communication classes

--Demonstration of commitment to the field of speech communication
--Must uphold high standards of personal and professional character
--Must support the purposes of the honor society, as outlined in the constitution.

Until this fall, no explicitly stated standards for membership into Lambda Pi Eta existed. SPEAK researched the national chapter requirements and proposed a new selection process to ameliorate the quality and organization of LPH. This new selection process includes the selection of eligible students, who now receive letters of eligibility and applications through the mail. Advisors Dr. Donna Weimer and Dr. Grace Fala determine the new LPH members through the information supplied on the applications.

The application process is intended to make new members more aware of the society and any expectations before inductions. SPEAK officers believe the process will make LPH a more organized and involved society on campus, providing more activities and opportunities for students studying Communication.

While the club and honor society exist separately, they maintain different objectives that work together to provide the campus and communication majors with a well-rounded presentation of activities through which students can develop their interests. These clubs will secure separate budgets for their own activities but with the same advisors will work closely to provide communication majors with real life educational material beyond the classroom. The advisors and officers of both convene monthly to insure the objectives are being met.

Specifically, SPEAK works to facilitate activities in conjunction with Lambda Pi Eta that will give Communication majors a way to expand their thoughts on what a communication major can do. It provides them with leadership opportunities and activities, such as the Soapbox speech events and the Bailey Oratorical. More complete information regarding Lamda Pi Eta is available at http://www.natcom.org/lph/.

New Honor Society Forms at Juniata

Teresa May
Contributor

Looking for a prestigious honor society to list on your resume? Omicron Delta Kappa may have a circle at Juniata College within the next year. The National Leadership Honor Society, Omicron Delta Kappa (ODK) is unique in its placement of emphasis on the development of the entire person, not limiting membership criteria solely to scholastic achievement.

Under the direction of Kris Clarkson, a Juniata College Leadership Honor Society was founded to petition a charter membership with ODK. The petitioning process takes a year before the college is considered. With the founding of the Juniata College Leadership Honor Society and the selection of officers, the responsibility of drafting a petition was given to the society's officers: President Jeffrey Bellomo, Vice President Teresa May and Secretary/Treasurer Jessica Yutzey.

The petition is lengthy and detailed, requiring data encompassing all facets of Juniata College. Following the bylaws and the election process, the group must review all worthy candidates for spring inductions. This spring, two seniors and ten juniors will be chosen to continue pursuing ODK membership. Current members include: Jeffrey Bellomo, Whitney Cramer, Roderick Kirby, Teresa May, Rebecca McClaine, Brian Olsen, Alicia Perusse, Jeremy Souder, Alicia Warner, Christina Weber, Sarah Worley, Jessica Yutzey and Brandon Zlupko.

Qualifications for Omicron Delta Kappa include junior and senior status in the upper thirty-five percent of the class, exemplary character and notable achievement in at least one of five major phases of campus life. These phases include scholarship, athletics, campus or community service, social, religious activities and campus government, journalism, speech, and the mass media, or creative and performing arts.

Juniata College currently houses a minimum of ten other honor societies, most directly related to declared programs of emphasis. By establishing an ODK Circle, the Leadership Honor Society hopes to offer students a higher standard through which they may be recognized.

In the future, members may be seen assisting in the awards banquet, extended orientation, the New Merit Scholarship process and public college events.

The Bone Collector:

Weak on Plot, Heavy on Suspense

Morgan Fogelman
Contributor

When the Academy Awards are held later this Spring, there probably won't be a great deal of attention paid to director Phillip Noyce's largest film since Clear and Present Danger, The Bone Collector. The reason for this is simply the fact that, although audiences may be impressed by the heart-pounding anxiety they feel in certain parts of the film, they will not totally accept that the story makes unbelievable jumps in its plot. In fact, the only saving grace for this film, may be the acting ability of Denzel Washington, who definitely deserves the title of Academy Award Winner (Glory), and the presence of Queen Latifah (Thelma) as the personal nurse to Washington's character, of course.

In this portrait of inner city crime, retired forensics specialist, Lincoln Rhyme (Washington) - who, by the way, has a disability due to a paralyzing accident occurring in the field some four years prior to the present - finds his calm life of writing best-selling books on forensics interrupted by a string of murders in the area of Manhattan. He teams with Amelia Donaghy

(Continued on Page 11)

This is a Blackout!

Matt Wolfe
Columnist

Huntingdon, PA (AP) - On Friday, February 11, 2000, Juniata College lost power for approximately two hours, give or take. That fateful Friday was also the date of the last Juniatian edition, prior to this one. Coincidence? I think not!

Let's examine the facts: the electricity went out and the paper was distributed. These are seemingly non-related events to the uneducated eye. However, electricity is the tiger to the newspaper's antelope, the spider to its fly, the park rangers to its Yogi Bear. One thousand college students on campus with no radio, TV, Playstation, or computers to use is a mighty coup for a newspaper or any printed medium. What else could a person do without electricity besides read the college newspaper? Some suggested studying. These people were quickly shot. Others suggested finding your significant other and having sex. These people were also shot, but it was done out of jealousy.

So with nothing else to do on campus, the newspaper was guaranteed a captive audience. Fiendish plan, isn't it? It has a brilliance in it's own despicable methods. I can admire a well thought and executed plan, especially since it is intrinsically evil. I have been called the devil, it's now one of my nicknames, so I like evil.

Now the question of who could have done this pops into my head. Who had enough guile, enough knowledge and enough intelligence to pull this plan off? This person would need extensive knowledge of the newspaper and it's distribution schedule; they would need to live in Lesher or have friends there since that's where the outage originated, they would need a brain in order to think of the plan. Now, since most of North has combined to bring down the campus GPA (which I happily contributed to), most of these residents fail qualification number three. We can eliminate anyone who lives in East because people that live there generally don't care about the rest of campus, and who can blame them? We can eliminate Sherwood because residents there are too busy destroying their own dorm to concern themselves with a plan this fiendish.

Now, I could go on like this for a while, but I think I've built the suspense up enough. Who is the mastermind behind this plot? None other than our editor extrodinaire, Megan Brown! She lives in Lesher, since she is the editor I would hope she knows the newspaper schedule, and she gets good grades so I assume she has a brain.

Now that we know who the perpetrator is, what shall we do about it? I say, nothing. It's not because I write for the paper and don't want to get fired, no, that's not the reason. Once again, it's my own independent thought that nothing should be done to Megan. Really. Now excuse me, I need to enlist in the Witness Protection Program...

Juniata College Artist Series: Ensemble Galilei

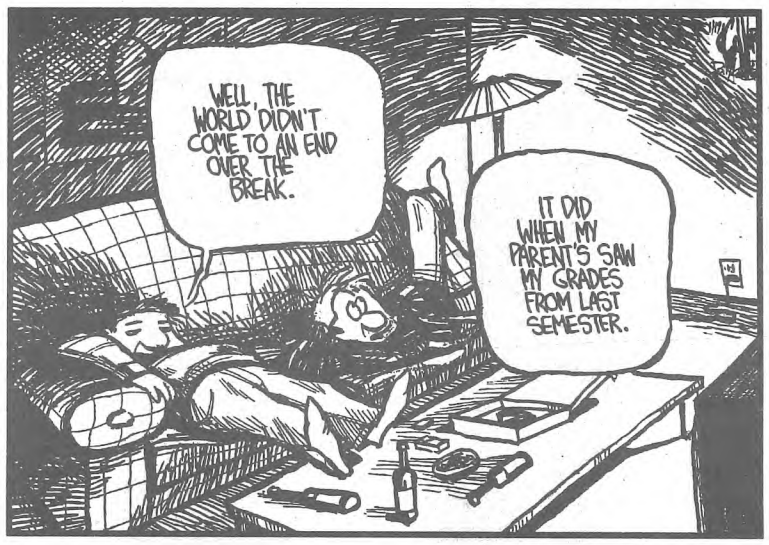
Ruth Bernhardt
Cultural Editor

On Friday February 18th, Juniata College was pleased to welcome Ensemble Galilei to Oller Hall. The group is made up of six wonderful ladies: Jan Hagiwara, the percussion player, Liz Knowles, playing fiddle, Deborah Nuse, who plays Scottish Small Pipes and fiddle, Sue Richards, on the Celtic Harp, Carolyn Anderson Surrick, playing a viola da gamba, and finally Sarah Weiner, who plays oboe, recorder, and pennywhistle.

These women come from very different backgrounds. Liz Knowles started with classical violin training but soon discovered Irish melodies. Jan Hagiwara has toured all over the world and now plays percussion in the pit of "The Phantom of the Opera" on

Ensemble Galilei

Broadway. Deborah Nuse placed second twice in the Northeast Regional Scottish Fiddle Championships. Sue Richards is a four-time winner of the American National Scottish Harp Championship and the president of both the Scottish Harp Society of America and the Washington, D.C., Folk Harp Society. Carolyn Anderson Surrick started the group and has recorded over a dozen works. Sarah Weiner won the 1996 Early Music Institute concerto competition and has played with many famous ensembles such as The Bach Ensemble, Smithsonian Chamber Orchestra, Chicago Baroque Ensemble, the Portland Baroque Orchestra, and of course Ensemble Galilei.



The six ladies delighted the audience on Friday night with enchanting Irish and Scottish melodies. They played many pieces from the sixteenth and seventeenth centuries. After intermission they played compositions inspired by Shakespearean plays and sonnets, finishing off with a set of reels.

Despite the weather the turnout was good. Many members of Juniata College and the community were fortunate enough to attend this event.

"The Vagina Is A Beautiful Place" New Play Says

Georgia O'Keefe's "Red Canna", circa 1928

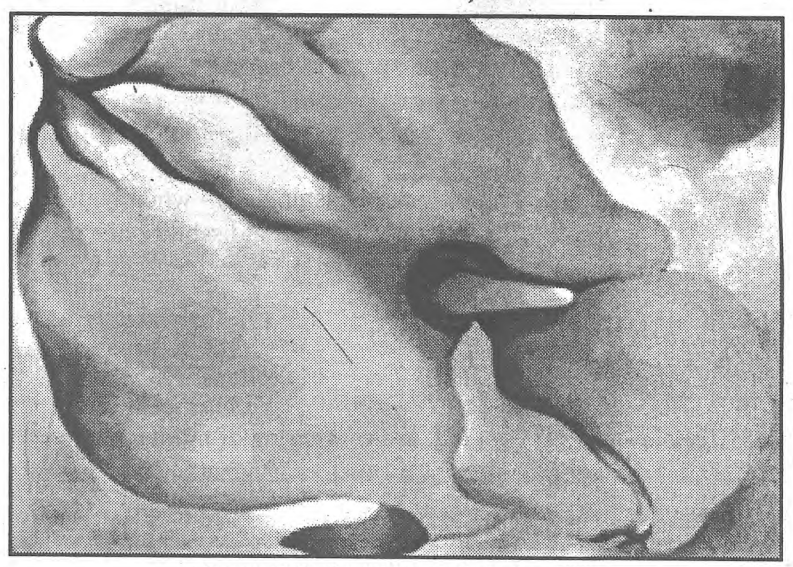
Christine Tatum
TMS Campus

Women around the world and on more than 70 college campuses across the U.S. are reserving Valentine's Day to talk about their vaginas.

Thinking you'll avoid the conversation? Perhaps this year you will. But the "V-Day" movement is hot and getting hotter -- thanks largely to "The Vagina Monologues," an Obie Award-winning play by Eve Ensler that encourages women to make very public statements about their private parts. Proceeds from performances are typically given to the V-Day Fund, which supports groups working to end violence against women.

Some of Hollywood's biggest names have performed in the typically sold-out play since its 1996 debut: Cate Blanchette, Melissa Etheridge, Calista Flockhart, Whoopi Goldberg, Anne Heche, Rosie Perez, Wynona Ryder and Kate Winslet. This year's V-Day events will be held in Atlanta, Johannesburg, Los Angeles, London, Paris, Santa Fe and Toronto.

Colleges are scrambling to stage the play, too. This year, about 70 campuses, including Carleton and Spelman colleges; Duke, Harvard and Princeton universities; and the universities of Nebraska, New Mexico and Wyoming, will host performances. Shows traditionally begin Feb. 14 and continue as time and space allow. As with the movement's international events, students say they, too, will be donating a portion of ticket sales to causes that help end violence against women. And much like those larger events, students across the country are reporting sold-out shows. New York University organizers said almost 1,000 tickets for two performances sold out in just a few hours.



What's all the fuss about?

"Women who see this play are so grateful to hear for the first time many of their stories expressed out loud," said Kristen Stake, a junior at the University of Southern Maine, who has performed one of the monologues on her campus. "I was so excited after reading the play for the first time because I had never heard or seen anything so frank or honest about female sexuality. Women don't usually talk about their bodies or their vaginas because society tells us we're not supposed to because that's dirty or bad. This play helps many women understand that the vagina is a beautiful place."

Aside from knowing her own body pretty well, Ensler interviewed hundreds of women -- young and old and of all ethnic, professional, racial and socioeconomic backgrounds -- to come up with the content for each of her monologues.

"At first, women were reluctant to talk, and they were a little shy" she wrote of her research. "But once they got going, you couldn't stop them."

The end result is electrifying -- and sometimes horrifying -- stories about female sexuality. Stories that include details of abuse, rape and genital mutilation. And stories that also take a humorous look at women's bodies -- including one in which a woman finds her clitoris for the first time and another in which a woman discusses what her vagina would wear if it could dress itself. "The audience just goes nuts when they hear some of this stuff," Stake said. "But we're starting a great conversation, and I don't want it to end."

Georgia O'Keefe's "Yellow Calla", circa 1928.

Girding Youths Against Christian Evangelism

(Continued from Page 4)

talking more to their youth about what to say when Christians talk to them about faith.

"Generally speaking, Hindus always have a siege mentality with regards to Christians, anyway," said Beth Kulkarni, president of the Houston chapter of the World Hindu Council. "Most Hindus don't know very well how to respond."

Muslims in America can turn to Dr. Jamal Badawi, head of the Islamic Information Foundation, based in Nova Scotia. Badawi travels and writes about how to respond to Christian evangelism and has faced evangelists in public debates.

There may be a need for special educational tools for North American Muslims, who have gained the attention of more Christians as their numbers have grown to an estimated 6 million, he said.

"Perhaps ... (Christians) need to learn in more detail about what the Koran says about Jesus and the place he occupies in the hearts and minds of Muslims," Badawi said. Islam teaches that Jesus is an important prophet but not the son of God.

Exchanges Often Testy At GOP Forum

Michael Tackett
Knight-Ridder Tribune

COLUMBIA, S.C. -- In often testy exchanges about who is the true reformer, outsider or grown up among them, Republican presidential candidates debated Tuesday night trying to rally support before Saturday's critical primary here.

The tenor of the debate reflected the increasingly contentious race between Sen. John McCain of Arizona and Texas Gov. George W. Bush as they enter the final days before the primary locked in an extremely close race.

Repeatedly Bush and McCain had harsh words over each other's campaign tactics, claims in advertising and public displays of disaffection. Bush's voice often rose to a shout as he and McCain traded charges over who fired the first negative shot, a matter that the debate did not resolve.

They each flourished the other's campaign literature with dramatic gestures to underscore their claims of negativity. And Bush tried to highlight his accomplishments as governor in bringing together disparate interests in Texas in contrast to McCain's iconoclastic reputation as a senator.

He also said it was he who enjoyed a zip code outside of Washington, D.C., making him the true outsider in the contest. McCain countered that his staggering victory in New Hampshire demonstrated his ability to appeal to independents and younger voters in ways that crossed party lines.

The debate was moderated by CNN's Larry King, but it was the third candidate in the race, longshot Alan Keyes, who served as the scold for the front-runners.

Keyes upbraided his competitors at several points, noting dryly that a worldwide audience was witness to "pointless squabbling" and a "spitting match" by men driven by "personal ambition."

And Keyes criticized both men witheringly for being in his view insufficiently committed to eliminating abortion.

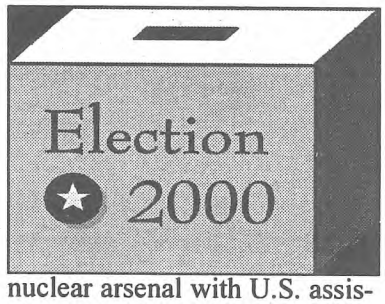
When Bush criticized McCain's tax plan as being driven by a "Washington mentality," McCain shot back, "It's not the Washington mentality, it's the grown-up mentality that recognizes we have obligations and ought to pay them off." Bush responded, "John, grown-up or non-grown-up, I know that is a line you are trying to come across with...."

Bush complained that he had "smiled my way" through earlier primaries "and got defined." Then he noted that McCain had run an ad in South Carolina comparing him to President Clinton. "You and I can disagree on issues, but don't equate my integrity and my trustworthiness to Bill Clinton." Bush said he stood by his ads.

McCain said that he ran the ad in response to Bush presiding over an event where a leader of a "fringe" veterans group accused the former Vietnam prisoner of war of abandoning his commitment to veterans. "You should be ashamed," McCain said to Bush.

Bush said that the man who made the charges was not speaking for him. Then he noted that one of McCain's supporters, former New Hampshire Sen. Warren Rudman, had called members of the Christian Coalition "bigots." The Christian Coalition remains a potent political force in South Carolina Republican politics. "George, he is entitled to his opinion," McCain said.

Each candidate also said they would not join Illinois Gov. George Ryan's call for a moratorium on capital punishment. Bush insisted that every convict executed in Texas during his tenure as governor had been properly tried and convicted.



The two leading candidates differed on the criteria they would use to deploy U.S. military force. Bush said he would do so only when it was in "our national strategic interest," citing potential conflicts in Europe, the Middle East, U.S. borders and the Far East.

McCain said that U.S. policy was more "Wilsonian" and that there were "times were our principles are so offended that we must do what we can to resolve a terrible situation." For instance, he said, he might commit troops to resolve a genocide in Rwanda.

On other international relations, Bush and McCain each said they would immediately change U.S. policy toward China. Bush said he would treat China as a "competitor" rather than as a "strategic partner" as Clinton characterizes it. "China is one of the signal failures of this administration," McCain said.

But the senator added that he also would immediately adopt a new policy toward what he termed "rogue states" of Libya, Iraq and North Korea. He said he would arm, train and equip forces "that would eventually overthrow those governments" and "install free and democratically elected governments."

On nuclear policy, Bush said he would continue to fund a program to reduce the Russian

nuclear arsenal with U.S. assistance. McCain and Bush also both suggested they would not meet with Russian President Vladimir Putin

McCain said that the United States should abide recent elections of members of Austria's far-right party and not try to "overturn a free and fair election."

Both men tried to claim the mantle of the reformer, with Bush introducing his first comprehensive campaign finance plan earlier in the day in an effort to blunt the strong voter appeal of McCain's call for an overhaul of the current system.

McCain claimed Bush's plan would still allow for a major loophole permitting individuals to donate unlimited, so-called soft money, to political parties.

Part of Bush's plan, a prohibition on a candidate for federal office taking money from another federal office campaign account, was an implicit dig at McCain. The senator transferred millions of dollars from his senatorial reelection funds to seed his presidential bid.

On abortion, Bush refused to answer a hypothetical question about how he would handle the issue with one of his daughters. McCain also asked that his family not be brought into the debate. But Keyes said that those questions were relevant because any national policy must be applied to all women.

2000-2001 Student Government Elections Held

Justin Miller
Co-Editor-in-Chief

Ten students vied for three open positions in Student Government election last week. The office of President was the most contested race with five candidates.

The turnout for this year's election was the highest in the past three years. Current Student Government President Brandon Zlupko attributes the increased turnout to several causes: location and the number of candidates.

Elections were held inside Baker Refectory. Previously, elections had been held in the lobby of Ellis Hall. It was difficult for students to not see the polling station during lunch and dinner.

Addressing the issue of more candidates, Zlupko said "The increase in interest is a healthy sign for student government and heightened the involvement in the voting process because more candidate means there are more students who have a vested interest while casting a vote."

The officers for next year will be President Teresa May, Vice President Ray Ghaner, and Secretary Kylie Gensimore. The Treasurer will be determined by the Student Senate at a later date.

President Teresa May, Vice-President Ray Ghaner, and Treasurer Jennifer Greening. Kylie Genismore is not pictured. Photo by C. Cato.

Skulldiggers Delve into World of Hinduism

Kristina Schmeider
Contributer

Erotic statues, incense, beautiful temples, and 330 million gods. This is the Hindu religion as explained by Dr. Klaus Kipphan. Dr. Kipphan, instructor of Culture of India, spoke of these most interesting traditions last Thursday at a lecture sponsored by the Skulldiggers, Juniata's history club.

Hinduism is the primary religion practiced in India. Hinduism has its own traditions, nothing like those of most western religions. Hinduism does not have a formal priesthood. Those considered priests are simply men, called Sadhus, who have renounced all of the material pleasures of life.

Hindus worship deities, statues of their gods and goddesses. Most Indians have one particular deity that they consider their main god, and different temples are dedicated to different gods. There is no congregational worship in the Hindu religion; all worship is done on an individual basis.

There are many rituals one must follow when worshipping in any Hindu temple. As Dr. Kipphan stated, "A temple is a power outlet of the divine," and should be treated as such. These rituals start with a bath before visiting the temple. This may be easy for people living in America, but not all Indians have running water. Once at the temple, one's shoes must be removed and left outside. The worshipper brings gifts of flowers, bananas, or coconuts. The priest presents these to the chief deity. The priest will take the gifts and place them at the feet of the deity. Once the god has symbolically partaken of the gifts, they are holy and blessed. The gifts are then returned to the worshipper.

After visiting the chief deity, the worshipper then visits the other deities housed in the temple, always following a clockwise rotation. The other deities in the temple are usually family members of the chief deity, such as wives, children, brothers, and sisters. The worshipper may also give gifts to these deities.

Hinduism is a very accepting religion. The Hindus believe that everyone has the right to worship their own gods and in their own way. They also feel that no one is damned, and everyone reaches moksha, the equivalent of what western religions would call being "saved." Hindus are very open to other religions and love to learn about and participate in them. The goal of the history club and Dr. Kipphan is to help people to learn more about this religion and be as open to Hinduism as Hindus are to other religions.

In order to accomplish this goal, the

Skulldiggers have planned a trip to the Venkateswara temple in Pittsburgh. The trip is planned for March 25th; they will be leaving sometime in the morning. If you are interested in joining them on this trip contact Erin Kirby at extension 4118.

Theatre Rehearsals Are Underway

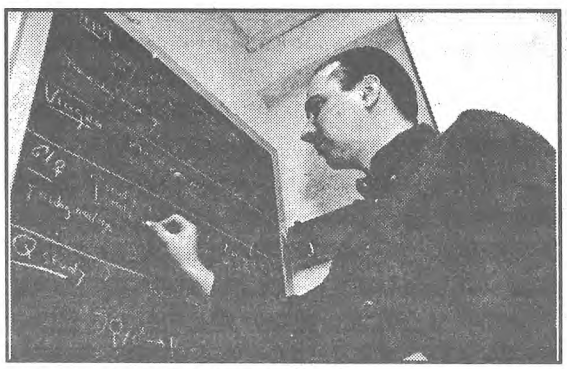
Ryan R. Miller
Staff Writer

Rehearsals began January 27th for JC Theatre's spring production of The Little Years, by John Mighton, who you may remember as the math consultant for Good Will Hunting. The play is very rich in content and deals with several aspects of life, including artistic immortality, the passage of time, and the human spirit.

Professor Andy Belser, assisted by Sophomore Sean Mahoney, directs the piece and is planning on incorporating movement styles into The Little Years. Cast member Kelly Cybuck declares she is excited about the show and that she's beginning to "Understand how movement and shapes fit in" to Mighton's realistic play. Other cast members, who feel that The Little Years will blow the audience away, echo Cybuck's enthusiasm.

The Guest Artist in Residence Program will continue this semester with the professional design team of lighting designer Craig Young, costume designer Kathy Norgren, and musical composer John Nuhn. Professor Belser and the crew have the privilege of presenting the American premier of The Little Years to Juniata College, and to Mr. Mighton himself, who will be in residence at JC during the week of performance. The show will be also be entered as a participating entry in the Kennedy Center American College Theatre Festival Region II competition.

The show runs the week after spring break, from March 16-18, with an open dress rehearsal on Wednesday night, March 15th. Student Tickets are $3.00



Indiana U. Professor An Expert In 'Sexology'

Christina Jewett
Campus Contributor

Erick Janssen sees things every day that would make even Cupid blush.

In a building that houses the world's second largest library of erotic materials -- the Vatican has the largest -- Janssen studies human sexuality as an assistant scientist at Indiana University's Kinsey Institute for Research in Sex, Gender and Reproduction.

"I'm not a sexologist," he said. "There's no such thing as a sexologist. There is no doctoral program for a sexologist - yet."

Erick Jannsen, one of the world's leading experts in "sexology." Photo by Vonetta Logan.

But if there were such a thing Janssen would be the perfect candidate. His expertise has contributed to "Cosmopolitan," "Glamour" and "Playboy." While the institute dishes out plenty of information to the popular press, its main focus is on research and academic publishing. The institute rose to international fame with Alfred Kinsey's publication of "Sexual Behavior in the Human Male" in 1948. The book met with severe criticism -- but also managed to find great favor among many people who found its contents reassuring in an age of sexual repression.

"It allowed people to see that people do engage in a range of behavior," said Jennifer Bass, head of information services at the institute. "(People learned) men masturbate and don't end up with a curse or hairy palms."

Two decades after the book's controversy subsided, Janssen was just a kid playing in the Dutch countryside. Although as a child he wanted to be a musician, his coursework in psychology steered him into a career focused on sex research.

But choosing the life of a sexologist comes with certain occupational hazards. It seems everyone thinks it's funny to give Janssen phallic gag-gifts. Sexual tools and trinkets - including penis-shaped pasta and a mug with a shiny penis handle -- clutter his office and line his shelves. And then there are all those incredulous looks he gets when he rents as many six porn flicks -- his research materials -- at the local video store.

"I tell them I work for the

HUNGRY?
Come to Pizza Hut February 28 from 5 to 9p.m. for some great pizza. A part of your bill will help support JIF.

SPEAK
has two movie nights coming up:
Monday, Feb 28 at 9pm we will show *Run Lola, Run* in Good 202.
Thursday, March 16 at 8:15pm we will show *Life is Beautiful* in Good 202.

Have you done research and want to get credit for it?
Present your research at the 2000 Research Symposium, sponsored by the Tri-Beta Biological Honors Society. The date has been set for the weekend of April 14th & 15th, 2000. Research from all fields is welcome and encouraged.
Contact Jenn Agnew at AgnewJL6
or Lisa Petrella at PetreLN6
with any questions you have.

Do you have questions about sexuality?
Come meet with AWOL. Our meetings are held every Thursday nights at 6PM in Humanities Lounge.
See you there!

The UCJC Annual Eid Dinner
will be on Saturday February 26th
Ellis Ballroom at 6:30 pm.
Tickets go on sale at the info desk :
$2.00 with ID number
$5.00 for non-students
There are only 150 tickets available, get yours fast!
No exceptions!

Open Campus meeting
Thursday, March 2 at 3:00 p.m. in the Ballroom of Ellis Hall. President Kepple will give an update on the progress of the campus plan and other happenings on campus.

Interested in working on the Juniata Theatre spring production?
It's the USA premier of *The Little Years.*
No experience necessary for any of these jobs!
Positions Include:
Stage manager, Asst. Stage manager (2), set construction, and lighting, sound, costume, and props assistants.
Contact Andy Belser, ASAP!

Come celebrate DIVERSITY!
Join the trip to the Millennium March in DC APR 29-30th. Call x. 5566 for more info. Watch for an e-mail with more info.

Spring Lecture Series Sponsored by the Baker Institute for PACS:
All are at 8:15 p.m. in Oller.
3-20-00 *Should We End the Sanctions? Moving Towards a Sustainable Policy on Iraq*
With Wafaa Bilal and Erik Gustafson.
3-23-00 *The Wrong Stuff: The Race to Militarize Space*
With Karl Grossman.
4-19-00 *Truth and Reconciliation Commission in S. Africa*
With Fredrick Hale.
4-24-00 *The Search for Peace in the Balkans: Confronting the Challenges of Protracted Ethnic Conflict*
With Andy Loomis: a 1994 JC grad.
TBA *Prospects for Peace in the Middle East* with Edward S. Walker, Jr.

Work to end VIOLENCE!
Take Back the Night: Zero Tolerance for Violence meets every Thursday at 9PM in the Faculty Lounge. For more information e-mail slinglx9.

Come to the
Saturday Night Contemporary Service
at St. James Lutheran Church in downtown Huntingdon.
It will be held from 6-7PM every week.
Come as you are.

PACS Club
Upcoming Events include:
Sat. 4-15-00 Rally for a Death Penalty Moratorium
Sun.-Mon. 4-2 to3
School of the Americas Rally and Lobby Day in DC for the SOA

"God the Creator" Comes Alive in Music

Justin P. Miller
Co-Editor-in-Chief

Nearly 80 singers from over 25 local churches gathered at Juniata College in Huntingdon, PA Saturday to celebrate their Creator in song. The two-day church music festival was the brainchild of Dr. Margaret Gray Towne, the J. Omar Good Visiting Professor of Evangelical Christianity at Juniata College. Sponsored by the J. Omar Good Trustees and Fund, the event provided a unique musical experience for the participants, many of whom have never had any formal musical training.

Guest Director Dr. Anthony T. Leach led the combined choir in a 75-minute musical experience. With only a little over nine hours of rehearsal time in which to prepare the singers, Dr. Leach used all his skills as the conductor of Penn State's University Choir and Essence of Joy to bring the ten musical selections performed to life.

In the past, Essence of Joy has performed at Juniata College, most recently in conjunction with the 1999 Dr. Martin Luther King, Jr. Convocation.

Interspersed among the musical selections were oral interpretations prepared by Professor Towne and presented by Juniata College student. Dr. Grace Fala, Professor of Communications at Juniata, presented the final oral interpretations just prior to the choir's rousing rendition of "Standing in the Need of Prayer" and the finale "He Has Done Great Things (For Me)." Fala also recruited and coached her students on the oral interpretations.

The J. Omar Good chair in Evangelical Christianity at Juniata College was established by the late Pauline and Lester Rosenberger of Narberth, PA. The Rosenbergers were trustees of the late J. Omar Good.

Good, an 1896 graduate of Juniata College, left the college one million dollars upon his death in 1969. Among his bequests, he ordered that the remainder of his estate be used for "the perpetuation of the Historical Triune Faith of Protestant Christianity." The Chair has been filled since 1975.

The Bone Collector

(Continued from Page 4)

(Angelina Jolie), a young, but energetic street-cop, in an attempt to find the killer. The whole idea is that Donaghy, representing the physical abilities -- long-since gone from Rhyme -- is the tool used by Rhyme to find the killer. She must not only face crime scenes single-handed, known as "walking the grid," but also be responsible for relying on her mental capabilities to piece together clues left at the scene.

Although, the story does not stupefy, Denzel does his best with the mediocre and all together melodramatic lines given to his character. And, Jolie gives her best panic-stricken face (repeated to the point of exhaustion) in almost every scene she appears. Overall, there isn't much need for concentration on the audiences part, though, for this post-Seven rip-off. I give it 2 fi eagles out of 4. Sadly, it would have gotten 3 eagles had they only let Queen Latifah's character live through the whole film.

Sports Round-Up

Bub Parker
Sports Director

MEN'S VOLLEYBALL (5-6, 2-4 EIVA Tait): Feb. 25 at Rutgers-Newark; Feb. 26 at Southampton.

Juniata, ranked fifth in the latest American Volleyball Coaches Association, hosted Division II East Stroudsburg on Tuesday for an Eastern Intercollegiate Volleyball Association (EIVA) non-division outing. The Eagles bumped their winning streak to two with a 15-8, 13-15, 15-8, 16-14 win over the Warriors. Senior outside hitter Rod Kirby (Penn Hills/Pittsburgh) and senior outside hitter Jason Moore (Spencerport/Spencerport, NY) each had 19 kills for Juniata. Kirby hit .533 on 30 swings, while Jason Moore posted a .516 percentage on 31 attempts. Senior libero Mike Foote (Bethel Park/Bethel Park) paced the blue and gold squad with 16 digs. Sophomore setter Kevin Moore (Webster/Webster, NY) passed out 45 assists in three games worth of action, while freshman setter Scott Kofmehl (North Allegheny/Pittsburgh) had 25 assists in two contests. Junior outside hitter Bill Todd (Manheim Township/Lititz) had nine kills, eight digs and three blocks. Freshman middle hitter Luke Manion (North Allegheny/Pittsburgh) chipped in with eight kills and three rejections. On Saturday, the Eagles downed Princeton, 15-8, 12-15, 14-16, 15-5, 16-14, for the first time in the history of the 11-match series. Jason Moore produced a career-best 35 kills on 65 swings and had four digs, four blocks and three aces to lead Juniata. Kirby came through with 25 kills, eight blocks, eight digs and four aces, while junior middle hitter Jason Michael (Ephrata/Ephrata) tallied 18 kills, a .654 hitting percentage, an impressive 13 blocks (two solo) and five digs. Manion added in 11 kills, eight rejections and four scoops. Kevin Moore passed out 86 assists, posted five blocks and six digs. Freshman opposite Neil Lukas (Fairport/Fairport, NY) had a team-best 13 digs. On Sunday, the Eagles put the finishes on a perfect week by handing the second-ranked team in the latest AVCA Division III poll, New York University a 15-9, 15-6, 15-6 loss on its home surface. Juniata has now won four straight outings. The Eagles were once again led by Jason Moore, who had 25 kills, a .513 hitting percentage, four blocks and two digs. Kirby ended the day with 20 kills, a .516 hitting mark, five digs, two aces and two blocks. Lukas came up with a team-best 16 digs, while Kevin Moore passed out 52 assists. Juniata, which hit .423 against the Violets, has now taken the last 12 outings between the two institutions.

MEN'S BASKETBALL (3-21, 1-13 MAC Commonwealth): season complete.

The Eagles suffered an 80-75 loss at Susquehanna on Wednesday to begin the last week of the 1999-2000 season. Juniata has now lost seven games in a row in Selinsgrove. Senior forward Tim Lonesky (Blacklick Valley/Nanty Glo) had a game-high 20 points and 13 rebounds, while sophomore guard Shane Crandall (North Allegheny/Doylestown) tied a career-high with 18 points. Junior guard Pat Sowerby (South Allegheny/Glassport) came off the bench to tally 14 points, including four three-pointers, while junior forward

Photo by J. Ramquist.

Nathan Hager added in 10 points. On Saturday, Juniata completed the year with an 81-66 loss at Elizabethtown. Juniata was down, 35-28, at halftime and did not get closer than seven points in the second stanza. Sophomore guard Brian Dietrich (Wilson/Wyomissing) paced the Eagles with 15 points, while Hager tossed in 13 points and had four rebounds and two assists. Sophomore forward Dave Reddick (North Hills/Pittsburgh) registered 12 points and five rebounds. Junior forward Justin Stephans (Gateway/Monroeville)

(Sports Round-up Continued page 12)

(Sports Round-up Continued) came off the bench to tally 11 points on five of five shooting from the floor. Lonesky finished with nine points and six

University, but they just look at me like 'Yeah, right, ok, yes sir,'" he said.

Janssen said he also fears car accidents -- but for reasons the average person doesn't even consider.

"I'm afraid of what the police might find," he said.

Since coming to America to work for the institute in 1995, Janssen has examined the fine balance between sexual excitation and inhibition -- what he calls either "pushing on the gas pedal" or "hitting the break." Janssen and his colleagues are working to better understand why people engage in risky sexual activity - or have a hard time engaging in sexual activity at all.

They've enlisted scores of volunteers to help them, and their lab looks like a sparsely decorated dorm room. A throw rug is on the floor, curtains are on the window and a leather chair and ottoman are near the door. There's also a color TV that's hooked to a VCR controlled from an outer office. But that's not a remote control on a table near the chair. It's a "RigiScan" designed to measure male volunteers' erections as they watch a variety of images -- sexual and non-sexual -- flashed before them on the TV screen.

"Having sex in itself can induce feelings of love, depending on the circumstances and with whom you are, of course," Janssen said. "During sexual arousal, levels of oxytocin - a brain peptide that is believed to be important in facilitating 'pair bonding' - go up, and they peak during orgasm."

For studies aimed at monitoring women's sexual arousal, Janssen holds up a device that looks like a cross between a tampon and a lightbulb. A filament inside the device measures photons, in the form of infrared light, that a woman generates as she becomes sexually aroused.

Although Janssen is very scientific and precise about his lab work, he views sexual desire - and sexual arousal - in the realm of emotions.

"(Sexual arousal) is an emotional state, involving feelings as well as physiological reactions, and it serves a purpose, is relevant to life's goals, is functional from a biological point of view," he said. "It is a 'hot' brain-state, and for some researchers that is already enough to say someone is experiencing an emotion."

The institute is conducting several studies in addition to Janssen's. Researchers are trying to determine why women stop taking the pill, learn more about Viagra's effects and find out whether fragrance affects women's sexual arousal.

Janssen said his study of human sexuality is an act of love that requires compassion specifically designed to help people improve their lives.

"There are many ways you can do that, I know, and this is just one - for women, for people of different sexual orientation, for victims of sexual violence. Maybe even for men," he said. "And, yes, I believe that part of the solution is based on a better understanding of ourselves as sexual beings."

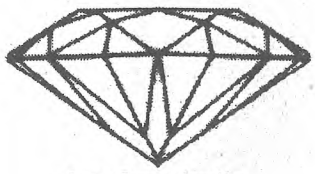
Sports Round-Up

(Continued from Page 11)
rebounds in his final collegiate tilt. He leaves the College Hill program ranked eighth in career points with 1,242 markers.

WOMEN'S BASKETBALL (16-8, 8-6 MAC Commonwealth): Feb 22 at Scranton (MAC Playoffs - First Round).

The Eagles started the final week of the regular season with a thrilling, 61-60, win at Susquehanna on Wednesday. Senior forward Danny Young (Eastern York/Craley), who finished with six points and eight rebounds, hit a baseline jumper with 2.7 seconds remaining in regulation to provide the difference in the outing. The victory set Juniata alone in third place in the Middle Atlantic Conference (MAC) Commonwealth. Sophomore forward Brandy Preslovich (Bald Eagle Area/Moshannon) paced the Eagle attack with 19 points (on 9 for 13 shooting from the floor), seven rebounds, three assists, three steals and one blocked shot. Senior center Mollie Lyman



(Conneaut Lake/Conneaut Lake) dropped in 14 markers and pulled down a team-best nine boards. Sophomore guards Kelli Young (United/Vintondale) and Kelly Grove (Penns Valley/Spring Mills) finished with eight points each, while senior guard Dana Lichtenfels (United/Robinson) stuck two three pointers to end the outing with six points. Danny Young had one steal and she moved into a tie on the career theft list at Juniata with her total of 292.

On Saturday, the Eagles lost at Elizabethtown, 67-56, in their final regular season tilt, but earned their first berth in the MAC playoffs since 1993-94 with Albright's win over Susquehanna on Saturday evening. Juniata will now travel to Scranton on Tuesday to take on the Lady Royals in the first round of the conference post-season. Against the Blue Jays, the Eagles were down, 38-28, at halftime, but got as close as four points in the second half. Lichtenfels had a team-best 14 points and added in three steals, while Preslovich ended the outing with 11 points and six rebounds. Kelli Young had 10 points, five assists and five steals. Lyman registered 10 points and four boards, while Danny Young notched six points, six caroms and three steals. Danny Young moved into first place on the all-time steals list on College Hill and now has 295 pilfers.

WOMEN'S SWIMMING (4-11, 1-4 MAC Commonwealth): season complete.

Juniata completed the 1999-2000 season at the Middle Atlantic Conference (MAC) championship hosted by Susquehanna on Friday through Sunday. The Eagles placed eighth for the fifth straight year in the 11-team field with 183 points. Juniata was just six points out of sixth place. Albright captured the team crown with 480 markers on the weekend. Freshman Alissa Schneider (Mililani/Mililani, HI) became the first swimmer in the history of the women's program on College Hill to place first in an individual event. She took top honors in the 400-yard individual medley with a school record time of 4:50.26. In addition, Schneider placed second in the 200-yard freestyle (2:01.16) and third in the 100-yard freestyle (56.41). Freshman Cyndi Long (Emmaus/Emmaus) was second in the 100-yard butterfly (1:02.58) and brought home a fourth in the 200-yard butterfly (2:19.26). Both of Long's times were school records at Juniata. Long was also fifth in the 50-yard freestyle (26.31), while sophomore Jenn Dorsch (Gov. Thomas Johnson/Frederick, MD) took seventh in the same event (26.60). Sophomore Greta Rettig (Saint Maria Goretti/Waynesboro) placed 10th in the 200-yard backstroke on the weeekend (2:25.89). In relay action, the 200-yard freestyle unit of Schneider, Long, Dorsch and sophomore Erinn Soule (Manheim Township/Lititz) placed second (1:44.61). The same foursome took fourth in the 800-yard freestyle relay (8:22.95). The 400-yard medley relay squad of Rettig, Long, Schneider and Dorsch was seventh (4:23.45) and the 200-yard medley relay team of senior Allyson Kenyon (Central Dauphin East/Dauphin), senior Kristen Plotner (Hempfield/East Petersburg), junior Katie Hildebrand (Rutherford/Rutherford, NJ) and junior Kelly Wynn (Leesville Road (NC)/Winona, MN) placed eighth (2:16.46). The 400-yard freestyle unit made up of Schneider, Soule, Dorsch and Long came in second with a time of 3:50.01. The 200-, 400- and 800-yard freestyle relay squads all set school records with their times on the weekend.

Students Celebrate Eid

Juniata students perform traditional dances. Photo by R. Bernhardt.

Ruth Berhardt
Cultural Editor

The Ballroom of Ellis was packed on Saturday night for the fourth annual Eid dinner, presented by United Cultures of Juniata College. Each year the Eid dinner is very well attended by JC students, staff, and the community.

The feast of Eid comes right after Rammadan, the Islamic holy month of fasting from dawn till dusk. The day begins with a prayer from the beginning of the Koran and presents of money are given followed by a feast in the evening.

The members of UCJC spent many hours of hard work preparing for the event, staying up the night before to cook traditional foods from the Middle East. Dishes such as lemon coconut chicken curry, Tandoori beef kababs, stuffed grape leaves, hummus and Baba Ganoush with flat bread, and baklava for dessert.

Following the meal, UCJC delighted guests by several dance performances. Suzanne Abbey, a behavioral science major from the University of Colorado, demonstrated the belly dance twice during the evening. In addition to dances by UCJC members, the Grier School Dancers also performed.

Thanks to the hard work of its members the evening was a great success for UCJC.

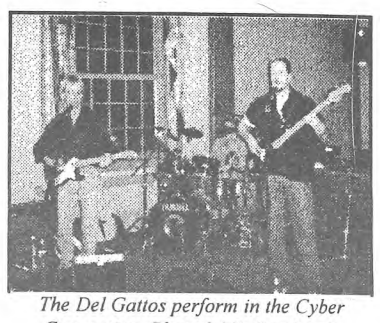
Hope for a Tolerant Australia



By Krissy Lipuma
Staff Writer

Students crowded room 202 last Tuesday evening for a chance to learn about Australia. Dr. Elaine Thompson, professor of American Politics at the University of New South Wales, Australia presented her speech "From White Australia to Multiculturalism," a lecture on Australian history in regards to race.

The country, settled by the British, attempted to remain 100% white, thereby excluding their close Asian neighbors. Most of all, the "White Australian Policy" was directed at the Chinese, who were considered by the Australians to be "heathens, opium smokers, and a race incapable of equal franchise," according to Dr. Thompson.

This discriminatory act was the first policy passed by the Australian government after the country came into being in 1901. The policy lasted until 1996. Dr. Thompson highlighted the paradox of the Australian plan: a radically democratic country committed to equality while actively pursuing discriminatory policies.

Bailey Oratorical Winners Announced

Justin Miller
Co-Editor-in-Chief

The annual John M. and Thomas F. Bailey Oratorical Contest was held at 8:15 p.m., February 21 in the Ballroom of Ellis Hall.

The contest asked students to creatively and insightfully address the topic: "How does the presence of violence shape our lives?"

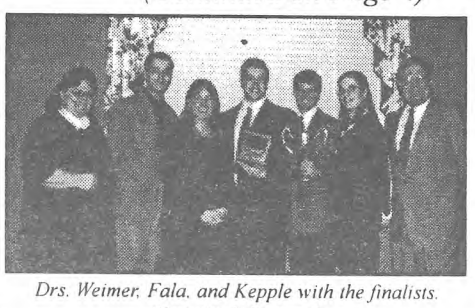
The first round of competition was held last week to narrow down to seven the 23 participants. The judges for the preliminaries were Jane Croyle '95 of Petersburg; David Shoenthal '98 of State College; and Daniel Shelley of State College.
Judges for the final competition were: Dr. Arthur Hayes '71 of Blue Bell, Pa., chair of the Montgomery Hospital emergency room and president of the medical staff; Jill Hayes '69 of Blue Bell, Pa., elementary school teacher; and Stephen Dunkle from Allensville, Pa., assistant director of government relations for the Pennsylvania State Education Association.

The seven finalists were seniors Jeffrey Bellomo and Sarah Worley and juniors Kenzie Leung, Colleen McLaughlin, Brian Olsen, Parisha Shah and Matthew Peters.

Jeffrey Bellomo and Brian Olsen, who tied for first place. Photo by I. Petranek.

The total prize money for the contest was $1,000 with a first-place prize of $500, a second-place prize of $300 and a third-place prize of $200.

After an initial welcome by College President Thomas Kepple, the finalists began their speeches.



"This year we had an excellent topic. These are seven great people who have seven interesting ways of approaching it. They really made us think" said Kepple while waiting for the judges to return with the results.

For the second consecutive year, there was a tie for first prize. The prize went to both Bellomo and Olsen. The second place finisher was Matt Peters. Third prize went to Colleen McLaughlin.

Attendance at this year's even far exceeded expectations. Upon realizing how much interest there was in the Oratorical this year, they were relocated from the Faculty Lounge to the much larger Ballroom in Ellis Hall. Even this room filled past capacity with over 180 people present.

The original Bailey Oratorical Award was established in 1915 by the Honorable Thomas F. Bailey who served as president judge of Huntingdon County from 1916-1936. The Oratorical was revived thirteen years ago.

Elimination of All Discrimination

Jennifer Bartimole
Staff Writer

The Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) was adopted in 1979 by the United Nations. The CEDAW "provides a universal definition of discrimination against women that provides a basis for every government's domestic and foreign policy to combat discrimination."

Before the CEDAW was adopted, there was no convention that comprehensively addressed women's rights within political, social, cultural, economic and family life. As of January, 165 countries had ratified this.

In September 1994, the Senate Foreign Relations Committee voted 13-5 (with one abstention) in favor of the CEDAW. However, this vote occurred within the last days of the Congressional session and a hold was put on it by several senators.

This hold blocked the CEDAW from the Senate during the 103rd Congress. No action on the CEDAW was reverted to the Senate Foreign Relations Committee in January 1995, and the committee has not acted upon it since then.

To date the United States has not ratified the CEDAW. However, at the UN Conference on Women in Beijing in September 1995 the United States made a public commitment to ratify it. By ratifying the CEDAW, the United States will "reinforce its commitment to eliminate discrimination and, therefore, move closer to effectively combating violence against women."

On Thursday, February 24, the Baha'i Club in conjunction with AWOL, the PACS Student Organization, and other clubs sponsored a letter-writing/petition-signing meeting to support the ratification of the CEDAW. In case you missed the meeting, and care to support this ratification, write to your senators and voice your opinions. More information on the CEDAW can be found at http://www.us.bahai.org/CEDAW/cedaw_bckgrnd.html.

In response to "GPA Drops Campus Wide"

As a student, I understand the importance of grades. They supply people with pride and ensure that students are learning what they will practice in the future. But after reading the article "GPA Drops Campus Wide", I was surprised by what I heard. Listed in a matter of fact style were several reasons as to why the campus' GPA had dropped.

The first explanation as to such a drop in grades was attributed to the increase in alcohol poisoning on campus. In this case, logic dismisses the argument that the 7 or so such individuals who became overly intoxicated, single handedly brought down the schools GPA.

Pressing forward, the next argument implied that, "higher number of breaches in the academic integrity policy", made all the difference. I'd like to hope that ***if*** Juniata's students were cheating more frequently, the school's cumulative GPA would increase. Ponder what I believe the article was trying to point out: that a handful of individuals had their grades lowered due to cheating. Even considering this interpretation, it's still an exaggeration to say that a modest size group of cheaters could lower the campus' GPA.

I must say that on the surface these two occurrences seem to coincide perfectly with the GPA crisis; it represents an easy way for individuals to find the cause of the problem. I'm tired of people pointing fingers at people who have GPA's lower than a 3.6. By the way, according to the Juniatian's article, all of us who have below a 3.6 are, "the ones who chose not to keep up in their work.." and consequently, "bring the averages down." If a student works hard then he or she should in no way feel ashamed of a B.

I really have no explanation for the rest of the campus. For myself, I tend to be lazy, and that can be attributed to my substandard GPA. But, I'd like to think that a GPA is not the only thing that has emphasis at a Liberal Arts College. Sports, music, academic clubs, and other contributions to the school are what makes Juniata a well-rounded community. I always make sure that I contribute to this community in an attempt to make it better, and although difficult, I implore students and administrators to look at Juniata as a whole rather than those things that make JC marketable to incoming freshman.

Mitch Silver

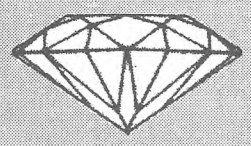
Hope for a Tolerant Australia

(Continued from Page 1)

Australia finally opened its borders following World War II and the Vietnam War, when it opened for humanitarian reasons. Though the Chinese, Japanese and other Asians have settled in the country, there is still a sense of racial hostility, as can be seen in the popularity of the Hanson party in 1996. The Hanson party ran on a plan that foreigners were responsible for causing unemployment and abusing the welfare system.

Dr. Thompson pointed out an important fact: where there are Asians, the Australians have a more favorable view of them than Australians do in areas with few Asians. There is hope for Australia to diversify still.

The CTN Debate Do We Smell the Birth of an American BBC?



Morgan Fogelman
Staff Writer

Several weeks ago, the Juniata College student body was given the opportunity to do something unheard of in previous years: view music videos on a regular basis, courtesy of CTN (College Television Network). And, while currently we are still able watch country music videos (CMT), one can hardly consider this to be appealing to the majority of our students -- my apologies to Dixie Chicks fans. Instantly, there seemed to be an excited buzz about our new reason to ignore studies and criticize the overexposed world of entertainment. Yet, while we felt secure in the satisfaction of being able to memorize one more thumb pattern on our remote controls, there were problems brewing.

Perhaps the first sign that this pseudo-blessing would turn bad was the fact that the often ignored televisions located just outside of the Cyber Café were now mandated to broadcast CTN permanently. Many students, including Sophomore Tyler Seymour were upset. "I think that it's unfair for those of us who would rather watch other shows -- like Simpsons -- in the lounge. I have nothing against (CTN), but I should have the choice to watch what I want, where I want," a scorned Seymour stated. However, for

The CTN Debate

(Continued from Page 2)

some of us, the presence of these televisions matters little. We still have the option to change the channel in our own rooms.

Even students like Seymour will have the ability to go elsewhere to watch their personal choices for viewing. Some individuals, though, are forced to view and listen to CTN on a constant basis without the aide of turning the volume down. I am talking about the helpful staff at Baker, whose initial favor of the new television in the cafeteria may have turned to nausea with the mandatory broadcast of Channel 61. Staff member Wanda, considered by many to be among the best omelet makers in the history of Juniata College, was hesitant to make a statement about the television, but couldn't help herself when the topic turned to musical preference. "I definitely liked it much better when we could watch our soap operas." She added, "I don't like rap too much so I just try to ignore the music."

The subject of rap has come up in many discussion about College Television Network. Many people have been upset at the shift in recent weeks from a selection of varied musical videos to almost all R&B and "hip-hop." Yet, we have learned from an inside source, that the reason for this shift was a mix up in broadcasting signals. It appears as though Juniata was put on the "minority broadcast list." This resulted in the station showing almost nothing but rap all day. A mistake turning many viewers into skeptics. However, we are told that this problem has been rectified.

For now, it seems as though CTN is here to stay. To the many students who have complained for years about being denied access to MTV, this new channel may serve as a suitable substitute. And while we may loose a tiny slice of freedom in selected areas of campus television viewing, it would appear as though the trade is worth it. Perhaps we should all take the approach of Sophomore Brian Wilson, who stated, "(CTN) is not so bad. At least we have music videos now: and even when they're bad songs, I can just put my headphones on and listen to my favorite music while still being able to watch music videos." Bravo, for innovation.

Etiquette on a College Level

Matt Wolfe
Web Page Editor

After a resoundingly favorable reaction to my column on college dating (Hey, one person telling me that they liked it counts!), I decided to write a type of sequel, this time focusing on college etiquette.

What is etiquette exactly? Well, my roommate's trusty Webster's says etiquette is "polite manners; rules for social conduct; decorous conventions." After looking up "decorous" (proper; fitting; seemly), I decided that was the last time I would look in a dictionary that is older than I am. This thing is from 1953! I mean, damn Nate, spring for a new one already! I thought the pages were going to crumble when I touched them! Anyway, I'm getting off topic a bit here…

I define college etiquette as the etiquette that is only needed on a college campus. For instance, using a washing machine. It takes roughly an hour for the washer and an hour for the dryer to complete their cycles. This is a known fact. So if a person puts their clothes in the washer at 2:00PM, they should come back at 3:00PM to put their clothes in the dryer. Then at 4:00PM, they can take their clothes out of the dryer, assuming that the stupid dryers actually get them dry the first time. So why is that the same clothes just sit in a dryer for hours? Do people just forget about them? Do they think the washers and dryers will take longer than an hour? Are they trying to air dry their clothes? Let's use some common sense here people! Wait an hour and then go check on your clothes. This will ensure that no one else will take them out and throw them around the room out of frustration. Not that I've done that, no…

Bathrooms are another place that needs some etiquette. Now I've never been in the women's bathroom, well, not while sober, so I don't know if this will apply to them, but guys can certainly take note. When using a toilet, FLUSH! It's not a hard concept! Would you not flush at home? Also, if you do flush and maybe not quite everything goes down, flush again! No one wants to walk in there next and find a little present waiting for them. Next, make sure the seat is clean after you use it. That means no "droppings," no hairs, nothing! This only takes a few seconds to make sure everything is taken care of, so it should not be a big deal. I can excuse these rules if the person is drunk, since the fact that they made it into the bathroom is good enough for me!

So what other things should people be aware of? I can't think of anymore, but if you can email me (wolfemb9). Also, I'm looking for a name for this column, so send me your suggestions. The winner gets their name mentioned in the paper and a check for ten dollars (checks not honored).

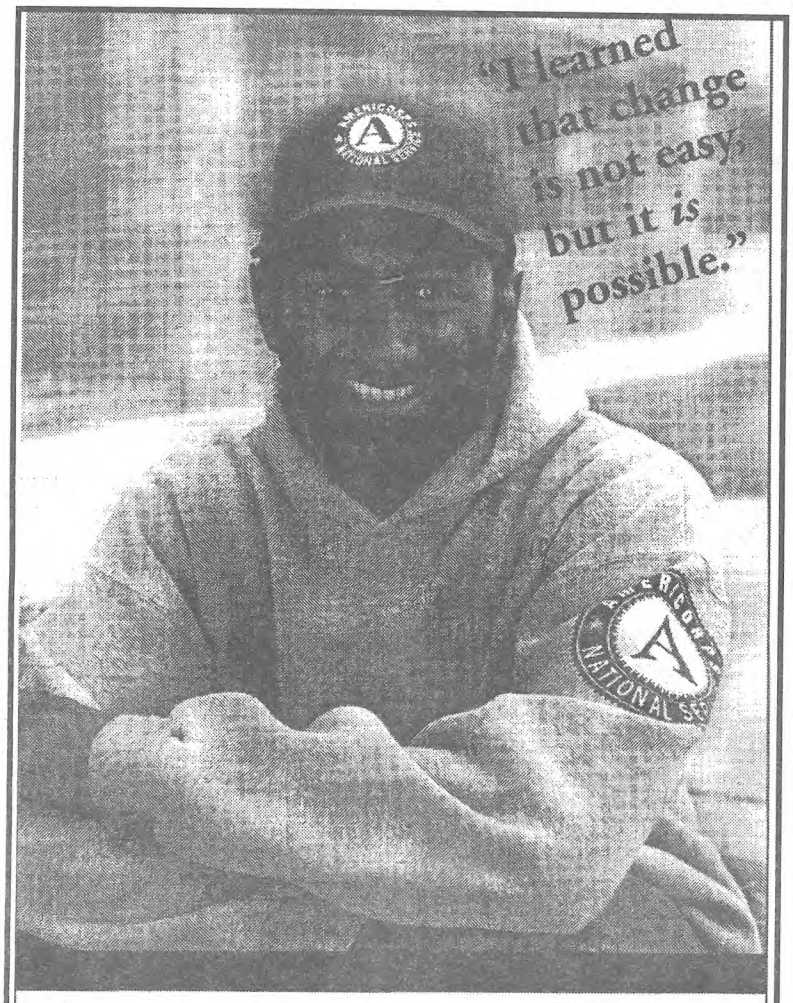
Sports Round-Up

(Abbreviated)

Bub Parker
Sports Information Director

MEN'S VOLLEYBALL (6-7, 3-5 EIVA Tait): Mar. 3 at N.J. Institute of Technology.



Juniata, ranked second in the latest American Volleyball Coaches Association, took to the road this past weekend for its only action during the past seven days. On Friday, the Eagles lost at Rutgers-Newark, 15-11, 15-7, 15-9, in an Eastern Intercollegiate Volleyball Association (EIVA) Tait Division match. As a result, the Scarlet Raiders swept the season series from the blue and gold squad. On Saturday, however, the Eagles rebounded from the setback to post a 15-11, 11-15, 15-13, 15-9 triumph at Southampton in another EIVA Tait outing.

WOMEN'S BASKETBALL (16-9, 8-6 MAC Commonwealth): season complete.

The Eagles had their season come to a close this past week with a 77-58 loss at Scranton during the Middle Atlantic Conference playoff quarterfinal round on Tuesday evening. Juniata owned a, 47-45, lead with 13:26 remaining in the contest, but the Lady Royals went on a 27-5 run over the next 9:30 to grab a 20-point advantage and then held on for the triumph.

BASEBALL (2-1, 0-0 MAC Commonwealth): Mar. 6 vs. Bluffton; Mar. 7 vs. Kenyon (2)

Juniata opened the 2000 season with a pair of wins at Washington (MD). The blue and gold squad took the opener, 5-0, and then won the nightcap, 2-1, on Saturday afternoon. In the opener, the Eagles produced seven hits and benefited from three Washington errors. The two victories moved head coach Bill Berrier's career win total to 399. On Sunday, the Eagles lost at Shenandoah, 15-12. Juniata was down, 8-0, before cutting its deficit to 8-6 with six runs in the top of the fifth. The Eagles then trailed, 15-7, heading into the ninth inning before tallying five runs to close out the scoring.

When Sanjay Garla left college, he doubted whether his classroom lessons related to the real world. But joining AmeriCorps helped him make the connection he had been lacking. By the end of the year, he had launched a public education drive to help community residents get the health care they needed. "AmeriCorps challenged me and helped me grow," Sanjay says. "After that year, I returned to school with new skills and a better sense of direction."

For best AmeriCorps*VISTA Placements beginning Summer/Fall 2000.
We recommend you submit your application by March 15th. Applications available online at www.americorps.org or by calling 1-800-942-2677

AmeriCorps: Are *you* up to the challenge?

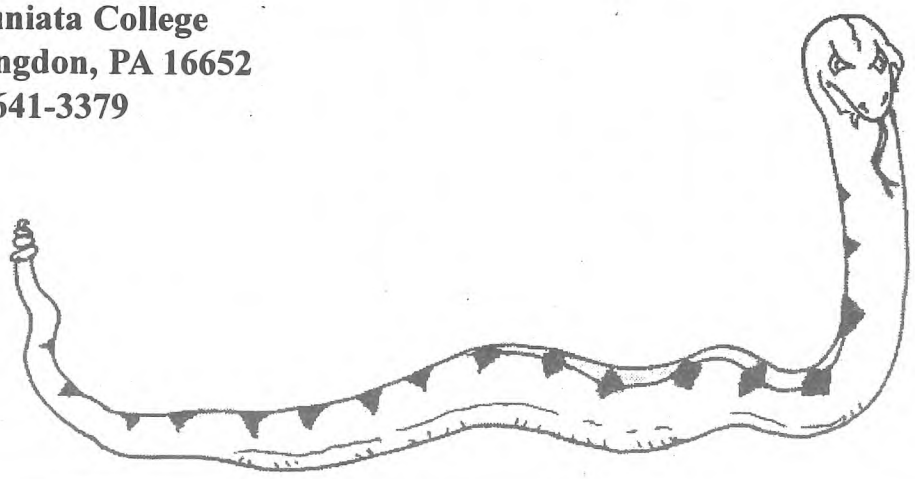
The Bailey Oratorical

Dr. Kepple and Matt Peters, second place winner. Photo by I. Petranek.



(Continued from Page 1)

The oratorical contest has always been a very prestigious event at Juniata with a monetary prize awarded to the winner. Today, an enhanced endowment contribution by Judge Bailey's son-in-law, Colonel Sedgley Thornbury, made the $1,000 in prize money possible. In addition, the name of the winner will be permanently inscribed on an antique loving cup presented to the college by Colonel Thornbury's son, Thomas Bailey Thornbury.

WKVR to Broadcast National Public Radio

Colleen McLaughlin
WKVR

On Tuesday, February 22, the Board of Directors at WKVR called an emergency meeting of all disc jockeys and interested campus personnel to discuss the possibility of airing National Public Radio over the WKVR signal.

The news comes in light of recent contact from WPSU at Penn State, the current local broadcasting station of NPR. The General Manager from WPSU has voiced an interest in using WKVR as another outlet for NPR in the Central Pennsylvania region where NPR and other radio signals are lost due to rough terrain. The interest in a partnership between WPSU and WKVR results from recent FCC freezes on licensing new NPR broadcasting stations. Thus the partnership would not be permanent, proposed to last no longer than five years.

The possibility of a partnership would result in several changes at Power 92. It would result in a constant broadcast of professional radio programming 24 hours a day, with NPR broadcasting as frequently as from 2 a.m. to 6 p.m., seven days, and around the clock during school breaks, such as extended Winter, Spring, and Summer breaks. Though airing NPR would reduce available Power 92 programming time and eliminate current afternoon shows, professionalism among the

Student Exhibition Opens

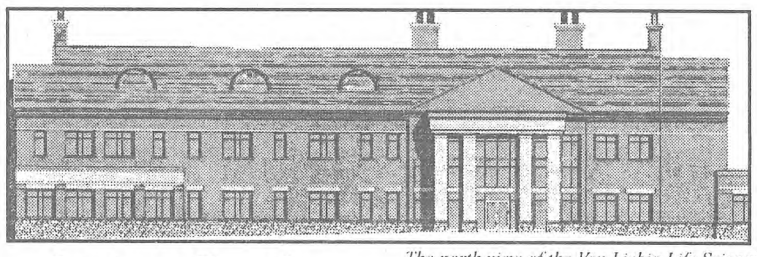
By Ruth Bernhardt
Cultural Editor

On Friday March 17, the opening reception for the annual Juniata College Student Exhibition was held from 7-9 in the evening. The student works will be on display until April first.

The process of selecting the pieces to be displayed begins in the classroom. Professors choose works they believe should be exhibited from the previous semester and the first half of the current semester, and send them to Director Earenfight and his student assistants. Of the thirty pieces submitted, twenty-four to twenty-five were accepted and are now on display.

Professor Jack Troy selects the ceramics, Alex Mcbride, the digital/computer art, painting and drawing, Adjunct Roberta Moore chooses the advanced photo pieces, and Adjunct Mary Valero selects the printmaking pieces.

Professors and museum staff strive to provide an accurate representation of both the student body and medium. Pieces range from photographs to ceramics to paintings.



A piece of art by Jennie Allison. It will be on display until Apr. 1. Photo by R. Bernhardt.

Thanks to the hard work of the professors and museum personnel, Director Phillip J. Earenfight, and student assistants Nichole Book, Nichole DeSantis, Sarah Oakman, and Mercedes Sierra-Ramìrez, the opening was a great success.

Student Assistants Mercedes Sierra-Ramìrez, Nichole Book, Nichole DeSantis, and Sarah Oakman.

Juniata Ponders Construction Woes

Justin Miller
Co-Editor-in-Chief

It is a bright day in late winter at Juniata College. Several squirrels cavort on the lawn behind Founder's Hall while a flock of Canadian geese squawk overhead. The only indication that this is about to become a $20 million construction site is the two-posted sign proclaiming this bit of land as the future site of the Von Liebig Life Sciences Center.

With any construction comes noise and dirt, and lots of them. These nuisances will be difficult to live with for the duration of the project. Current projections put that at being an 18-month to two-year plan, with groundbreaking in October 2000. "We hope to begin classes in the new building in the fall of 2002," said President Kepple.

Student concerns about the disruptions are being taken under consideration by the administration.

Kathy Collins, from the Office of Resedential Live, has sent out a campus-wide letter prior to Room Draw, reminding everyone of the potential disruptions associated with living in South and Lesher this coming year.

Dean of Students Kris Clarkson also has plans for keeping students informed. "I've been on campuses before where we've built buildings and I want to foster communication between the student body and the construction crews. If they get to know each other as people, they will better understand each others' concerns." Also of concern to Clarkson is keeping the Huntingdon community informed on the progress of the project.

The cornerstone of the college's

Muddy Run: Playing in the Wetlands

Nicole Bowen and Kristin Wilson
Staff Writers

When many of us think of Muddy Run, we think of hamburgers, mozzarella sticks, and chicken fingers. However, some members of the College and of Huntingdon community have been focusing on the other Muddy Run on campus: the stream that separates East from the practice fields behind Ellis and continues to run behind the baseball field.

If you've walked to East lately, you've probably noticed that there's no wildlife or wetlands surrounding

All Class Night Lives Up to Expectations

Ryan Miller
Staff Writer

The annual JAB-sponsored All Class Night graced Oller Hall on Friday, February 25th. Each class competed in the fun-filled evening by preparing a 30-minute skit based on this year's theme of "Lights, Camera, Action!"

Faculty and Staff participated in the event as well. Dr. Emil Nagengast served as Master of Ceremonies, with Rocca Panosetti, Jim Bogardt, JoAnne Wallace, and Paula Wagoner filling in as judges.

The class skits were judged on numerous criteria, including acting, audience reaction, and set design. The class of 2003 dropped into the traditional freshman slot of 4th place. The freshmen had almost canceled their entry in ACN because of low participation, forcing them to re-write most of their original script. The new script was based on a JC news report, making light of the freshmen's' situation.

Students Spend Break in Honduras

Nicole Bowen
Co-Events Editor

For spring break 2000 some very fortunate students, faculty, and staff members from Juniata College were able to visit Honduras. They spent time working at an orphanage and talking with various groups of people throughout the country. This experience enabled the members of Juniata College to learn and view things that have made an impact on the lives of the Hondurans.

This service learning trip entailed working at an orphanage helping play with the kids, and then traveling to various cities to listen to organizations speak. Some of the organizations that the Juniata College students spoke with were a group that works to bring the Internet into third world countries, a group of indigenous peoples, and a women's rights groups.

The group lived at an orphanage for the first half of the week. While living at the ranch the group was able to eat some traditional Honduran food, which included the common delicacy of "beans." Later on the group headed to the capital city of Tegucigalpa. Here they were spoke with a woman who helped to develop the first battered womens' shelter in Honduras. While meeting with a group of indigenous peoples towards the end of the week, the students learned how to speak some Chorti, their language. They also got to see how the group lived in small straw huts. This was not a typical Western American house with four walls, a ceiling and floor of cement.

This trip was both fun and educational for the group. They would like to share their experience with the rest of campus on April 4th, 2000. More details will come closer to the date! Be sure to look for more information and come to see photos and speak with the students who went.

Birds of Prey

Jonathan Polloni
Staff Writer

On Tuesday, the last day of February, a.k.a. the twenty-ninth, Doug Steigerwalt and Jennifer Brackbill visited Juniata College, and brought a few friends along with them. These friends were an eight-inch Eastern Screech Owl, a five pound Great Horned Owl, a grimacing Red-tailed Hawk, and the broad winged Golden Eagle.

Jen and Doug are bird handlers working at Shaver's Creek Environmental Center. Here they train volunteers in the art of birds, and provide educational presentations for visitors. This is important, as they feel the need to increase human awareness of birds. "It's ok to take pictures," Doug reassured the audience.

To open the evening, which began at 7:30, Doug gave a brief slide show, picturing several species of common birds, then moving to the focus of the event, Birds of PREY! All these birds had come under their care as the victims of unfortunate circumstance, involving car accidents, a barbed wire fence, and a case of electrocution. After being seen by the center's veterinarian, they are now in the care of the center. They get to travel around and are used for educational demonstrations and bird handling training, both at the Shaver's Creek Environmental Center and abroad.

Hosted by the ESS club, there was a good-sized turn out for the talk, consisting mainly of faculty children and Huntingdon residents.

WKVR to Air NPR

(Continued From Page 1)

DJs will increase as air-time will be scarce, thus causing DJs to perhaps audition for slots or take part in some other selection process. WKVR does plan to make arrangements to preserve broadcasts of Juniata athletic events.

Other benefits created by the partnership would be increased listenership, leverage for infrastructure improvements, and the good will of providing a service to not only the Juniata community, but to Huntingdon at large.

DJs represented at the meeting and other interested campus personnel have largely offered support in this decision. WKVR hopes to have more information available about the start of this process by early March.

The Beach: Leo's Latest Lapse

Morgan Fogelman
Staff Writer

WARNING: All Leonardo DiCaprio fans, do not enter this review. It contains truthful information which may cause you to awake from your post-Titanic brainwashing. In all honesty, however, Leonardo Dicaprio does not suffer from over-acting or under-acting of any kind in The Beach - his largest release since that one about the boat. He does, on the other hand, fail in his ability to choose an original script. For fans of Apocalypse Now - the film inspired by Joseph Conrad's work Heart of Darkness - The Beach may seem like nothing more than Hollywood's newest attempt at producing a regurgitation of a classic based on a classic. Director, Danny Boyle - of Trainspotting fame - certainly does his part to hit the audience over the head with the connection by inserting a short clip of Apocalypse Now

(Continued on Page 4)

Friday Night Live

Jen Bartimole
Staff Writer

The Have Nots, a comedy improv group from Charleston, South Carolina, performed the last Friday Night Live of the school year.

Unlike other Friday Night Live performers, The Have Nots based their act upon audience participation. Audience participation was not recommended: it was required. The audience was very involved in the act, and willingly offered ideas. To learn more about The Have Nots, visit their website at www.thehavenots.com.

From the J-Files...

By Matt Wolfe
Web Page Editor

While checking my mail after lunch one day this past week, I received a blank manila envelope. I wasn't expecting my issue of Conspiracy Theory, so I was taken off guard. I deftly tucked it into my bag and walked back to my dorm. Once I was alone (You never let anyone see what's inside an unmarked envelope until you've read it.), I opened the mystery. I was amazed at what was inside! Someone had broken into the legendary J-Files, the files that contain everything Juniata tries to keep from public knowledge. I had been trying to "obtain" some of these files all year! Someone had helped me out. I made a mental note to find out who later...

This particular file that was delivered to me was a list of rejected T-shirt ideas for various clubs here at Juniata. This was gold! How could I not publish this in the paper? So, without further ado, here is the legendary Rejected T-shirt Ideas!

o Math Club - "The Null set does not stand for our sexual encounters"
o Philosophy Club - "We're still debating the existence of this club"
o Skulldiggers - "Stop asking about shovel rentals"
o Equestrian Club - "(front) We LOVE to ride (back) Horses, of course!"
o French Club - "We unplug our noses in your general direction!"
o Laughing Bush - "The name makes us laugh too"
o Mud Junkies (ceramics club) - "Pot, we make 'em, you buy 'em"
o Spanish Club - "Please don't send us back"
o English Club - "Can you spare $5? Our department is poor"
o JIF - "Creamy, Chunky, or Extra-Chunky?"
o Judo Club - "Human punching bags needed"
o Men's Soccer - "Soccer players do it for 90 minutes, but somehow we still lose"
o Women's Soccer - "The men's soccer team lies"
o Women's Volleyball - "We're hot, come to our matches already!"
o Geological Society - "Rocks have feelings too! They talk to us..."
o AWOL - "We love your mom"
o Kvasir - "We have a story behind the name, but it changes from year to year"
o Caving Club - "We love dark, moist holes"
o WKVR - "We don't listen either"
o The Juniatian - "Circulation: 10"

I can see why Juniata didn't want anyone to see these slogans. However, I felt that people had a right to know. Now, who else can steal some J-Files? I want to know the truth behind the ghost in Cloister...

Opportunities Abound in Muenster

Kristine Lipuma
Staff Writer

This spring approximately one dozen Juniata students will travel to Germany for the opportunity to study at one of Europe's leading business schools. Fachhochschule Muenster will host the students for three weeks, during which they will learn about the European Union, business practices, and the German language and culture. Four field trips to places such as the European National Bank are also included.

This is the first time Fachhochschule Muenster will hold the summer program, though it has been one of the Juniata exchange sites for many years. Over the years, the German school has been sending students to Juniata while few students from Juniata attended school there. Over the years, Fachhochschule Muenster accumulated a debt to Juniata as a result of the exchange imbalance. To help balance the books, Muenster is offering all the instruction for free, therefore the participants only pay $1300, the cost of airfare, train tickets, housing, and meals. German students at the school will host them.

The courses will be conducted in English, and the application process was open to all freshmen and sophomores. Participants in the Muenster 2000 program earn four credits: three for the actual classes in Germany and one credit for pre-departure classes.

Who Speaks for the Liberals?

Bill Minutaglio
Knight-Ridder Tribune

Bill Bradley, a candidate some liberals had once viewed as their last, best hope, has dropped out of the White House sweepstakes.

And now that he's gone, thousands of liberal voters across the country have been left wondering about their presidential options -- and the future of liberalism in America.

Bradley -- often derided by many liberals who saw him as a moderate conservative in Democratic clothing -- rarely mentioned the word "liberal" when talking about himself and his campaign.

And, this year it has been virtually impossible to find the word popping up on the lips of candidates or pundits -- except as vile invective.

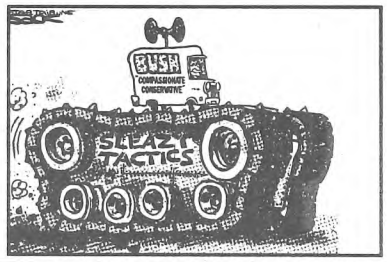
For much of the 2000 presidential run, Al Gore and Bradley steadfastly refused to describe any of their policies as liberal; John McCain and George W. Bush were slinging the word around like a poison dart.

All of which makes it a long way from the days when a young, progressive presidential candidate named John F. Kennedy boldly spoke these words in 1960 as he accepted the New York Liberal Party endorsement:

"I'm proud to say I'm a liberal . ... Only liberalism, in short, can repair our national power, restore our national purpose, and liberate our national energies."

Austin has long been considered one of the homes of liberalism in Texas -- and the launching pad for unrepentant liberals such as former Texas agriculture commissioner Jim Hightower.

After a recent broadcast, Hightower suggested that liberals can look toward the Green Party, the Labor Party, the New Party and other outlets for their candidates.



"You've got guys like Clinton, Gore and Bradley who aren't even Democrats," said Hightower. Those Democratic Party candidates are more like "Democrat Lite," he said.

King, a seasoned chronicler of national and Texas politics, questioned suggestions that Bradley had been espousing true liberal ideas. He added that the Democratic Party has fled from its liberal roots -- in an attempt to take voters away from the GOP.

"It is embarrassing that the Democratic Party has abandoned much of its traditional principles," he said.

Through the campaign, refused to describe himself as a liberal: "We're in a new world where there are new priorities. The label hasn't been found to describe what it is," he told the Wall Street Journal earlier this year.

Gore was just as ginger. "I consider myself a progressive," he said.

Bookend Seminar

Ejlal Alalawi
Features Editor

Professor David Atwill held a bookend seminar about China on March 14, at Good Hall. I thought the lecture was suitable for History or Politics majors but 75% of the attendees were college professors.

He talked about the different Chinese groups and the way they interacted with one another during the Qing Period, which ran form 1444 to 1911. He first gave some background information and talked a little about the Middle Kingdom Myth. He also showed some pictures like the rice terraces and the mountains.

He then proceeded to talk about the topography of China and how some major groups lived on the highlands, highlanders, and other in the tropical areas, lowlanders. But most of the minorities, he said, inhabited the elevations. The three major groups are the Han Chinese, which make 20%, the Non-Han or Yo 70%, and the Muslim Chinese or Hui 10%. The Bai, Sha, Hei Sha, Lisu, and the Miao people are some of the minor groups he talked mentioned. He also talked about the Woni uprising (1817-18), the Dao Shengwu Affair in 1833, and the Baoshan Massacre in 1845.

Majors versus P.O.E.'s

Nicole Stahl
Co- Events Editor

"So what's your major?" asked my friend from another college. "Well…I don't have a major, I have a P.O.E. but it doesn't make sense to me. I guess it's the same thing as a major," I said.

According to Bill Duey, Registrar, P.O.E.'s are better than majors because "more than half of the students, and the number is rising, [have] individual P.O.E.'s. This way students can tailor their academic program, which is a better idea academically."

P.O.E. submission is required before students are able to pick up their pre-registration packets. Previously, the Registrar's office and advisors did not have this requirement. They began requiring P.O.E. submission because many seniors reached their final semester at Juniata and realized that they had not planned a program. These seniors were then forced to look at their transcript and see what they could pull together at the last minute before graduation. Duey feels that requiring P.O.E. submission starting sophomore year "prevents suprises."

For juniors and sophomores, springtime brings P.O.E. deadlines. But why are they so important? According to Duey, "P.O.E.'s are documents representing a list of courses the student takes that justifies their title when they graduate." P.O.E.'s also serve as a method of planning that students and their advisors use to space out the requirements of a program. "It's almost like a checklist," said Duey.

Freshmen are also required to submit an initial P.O.E. in the spring. The 'In- P.O.E.' begins the planning process for students. The 'In- P.O.E.' consists of a list of ten classes in one's desired field along with goals.

The student reaction to the P.O.E. process varies. One sophomore said, "it sucks." When another student said, "I like how you can individualize them, but writing it and getting it approved can be a hassle. Five difference people tell me five different things."

Camp Sussex

Enjoy a helpful and rewarding summer at Camp Sussex, which is located in the beautiful mountains of northern New Jersey , and is about one hour from New York City.

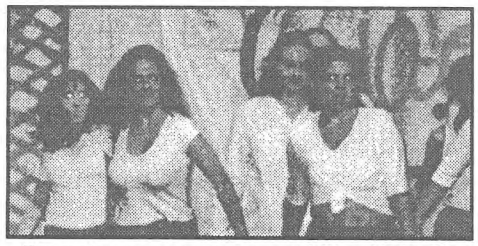
All Class Night



(Continued from page 1)

Coming into third place was the Junior class, with a skit based around the life of a Juniata couch potato (Ray Ghaner) channel-surfing through the world of the local cable station. One skit included a parody of "Who wants to be a millionaire?," with students playing JC faculty and staff as contestants.

Second place was seized by Juniata's sophomores, who took the stage with a number of skit parodies in a Saturday Night Live style format, hosted by Britney Spears (Heather Klebe). The class of 2002 presented three large comedy skits, several short SNL-like commercials, and three song and dance numbers, including their closing theme song of "I want the JC way," sung to the tune of the Backstreet Boys.

Although the sophomores gave them a run for their money, the Seniors took the ACN trophy home. Poking fun at President Kepple's Capital Campaign, the seniors' skit had the Juniata administration devise an evil plan to produce a JC promotion film. The skit included much of the entertainment world blended with life at JC.

However, not even the seniors were the highlight of the evening. After the last class had performed, President Thomas Kepple, Provost Jim Lakso, and Professor Andy Murray ended the evening with a blues-brothers style musical set, joined by other faculty and staff as backup singers and musicians. History Professor James Tuten, who sang back up, claimed that he was "a little worried" (after watching the audience's reaction to the freshmen skit) that the students might boo them all off stage. Nothing could have prepared him for the screams of excitement and standing ovation that students gave him and the other performers of "The Blues Siblings."

The sophomore presentation at All Class Night. Photo by J. Ramquist.

The Beach

(Continued from Page 2)

in the very beginning of the film. The plot, for those unfamiliar with any of the three is centered around a main character searching for and/or finding the unbeaten path and a bit of utopia in the process. However, what our protagonist finds, is that there is no such thing as utopia - the perfect civilization. In fact, Richard (DiCaprio), is not the typical protagonist in this film. His character is, rather, deceitful and dishonest in his approach to finding adventure in his life. One bright spot in the film can be attributed to French rising stars Virginie Ledoyen and Guillaume Canet, who play a pair of lovers left in the wake of Richard's search for the most non-tourist, tourist attraction of them all - the perfect beach. When we finally get to see the beach, it may not stand up to the image created in our minds, but it is somewhat breathtaking. And, although it pains me to say it, the best actor in this movie is the non-human namesake of this otherwise weak film. I give it two eagles. Wait until it is in the old section of the movie store, and even then, consider it - if you can stay away from Leo for more than a year.

Wetlands Project

(Continued from Page 1)

Muddy Run. Members of the Conservation Club and the Environmental Science and Studies Department have been in the process of rectifying this situation with the help of Andy Patterson of the Huntingdon County Conservation District.

The Muddy Run Wetlands Project consists of replenishing the wetlands surrounding the stream in order to prevent flooding, improve water quality, and to return sediments and nutrients to the fragile ecosystem. The area that will be concentrated on is located behind the baseball field to the right of East houses.

The area consists of an open lawn, which is used by students and community members for recreational activities. Therefore, an organized or paved path will be constructed to allow people to walk along the stream and not disrupt the new habitat. The project won't interfere with sports, and maintenance costs will be reduced because the area will not have to be mowed.

Professor Paula Martin believes that there are essentially "no negatives associated with the project" and that it is a "win-win" implementation. When spoken to, she was extremely enthusiastic about the project.

The Muddy Run Wetlands Project, which began over a year ago, has recently been funded and is now in the approval stages. Funding has been granted by the Heinz Foundation, a family whose interests lie in improving water-sheds and overall environmental conditions.

If you'd like to get involved, or if you have any questions, contact Ann Parry.

Students Desperate to Get Arrested - Prison a Marked Improvement

Ruth Bernhardt
Cultural Editor

Word has reached Juniata College that the local prison receives MTV, VH1, and Comedy Central. Students run amok, forming so-called "death squads" to gain access to the forbidden stations.

One such "death squad" leader, who asks his name be printed in large letters in this paper (RYAN MILLER), says, "Sure, we have freedom now, but it is worthless without good music and comedy reruns. That College Television station sure isn't doing the trick. We'll do whatever we have to to get them, and if that means bumping off a few Huntingdon residents to get jail time, so be it. They breed like rabbits anyway."

One student, already behind bars, enjoys the freedoms of prison. Photo from www.artville.com.

Ryan Miller and his "death squad" were later picked up by police for allegedly urinating on the courthouse. One student

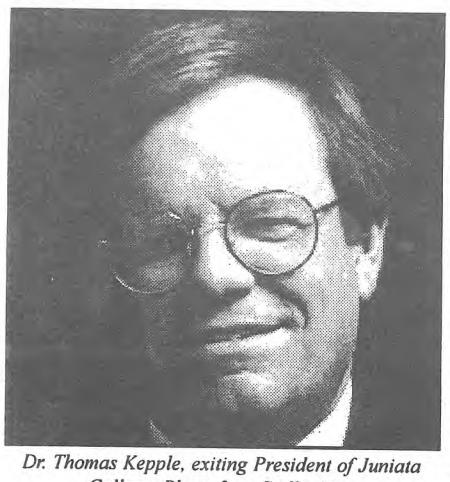
Green Dye Linked to Cancer

Matt Wolfe
Staff Writer

A health warning released by the CDC (Centers for Disease Control) has caused a huge commotion across college campuses. It seems that certain brands of green food dye have been linked to a rare form of cancer.

A Juniata researcher studies the effects of green dye on a college population. Photo From Juanitian archives.



The CDC has not released the names of the brands of the dye yet, but one of them is believed to be the McCormick brand. The CDC is consulting the companies in question before they release their findings. It is unclear at this point what the reasoning behind the consulting is, although it may be a comparison of data.

It appears that the only dye affected is the consumer dye sold in stores, not the type used within the industry. This means any food or drink that has green dye in it is not a cause for concern. Please do not boycott any products that have green dye in them, as they do not appear to be carcinogenic.

While this consumer dye is meant for food products, it is commonly used to change the color of alcoholic beverages, specifically beer, on St. Patrick's Day. This has caused a near panic on some of the bigger college campuses. The college health centers are overflowing with students who have consumed this dye.

If you have consumed any green dye within the last two years, please see your doctor immediately. Only early detection and a rigorous treatment can defeat this type of cancer.

Juniata College to Change Name, Induct New President

Dr. Thomas Kepple, exiting President of Juniata College. Photo from StalkerNet.

Kristen Wilson
Staff Writer

Juniata College will be re-named over the summer and a new president will be sworn in during Springfest this April 15. Tom Kepple announced this week that Andy Belser, theater professor, will become the new President of Juniata Clown College as of midnight, April 16. "I feel that Andy has proven himself worthy to take on the very demanding task of making Juniata Clown College an appealing place for people to learn to make fools out of themselves," Kepple stated on Tuesday.

Belser has announced some major curriculum changes already, and more are sure to follow. For example, CWS will be changed drastically. Belser believes that computers and writing are not a necessary part of clowning. Therefore, instead of IA and RW freshmen will be taking BG: Beer Goggles. A valuable part of the core curriculum, what the student learns in BG will be applied throughout his four years at JCC. "Working from the basics will allow the student to gain a deeper understanding of what it is like to 'let go' and explore his inner creativity," says Belser. Extended Orientation will continue throughout the student's four years at JCC in order to provide a sense of security concerning their "outlandish behavior" as compared to members of "normal" society.

Because of the sudden change of curriculum, it has been proposed that all those currently enrolled at Juniata College be granted their POE in whatever they'd like. Being granted a POE in the student's designated field will allow him to enter the world after graduation and be able to experience first-hand what it is like to make a fool of himself during interviews or on the job. Due to this procedure, classes will no longer be available in departments outside of Fine Arts, Invertebrate Zoology, and Creative Writing.

When asked to comment on the placement of Invertebrate Zoology in the Mission Statement of JCC, Belser explained that his students must learn and appreciate the movement of animals who have no spine. "After all," he continued, "part of clowning has to do with warming to ones co-clowns as well as to the floor, as it is a clown's best friend when falling from higher tables or platforms."

Many students are enthusiastic about the mandatory uniform that Belser is currently designing. Accessories such as a red foam nose and big, floppy shoes accompany bright, exciting jumpers that must be worn when a student exits

Trustees Vote Against Von Liebig Plans

Justin Miller
Co-Editor-in-Chief

The Juniata College Board of Trustees voted unanimously last week to rename the planned Von Liebig Science Center in honor of the college newspaper, *The Juniatian*. College officials indicated that the new name for the building will also entail a number of changes to the planned usage of the building.

The newspaper will begin daily distribution as a regional paper covering the areas between Pittsburgh and Philadelphia, inclusive. "We expect to move into competition with several of the other regional papers, such as the *Altoona Mirror*, the *Huntingdon Daily News*, the *Centre Daily Times*, *The New York Times*, and the *Weekly World News*." said Megan Brown, Co-Editor of The Juniatian.

Paper employees will be paid salaries competitive with other professional news outlets.

The building will also be

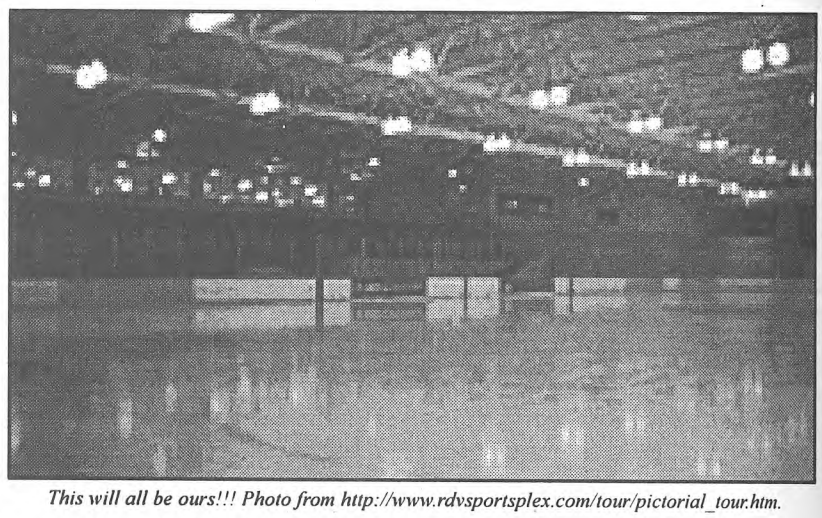
No more Cultural Analysis!

Ruth Bernhardt
Cultural Editor

On Monday, March 27, President Kepple announced that the cultural analysis course designed to better acquaint students with the "modern" will not be required for next year's sophomores. A student protest is scheduled for next Friday concerning this announcement.

"If we no longer have CA," one freshman said, "what will we complain about for half a year? And what will we spoof in that great tradition of All Class Night?"

A spokesmen for the protest committee added that CA offers a wonderful opportunity to sleep in and earn four credits for it.



"Perhaps we shouldn't give this up," one student commented. "If we let them take away this course what's next? CWS? C'mon people, think a little here!"

Reports indicate that the professors are also in an uproar. "Who will we have to listen to us lecture on something we know nothing about?" says one. "We need those three hours a week of mindless ranting, it's very therapeutic. It takes our minds off all the students who are failing our other classes."

Public opinion may do little to dissuade President Kepple who's new plan for the sophomore requirements include group hugs with international students, and a foot massage class with the practicum to be held in the presidents office daily.

Ice Hockey Rink Coming To Juniata

Matt Wolfe
Staff Writer

This will all be ours!!! Photo from http://www.rdvsportsplex.com/tour/pictorial_tour.htm.

On Wednesday, March 15, the Juniata Board of Directors approved a plan to build an ice hockey rink on school grounds. The plan was approved despite heavy opposition from the townspeople of Huntingdon.

The rink is to be built on the empty field that sits between East and Sherwood. Construction is expected to begin after the new science center has been completed. In other words, it will be completed by the next decade.

Some people have asked where the money for this ice hockey rink is coming from. "Well," and anonymous source offered, "We are taking even more money away from the English department than ever before! We then invest this money into high profile initial public offerings like Palm and Akamai and make a ton of money. So instead of giving it back to the English department, who sorely needs it, we spend it on frivolous things, like an ice hockey rink!"

The townspeople of Huntingdon do not agree with the plan of building an ice hockey rink on school grounds. "A typical ice hokey rink takes 4.3 billion gallons of water to fill it each year. This would cause a massive drought in Huntingdon!" a city council member said. "We're predicting that people will go to extreme measures trying to obtain water, including stealing, murdering, and buying it. We vigorously disagree with the school judgement in this instance."

When asked if the school was aware of the view of the town, our source replied, "Yes, we're aware. Frankly, we don't care. This jerkwater berg can go to hell! We're going to build our ice hockey rink and no one can stop us. One of the advantages of being a private college is that we can do anything we want. You think that Physical Plant is always digging up the ground to fix something? No, they're burying bodies! Oh, I've said too much..." With that our source swallowed a small black pill and ran out of the room, never to be seen again.

Last Wednesday the town council held a special meeting to discuss the proposed ice hockey rink. The council was united in their views. A motion to "burn the college to cinders along with their evil books of knowledge" if they proceeded with the plan to build the ice hockey rink was unanimously passed. The townspeople started making Molotov cocktails and torches in anticipation.

When told of the town's decision, President Kepple simply responded, "Bring it on!"

Will there be a major conflict at Juniata within the next few years? Only time will tell.

Spring Break Canceled!

I.M. Meanie
Contributer

Due to the complaints of faculty, and surprisingly, some of the students, students will not have a spring break during the 2000-2001 school year.

When questioned about the change, an anonymous faculty member stated, "spring break is too disruptive. By the time we get started learning and broken in from winter break, the students leave for a week." As a result, there is no continuity of learning.

In addition, a survey revealed that 90% of students do not do any work over break, therefore fall behind, and they sometimes never catch up. Furthermore, professors have noted a significant drop in attendance during

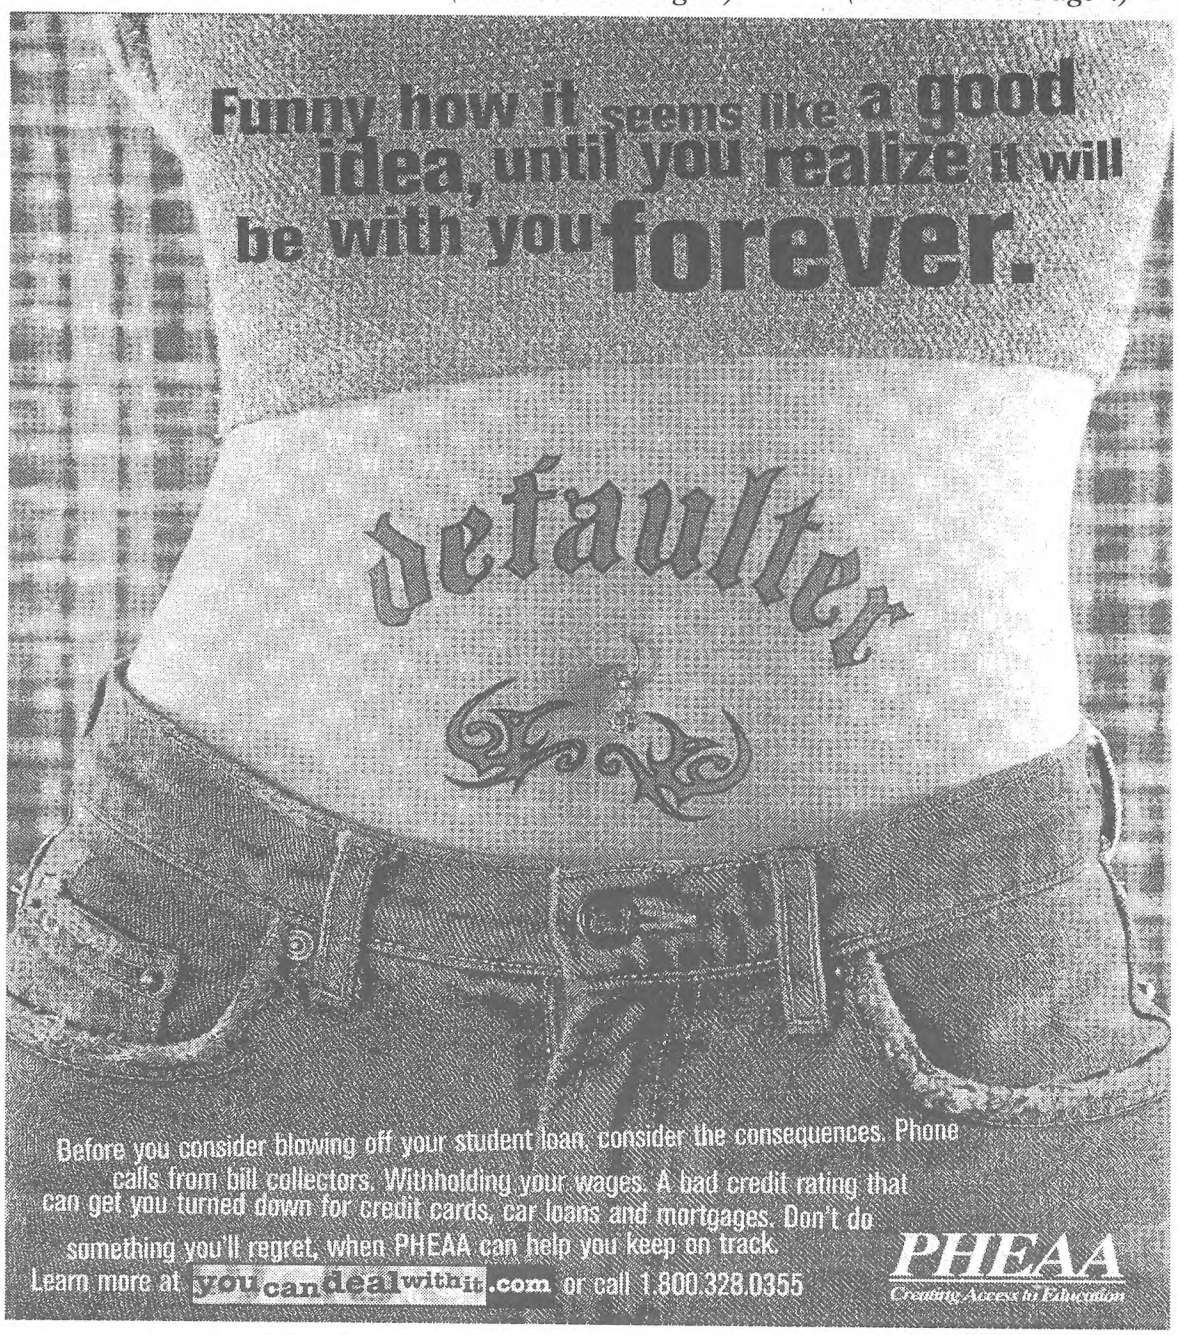
The True Meaning of April Fool's Day

By Matt Wolfe
Staff Writer

Over the years many people have asked me what the true meaning of April Fool's day is. How these people ever found out that I own Steve Allen's *The True Meaning of April Fool's Day* I'll never know, but it's my cross to bear. This year I decided to print the story. Since no one actually reads the Juniatian, I suppose I'd be more effective just telling people the story. However, the few that do read the paper will just have another Jeopardy fact stuck in their heads!

The True Meaning of April Fool's Day

April walked jubilantly down the street. She was on her way to the general store to purchase some items that her mother had written on a list: flour, sugar, and some items April had never heard before. She would have to ask the clerk for help. She knew the clerk well; Mr. James was a pleasant fellow, in his 40s, April guessed. She had known him her entire life. She considered him to be a second father. April thought of these things while skipping merrily down Wallace Road.



Harry Higgins climbed into his brand new Ford Model-T and started the engine. He needed to run into town and consult with his lawyer. Higgins had come into some money recently and there was a dispute over a portion of it amongst his relatives. Therefore he decided it would be prudent to hire a lawyer to protect his interests. His mind was lost in his thoughts of money as he turned the corner onto Wallace Road.

April stepped out onto the street, intending to cross to the other side where the general store was located. She was reading the list her mother gave her, not paying attention to anything else. By the time April realized that a car was coming it was too late. The Model-T driven by Harry Higgins slammed into April at full speed.

The funeral was very tough for April's mother. She felt a particularly bitter loss since April was running an errand for her when she was killed. She could barely listen while the priest gave the eulogy. "April Fool will always be remembered as the young girl whose infectious smile and wonderful personality could bring a ray of sunshine into the darkest corner of life. She will be missed dearly."

The mayor of the town, being close friends of the Fool's, decreed that from now on April 1st would be known as April Fool's Day, in remembrance of that special girl.

Over the years the true meaning has become forgotten and the purpose of the day misconstrued. Hopefully now that the story is known people will stop pulling practical jokes and will observe the true meaning of April Fool's Day.

College to Acquire Dolly the Sheep, Change Mascot

The eagle, now J.C.'s defunct mascot. Photo from www.artville.com.

Justin Miller, Esq.
Co-Editor-in-Chief

The Juniatian has learned that the Juniata College mascot will no longer be the Eagle, but the sheep. Specifically, the College has begun negotiations to purchase Dolly, the cloned sheep, from the Scottish scientists who carried out the procedure.

"Dolly fits right in with our long-term strategy. She represents for us not only the triumph of science to solves life's great mysteries, but our flagrant disregard for principles and ethics." said a member of the administration who spoke with The Juniatian under condition of anonymity.

The mascot, which had only been changed to the Eagle from the Indian a few years ago, is to be proudly displayed in a pen to be built in front of the new Von Liebig Life Sciences Center.

Much debate surrounded the purchase of Dolly. Many wanted to acquire a turkey vulture for reasons unknown by press time.

Dolly, the new mascot.. Photo from www.artville.com

Year-Round School

Jen Bartimole
News Editor

Due to the recent decline in the average GPA of students, Juniata will implement year-round schooling starting with the Fall semester of 2001. Starting in August of 2001, students will attend school year-round with short breaks every two to three months. This decision year-long was made in hopes that the students' GPAs will improve.

This decision was made along with other decisions to boost the average students' GPAs. Another decision made with the same goal in mind was to cancel Spring Break next year. According to a source, who wished to remain anonymous, "canceling Spring Break and starting year-round schooling are just two of the many strategies that we are using to help raise the average GPAs of the students." The source, however, would not comment on what these other strategies are.

In regards to year-round schooling, students are responding favorably. In fact, some are even enthusiastic. Seymour P. Goodstudent, a freshman, likes the idea of possibly going to school year round. He said, "Having us go to school all year is a wonderful idea. Under the new system, I can finish my triple-major in only five years!"

Trustees Nix Von Liebig

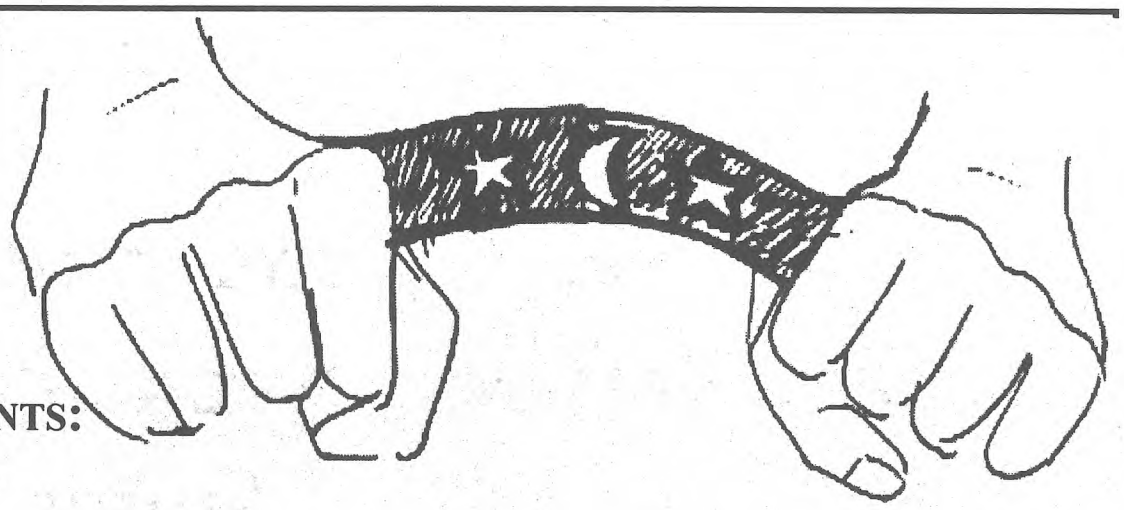
(Continued from Page 1)

used to house the rapidly expanding English department, with the addition of Journalism as a department.

Referring to the fact that the life sciences will not be placed in the new building, an anonymous college official commented using an expletive that cannot be printed here. He later revised his comment to be, "Like I care?"

Spring Break Canceled!

(Continued from Page 3)



the day before break starts and the day classes resume, making it hard in some cases to even hold a class. "It's just no good," one professor reported, "students just quit working over spring break."

Negative feedback also came from the student body. Complaints ranged from unavailability of campus housing for students that need to remain here over break, to jealousy over tans. Several students mentioned they would rather get out of class a week earlier than have a week off in the middle of the semester. "I would rather get it over and done with," said one student, "It's not like I get to go to the Bahamas. All I do is go home and sit."

The decision to cancel break was made by the administration following a study of student and faculty opinions. Next spring, there will be no break. Instead, classes will continue straight through until the end of April. The decision was made in early February, but kept a secret until now to avoid controversy. It is yet undetermined when the school year will end.

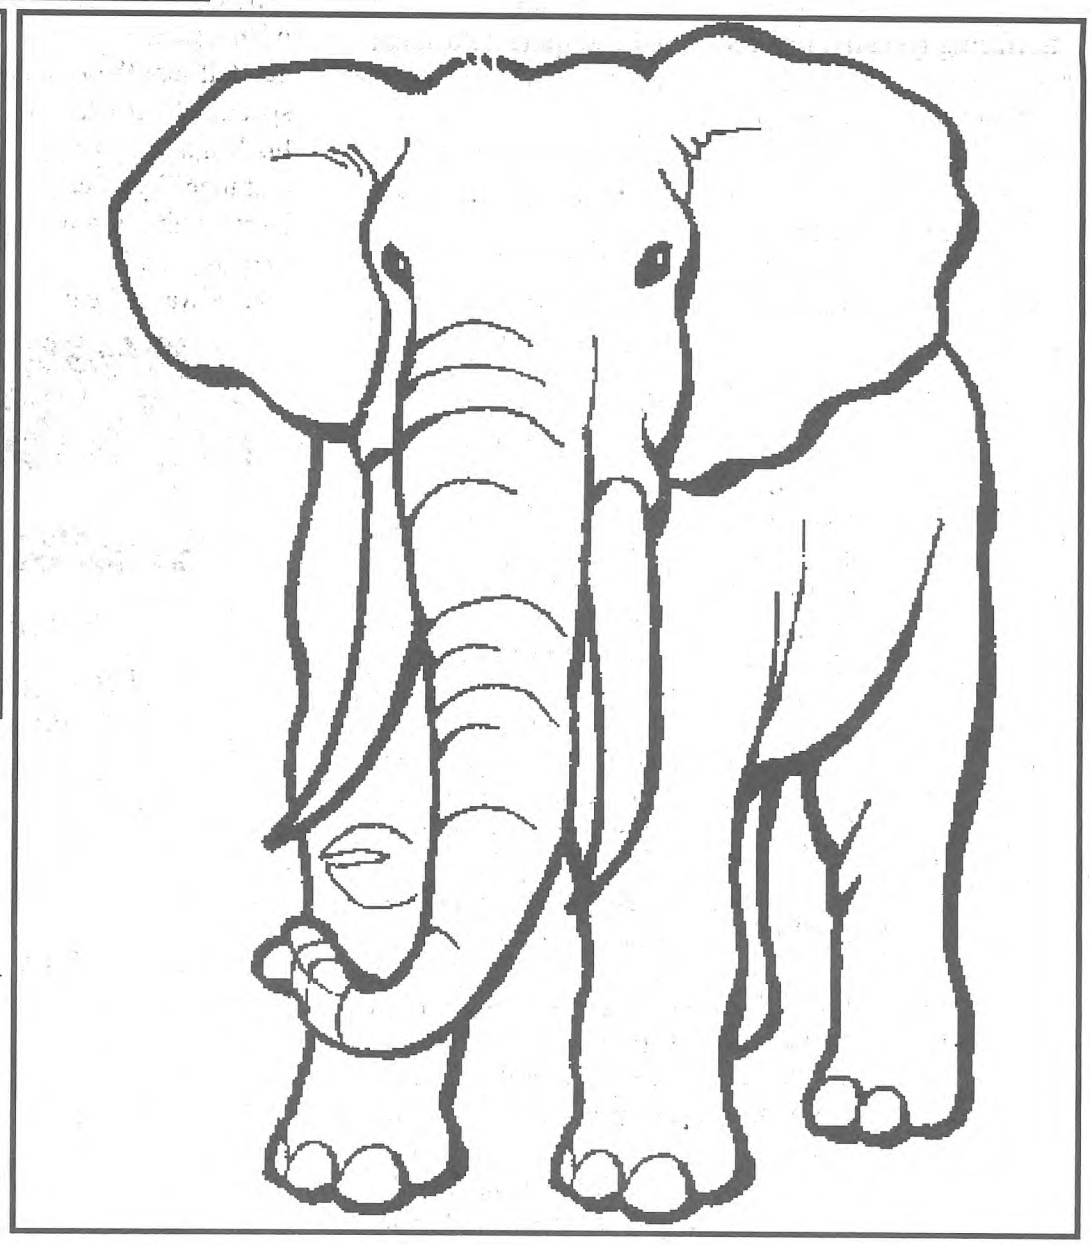
Color your Favorite Mascot

The Donkey: Symbol of the Democratic Party

When Andrew Jackson ran for president in 1828, his opponents tried to label him a "jackass" for his populist views and his slogan "Let the people rule." Jackson, however, picked up on their name calling and turned it to his own advantage by using the donkey on his campaign posters. During his presidency, the donkey was used to represent Jackson's stubbornness when he vetoed re-chartering the National Bank.The first time the donkey was used in a political cartoon to represent the Democratic party, it was again in conjunction with Jackson. Although in 1837 Jackson was retired, he still thought of himself as the Party's leader and was shown trying to get the donkey to go where he wanted it to go.



By 1880 the donkey was well established as a mascot for the Democratic party. A cartoon about the Garfield-Hancock campaign in the New York Daily Graphic showed the Democratic candidate mounted on a donkey, leading a procession of crusaders. Democrats think of the donkey as humble, homely, smart, courageous and lovable.

The Elephant: Symbol of the Republican Party

In the spring of 1874, the New York Herald printed an editorial raising the cry of Caesarism against President Ulysses S. Grant. The Herald falsely believed that Grant would attempt to run for an unprecedented third term in 1876. Herald editorial writers apparently felt this would have overthrown the unwritten rule that presidents served only two terms, making Grant a dictator. Despite its falseness and rumors that the Herald had printed the editorial only to gain publicity, the idea was used by Democrats that year to scare Republican voters away from the party in Congressional elections.

About the same time, the New York Herald concocted another scheme to increase its circulation. The paper printed a fabricated story that wild animals had escaped from the Central Park Zoo and were roaming the city looking for prey. Seeing an opportunity to use both the Caesarism charge and the animal scare, cartoonist Thomas Nast produced a cartoon which appeared in Harper's Weekly on November 7, 1874. Nast drew a donkey (the symbol of the Democratic Party for which Nast was also responsible) clothed in a lion's skin, scaring away the other animals in the park. Among the animals in the cartoon is an elephant, labeled "The Republican Vote." Nast chose the elephant because it was believed that elephants were clever, steadfast, and easily controlled, but unmanageable when frightened. The election soon afterwards proved all of these to be true. Nast's post-election cartoon depicted an elephant having walked into a Democratic trap. Soon, other cartoonists began using elephants to symbolize Republicans, and eventually, the Elephant came to symbolize the Republican Party.

Pott Shop Burns Down -- Drugs Involved

Jon Polloni
Staff Writer

On the twenty-seventh of March, apparent carelessness on the part of several students caused the roof of the infamous Pott shop to collapse, with the supposed aid of several pounds of fireworks. Surveying the destruction, teacher and potter Jack Troy exclaimed, "Well, I'll be damned."

Knowing that this day would come eventually, Troy handled the situation with surreptitious calm. This reporter takes the news a little more seriously, and found Troy's reaction to the debacle slightly amusing, yet obviously out of place. What is being hidden, I ask you. What is the story? Here's what our inquisition found...

Surfacing recently, reports of an "alternate usage" for the "Pott Shop" have been cycling. When questioned, Troy became hostile, menacing, "When will you kids learn there's more to life? Stupid one track minds...".

And while this ardent professor may feel justified in turning a blind eye, there may just be more impetus to the truth. Further questioning revealed the potential for a pandemic of grand proportions unveiling beneath the quiet, brightly tinted night of Huntingdon.

An avid loiterer of the Pott shop, Nick Stanislowski, stated, "Immanuel Steve is very busy there." A clue, perhaps.

A timelessly dedicated student, Elaine Kneller, was propositioned as to the truth of said statements. "I'm not in the mood for this, Jon." Was her only reply.

Is this indication of a hidden undercurrent beneath Juniata's savy surface? or simply the ravings of a paranoid and quite delusional madman. Only time will tell.

Juniata/Dubois Merger

(Continued from Page 3)

design to his music courses.

Both college administrations feel that there should be no animosity between the students, although border skirmishes have been felt in some low lying areas around the Huntingdon plains- Juniata students have founded the "Juniata Liberation League" and the Dubois Business students proclaiming the "Business People's Army".

The current Dubois building will be used to house Baker facilities, with Marriot hoping to save money with the less traffic of students.

Students Want to Be Arrested

(Continued from Page 1)

confided that Ryan was unable to stand the sight of blood and fainted when he saw a knife. Mr. Miller refused to comment on this subject, however he told reporters he was looking forward to the five hour South Park marathon later that night.

College officials are increasingly under fire for the actions of their discontented student body. The town council is demanding solutions to the growing number of incidents of public urination. Student leaders suggested asking the Cable Company to carry the desired channels, however the town council vetoed the suggestion, saying, "Yeah, right! We don't want our children corrupted by those tools of the devil. They'll just have to find something else to do with their time."

The Matrix: A Classic Love Saga

Morgan Fogelman
Playboy's Sexiest Man of the Millennium

It is not every week that this column will take a look back at a motion picture. Yet, if there is one thing that this week's Oscar awards ceremony has given us, it is the opportunity to refresh our memories of some of the most touching films of the year. Indeed, The Matrix is one of these.

Set in a small farm on the Danube River, this 1999 box office smash begins with the introduction of Keanu Reeves character, Olaf. Olaf is a dim-whited and ultimately hopeless young mule-tender who values the love of a local women over any fantasy world which his friends can create.

Indeed, from the very start of this picture, the audience can tell that there is nothing special about Olaf, other than his brightly colored clothes and inability to come to terms with the progress of the "big city."

Olaf and his love. Photo from The Juanitian's archives.

As always, Reeves stuns the audience with his amazing mastery of not only acting, but the ability to tap into the human emotions of fear and passion. It is no wonder that this young actor has been nominated several times for Oscars.

A twist is thrown into the plot when Glunk Harvestafern (played by Laurence Fishburn), the owner of the local goat shearing factory falls in love with the same woman who has caught Olaf's fancy.

Fishburn is the ultimate antagonist in this picture. He finds no greater pleasure than in harassing the small orphanage children and throwing mule tends at the local nunnery.

In order to truly believe in the romantic power of this film, one should probably speak French (the language used), rather than relying on subtitles. I highly recommend this classic if you are in the mood to cry next to a loved one.

Emergency Phones Planned for Campus

Indi Petranek
News Editor

A motion in student government intends to install 18 emergency blue phone all over campus. Christopher McHugh, a student security officer, brought the idea to student governments' attention.

"I think the phones are something that the campus needs to protect the students, faculty, visitors -- anyone on campus." McHugh said when asked why he took on the project.

There are already plans to install one phone in front of Ellis Hall. It is to be used when Ellis is locked and students are unable to get to the security office downstairs. However plans for this phone where put on hold when the administration raised concerns about the ascetics versus visibility of the phone.

McHugh has also created a plan to add the phones over a period of four years, to be tied in with various construction projects around campus, such as the paving of South Parking lot and the construction of the new Science center.

McHugh spoke at the student government meeting on April 3, to positive feedback. Student government will now plug the motion at various meetings with the administration. The fear is that this motion will get buried as just another cost.

When asked about the importance of the new phones McHugh said, "What happens if someone were to be attacked, or have some medical emergency in the parking lot on the hill behind the soccer fields, the East walk or the plaza

Presidential Campaign Kickoff: An Extraordinary Springfest

Teresa May
Contributor

Students wonder…what is the President planning for Juniata College? April 15th, the whole world will know. The Juniata Campaign will kick off during Springfest weekend, deliberately coinciding with one of the campus's most popular activities to create an event that everyone can enjoy.

The weekend theme is "Welcome Back to the Future Juniata… Expect the Uncommon." Indeed, Springfest this year will be "the uncommon." The biggest change may be location - this year booths will line the 18th street walkway, which will centralize the event and utilize the new path. Continuing with a carnival-like atmosphere, lunch will be available at four different stations on Oller Lawn. Board walk fries, Buffalo wings, a variety of burgers, and Twinkies only begin the list of food to be served.

Among the student booths will be a smattering of administrative tents that will follow a coffee house theme. These booths will include a book-signing tent that will feature Jack Troy and David Hsiung, among others. The TLT center will unveil the new web page and a faculty reception tent will feature faculty emeriti. Alumni will have a tent where students and alumni can learn about the alumni council, the passport

Juniata students, faculty, and administration particapated in soap box speeches with the theme, "I'll talk if you talk" on Thursday, March 23 at 4 p.m. Pairs at the Soap Box Speeches, sponsored by Speak, the communications club, spoke about social issues, read children's stories, shared inspiring ideas, and bantered playfully.

While some topics were serious and thought provoking, others were lighter and added some humor to the event.

Caroline Laret explains the choice to read Oh, The Places You'll Go: "I felt that a return to our childhood, via a Dr. Seuss classic, was a great way for my roommate and I to express our fear and anticipation about the

F.L.U.S.H. Entertains and Informs

Nicole Bowen
Co-Events Editor

On Thursday, March 23, 2000 Juniata College's Residence Hall Association hosted F.L.U.S.H., an improv group from Indiana University of Pennsylvania. This group presented Juniata students with a fantastic performance of young college students' perspective of the hardships of everyday life. The emotions felt from watching the performance ranged from laughter, to tears, and even to anger.

F.L.U.S.H. is an acronym for Friends Living Under Serious Hardships. The 1996 Tony Award Winning musical RENT, is the inspiration for the formation of this group on campus. The plot for the continuing performances for F.L.U.S.H. is based on the life of 17 residence hall students, including a resident assistant, who are all dealing with the contemporary social issues on a college campus. This group is dedicated to promoting student awareness on I.U.P's campus and many others. By performing the small skits in different places F.L.U.S.H. is able to fulfill their mission of helping to impose a greater understanding of others and oneself.

On the campus of I.U.P. the student improvisational theater founded "Friends Living Under Serious Hardships" on September 8, 1996. For the past four years F.L.U.S.H. has been able to touch many hearts of students on I.U.P.'s campus and many others. They have been able to present such story lines as domestic violence, DUI, sexual assault, harassment, drug and alcohol addiction, academic stress, eating disorders, peer pressure, racism and death.

The purpose of this group is

Should We End Sanctions in Iraq?

Kristin Wilson
Staff Writer

Seeing the hollow faces of starving children and hearing the cries of a devastated family will make almost anyone's heart ache.

Such was the case in Alumni Hall on Monday, March 20 when Wafaa Bilal and Erik Gustavson spoke on ending US sanctions in Iraq due to the suffering it is causing across the majority of the Iraqi population.

The pair used shocking slides to try to persuade the audience to take action in stopping US intervention in Iraq. The slides were of dying children, mourning adults, crumbled buildings, and partially destroyed roads and bridges from bombs. Also, there was a demonstration of the food rations for one person in Iraq.

International Monetary Fund and World Bank Protest in Washington, DC

Adam Nelson
Opinion Editor

Next weekend Washington, DC is going to be the temporary home of not only politicians and emissaries, but also to activists, and anarchists.

In December the nation's environmental, labor, human rights, and other activists set down on Seattle to protest the World Trade Organization's (WTO's) Ministerial Meeting. During the "Battle in Seattle" over $7M worth of damage to local business property was destroyed by the protesters.

Images on the television made one watching think of places like Beirut or Tel Aviv, not Seattle, WA.

Now our country is going to endure protests in Washington DC, the nations capital. I, personally, believe that protest of our government is a good idea. Without it the United States would have never gained equal rights for women, and African-Americans or an end to the war in Vietnam.

But, do most of these protesters really know anything about the World Bank or International Monetary Fund (IMF)?

My answer is no. From what I saw in Seattle, the protesters were there either because it was fashionable or it fit with their personal counter-culture agenda. Yes, it is cool today to fight the coming 'monoculture.' Globalization is finally setting in for the large majority and many are lashing out against it. The protesters in Seattle did this by destroying a Starbucks. They can't comprehend though that the Starbucks was most likely opened with the hard earned money of an individual trying to make a living.

The campaign slogan for the protest's is "Shut Down the IMF/ World Bank!" What purpose will this serve?

The World Bank and IMF

Texas Ain't Sweden: Death Penalty Works

Morgan Reynolds
Knight-Ridder Tribune

The squeamish have a thousand and one arguments against capital punishment -- it's "barbaric," racist, has no deterrent effect, Europeans don't do it, every human life is sacred, an innocent might be executed, violence can only be justified for immediate self defense, and so on.

These arguments are defective, but let's consider a specific case first.

Larry Robison was a white male, 42 years old, 13 years of schooling, ex-carpenter, no prior prison record and 16 years on death row. He was an attractive-looking guy. A former mental patient, Larry's parents insisted that his life be spared because he hadn't received the right psychological help.

Larry's behavior was extraordinarily all right. Age 24 at the time of the offense, Larry was convicted of stabbing and shooting to death a 33-year-old white man. He killed four others during the same incident for a total of five dead, including decapitating and sexually mutilated his homosexual lover.

Court after court found him competent to stand trial. He had legal representation for 17 years. A Fort Worth court deemed him competent to suffer his fate as late as last November. He knew the consequences of what he had done, knew that it was wrong, and understood the legal process and his punishment.

Each time I study a death penalty case in Texas, the punishment seems deserved and the process thorough.

One of every three executions occurs in Texas. As a result, Texas has the system down pat, and has passed scrutiny upon scrutiny, check and recheck, both within the state and outside.

Only seven types of murder qualify as capital crimes in Texas.

-- First, murder of a child under six years of age because it is considered especially heinous.
-- Second, murder of a public safety officer, firefighter or correctional officer.
-- Third, murder for remuneration or hire.
-- Fourth, murder during the commission of specified felonies like kidnapping or robbery.
-- Fifth, murders during prison escapes.
-- Sixth, murder by a prisoner serving a life sentence.
-- Seventh, multiple murders.

Executions serve obvious utilitarian ends and are saved for the worst. Robbers, for example, are encouraged to leave victims and witnesses alive. Murderers have an incentive to stop with one life taken. Guards have some protection from "lifers."

Some acts are bad enough to deserve the death penalty, pure and simple. Remember Jeffrey Dahmer, that homosexual butcher of boys and young men in Milwaukee?

No death penalty in Wisconsin, but was a life sentence justice? Ask the victims' families. Few tears were shed when inmates killed Dahmer in prison.

Local sentiment varies, and gov-

(Continued on Page 4)

Announcement:

Thank you for all of the time and energy that went into the Room Draw proposal that I received this week. It is with highest regards to the process that I grant the policy change to go into effect immediately.

I grant this policy change for two reasons. The first reason is that, I want to work with all students to meet their needs, when it is in the best interest of the college as a whole. The second and most important reason, is that the correct process was followed in asking for this policy change in housing. In the future, I hope that more students follow your lead and use RHA for policy changes in housing and residential matters.

The policy will now read:

In room draw point distribution, the points of the Juniata students, whether studying abroad during the fall or the spring semester will be used when calculating the total points for multiple room selection. In the case of double occupancy rooms, the room selection will be made by the Juniata student who has the most seniority and the highest class standing, regardless of the semester they are studying abroad.

We are in the process of contacting all students who are studying abroad in the Fall of '00 term to notify them of this change. Keep in mind, that while 3 students came forth with this proposal, many more will benefit from it.

If you have any other questions, or any suggestions on the rewording of this proposal, please contact me. Again, thank you for using "the system".

IMF/World Bank Protest

(Continued from Page 2)

both presently play very important roles in the world. I cannot think of any other institutions that try to help developing nations by building their infrastructure or stabilizing their currencies.

These two institutions are not flawless and could use reform, but do they deserve to be shut down? I don't think so.

I expect that next weekend we will see many groups in Washington, DC blaming many things on these two agencies. The problems of the IMF are very complex. Shutting down either agency and destroying property isn't going to help them.

I will be very interested to see the footage from Washington, DC. Let's just hope that this group doesn't do as much damage as Seattle. I'm just glad not to have invested in a Washington, DC Starbucks .

club and other services they offer. Alumni, trustees, volunteers and donors will celebrate the campaign with current students and reconnect with the college atmosphere they used to enjoy.

Students are an integral part of the weekend, with many events planned solely for their enjoyment. Not only are they able to enjoy the celebration, but they are also present on campus during a turning point for the college.

Along with the carnival atmosphere, the groundbreaking ceremony for the science building at 2pm, the student research symposium and the web page unveiling, fireworks will cap off a whole day of celebration.

Liberal Arts Education

Krissy Lipuma
Staff Writer

Juniata grad Fred H. Wulczyn spoke to students on the evening of March 22 about the importance of a liberal arts education, welfare policy, and New York's foster care system. Three different departments sponsored Dr. Wulczyn's presentation, "Social Change as a Liberal Art." Refreshments followed the presentation

Dr. Wulczyn has held several distinguished positions, including Senior Policy Analyst for the New York Department of Social Services, Director of the Child Welfare Managed Care Initiative in New York, and Assistant Professor at Columbia University School of Social Work.

Through extensive research, he was able to redesign New York's fostercare program. The program is better able to track children, those currently in the system and those with continuous returns. He forms policies to improve communities, thereby lowering the chances of a child needing foster care. He has also worked to increase welfare payments to parents, thereby reducing the need to place a child in foster care.

Dr. Wulczyn emphasized the importance of a liberal arts education, as provides a firm base for any career. There may be times when a job requires skills from different areas. Though he majored on Psychology and Sociology while at Juniata, he mostly uses math and statistics in his work. Through statistics, he is able to calculate the cost and time of a child in the foster care system and derive ways to shorten their stay. His newest policy will begin the implementation phase later this year.

Is It a Summer Job or an Internship?

Darwin Kyzer
Director of Career Services

Do you know that your summer job could also double as an internship? Even if you find the position on your own without assistance from the Career Services Office, it could qualify as a non-credit, transcript-notation internship.

Essentially, in order to qualify as an internship, a summer job must consist of pre-professional, academically-valid responsibilities related to your POE, and be performed in accordance with guidelines (available in the Career Services Office). The job can be a paid or a volunteer position. If approved, a summer internship will appear on your official transcript (without grade or credit), and can be advantageous in the future as prospective employers, graduate schools, and similar persons review your transcript.

Having a summer job qualify as an internship is not an unsupervised, rubber-stamp process (i.e., just because you think you have a good summer job doesn't mean it automatically will qualify as an internship). It requires the satisfactory completion of various criteria on behalf of the college, the student and the organization providing the position. However, so long as the work is academically related, most students find it relatively simple to attempt qualifying their work as an internship. If you are interested in pursuing internship qualification, please stop by the Career Services Office to obtain information on how to proceed. If you have a position lined up now that you think might be internship-oriented, maximize the benefits of the job by trying to have it qualify as an internship. Registration paperwork is necessary.

If you already have a position that might qualify as an internship, maximize the benefits of the job by trying to have it qualify as an internship as well. If you are not sure if this is a good idea for you, you can register for it now, yet still cancel your interest anytime during the summer if you change your mind.

Please don't hesitate to stop by Career Services or give them a call at x.3350 and ask any questions you may have about pursuing this type of internship experience. Information is available for your perusal on past internship experiences of Juniata students.

F.L.U.S.H.

(Continued from Page 1)

to sensitize audiences to specific issues or social concerns, raise their awareness of the issues presented and facilitate problem solving as it relate to the needs of each specific audience. F.L.U.S.H.'s message to everyone is "No Day But Today!"

At the end of their performance here at Juniata College, there was a question and answer section. This is when the students are still in character and the audience may ask questions pertaining to the skits; Why someone reacted a certain way? Or what someone is planning on doing in the future? This was a great performance that Residence Hall Association is planning to bring back to campus the following academic school year.

Sanctions in Iraq

(Continued from Page 1)

While fighting in Desert Storm, Gustavson was given a firsthand look at the atrocities that occur in Iraq due to the sanctions that are imposed by the US and decided to take action against them. Bilal, a refugee to the United States from Iraq, spoke of his experiences in escaping the country to find a better life in the US.

Bilal and Gustavson also spoke about their political activism in Washington, DC. They are the founders of EPIC, the Education for Peace in Iraq Center and work on organizing Lobby Days and give lectures across the country.

For more information on EPIC, go to www.savagegeneration.org.

The lecture on Iraq is just one of a number of Spring events that are sponsored by the Baker Institute for Peace.

Fifth-Annual Honors Band Concert at J. C.

Justin Miller
Co-Editor-in-Chief

Juniata hosted the fifth annual Wind Symphony and Honors Band Concert at 3 p.m., Sunday, March 26 in Rosenberger Auditorium, Oller Hall. The concert featured the Juniata College Wind Symphony and high school band members from 44 high schools spanning six states.

The concert was a celebration of high school band musicians and leaders. The participants in the Honors Band are selected as the top musicians in their respective schools and were matched with the talents of the Juniata College Wind

Hunger Awareness Week

(Continued from Page 1)

donated their meal had the option of going to the Hunger Awareness Meal.

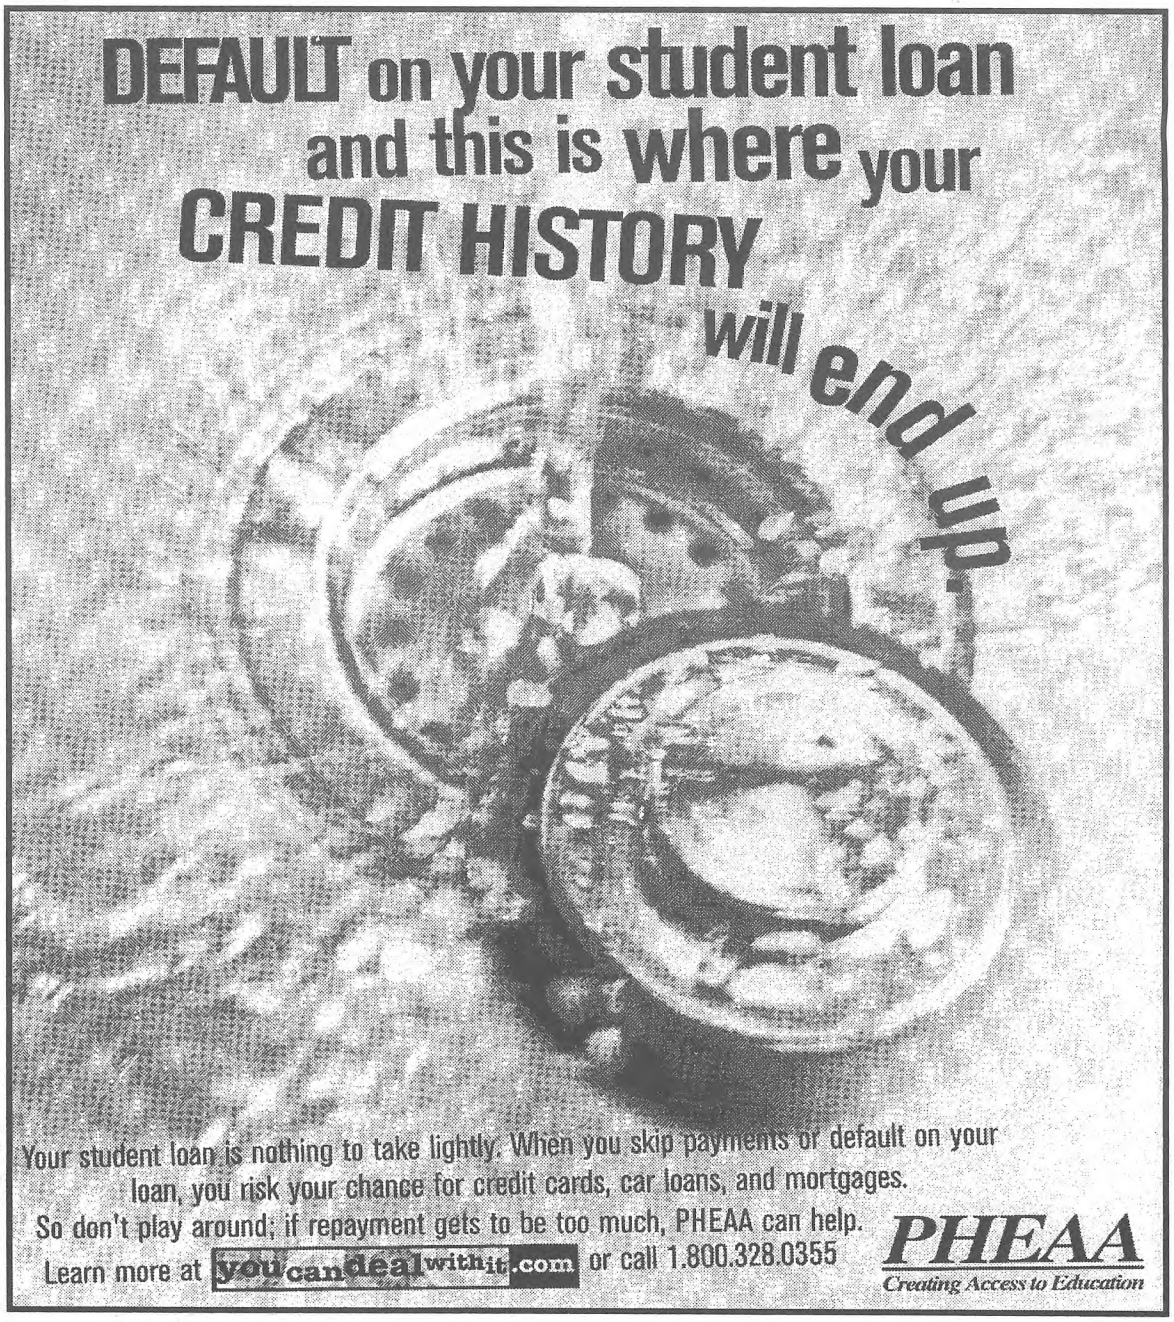
Koinonia, the student fellowship service, Wednesday night had a hunger awareness theme. Thursday's "Faith and..." series topic was "Faith and Poverty," featuring Henry Thurston-Griswold as the speaker.

Finally, as a culminating event Friday, the film Life Stinks starring Mel Brooks was shown.

Death Penalty and Texas



(Continued from Page 2)

ernment must heed public opinion -- if too many criminals walk or punishment is too soft, people will do the job that government won't.

Places like Texas -- border states in the Sun Belt with soaring growth, high minority populations, great upward mobility and younger than average people -- also have lots of rough 'n tumble people and naturally high crime rates. Texas ain't Sweden.

The murder rate fell 60 percent since Texas started using the death penalty seriously in the 1990s, while the national murder rate fell 33 percent. Coincidence?

Maybe, but the spirit and practice of impartial retribution is a mark of civilization. By contrast, societies unwilling to execute their worst criminals reveal the low value they place on the lives of victims.

Soap Box Speeches Held

(Continued from Page 1)

end of our senior year, and the beginning of our lives as grown-ups."

Not only the topics, but the speakers themselves engaged the audience. "It was interesting to observe people who I've seen around campus, but never really talked to, show their personalities and concerns," said Cynthia Cato, one of the audience members.

Another student, Jeff Rice said, "I liked most of the topics. Also, I liked the format of speaking with another person."

The theme "I'll Talk if You Talk"was chosen to encourage faculty and administration to participate in the event as they have in years past.

"I'm hoping that those who participated this year will be a source of encouragement for more to participate in the future," says Matt Peters, secretary of Speak.

Grace Fala, recalls the beginning of Soap Box when everyone participated. "The first one is still my favorite because it was a daring, pioneering event," she explains.

While the themes and speakers change at each Soap Box event, the style stays the same, and it is quite different from formal public speaking events. Colleen McLaughlin, who also participated in the Bailey Oratorical earlier this semester, describes the contrast. "The environment was totally different, and I think that led to a different kind of speech and interaction with the audience," she said.

High speaker participation and audience attendance for the first Spring Soap Box Speeches ensured that it will continue as a twice a year tradition. Several speakers found the experience to be challenging, even terrifying, but also rewarding.

Whether for a life experience, to take a stand, or just to have fun, speakers will now have two chances a year to get on their soap box.

Dr. Weimer offers some words of wisdom to future speakers, "Think about an idea, quote or passage you read that made you think and feel and respond to it with equal parts passion and respect for the audience. We worry too much about saying something that someone has already said, that is cliché or we believe trite. What we often miss is that if it comes from us it will be new...our voice...our take...our passion. We make a message fresh, interesting and compelling. After all, painters have been painting landscapes and portraits for forever and yet we are all glad that Monet didn't say 'well, Rembrandt covered that ground already.'"

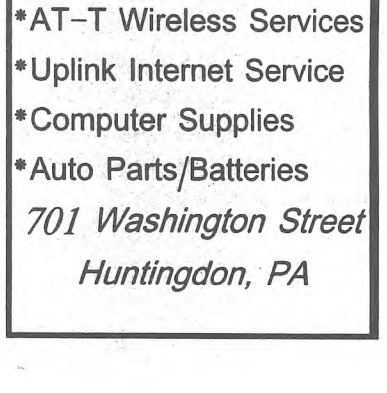
The participant pairs included Grace Fala and Donna Weimer, Jesse Ault and Colleen McLaughlin, Dan Cook-Huffman and Bekah Helsel, Kelly Cybuck and Alicia Perusse, Tom Kepple and Matt Peters, Caroline Laret and Bridget O'Brien, Teresa May and Carol Peters, and Davina Morganstern and Karen Snape.

Peace Studies Conference Held in Austin, Texas

Kristin Wilson
Staff Writer

Last weekend a group of four faculty members and five students traveled to Austin, Texas, for the annual PSA/COPRED (Peace Studies Association/ Consortium On Peace Research, Education, and Development) Conference that ran from March 30 to April 2. The group left from Juniata Wednesday, March 29, and returned Sunday, April 2. While at the Conference, members of the Juniata group attended discussions, dinners, speakers, workshops, and went to an auction.

During the day, professors and students gave lectures on their academic research and thesis papers, and Juniata was well represented in this area of the conference. Dr. Celia Cook-Huffman presented her ideas concerning Writing an Introductory Conflict Resolution Handbook and Dr. Paula Wagoner Spoke on Blending Identities and Building Community: Mixed Blood Identities in Pennsylvania. Dr. Andrew Murray, who founded the PSA, was also given the opportunity to speak at the conference numerous times on many different topics.



Senior J. Diane Brannon presented her paper entitled "Public Private Partnerships: Building Sustainability Between Individuals and Society." She also spoke at the last minute about her time in Russia to a group of interested Conference attendants. Also, graduate Jamien Leckey presented her paper on Success Factors Related to Land Use Mediation: Case Studies of Oregon.

Friday night's keynote speaker was Ela Gandhi, who serves as a member of the African National Congress in the South African Parliament. Following the tradition of her grandfather, Ms. Gandhi continues to support the rights of the underprivileged

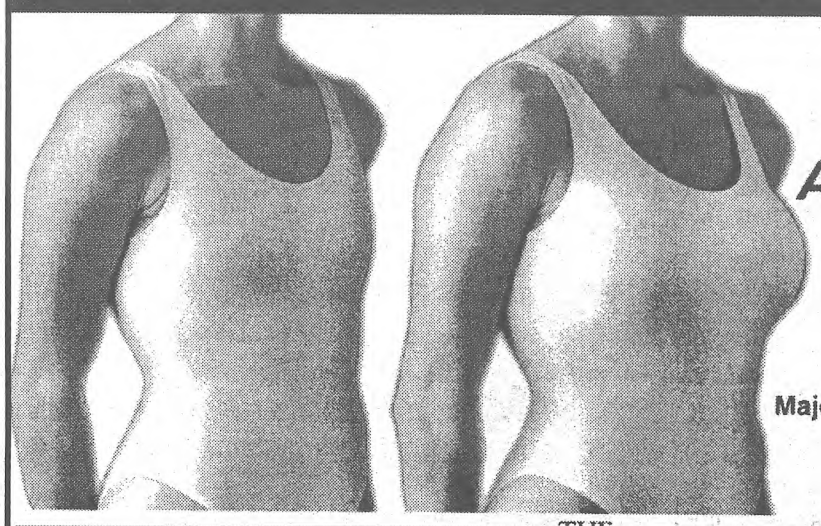
Incubus' Album Excellent Choice

Michael Crake
Contributor



Are you tired of the countless teenybopper bands, and pseudo depressed rock bands? If you need a change from these bands, purchase Incubus' newest album *Make Yourself*. The Incubus sound has changed from mostly metal riffs to a sound that has made use of slower intros that finally lead to the jarring guitar riff. The band also expands their sounds with the acoustic song "I Miss You" and the porno background music of "Battlestar Scralatchtica". While the band's sound has expanded from metal riffs, the band hasn't lost it's unique sound which incorporates a variety of guitar pedals, a turntable, and lyrics that withstand repeated listens.

What makes Incubus' latest album so intriguing is that they don't fall into the popular trends of rock music. They don't fall into the category of softer acts like Third Eye Blind or the heavy rock onslaught of Korn. Instead "Make Yourself" has a sound that is completely devoid of modern day influences. The lyrics are thought provoking, which is a rare when a large majority of bands deal with simplistic theme of love lost. Incubus lyrics range from the introspective "Yes I feel emphatic about not being static" heard in "When It Comes" to the battle against fakeness voiced in the album's title track.

The combination of original guitar parts and strong lyrics is heard throughout the entire album. *Make Yourself* has enough variety in its songs that it will hold up to countless plays. Incubus' experimentation on this album makes it an excellent purchase for anyone looking for something besides non-creative glut heard on the radio.

2000 Census Seizes People's Attention To Their Own Race

Thomas Ginsberg and Nita Lelyveld
Knight-Ridder Tribune

In the first United States Census of the 21st century, on the most detailed question ever about individual race and ethnicity, a confounding new choice of lineage for millions of minorities could be glimpsed in the answers of Robert Atkins of Camden, N.J.

Atkins, 32, proudly listed himself as mixed African American and American Indian. He ignored pleas by African American leaders to write "black only," calling their racial generalization for the sake of politics "arbitrary."

But, then, Atkins made his own arbitrary generalization: He fudged his son's tribe as only Mashpee Wampanoag, rather than mixed with Lenape, the tribe of his wife.

"I'm not saying I don't feel conflicted about it," Atkins said sheepishly. "But we need the numbers right now."

In a kind of rivalry between personal identity and political strength, the 2000 Census has seized people's attention to their own race and ethnicity like never before. It is creating a stew of ethnic cross interests between groups and even between family members, sometimes inspiring people to break out of one category just to lump themselves in a new one.

The Census' voluntary choices of 63 racial and ethnic combinations, available this year for the first time, do not even include countless "other" identities that people are free to write in.

The new accounting means that minority groups could be pitted against each other. If the number of people who realign themselves into new race and ethnicity categories is significant -- something on which the experts are divided -- the Census could have a huge effect on everything from national identity to government recognition of ethnic groups and tribes to funding and political power in a single city ward.

And those prospects are prompting some minority communities to vie for people's "check marks" like votes on a political balance sheet. Taiwanese immigrants in New York, for example, are being encouraged to skip the "Chinese" box entirely and write "Taiwanese" under the "Other Asian" category in support of the island's independence movement from Beijing.

In general, Latino, Asian and American Indian advocates are embracing the chance to delineate their ancestry in detail. Master Communications, a multicultural-education firm in Cincinnati, has mounted a campaign to encourage Asians to identify their individual roots as much as they can, even if it means creating a "multi-, multi-, multirace" category.

"There are so many studies now that show that having a strong sense of self really impacts the future success of a person," said Selina Yoon, founder of the firm, which is dedicated to "marketing to multiethnics."

To Beatriz Lopez-Flores, vice president of the Los Angeles-based Mexican American Legal Defense and Educational Fund, the issue should be unity despite -- not instead of -- the differences.

"Whether you're Latino, whether you're black, whether you're Indian, people of color in this country still get treated differently," she said. "We have to fight together."

On the other hand, a core of African-American leaders and groups are gasping at the possibility that their numbers -- which until now included many other minorities -- may be diluted by the new "multiple" race choices. The concern is especially acute in major urban areas, where immigrants are many and the number of interracial marriages appears to be growing fast.

Their argument is that the 120 million Census forms mailed out last month are, first and foremost, political documents, that people should treat them like ballots on African American influence, not explorations of personal identity. It is a rationale that mirrors, at turns, a startlingly old notion of self-identity.

"It's not what you think you are, but what do other people consider you to be?" said Tom Joyner, the nation's No. 1-rated African American radio personality and a vocal leader of the "black only" campaign nationally.

"Whatever race makes you the person that you are is good," Joyner said. "You should be proud of your ancestry. But . . . what about the community that's going to be affected by the box you check? When the count is done and the funds are allocated, they're going to say, 'Here's one big minority pie.' Will the black community get what they should?"

Their call is echoed by community and advocacy groups in urban centers nationwide. The NAACP is calling for a "black only" response. People in Southern California seeking advice on the question can call a hotline and hear a chipper voice answer: "Good afternoon. Check the black box."

Others, meanwhile, said the choice was just what they had fought for.

"I feel very torn about it," said Shelley Rowland, 44, a Philadelphia artist.

She is African American and American Indian, her husband is white, and they have two children -- who will be listed as all three.

"We (African Americans) want the strength of our numbers," Rowland said, "but if multicultural people are going to be substandard, let us have our numbers, too."

Nobody is sure how many people call themselves mixed. In its test run of the Census in 1998 in Sacramento, Calif., the bureau found that just 5.6 percent identified themselves as such. Some demographers call that number low -- and a few note that the figure was more than double what the bureau had expected.

"They are grossly underestimated this mixing," said Kimball Brace, an expert on redistricting at the consulting firm Election Data Services in Washington.

Emerson College Student Shoots Up During Class

Brian Eastwood
Emerson College

Students and faculty are still trying to make sense of a classroom performance piece in which one unidentified student injected an unknown substance into his or her arm.

The March 23 incident was part of an acting class assignment that required students to bring props and perform an activity they do every day. Those in attendance watched one student, whose name has not been released, use a syringe to inject a liquid. The course's instructor, Steve Yakutis, dismissed the class immediately after the student was finished.

"It was a frightening situation," said another student who didn't want to be identified. "We saw someone who really needs help because they live and breathe addiction. It seemed to many of us that it was a cry for help."

School officials agree and are looking into the incident. Still unclear, they say, is whether any illegal substance was used.

"The reported act is considered very serious and is being addressed with the utmost concern for the interests and well-being of the individual, the acting class and campus community," said Ronald Ludman, Emerson's dean of students.

Students in the class met with a campus counselor and decided afterwards not to discuss the incident with anyone outside the class or to disclose the student's identity.

"I feel that the student's privacy needs to be respected in the classroom," said Maureen Shea, chairman of the college's department of performing arts. "Especially in an acting class, which is an environment where the students need to feel safe."

Study Says Origin

Jeremy Manier
Chicago Tribune

As researchers on Tuesday officially presented the details of a study that pushes the origin of the AIDS pandemic back to around 1930, their results gave new ammunition to an obscure yet often emotional scientific dispute over recent claims that the virus first entered humans during tests of an early oral polio vaccine derived from primates.

Most HIV experts at the Seventh Conference on Retroviruses and Opportunistic Infections praised the meticulous work that went into the new date estimate, calculated by running a massive database of HIV genetic sequences through one of the most powerful supercomputers in the world.

Researchers from Northwestern University contributed to the study, which is summarized in the current issue of Science magazine and was reported by the Chicago Tribune on Monday. Such work may give crucial insights into HIV's long-term evolution and future vaccines for the virus.

Yet some of the world's top AIDS authorities at the conference were just as interested that the new date of 1930 seemed to weaken the controversial thesis, advanced in a book last year by British science writer Edward Hooper, that the virus spread to humans through accidental contamination of an oral polio vaccine tested in central Africa during the late 1950s.

Many researchers doubt Hooper's argument, saying it is more plausible that HIV spread from chimpanzees to people who hunted the ani-

"Take Back The Night" Held at Juniata College

Tammy Chaloux
Contributor

Among the many plans for the spring semester at Juniata College is an event that will promote awareness of issues pertaining to sexual assault. It is called "Take Back The Night: Zero Tolerance Against Violence". April is Sexual Assault Awareness month. Statistics show that 1 in 4 women and 1 in 8 men, during their college years, will be sexually assaulted.

Unfortunately, things may not be that much different at Juniata. In order to promote awareness about sexual assault and violence, many clubs at Juniata began gathering together in the fall to organize an event that will be held this April. Their goal is to send the message that violence, directed at anyone, will not be tolerated.

The event will kick off on April 6th at 7 p.m. with a "Dispelling Myths" session to be led by faculty members on campus. This event will be held in the faculty lounge in Ellis Hall. On April 11th events will begin on Oller lawn - Katie Koester, a professional guest speaker and rape victim will speak at 8:15 p.m. Her proceeds go to the Campus Outreach Services, an organization that promotes sexual awareness on college campuses across the United States. Students are also planning to host a candlelight vigil that same night which will include a night walk around the entire perimeter of campus. Other plans include a Self- Defense class on April 12th at 7 p.m. in the wrestling room in the Kennedy Sports and Recreation Center and on April 13th Juniata will host a Real Life session with the help of the District Attorney and Victim's Assistance in Huntingdon. All events are open to the public.

Students have designed a tee-shirt to celebrate this event and sponsoring businesses or individuals names have been placed on the back of the tee-shirt. In order to give a visual representation of what 1 in 4 woman would look like here at Juniata, 143 women will be wearing the tee shirt to kick off the event. Students are hoping that this event will answer many of the questions regarding the issues of violence, particularly sexual assault. Of the many important questions: What can be done to stop this? This event is open to the public and if you would like more information please contact Leslie Slingsby at 641-5725.

Discussion with John Mighton

Justin Miller
Co-Editor-in-Chief

As part of his visit to the Juniata College campus for the American premiere of his play The Little Years, award-winning Canadian playwright John Mighton was available for an open discussion with anyone who was interested. The discussion ranged from issues sparked by the play, the production itself, mathematics (Mighton is also a research mathematician), Mighton's writing process, and many other questions and comments that people had.

Much of the discussion was devoted to the issue of the appropriateness of education and the shortcomings of the educational systems through which most students must go. Mighton himself started a school for students who were "damaged by the school system" in Toronto. It provided one hour of tutoring a week for students in the Toronto public school system and operated out of Mighton's apartment. It quickly grew to be an overwhelming success and now serves many more students.

Mighton also led discussions of issues relating to his play in English classes and issues relating to his mathematics research in mathematics classes throughout the day Monday, March 20, 2000.

College Etiquette, Part Two

Matt Wolfe
Web Page Editor

The naysayers have been proved wrong. People do read the Juniatian! I have proof. A total of, brace yourselves, three people responded to my column on college etiquette. So that means that at least three people read our fine paper. Makes me so proud... Excuse me, I'm tearing up a bit...

OK, all better now! The first bit of feedback comes from faithful reader Erika Ward. She notes that the actual time for a washing machine cycle is 33 minutes, not one hour as I had reported earlier. I probably should verify my facts before I make them up, shouldn't I? Thanks for the correction Erika!

Our second feedback comes from my RA, Mike Deskevich. His addition to college etiquette is for guys not to leave the little stubble from shaving in the sink. Wash it down the drain! Obvious, yes, but for some reason guys don't do this. Why make the wonderful Wanda's job any harder than it needs to be? Take the few extra seconds out of your busy schedule and wash that razor stubble down the drain. Or else Mike just might right you up. Try explaining that one to your parents!

Our last piece of reader feedback comes from Professor Ingerman. When a professor reads your column you know you're reaching people! Anyway, to paraphrase her question about etiquette:
One area which confuses my students and probably many American students also is how to behave when they come into their own room and [their] roommate and partner are obliviously engaged in bed. They are uncomfortable and don't know what to do. They don't know what choices they have. And also, what is the proper etiquette for the couple?

Well, that certainly is a tough situation. If I were to walk in on my roommate and his girlfriend in bed together, I would immediately turn around and walk back out. I would go to a friend's room for an hour in order to let the couple have their privacy. However, this situation should never happen in the first place. You need to come to an understanding with your roommate about the whole sex situation. Make sure your roommate knows where you are during the day and how long you will be gone. That way they can "play" while you're not there. And you don't even have to know about it. I find it helpful to know my roommate's schedule, for my benefit and in case anyone asks where he is so I can tell them. Just remember that you share the room. Both people need to be respectful of the other's feelings. In the perfect world hormones don't override manners, but sometimes they do.

I'm still open to any more suggestions of college etiquette if anyone else has any ideas. Although I seem to slowly turning into Dr. Ruth with this topic... If I start speaking with a German accent, please shoot me!

Matt can be reached at wolfemb9@juniata.edu or ext. 4794

Of AIDS Was in 1930s

mals for food. Moreover, they say, the polio vaccine theory could have a destructive effect, especially in Africa where some people have a distrust of Western researchers and may draw the incorrect conclusion that polio vaccines are dangerous.

One conference attendee with a personal stake in the debate is Dr. Stanley Plotkin, a professor emeritus of immunology at the University of Pennsylvania. In the 1950s Plotkin was a research fellow at the Philadelphia-based Wistar Institute, which conducted the African polio vaccine tests.

Plotkin said Tuesday that he believes the new estimate gives fresh evidence that HIV entered people decades before the vaccine tests took place.

"I am more than ever convinced that the book is completely wrong," Plotkin said, referring to Hooper's book, "The River: A Journey to the Source of HIV and AIDS."

Dr. Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, said Tuesday that the new estimate of HIV's origins damages the argument that HIV came from a polio vaccine.

"It's important because of all the publicity "The River' is getting," Fauci said.

The lead author of Tuesday's study, Bette Korber of the Los Alamos National Laboratory in New Mexico, took a relatively balanced view in assessing the significance of her work.

"My work doesn't disprove Hooper," Korber said. "It just makes (his thesis) less likely."

THE JUNIATIAN IS NOW ACCEPTING APPLICATIONS FOR ALL EDITORIAL POSITIONS.

Symphony. The students were hosted by Juniata College students in their residence hall rooms.

The Honors Band played selections including "An Outdoor Overture" by Aaron Copland, the "Lincolnshire Posy" by Percy Aldridge Grainger and Fennell, excerpts from the "Symphony No. 3 Finale" by Gustav Mahler and J.H. Reynolds, and "American Salute" by Morton Gould and Lang. The Honors Band percussion ensemble played an original piece entitled "Mesozoic Fantasy."

The 40-member Wind Symphony is comprised of select Juniata students and community members. The program for the Wind Symphony consisted of "The Marriage of Figaro Overture" by W.A. Mozart and Earl Slocum, "Ballade and Allegro" by Ronald W. Follas, and excerpts from "Manzoni Requiem" by Giuseppe Verdi and Mollenhauer.

Described as "The Andres Segovia of the Tenor Saxophone" by the Washington Post and "the world's great saxophone virtuoso" by the London Daily Mail, concert tenor saxophonist James Houlik performed with the Juniata College Wind Symphony. During the last two seasons, Houlik has played in recital, with orchestra, and with wind groups in such places as Istanbul, Prague, Pretoria, Taranto, and from California to New York. In addition, Houlik is professor of saxophone at Duquesne University in Pittsburgh.

Peace Studies Conference

The Lowdown on Juniata Sports

Juniata women's soccer playing hard. Photo by M. Brown

Bill Reddinger
Sports Editor

Months of off season training and hard work will finally be tested this month whenever Juniata College sports teams begin their seasons in hopes of being high-flying Eagles. Who will be victorious? Who will struggle? Let's take a look into the next few months of Juniata sports.

Football

Preseason polls place Juniata third in the MAC Commonwealth behind the always-powerful Lycoming and archrival Susquehanna. However, with Juniata's explosive offense, and maturing defense, a MAC Commonwealth first-place finish might not be out of reach.

With returning MAC Offensive Player of the Year Matt Eisenberg, and second year captain Andy Grace, the team has veteran leadership and impressive talent. In addition to the veteran play of Eisenberg and Grace, the whole Juniata roster features many players with substantial varsity experience.

In the annual preseason scrimmage against Frostburg State University, the Juniata defense made an impressive showing that is key for another winning season. Head Coach Kevin Burke says that the defense is "ahead of pace" for expectations that the coaching staff had this preseason. Coach Burke also credits this early defensive success to this being the second year for the current defensive package.

This year's offense is challenged with meeting up to the

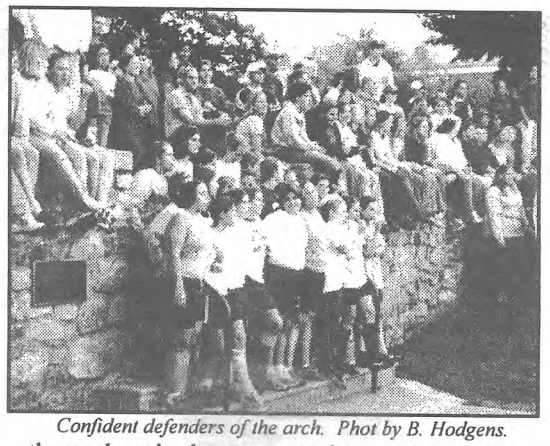
Of Tradition and Blood

Benjamin A. Hodgens
Web Page Editor

On Wednesday the 6th at 7PM, a small cluster of brave Freshmen clad in Saran Wrap, duct tape, and oil stormed the arch of Cloister Dormitory. Outnumbered approximately two to one, they stood little chance against the impenetrable onslaught of rugby players and former Stormers.



As in past years, no one made it through the Arch. Still, they made a good showing and gave the Defenders a run for their money.

"We made a really good showing, we really did. Several people got to the girls, and a lot of the guys were working like hell to get the rest of us down," said Nicholas Myers, a Freshman who did a lot of planning for the event. Myers said he would think about his decision more than he did this time, if he were given the option to storm again, but he was definitely going to defend next year.

Some of the tactics involved were covering themselves in duct tape, and several poured gallons of oil on themselves beforehand.

Freshman prepare to storm the Arch. Photo by Ben Hodgens

Confident defenders of the arch. Phot by B. Hodgens.

"I slipped right off several 300 pound guys, since I had so much oil on me. Most of our tactics were improvised, though," said Myers. One such tactic that proved fairly successful was to place the female Stormers out in front. This seemed to make the frontal male Defenders fairly apprehensive, allowing several to slip to the back defenses.

Timothy McMichael, a member of the Quick Response Service was quite pleased. Even though there were several minor injuries, mostly everyone had fun. There were no serious injuries, and only three people had minor injuries; one of those was a Defender.

"Everybody had fun, and there was a good turnout. The Juniata tradition is alive and well!" McMichael said later.

Into the Wild: A New Juniata Tradition

Marci Andrews
Features Editor

A tradition has been set this year. The class of 2004 was assigned required summer reading, specifically the bestseller Into the Wild, by Jon Krakauer. As part of a follow-up to that reading, Juniata College held a discussion panel on the book on Thursday, September 7, 2000, at 7:30 p.m. The panel included, Mark Hochberg, Department of English, Janet Lewis, Department of Philosophy, Paula Martin, Department of Environmental Science and Studies, Bob Reilly, Department of Sociology, James Tuten, Department of History, Marty Keeney, Juniata alumnus and Psychiatrist for J.C. Blair Hospital, Alana Malar, class of 2001, POE in Environmental Science and Dan Sahd, class of 2001, POE in Secondary Education/Science. Provost Jim Lakso acted as the moderator for the debate.

First to speak was Professor James Tuten. There were many things about the main character, Chris McCandless, that Professor Tuten did not like, but he chose to focus on the positive. He liked the energy that Chris showed towards his beliefs and ideas. Explaining that Americans often expect success and therefore rarely take risks, Prof. Tuten said, "plenty of people have great ideas, but few people act on them."

Professor Reilly took a creative approach to analyzing Chris by pretending to be St. Peter and grading his ability to avoid the seven deadly sins. Chris got all A's except for a B in Wrath, and a C in Pride.

Alana Malar found many of the book's good points. She believed the investigating to have been well done, and the explanation of Chris McCandless motivation excellent. The flow of the book was broken by other character's experiences, she claimed. On a more personal note, Alana admired and identified with Chris's appreciation for nature.

Freshman Raina Miller Speaks her mind. Photo by K. Schmieder

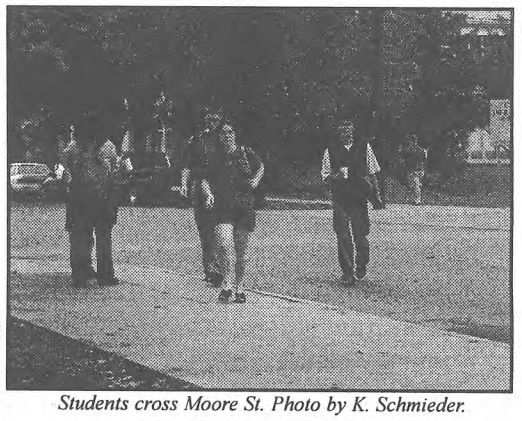
The only alumnus on the panel, Marty Keeney, brought a psychological viewpoint to the debate. Following disclaimers that he couldn't really diagnose Chris without meeting him, he filled the audience in on a hunch that the main

(Continued on Page 5)

To the students of Juniata College:

Pedestrians and cars interacting. Photo by K. Schmieder.

It's only the second week of the academic year, and there has already been quite a lot said about the new "Pedestrian Crossing" signs on Moore St. They are clearly useful, in that they serve to alert drivers to the fact that there are many pedestrians in the area; however, it should be noted that they do not absolve the pedestrians of an obligation to behave sensibly.



I'm the spouse of a faculty member, a former college staff employee, a part-time student, and a citizen of Huntingdon. As a member of the campus community, I have an interest in being able to walk across campus (including crossing the streets) safely; but I also have an interest in seeing students behave courteously and responsibly.

While driving up Moore Street today, I encountered the usual "on the hour" mass of students trying to cross in front of Founder's and Good Hall. I stopped for one "wave" of crossers (not in a crosswalk, I might add), the proceeded up the street. There was a group of students standing in the crosswalk in front of Good, but I reasoned they could cross behind me, and continued on my way. As I drove up the street, one of the waiting students shouted in my car window, "Why don't you stop, dumb ass!"

If the students of Juniata College expect the local citizens to treat them with respect, they would do well not to engage in this kind of childish behavior. It only serves to promote antagonism between "townies" and "gownies". (Thanks to one rude and vocal student, I no longer have any interest whatsoever in stopping for any student trying to cross Moore St.) Students would do far better to extend the same kind of courtesy to local motorists that they expect to receive from them.

Most of the Juniata students I know are intelligent, thoughtful people. I hope that the rest of them will take a minute to think about the effect their behavior has on others (and the reflection it casts on the college community as a whole), and that we can all continue to share Moore Street in a reasonable and adult manner.

Sincerely,
Kathleen Barlow

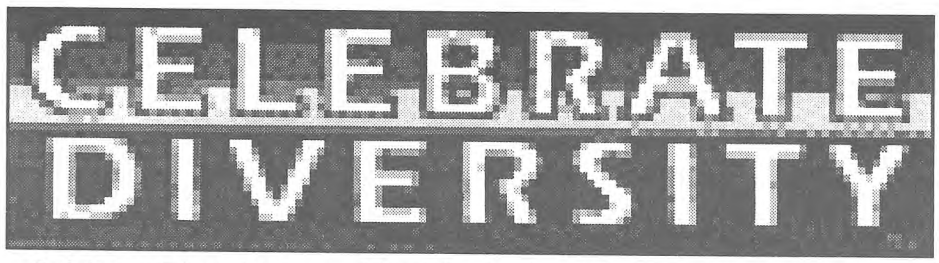
Letter to the Editor

As a panelist for the community discussion about Jon Krakauer's Into the Wild I present this letter of reflection and appraisal. My intention is not to have the last word, but to offer what I think are worthy observations that members of a liberal arts community ought to consider.



By far, my greatest disappointment of the discussion was the marked tendency of the panel and the audience to marginalize and dismiss Alexander Supertramp as an "outsider" whose condition is best explained and understood by any number of deficient personal characteristics. The main consensus seemed to be that his early childhood experiences so crippled his psyche that he was doomed to hedonism, narcissism, and an inability to form meaningful social relationships. That he is an "idiot," "stupid," akin to "a heroin addict ," a "personality disorder" and the like became the fundamental essence of most, if not all, of his entire being. Whatever "nice" things were said about him were usually expressed as a preface or parenthetical to the speaker's real message, and that real message was almost universally directed to the theme of psychological autopsy. The bottom line was that "normal" people shouldn't and wouldn't think or behave like Supertramp.

For better or worse this manner of thinking, wherein individual defect becomes the fundamental unit of concern, is all too common and pervasive in American thought. When confronted with a person like Alexander Supertramp, our culturally conditioned inclination is to ask what is wrong with the person. And even when available evidence to support our argument is sparse, it is very difficult for us to consider alternative ways of thinking. In other words, in light of what we know about Supertramp from the book, a psychological or psychiatric hypothesis might be considered as one plausible interpretation, but there is a huge leap between hypothesis and conclusion.

My second disappointment, which is an extension of the first, is that too little attention was given to the virtues of what Professor Nagengast referred to as "passion,"

(Continued on Page 3)

Oppression of Diversity at Juniata?

Celebrate Diversity. What do you first think of when you see these two words together? Do you think of racial, ethnic, sexual, or gender-oriented diversity? What if the words are super-imposed on a rainbow background? The assumption in many situations is that it indicates diversity of sexual orientation, simply because the rainbow symbol has been adopted by the Gay Community.

Three Celebrate Diversity bumper-stickers have been removed from the second floor of Lesher in the past two weeks, two from posted bulletin boards and one from a resident's door. One might ask her or himself, "how does this affect the Juniata Community?"

The action of removing the stickers is not only disrespectful but insensitive and immature. By removing the stickers, one vandalizes property and emphasizes the perceived closed-mindedness of the Juniata campus. The actions of a few individuals may make others feel threatened and unwelcome on this campus. Unless the vandals start to think about the effects that their actions have on the lives and emotions of others, Juniata won't become the safe environment that is necessary for the ever-diversifying world.

Many people say that Juniata is not very diverse. However, according to the Juniata website, "this year we have 86 students studying at 22 different sites throughout the world (approximately 30% of the College community studies abroad). We are enjoying the 89 international students from 29 different countries who enrich the living environment of our campus." Along with these facts, one can look at his or her group of friends: Where are they from; what do they like to do; what is their family heritage? Also, there is a Diversity Task Force here at Juniata, comprised of faculty and advisors who are working to promote the acceptance and equal treatment of minorities.

However, it takes an entire student body to enforce the actions of the administration - when events such as the vandalism of Celebrate Diversity stickers occur, a hint of dissent toward these differing opinions and cultures surfaces. If students have issues with the diversity that is clearly apparent on campus, it is time to vocalize them, not act and run to avoid confrontation by peers or otherwise.

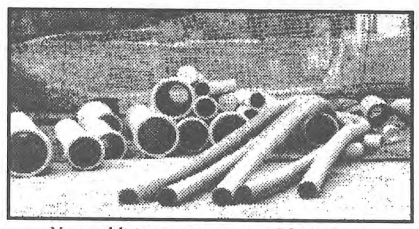
Amanda Kohr ('01) and
Kristin Wilson ('03)
Alternative Ways Of Loving

Letter to the Editor

(Continued from Page 2)

especially passion beyond that which is "goal directed" or, more precisely, passion beyond that which is aimed at having a careful life plan, listening to one's elders, and minimizing risks, so eventually one can get a job, earn money, and buy stuff. From my viewpoint many of us would be much better off if we were willing to consider that maybe, in the words of Dan Eldon, "the journey is the destination" and that it is often good to go out on a limb since, after all, that is where most of the fruit is. It seems to me that Supertramp is a useful metaphor for such things. Unfortunately, few people were inclined to entertain this dimension of him as worthy of exploration.

All of this gets me to wondering how many of us, especially students, may sense that we have a passion but lack the courage or are too apathetic to act on it because that passion may in some way marginalize us as outsiders to our parents and professors, and to each other. I would like to think I am wrong, but I am afraid the answer is one too many.

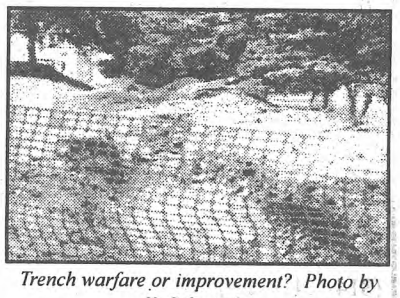


Sincerely,
Bob Reilly

N.B., Dan Eldon was stoned to death by a mob in Somalia in 1993. In his 22 years on the planet he led an amazing life. If you would like to know more about this incredibly passionate young man, you might read Dan's book, The Journey is the Destination, which was compiled from his journals by his mom.

Professors speak their minds about the book. Photo by K. Schmieder

Construction's Impact on Campus



New additions to campus. Photo by K. Schmieder

Walking through campus has become an obstacle course consisting of trenches, half completed sidewalks, and dirt piles. Then there is the all-encompassing yellow tape that prevents students from taking shortcuts. If the visual decay wasn't enough, the loud repetition of machines has made the campus even more unattractive.

It is disheartening to return to see the campus in shambles. The campus reminds me more of a place to play capture the flag, than a pristine place to learn. Aside from the pipes, and sidewalks being redone, the trees in South have been deleted in order to make room for the colossal science center. This creates a shade less area where the heat is even more oppressive.

Do the construction's inconveniences outweigh the overall improvement of Juniata? Even though the campus is difficult to maneuver around, it is hard to say that improving campus is a worthless cause. If previous administration had gone against some other improvement in the past, the current students would not be benefiting from it now. We may not be profiting from these changes, but it would be ridiculous to stop a cycle of improvements that has benefited past and present students.

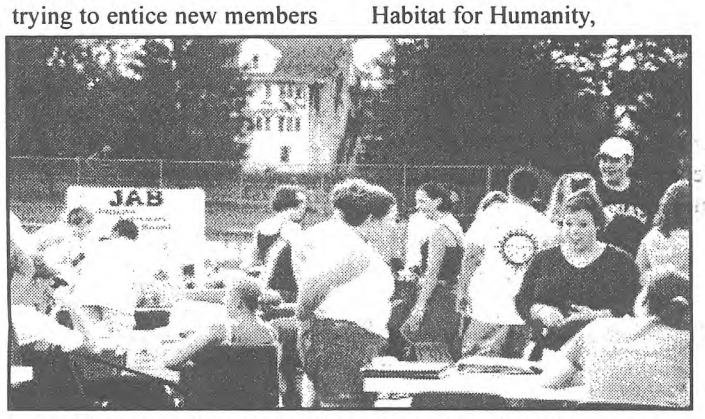
Trench warfare or improvement? Photo by K. Schmieder

Lobsterfest Strikes!

Karl Stupic
Advertising Editor

Ah, that time of the year again. The setting up of the tents and the tables. The preparing of crustaceans that you will smell for several days on North lawn. The very essence of Lobsterfest. There was lots of food, drinks, and people at this year's Lobsterfest.



Meanwhile just above the tents for Lobsterfest you could find a club fair going on. Many clubs from AWOL to Japanese, from WKVR to Conservation, if you wanted to look at a club first that was the place to be. Many clubs were trying to entice new members with food, or prizes, or equipment. Habitat for Humanities was raffling off T-shirts, WKVR was giving away CDs, and Emergency Services and Safety club had their gear out to look at.

"About 40 clubs here (at club fair) to recruit new members." Was a comment from Dawn Scialabba, Director of Campus Activities.

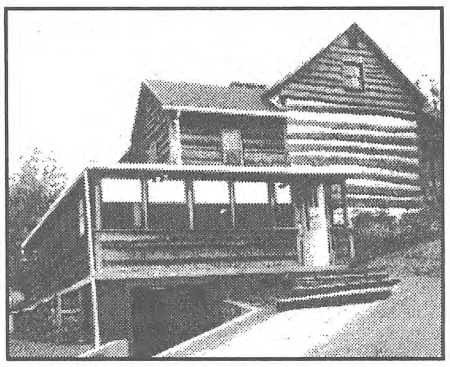
A few comments from some of the club leaders were:

From Amy Schumann the president of Juniata Instructors of the Future (JIF), "JIF is a great support group for all education majors."

From Diana Goodley of Habitat for Humanity,

Students enjoying Lobsterfest and learning more about the clubs on campus. Photo by K. Schmieder

A student and his lobster. Photo by K. Stupic



"Habitat's day has been awesome, lots of new people signing up."

For many people Lobsterfest was another activity to get used to Juniata and to have a little fun.

One mystery about Lobsterfest this year was the surprising shortage of Dr. Pepper cups. Perhaps with the larger freshman class this year the administration underestimated the number needed. Hopefully this will be remedied next year.

New Funding for Field Station

Seung-Yul Jeong
Layout Editor

The field station as it is now. Photo by K. Wilson.

President Kepple is requesting five million dollars from the Federal Government to fund a new Field Station on Raystown Lake. To get the funding from the federal government, Juniata College must take several steps.

The first step, authorization, is done. President Kepple submitted a written appeal for funding to the Federal Government. Next, appropriation of funds occurs. This event is scheduled for September 25th through 30th during the house and senate meeting. After the House of Representatives and Senators decide whether Juniata College receives the money. If the money is appropriated to Juniata College, then the President will sign a final statement.

The proposal for appropriation is for 1.25 million dollars. The result will be announced at the end of September. In addition, government budget for the next fiscal year begins on October first. "We are waiting to hear from the Federal Government, our odds are better than fifty-fifty; therefore, we are hopeful," Professor Chuck Yohn stated.

"Once, the renovation is done, the Field Station will be one of the best Field Bases in the Country," President Kepple said. The academic plan states, new buildings will include a dormitory (30 to 40 people maximum), dining hall, a building for classrooms and laboratories, and housing for visiting researchers. There will be a consortium of other schools and summer classes that at least fifty people can stay during a summer academic session.

They are cutting down the trees to build a new Field Center. However, Green Technology reduces the impact of the buildings to

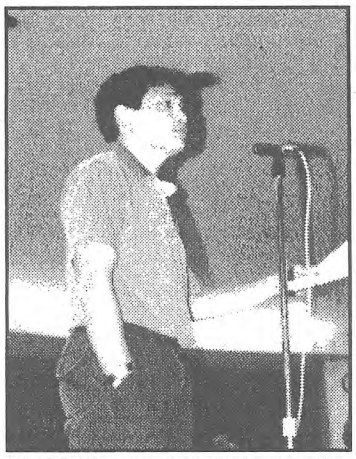
Students Learn to Juggle

Kristin Wilson
Staff Writer

Juniata had the honor of hosting playwright and professional juggler Russell Davis last week. Davis led two juggling workshops, one Tuesday night and one Thursday night; both were well attended by members of the College Community and the Huntingdon Community.

Davis began his work in the theater and felt the "need to juggle." A potter-friend of his explained juggling to him just as Davis had explained it to us, and since then he has moved on to incorporate juggling and circus imagery into his theatrical works such as "Wild Goose Circus" which was preformed at Juniata a few years ago. Davis has worked with the Big Apple Circus as a juggling trainer, as well as with other institutions.

Working with Davis was Josh Weiner, a street performer in New York City at the South Street Seaport. Weiner has been juggling for 12 years, and uses everything from a pool stick to a uni-cycle while he juggles to make his acts more daring. Currently the two are working together on a play by Davis entitled "The Thoughts and Travels of Nikki," and it's being produced through the People's Light and Theater Company in Melvin, PA.



As many of the workshop attendants had never juggled before, Davis began by giving everyone just one ball so that they could get the feel of it in their hands. Twenty minutes later, we were handed a second ball and shown how to juggle it properly, using an underhand motion and creating an "X" in midair with the two balls.

Although there were a few students who could handle only two juggling-balls, many others moved their way up to three before the night was over. Kim Kelly said, when she received her third ball after struggling with two for quite some time, "I'm happy I've graduated to three balls!"

Matt Wolfe, who began Tuesday evening in the ranks of amateur juggler, had moved comfortably up to three balls after an hour of work. "At first I was frustrated," he says, "but the more you do it [juggle] the easier it becomes."

Toward the end of the workshop, Davis and Weiner performed for the audience at hand. They did a variety of juggling tricks, including working with anywhere from three to seven balls, seven rings, and six clubs. Davis and Weiner did tricks in which they juggled together, standing approximately 8 feet apart, and they also did tricks solo. According to Davis, the possibilities for combinations that one can come up with when juggling are "infinite" - and this workshop was proof of that.

Into the Wild

Prof. Hsiung expresses his ideas to the panel. Photo by K. Schmieder

(Continued from Page 1)

character may have suffered from a personality disorder. To him, Chris seemed to lack the judgement and sensibility that most people have to override the desire to constantly take wild risks.

The second student to speak on the book was Dan Sahd. He expressed his admiration for Chris's willingness to take up a challenge. Because of his eagerness to take action, Dan opined, he changed lives and was fine role model.

Then the panel moved to Professor Janet Lewis, who may well have voiced the most confident analysis of Chris McCandless. "I don't like this kid." She hypothesized that he continually took risks because it made him feel good, much the way some people take drugs to feel good. She thought that the book diverged into too much conjecture and machismo. It was her opinion that Chris harbored a 'lack of respect for the world in which he lived' and it killed him. In short she quipped, "Alaska, one, McCandless, nothing.'"

Professor Paula Martin followed with her personal memory of Chris's death. As a faculty member at Emory, she faced many questions about Chris but had few answers as he graduated before she began to work there. Professor Martin postulated that if Chris was indeed a 'thinking person' he wouldn't have ignored what nature was. She pointed out that eating the wrong plant was not his first mistake, but part of a pattern of follies.

The last panel member to speak was Professor Mark Hochberg. He began by analyzing the authors that influenced Chris, Thoreau in particular. Prof. Hochberg conjectured that Chris drew his belief that 'greatness comes from isolation.' Stemming from that he spoke as a parent. If he had been my child, I would have 'wished he had lived so I could have killed him myself.' He unequivocally expressed his notion that Chris was sadistic to abandon everyone he knew.

When the floor was opened to the audience, shyness was quickly abandoned to a lively discussion. Both professors and students shared their thoughts on the book, ranging from 'it bothers me that this book was chosen' to 'this book appealed to me.' Opinions flew, and theories were discussed right up to the end. Into the Wild may not have been a favorite book by everyone taking part, but it certainly made for a fantastic debate.

Students on the panel discuss their opinions. Photo by K. Schmieder

Campus Computing Upgraded

Benjamin Hodgens and Rachel Donahue
Staff Writers

There has been a lot of construction going on around the campus lately, but ground work isn't the only the thing that has been changed. Over the summer there were many new additions to Juniata's computer network.

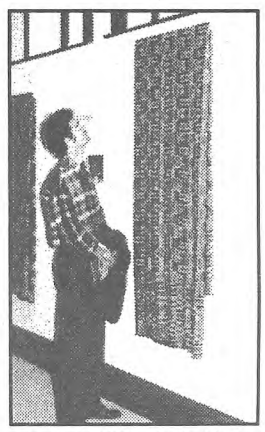
Perhaps the most exciting is the installation of a second non-fractured T-1, providing twice the speed for the network - bringing the total up to slightly over three megabytes a second. Currently, the second T-1 is only being used for the labs and faculty, but will be joined with the other to offer campus wide benefits as soon as the new router is available. This router will allow up to 4 T-1's to be connected to the network servers, providing four times the bandwidth available at the beginning of the Fall semester. Still, Director of Network Infrastructure Art Manion is trying to find ways to cut down on bandwidth consumption. "We're going to try prioritizing the bandwidth so that the labs and faculty get first prerogative, and the dorms get second," Manion said.

The hubs in the dorms were also upgraded over the summer, providing faster, more dynamic on-campus data transfer. Instead of a single line going from each dorm to the servers in Brumbaugh Science Center, there is a single line coming from each hub, of which there are many in each dorm. This helps prevent the campus network from getting overloaded, as has happened in the past.

There are also quite a few new computers in BSC. Forty new Macs have been gained, approximately 22 of which are iMacs, the rest being speedy G4s. There are also one hundred new Dell systems with processor speeds of at least 600MHz, spread between the Main lab, and the lab in P-107, which are accompanied by crisp new fifteen inch flatscreen monitors. Almost all of the classrooms have now been upgraded from the state they were in last year - as opposed to approximately 40 percent having computers and projectors, nearly all are now equipped with PowerPoint presentation software.

Kente: "Cloth of Asante Royalty"

Amanda Kohr
Staff Writer



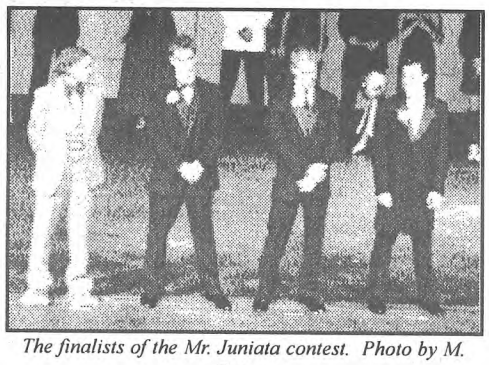
There was an extremely interesting lecture given on Friday, September 15th by Harriet B. Schiffer, Ph.D about many traditional and contemporary Kente Cloths. This lecture was in conjunction with the opening of the art exhibit, Kente: "Cloth of Asante Royalty," at the Juniata College Museum of Art.

Kente Cloth is not your average textile. Traditionally it was woven specifically for the use of the Asante kings of central-west Africa. Even though our culture often stereotypes weaving as being a woman's job, in the villages of Wonoo and Bonwire in Asante, Ghana, weaving is traditionally performed only by men. The cloths exhibited in the gallery are comprised of long narrow strips, hand-woven and then hand-sewn together to create large pieces of fabric. The sizes and lengths of the cloths vary according to its intended uses. The dimensions of a man's piece usually consist of strips measuring 4"-5" wide and 120" long, compared to a the woman's cloth of 4"-5" strips and 72" long. A man's garment is usually one long cloth "wrapped around the body toga-style, and the woman's garment consists of three pieces, skirt, bodice, and head wrap.

The pieces exhibited in the museum vary greatly. They were produced anywhere from around 1910 to early 1990's. The patterns are beautifully complex while seeming deceptively simple. Many of the patterns are named, and they translate to different meanings including, No Man Governs Alone, Family Unity, A Clever Old Woman, To Err is Human, and I've Exhausted My Skill.

The Kente cloths are used widely as status symbols and the more complex the pattern, the more it is admired and respected. The pattern of I've Exhausted My Skill symbolizes royalty, elegance, and superior craftsmanship, and the pattern To Err is Human "reflects values of reconciliation, tolerance, sympathy, and patience." Even the colors associated with the Kente weaving are greatly symbolic. The traditional colors used most often were red, green, white, yellow, blue, and black. Red "refers to ancestral blood that was shed during wars or colonial occupation and resistance," and it is often worn during political rallies. Yellow represents "royalty, prosperity, maturity, and prime of life." Yellow and gold are often worn by chiefs because of the properties associated with the colors. Green "reflects newness, fertility, vitality, primeness in growth, and it is often worn by girls during the second stage of the puberty ceremony."

Contemporary cloths are used in a variety of places. One may see Kente Cloths as a part of graduation gowns for students and faculty as a sign of achievements, on a hem of an infant's christening gown, and as a trim on tuxedo jackets. It is used to create jackets, suits, belts, and shawls.



A guest of the Kente Cloth exhibit admiring one of the pieces. Photo by A. Kohr

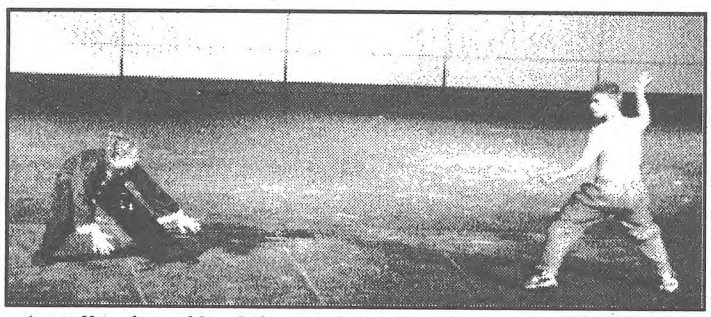
The Kente cloths will be on exhibit at the gallery until November 4, 2000. A special thanks to Dr. Schiffer for her lecture, informational booklet, and loaning pieces of her beautiful collection, as well as all the students, faculty, and staff for their hard work associated with the exhibition. For more information on Traditional African Kente Cloth you can contact Dr. Schiffer at email: LFSforWonoo@aol.com.

Freshman Wins Mr. Juniata

Suzanne Gardner
News Editor

On September 13, 2000, freshman Ian Palonis was crowned the Mr. Juniata 2000, at the fourth annual pageant held in Oller Hall, shortly after answering the winning question: "If your house caught fire and you could take only one item with you, what would it be, and why?"

The finalists of the Mr. Juniata contest. Photo by M. Brown



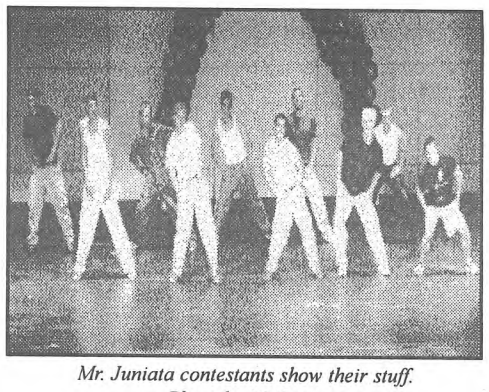
This year, the pageant brought together ten male faces from the Juniata College campus, including three freshmen, three sophomores, two juniors, and two seniors. This years contestants included: freshmen Aaron Himmler, Darren Moser, and Ian Palonis, sophomores Justin Eskra, Scott Kyper, and Dusty Lehr, juniors Cory Kelso and Jeff Kotz, and seniors Andrew Bockis and Luke DeJohn.

The first runner-up was senior Andrew Bockis. The second runner-up was junior Cory Kelso.

The pageant was a charity event sponsored by Circle K and all proceeds went to help the fight against Iodine Deficiency Disorder. Circle K, one of several community service organizations across the campus, was the group in charge of the entire pageant. Tasia Kavalek admitted that the volunteer organization has been preparing for the upcoming pageant since "...the start of school."

The preparations included many meetings between the officers, President Allison Zeigler, Vice President Tasia Kavalek, Secretary Amy Mullen, and Treasurer Todd Fortney. In addition to the officer meetings, a prize committee also met to discuss prizes for the winners. Also, a dance duo comprised of Kellie Martin and Annie Russell took on the challenge of composing the opening dance routine. These two girls took on the task of teaching ten guys how to dance--even more impressive. A tech crew also assisted with the pageant.

Most of the funding for the pageant came from either volunteers or area businesses. All of the prizes awarded to the new Mr. Juniata were donated from local businesses. The prizes included a gift certificate and a T-shirt from Boxers, a Great Dragon gift certificate for two, a large pizza from Pizza Hut, a $25 gift certificate from Ames, two movie passes to Clifton Five, A calculator from Radio Shack, a Weis Markets gift certificate, shampoo and conditioner from Holiday Hair, and two Extra Value Meals from McDonald's.



Aaron Himmler and Iam Polonis perform a Kung-Fu act. Photo by M. Brown

The pageant events included an opening dance routine, a talent exhibition, and a formal wear competition, after which an escort of their choice joined the contestants. The contestants were then narrowed down to four finalists, Ian Palonis, Andrew Bockis, Cory Kelso, and Aaron Himmler. At this time, each contestant was asked to answer a random question. The runners-up and winner were then announced.

The participants had mixed emotions as to which part they were most excited for. "I look forward to the crowd cheering," said senior Luke DeJohn, and cheer they did. Junior Jeff Kotz said that he looked forward to "sweating on stage." Cory Kelso was anticipating the "public service announcements for Easy-Chairs and Ottomans."

Judging the contest was a variety of people from the school and the surrounding community. The judges were Kris Clarkson, Dean of Students, Prof. Gerald Kruse, Assistant Mathematics Professor, Joanne Krug, assistant to the provost, Candy, an employee from Baker Refectory (also known as "the card-swiper"), and Judy Flemming, a representative of Kiwanis, and Karen Rosell, professor of art.

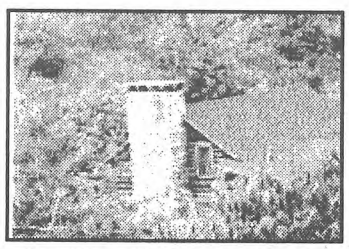
Mr. Juniata contestants show their stuff. Photo by M. Brown

So how exactly does one become a contestant for the pageant? Circle K sets up a specific time when campus-wide nominating takes place. At this time, students are able to nominate up to six guys to represent their class in the pageant.

The nominees with the most votes are then asked if they would like to participate in the pageant.

When asked why they decided to do the pageant, most of the guys responded "because I was asked to do it." Some of them, who had participated in past years, admitted that they really enjoyed the experience and just want to have fun again this year. Scott Kyper's motivation for doing the pageant is to "show my South (Hall) boys that I can dance," while Darren Moser admitted "I was skeptical at first, but when I found out it was for a charity I was more than willing."

The evening was full of fun from the second the guys stepped on stage until Mr. Juniata was crowned. All the contestants had a great time, while raising money to help the fight against Iodine Deficiency Disorder. Thanks to all the participants and the many people who made the pageant a success!



Funding for Field Station

(Continued from Page 4)

the environment by using recycled materials and energy conservation devices. The Academic Plan Committee has identified four architect firms that specialize in green technology. They will also dig a wetland for water treatment.

When they build the new Field Station, it will bring a new look. As the campaign brochure put it, "An uncommon environment with dormitory and research space that will allow faculty members and students to live and learn on site."

There is more information at www.juniata.edu/station/

Site of future field station. Photo by C. Swan

The 2000 Mr. Juniata participants are listed below by class, as well as escorts and talents performed:

Aaron Himmler, escorted by two foreign exchange students, performed a duo comedy Kung-Fu act.

Darren Moser, escorted by Jamie Miller, was part of a trio and performed a dance medley.

Ian Palonis, escorted by Stacey Dill and his twin brothers, performed as part of the duo Kung-Fu act.

Justin Eskra, escorted by Dave Spokus, Jeff Spotts, and Katie Johnson, performed as part the a lip-sync/dance trio.

Scott Kyper, escorted by Nicole Popich, performed as part of the lip-sync/dance trio.

Dusty Lehr, escorted by Jessica Collins, performed as part of the lip-sync/dance trio.

Cory Kelso, escorted by Lindsey Roberts, performed as part of a dance medley trio.

Jeff Kotz, escorted by the Women's Rugby Team, performed a talent better entitled "What I Learned on the Farm," with guest cow Francine (Frank) Partica.

Andrew Bockis, escorted by Axle, Prof. Borgardt's Chocolate lab, performed a Mariachi song.

Luke DeJohn, escorted by Kara Piazza, performed as part of the dance medley trio.

The Replacements: Art Imitating Art

By Morgan Fogelman
Staff Writer

Well, well my little moviegoers, did we happen to catch a few flicks over our summer of lounging around on unearned money or slaving over a hot grease pit? No? You didn't miss much - with the possible exception of the blockbuster X-Men, which I'm sure most of us have already forgotten. With that behind us, we can turn our attention to a year that actually shows promise. With upcoming titles such as Val Kilmer's The Red Planet and Will Smith's The Legend of Bagger Vance (which gives me goosebumps by just the mention), our dreary year of studies and gossip may be looking up. For now, however, let's turn our attention to one of the latest films to ruin my expectations - and you'd think I would have learned my lesson - The Replacements, starring Gene Hackman and Keanu Reeves. This film is the latest in line of movies about athletes thrust into stardom after their superstar counterparts fail due to strike, injury, or felony. The plot and story are basically a combination of last years Any Given Sunday and the long forgotten Necessary Roughness. It even comes complete with the trademark "puking on the field" and "barroom brawl with the other team" scenes. The movie, directed by Howard Deutch (Pretty in Pink), is, for the most part, a preview movie - meaning that all of the best scenes can be found in the coming attractions. Many films can make this handicap work, however, The Replacements does nothing to fill the wide gaps between these exciting and poignant moments.
Gene Hackman seems to pick up just where he left off with Coach Norman Dale's character (Hoosiers) - and he thought we'd forgotten his little cackle after the big win and nod of his head to the crowd after a heartbreaking loss. Keanu Reeves has his moments, but let's be honest, is there really life after The Matrix for him? One thing's for sure, judging by his physique in this film he had better get into the gym for the sequel to his biggest success to date. I'm forgetting someone - and it's not John Madden. Oh yeah, the "Make 7 Up Yours" guy - whose name is really unimportant after this one. He does his best to humor the audience and the football team, but it's too little too late. My advice: rent Necessary Roughness and picture Neo as Scott Bakula. **2.3 Eagles.**

Keanu Reeves in "The Replacements"

The Soul of Shawn Mullins

Abby Capuroscio
Entertainment Editor

There's a lot to be said about the integrity of walking away from the fame and fortune of rock stardom. Those truly gifted people spend their lives searching for that integrity in their music and don't give in to the spoils of celebrity. For Shawn Mullins, his music has always come first.

Raised a southern boy, he grew up influenced by The Allman Brothers Band, and Lynard Skynard, yet his music is more reminiscent of a young Springsteen, soulful, spiritual, deeply affecting. Ballads about poverty, loneliness and friendship fill his freshman effort, Soul's Core.

It's hard to explain an album so obviously personal yet it still rings true for many listeners. Mullins writes what he knows and what he knows is people. He has them pegged right down to their habits and morals. It's interesting to take a journey with Mullins inside a trailer in the "Tannin Bed Song" or to volunteer information about yourself like Mullins seems so comfortable doing.

It's a soulful I've never heard before. It's another human's heart in three part harmony and a good beat. Yet, even after the commercial success of "Lullaby" Mullins drifted back into the coffeehouse method that had gotten him to the rock star status; always aware of the newest ways, stars and always perfecting the music and meaning within.

As a storyteller, Mullins weaves tales like strands of gold (reminding me of Harry Chapin style songs.) Each song convinces you that he must have known the person he sings of personally. Or perhaps he doesn't know them but is a storyteller of the highest degree, with character development in tact and polished.

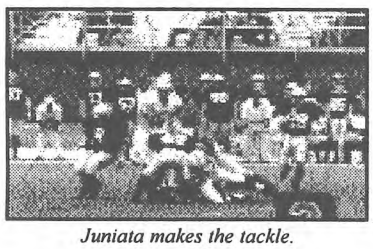
Mullins really makes me believe that heart, music and story telling are one in the same and irrepressible.

Musician Shawn Mullins.

HOROSCOPES *by Lindsey Roberts*

Aries- This week you will fall into money, unfortunately the money will be coins, so be sure to carry band-aids.
Taurus- Don't put all your eggs in your pockets
Gemini- I know you hate math, you know you hate math, just do it buddy-boy.
Cancer- Pork Chops for dinner Mmm-Mmm good
Leo- Just like Poison's top ten song, "Every Rose has it's Thorns," you sure do get poked a lot
Virgo- Don't drop the soap, who knows where that floor's been.
Libra- I like chicken I like liver meow mix meow mix please deliver.
Scorpio- Watch out for giant spiders living in your shower or is that a giant clump of hair?
Sagittarius- If you see a tall dark and handsome man walking down the street towards you in a trench coat just run, don't question, run.
Capricorn- Beans. Beans. Beans. Embarrassing situations may come up at dinner.
Aquarius- I see you near water a lot this week just be sure to give a courtesy flush now and then.
Pisces- Do your laundry, your mother said so.

Freshman's Guide to Juniata



Matt Wolfe
Co-Editor-in-Chief

To begin this year properly, I thought I'd write about all the things that freshmen need to know but for one reason or another is never taught except through trial and error. So I present to you a set of guidelines that freshmen should be made aware of.
-- If you are over in East and hear loud music coming from a room, this is not always an automatic invitation to enter. If you are very drunk, go on in because you'll fit in with everyone else and most likely will do something funny that everyone will laugh at and you won't remember. If you are bringing several hot girls into the room with you, you can also go right in. Especially if the room number is 301.
-- While I'm on the subject of East, another rule is to never walk around by yourself. Besides looking like a loser, if you've been drinking a lot you want friends around to make sure that you can get back to your room eventually.
-- Piss on buildings on campus and then run when security finds you. The guys in the security office love to keep in shape by chasing college students, so make sure you do your part.
-- Be very nice to the people you get to hook you up with alcohol. The standard rule is the person that buys it for you drinks for free. Consider that when determining how much alcohol to buy. If you're not sure how many cases of beer you will need, always buy one more than the number you guess. That way you won't run out. If you don't drink it all that weekend, that's perfectly fine, there's always the next weekend.
-- Play Quake in the computers labs. No one minds and it's a lot of fun to slow the network down by killing random people.
-- Don't skip any classes until after fall break. Some professors only give you three before they start lowering your grade, so save them. Usually after fall break the weather starts getting cold and sometimes you just don't want to leave your nice warm bed. This is also the point of the year that people are more susceptible to getting sick, so you definitely want to have some skips left.
-- Go to as many activities on campus as possible. This includes comedians, sporting events (especially soccer games), movies, etc. Don't get so wrapped up in work and drinking that you miss out on a lot of the fun things that go on around here.
-- Go to every home soccer game.
-- Don't sexile your roommate. Sexile is exiling your roommate for a night in order to hook up with someone. It tends to piss them off when they need to unexpectedly need to find another place to sleep. Now, if you talk with your roommate and ask them to sleep somewhere else that night, that's a different story. Just make sure that things are worked out in advance and no one will get pissed off. Oh, and thanks Lindsey for introducing sexile into my vocabulary!

So there are some basic guidelines for the new freshman class to follow. Just another public service announcement from your friends at The Juniatian!

Sports Round-Up

Juniata makes the tackle.
Photo by J. Hanohano

(Continued from Page 1)

record-breaking performance of the 1999 offense. Such key players as quarterback Joe Montrella and wide receiver Jeff Craft graduated, but most see only improvement in store for Juniata's offense. Matt Eisenberg and a wide selection of receivers including Andy Radomsky, Nate Leach, and freshman William Kulbacki will pick-up any slack left from last year. Jamie Campbell, who had previously been Juniata's backup quarterback, now fills the starting position, and no one has objections to that.

"[Campbell] is a gamer. He'll do whatever it takes to win," said Eisenberg. Coach Burke agrees with Eisenberg, but says that the offense needs more consistency.

"We can't score 59 points one game and seven in another," Burke said. School passing records were broken last year even with this offensive inconsistency. Teams of the Commonwealth League beware if Juniata gains the consistency that they are striving for.

Women's Tennis

In addition to the foundation that the team already has, the tennis team gained four freshmen this year. With this addition, Head Coach Ann Houck hopes to guide her team to another impressive MAC playoff run as she did in 1999.

To make this playoff run, the team will need solid play from Lisa Dumansky, Jen Thompson, Liz Osche, Victoria Hilosky, as well as many other members of the team.

Field Hockey

The Juniata Field Hockey team is coming off of a less than satisfactory 6-12 campaign in 1999. Coach Caroline Gillich does not see this as a problem. There is veteran depth at the goalie position with Kara Elias and Liz Allard. However, the overall team is very young, but Coach Gillich just wants to give it time.

"We need to mesh as a team," says Gillich. This young team includes three starting freshmen as well as several who have been struck down with injuries.

Along with the goal-keeping, Coach Gillich also puts much trust in her offensive unit. The defense, however, is very young. If the defense adjusts well, look for the Juniata Field Hockey team to have a successful season.

No matter what the result this year, expect long-term success with the young and talented group of players.

Cross Country

Women's Cross Country

The team includes many new runners this year, but that doesn't mean that talent is hard to find. Such talented runners as Michele Palmer and Tasia Kavalek remain from last year, and they are looking to make significant improvements in their times.

Men's Cross Country

Runners David Wilcox and Scott Hobbie lead the team. Other experienced and talented runners include Noah Fredette and David Slat. Freshman Jasen Lawrence and Frenchman Sebastien Moisnard account for the remainder of the runners on the team.

Soccer

With new Head Coach Scott McKenzie at the helm of both men's and women's soccer teams, Juniata soccer fans may have something huge to cheer about in the coming months. Both teams are accepting Coach McKenzie's aggressive and offensive game plan. All players have also openly accepted the new and improved stress on fitness on both sides.

Men's Soccer

The men of Juniata soccer have struggled in recent years, but have played well early on in the 2000 season. Look for much more scoring this season, as was seen in the 5-1 victory over Pitt-Johnstown on September 5th.

With the arrival of Scott McKenzie as head coach, former head coach John Mumford shifts to associate head coach, both of whom are assisted by Klaus Jaeger. Coach McKenzie is very pleased at the setup, saying that, "The three of us are working very, very well together; there are no egos involved."

The team itself has a veteran cast of players who seem to be working together as a solid unit so far, despite the opening loss to King's. This well-oiled machine includes freshman sweeper Kodi Hockenberry controlling the defense, senior co-captain Todd Fabian in the midfield, as well as forwards Joel Abe and Nick Wolfe who should have plenty of action with Coach McKenzie's attacking style of soccer.

"There is reason to be optimistic," says Coach McKenzie of this year's soccer season. Look for a playoff run as this good play continues. Though seniors Todd Fabian, Ben Webster, Jorn Vermehren, TJ Cotter, Khaled El-Zahhar will be deeply missed after this soccer season, look for the Juniata Men's Soccer program to have more and more success in future years.

Women's Soccer

The women's soccer team also has its hopes set high for this year. There is a strong foundation to improve upon with the women's soccer team.

"All we've done is added to what [Coach Herlan] started," says Coach McKenzie of last year's head coach. Everyone is pleased with what this team has going, and the outlook seems good following an opening 4-2 victory over Goucher.

Coach McKenzie also added about the team, "They've just made the decision to be dedicated." Captains Marybeth Markiewicz and Megan McElroy lead the team. It is a well-rounded squad with deep talent and constant potential for victory.

Women's Volleyball

With expectations always very high, fans of the volleyball team have their doubts about this volleyball season considering the very young 2000 squad. Even so, heads were turned after the dominant win over Gettysburg to open the season. Even the coaching staff isn't entirely sure how to predict this season.

One thing Head Coach Larry Bock was sure of was, "We're very deep in athletic ability, and very shallow in experience." The coaching staff also believes that they have one of the best players in the nation in Brandy Workinger. A large pack of talented freshman and transfers also highlight the Juniata roster; 12 of them to be exact. Some of these include captain Jesse Woods, as well as freshmen Jill Davis, Johanna Holton and Danielle Hart.

Though Coach Bock is asking of more blocking and better defense, weaknesses seem few and far between. Juniata Volleyball fans don't despair, but rather look for your team in another playoff run in November.

Juniata Reacts

College struggles to understand terrorist attacks

Ryan R. Miller
Politics Editor
Paul Blore
Staff Writer

Tuesday, September 11 began as a perfect day at JC. The weather was warm and clear, and homework had not yet become too much of a burden. Then, at 9:00am, the news hit the grapevine.

Unable to believe the magnitude of what they were told, many on campus did not at first accept that the attacks even took place. People began hunting for a television or computer to confirm the reports. CNN.com was down, overrun with internet users, and no one could establish cable TV in many classrooms. Students, faculty, and staff in Good Hall crowded around the one available television in the audio-visual center. It was there that the horror struck.

Photo by R. Bernhardt

The flag flies at half-staff over campus on Tuesday.

Tears began rolling as footage emerged showing the collapse of the twin towers of the World Trade Center in New York. More rumors started circling. "The White House is on fire...the Capitol's been hit...they've attacked the Pentagon." Many students were angry. Almost everyone was shocked and afraid.

People rushed to hallway phones to call friends and family in New York and Washington. Many professors immediately cancelled classes. Some students refused to attend classes.

Around 10:45am Good Hall cable was up and running. Rooms were then turned into viewing areas, filled with college community members intently watching the horrible news unfold. A few individuals stayed there all morning.

As the day wore on, a person could not walk past a group of people without overhearing some reaction to the tragedies. Most students could not believe what was happening, and likened the news images to something they might have seen in a movie.

The crash in Somerset County received very little national media coverage but many students paid special attention to it, due to its proximity to our area.

Some students still had not yet felt the impact, having only a sense that the events were surreal. "It'll take awhile for it to sink in," said one student.

At approximately 12:00noon the President's cabinet met in an emergency meeting to determine the appropriate response for the college as a whole to make. Classes were cancelled and the college flag set at half-staff. In addition, the cabinet called a 3:00pm all-campus meeting in Oller Hall.

Speaking before the entire Juniata College community, President Kepple said that everyone's primary responsibilities were to "remember our fellow citizens," and pray for the victims and their families. Second, he emphasized the need for people to continue on, and not panic or give up. "We will pause today to grieve, but tomorrow we will carry on with the strength that God has given us," Kepple said. He then asked those present to join in the college's condemnation of terrorism and its traditional efforts towards peace. Lavinia Kolarczyk, President of Student Government urged students to concentrate on concern for those suffering, and not on revenge.

Afterwards, all members of the community were invited to go to three designated sites on campus in order to express their feelings and concerns. Student voices varied, with some students emphasizing the need for retaliation, while others felt more scared than anything else.

Photo by R. Bernhardt

Members of the Juniata community join together in a candlelight vigil.

The college's efforts to unify the campus ended that evening at 9:00pm with a candlelight vigil on Oller lawn. David Witkovsky, the College Chaplain, led hundreds of people in a giant circle from Oller steps to the central walkway in prayer, saying that the college must "pray not only for the nation, but for the entire world."

Dr. Skelly Speaks on Europe's View of Bush

Ryan R. Miller
Politics Editor

The Baker Institute for Peace and Conflict Studies kicked off this year's World Affairs Lecture Series on Tuesday, September 4th with a fun and informative lecture by Dr. James Skelly, entitled "Europe and Bush's America."

A Senior Fellow at the Baker Institute and an Irish citizen based in Dublin, Skelly has been researching the reaction in European circles to some of President George W. Bush's more prominent foreign policy moves.

He began the evening by drawing what he contended to be two important cultural distinctions between the US and Europe: differing socio-economic models and contrasting visions of multilateralism. "I am a European Social Democrat," Skelly proudly declared, explaining that he and those sharing his political tendencies are more willing to support stronger measures to improve community living standards than are most Americans. Second, he asserted that America is more inclined than European Nations to pur-

(Continued on Page 2)

Bush and National Security: Right idea, wrong strategy

Ryan R. Miller
Politics Editor

Last summer President Bush made his first trip to Europe. His mission? To convince European allies that the new millennium requires new strategic thinking, and that at the cornerstone of such strategy lies national missile defense (NMD). Old threats, he said, have disappeared and a new security environment is emerging, proclaiming that "today's world requires a new policy."

While the world has indeed changed, missile defense is not the answer to meet such changes. For the moment, let us leave aside the argument that NMD will set a new arms race into motion.

More importantly, missile defense represents time and resources that would be better directed elsewhere. The real failure with pursuing NMD now is that it does not offer protection against the more pressing threat to national security: terrorism. The fact is that anyone, even we in Huntingdon, can easily build a biological weapon. Another truth that one must acknowledge is that as long as the United States remains a superpower and operates a global foreign policy, there will always be those who resent us. The weak envy the strong, this is nothing new. The current problem is that technology is giving the weak and resentful the weaponry to commit mass violence, not to mention the ability to organize through improved communication.

A new security policy is sorely needed, but one that focuses less on "rogue states" and more on an ever-growing danger: individuals. As such, the Bush administration should invest in protecting the homeland against these threats. Presently, if a chemical or biological weapon were unleashed at a Philadelphia Eagles game for example, any emergency response would be under prepared to handle the situation. Another area in poor condition is intelligence. The National Security Agency, for instance, is suffering from a lack of funding, educated linguists, and research capital. It is towards these weaknesses that the defense budget increase must flow, not missile defense.

When one is confronted with asymmetrical threats, it is necessary to defend yourself in a like manner. Machiavelli wrote that "the one who adapts his policy to the times prospers, and likewise that the one whose policy clashes with the demands of the times does not." In light of Tuesday's tragedy, President Bush and his national security team would do well to remember this.

(Continued from Page 1)

sue its national interest by acting alone, and less willing to think in multilateral terms.

From there, Skelly outlined a long list of policy areas where rifts are forming between the old continent and the new administration. Proceeding down an overhead list of "areas in dispute," he explained the emerging tensions on numerous topics, including EU-US trade disputes, the Echelon Spy System, the death penalty, the International Criminal Court, the Kyoto protocol, missile defense, small arms treaties, EU common defense initiatives, tax evasion, and others. "Do you see a pattern occurring?" he joked.

Skelly showed off his wonderfully dry wit on other occasions as well. After critiquing the United States' somewhat rigged missile defense test last summer, he quipped that he "wasn't sure" if Saddam Hussein would place homing beacons that the US could track in his missiles, "but who knows?"

He concluded by saying that for the remainder of his stay in office, Bush will likely encounter increasing resentment among his European friends and allies. He quoted one Swedish diplomat who once said that America constituted "the only rogue state," a term Washington policymakers often attach to politically isolated nations like Iran.

Dr. Skelly teaches "Nuclear weapons and American society" here at Juniata this semester, and is joined at the college by his daughter, Genevieve who is starting as a freshman. He is a faculty member and administrator at several European institutions, and has lectured to audiences in the US, China, Russia, Japan, and throughout Europe.

The Baker Institute will pick up the lecture series with two more events this month: David Bell's "Sustainability and the Implications for Peace and Security" on September 24th, and Patricia Lewis' "The Travesty of Arms Control" on September 27th. These two lecturers have a tough mark to beat. After all, not only is it difficult to follow a great opening act, but it is even harder to take on an Irishman.

Students Explore Clubs at LobsterFest

Erin Percinsky
Staff Writer

On Saturday September 1, 2001, Juniata College held its first all-campus event for the year: the thirteenth annual Lobsterfest. A Juniata tradition since 1988, the Lobsterfest gives students a chance to socialize, learn about the different clubs that they can become involved in on campus, and have one of the best meals of the school year.

45 Clubs were represented at Lobsterfest. Some of these clubs included Model UN, AWOL, Campus Ministry, Habitat for Humanity, The Juniatian, and many other active organizations. Students had the opportunity to learn about the clubs that they would be interested in joining. For anyone who did not attend Lobsterfest or didn't find a club that looked interesting to them, there are over 75 clubs and organizations on campus, many of which were not represented at Lobsterfest. Information can be found by one's e-mail and looking for fliers about other school-sponsored. Many students often say that becoming involved in a club, sport, or activity is a great way to meet new people and impact the Juniata community.

Sodexho food service served approximately 673 people a delicious dinner, which included a choice of lobster, steak, or chicken, macaroni salad, vegetables, corn on the cob, cookies, and soda. The Juniata Activities Board put the event together, and power 92 FM provided the music.

K.J. Holmes Returns to Juniata

Paul Blore
Staff Writer

On the weekend of September 2nd, K.J. Holmes, an internationally recognized teacher of Contact Improvisation invited Juniata students to participate in four workshops held in Oller Hall.

Contact Improvisation is nearly impossible to describe to someone who has not previously experienced it. Essentially, it is a movement form that explores the sense of touch. Participants interact with one another, improvising various ways to move. They learn how to share weight, becoming aware of their own weight and gravity and how it can be used.

Holmes emphasized the aspect of devolving: reacquainting oneself with the earlier movements that one enjoyed and explored as an infant. As a person grows, he or she learns how to stand and behave in "the vertical world," and Contact Improvisation is about "unlearning" that. A person should be able to understand "the pleasure of having a body, of moving in ways that are not the usual ways of moving... that they can have a form of communication that is without words," says Holmes. Also, by playing with trust and risk, she says, a person is able to gain a lot of confidence in themselves and others. Another aspect that many students spoke of was a feeling of freedom when engaging in the form, of being able to "let go" and be uninhibited.

This is the fourth year in a row K.J. Holmes has instructed workshops at Juniata, and last spring she created a movement performance for the Celebration of Juniata Women. For 20 years, she has taught all over the U.S. and world, including Mexico and China, sometimes teaching for just a day and other times for as long as a month.

Freshmen Storm the Arch

Michael Crake
Staff Writer

The bloody tradtion of arch storming brings another class of would be freshman warriors to the Cloister lawn hoping to achieve life long fame. The long time tradition is upheld by the rugby teams who guard the arch from any "stormers." Students who have stormed before are allowed to defend. The challenge of this contest is not the men who will give you a good solid knock, but the women's rugby team who are waiting at the steps. By any means necessary, freshman and other stormers will feel pain throughout their next day of classes. The women's rugby team will gauge, claw, and pummel anyone at the doorstep of nirvana. Nirvana for stormers is any room on campus.

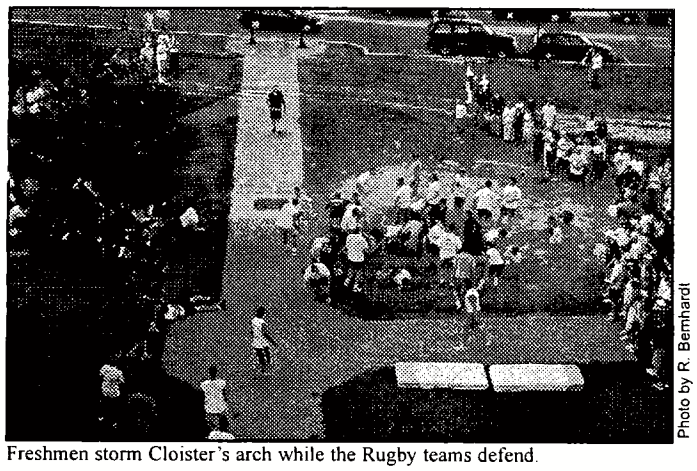

Photo by R. Bernhardt

Freshmen storm Cloister's arch while the Rugby teams defend.

The women's rugby team is led by Yvette Carrano, who has both defended and stormed. She says she prefers defending because it is a rush. She compared this rush to a victorious sporting match.

Some defenders prefer the ultra violence arena atmosphere. Dan Sahd, super senior, said "you get someone else's blood on you instead of your own." Sahd also believes freshman have a better chance of divine intervention than making it through the Cloister gauntlet.

The men's team was the first line the stormers saw as they ran to the arch. The rugby team, wearing their red and black uniforms, stood beside former stormers such as Caleb Lamont, Nathan Sobel, Matt Minichbach, and Chris Deats. The rugby team led by Jesse Ault, Dan Figueroa and Ryan Silvis, produced a state of fear in every stormer. The undersized band of stormers didn't have a chance against the colossal strength of the defenders. This did not deter them for trying. Mattresses were laid out for safety, yet the defenders were tossing their prey on the soft square pillows. If they were lucky, they were dragged from the brick walkway before being thrown to the ground. Blood stained the shirts of both sides. Rugby player Jake Dickerson received stitches above his eye. Some freshmen's heads were jarred with concussions, others noses bled red over the grass. After ten runs, the rugby teams, as well as the other defenders, had won another decisive victory over the freshman who were led by the fearless Lee Cain, an upperclassmen. Lee with his unhindered confidence was a nuisance for the defenders. He created a diversion with his size, while other stormers saw a brief opening. This opening was closed by the sheer mass of defenders.

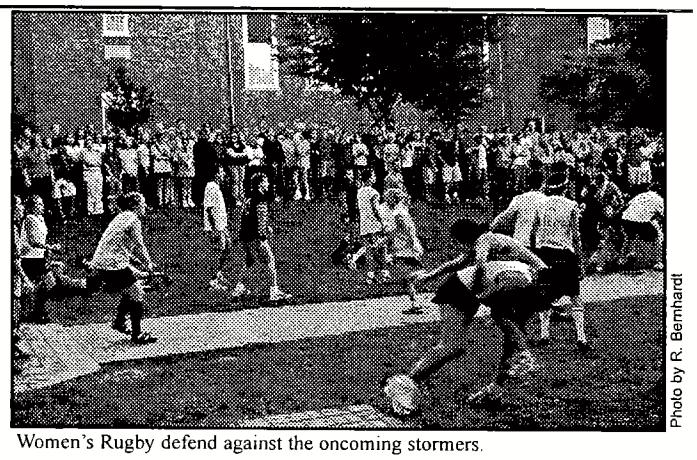

Photo by R. Bernhardt

Women's Rugby defend against the oncoming stormers.

The defenders at the end of the contest gave each of the stormers a vulgar nickname. This nickname will live on with them, as will the tradition of storming of the arch. This gladiator atmosphere continues to bring new faces to the coliseum know as Cloister.

JC Theater: From Movement to Musicals

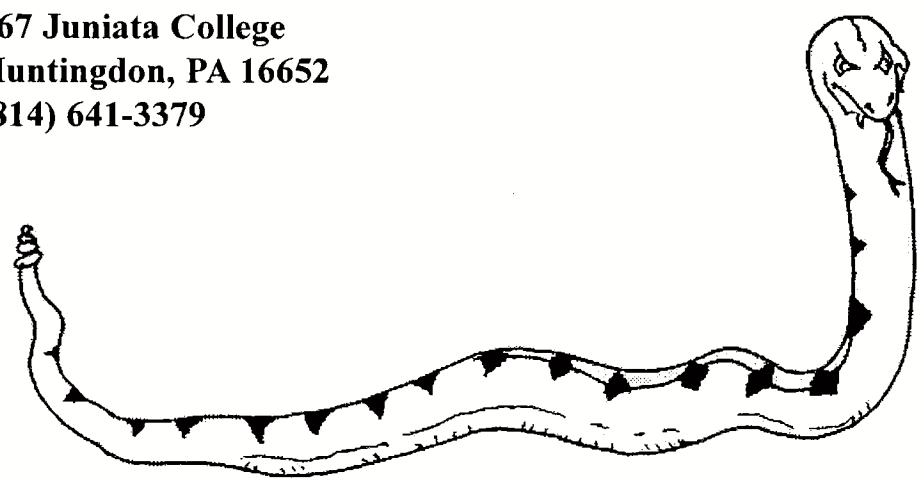
Raina Miller
Staff Writer

Excitement is in the air for Juniata College's Theater activities this fall. This season, Juniata will present a range of theatrical events from Movement plays to Musicals.

"Body of Mystery," directed by professor Andrew Belser, is a movement piece that looks at stories from the Old Testament. However, despite what one might think, this is not a "Christian" play. In fact, when asked about the production, the first thing Prof. Belser said was "It is not what it would seem to be." He made it very clear that "Body of Mystery" is not intended to preach to the audience, but rather to make the stories themselves more accessible.

The play is somewhat based on the book Body of Myth, by J. Nigro Sansonese, which suggests the mythology did not originate from the symbolic, but rather began from bodily experience. "I believe," says Belser "that we have gotten away from this [bodily experience], and this is a way for us to get back to that." Auditions were held Thursday the 6th, and a lucky few were cast. The show is scheduled to run from Oct. 25-27.

On the technical end, Oller Hall Auditorium is abuzz with the addition of John Teacher, Oller's official Technical Director. John , the RD of Sunderland, is a great asset to Juniata College, having already outlined an impressive training program for this year's student crew. This is designed to help anyone on the crew to learn skills relating to all aspects of Theater. Teacher's enthusiasm will surely start off this year's season with pizzazz.



In addition to having John Teacher, Juniata is also hiring Craig Young, a professional lighting designer, to design stage lighting for "Body of Mystery." Young has designed lights for many other Juniata productions including last fall's production of Ionesco's "Exit The King."

Last but not least, Juniata's Musical Theater Club will be performing a production of "Snoopy" the musical, November 16-18. If you are interested in being a part of the Musical Theater Club, contact Jaime Schwartz.

Cast Lists

Body of Mystery	Snoopy
Paul Blore	David Sutton - Snoopy
Megan Brown	Paul Vranesic - Charlie Brown

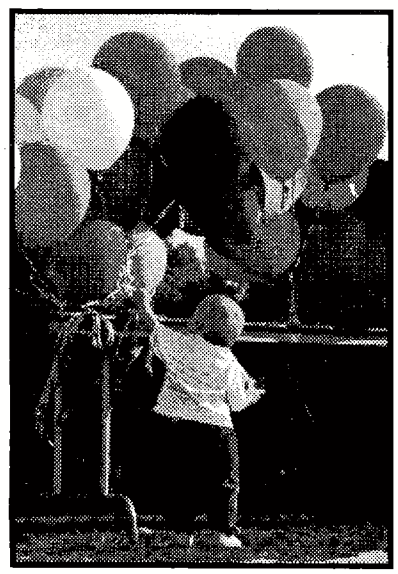
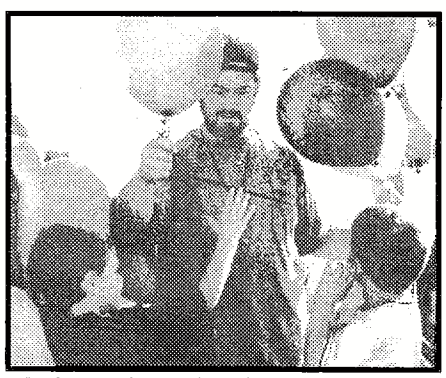
Day of the Children Celebrated with Balloons for Peace



Erin Brunner
Staff Writer

The Peace Chapel, known for it's serene nature and peaceful ambience, was home to a celebration of peace early Wednesday evening. Sponsored by the Baker Institute for Peace and Conflict Studies and the Bahai Club, Balloons for Peace was a festive reminder that all cultures can coexist happily.

Every year, the Baker Institute for Peace and Conflict Studies hosts an event for the International Week of Peace, it just so happened this year that the day the Institute decided to hold it fell on the United Nations Day of the Children. The Baker Institute decided to emphasize children this year by having activities geared toward young people. It was the first time they have emphasized children for this event, but the consensus was that "Balloons for Peace" was a huge success.



In order to more involve the children, Andy Murray sang traditional Christian children songs, adding a small twist to some of them to incorporate other religions. "Jesus Loves the Little Children" was altered to fit in Moses and Sidharta and a few International students were asked to sing songs from their culture, which included Egyptian and Korean.

Balloons and refreshments were also a huge part of the Peace event. The entire purpose of the event was to raise awareness of other cultures for children and adults alike. As the children danced, sang, and ate chicken noodle soup, it was apparent that the culture difference was no matter to any of them. Children adorned their balloons with peace signs, and wishes of harmony for the world. While stores all around us put up signs for God to Bless America, the children asked God to bless us all.

Balloons were on hand for all at the Peace Chapel.(Photo by: E. Brunner)

When asked if the success of the event was due to the terrorism the week before, Andy Murray replied that he thought they "probably would have had more [people] if [the terrorist act of September 11] wouldn't have happened because there were so many other peace events happening lately." Murray said that he wanted to have the children "sing songs from the Arabic background so the children would know that children of all cultures were okay."

Juniata Junior Karl Justice hands out balloons. (Photo by: E. Brunner)

A handful of Juniata students were present from all different backgrounds, proving that different culture is not a roadblock, but simply a stepping-stone to peace. One student voiced his regret of the lack of students when he stated that he "thought more people would be there because this event integrates many religions."

Murray stated the best part of the day was "seeing everyone just talking, playing, and eating together." The children thought the balloons were the best part of the event. To some, it wouldn't seem that the younger children grasp the concept of "Balloons for Peace", but as Kara Laskowski put it in reference to her small son, she "thinks he understands, he still gets something out of it."

As the event began to disperse, and balloons of all different colors went home with children of all different backgrounds, one can't help but wish that balloons and chicken noodle soup were all it took to achieve peace in this world.

Planning for the Future with a New Field Station

Seung-Yul Jeong
Staff Writer

A short while ago, students, faculty members, and visitors gathered at the Raystown Field Station for their annual Open House. In cooperation with the U.S. Army Corps of Engineers, the field station is used for research, maple sugaring operation, and a high school outreach program. This year, a new station was unveiled at another location. Allan Popovich, who was in charge of design for the new station, demonstrated new facilities, such as a housing, a dining hall, and a lab classroom. The new dining hall will be a multi-purpose facility, equipped with 100 tables. The newer field station will be built under the condition of non-interference with the surrounding environment. In order to ensure this goal, Leadership in Environment &Energy Design (LEED) will inspect the following categories--site, water, energy, material, air quality, and innovation of design. Mr. Popovich mentioned, "We have had several categories approved already, such as the light pollution system, building materials, recycling lab and kitchen equipment." However, building a new station with the LEED certification may require a larger budget than the previous estimate of 1.25 million dollars.

Last year, Juniata Sapsuckers displayed their talents in the maple sugaring operation. Though maple syrup and hands were both frozen, they prepared the sweet syrup for volunteers and the Juniata community. Nick Myers, Co-president of the Juniata Sapsuckers, said, "Come out and help sugaring, even if it is once-it's easy."

Some students at the Open House presented a variety of research projects on a number of topics, such as: Fence Lizards, artificial habitat, owls, turtles, and water quality monitoring. After the new field station is completed, Juniata College will offer new courses for their undergraduate program, including both science and non-science classes. "Of all the projects this campus is doing, other schools can do them, except build a field station on a large lake," stated director of the Raystown Field Station, Chuck Yeon.

A Stand For Freedom

Justin P. Miller
Co-Editor in Chief

In a move that may well cost her re-election, Representative Barbara Lee (D-CA) cast the lone dissenting vote on S.J.RES. 23 authorizing the use of military force and giving the President a free hand to attack suspected terrorists. Rep. Lee made her case very clear on the floor of the House on September 15th for what she called her "vote of conscience."

She has supported other resolutions, including condemnation of the terrorist attacks, encouraging Americans to fly the flag, expediting benefit payments to families of public safety officers killed or injured in the attacks, and the $40 billion in emergency funding for increased public safety, anti-terrorism activities, disaster recovery efforts, and assistance for the victims.

Remembering the words of the dean of the National Cathedral during the prayer service for the victims, that "As we act, let us not become the evil that we deplore," Rep. Lee voted to make sure Congress continues to have the final say on US military actions around the world. Her vote was not, as some have suggested, a vote against the President. Nor was it a vote in favor of the international criminals who committed those heinous crimes against humanity on September 11. There is nothing un-American about voicing concerns. I will go so far as to write that every American has an obligation to question those among our leaders who would jump to a military solution before all of the facts are in and before we have even considered alternatives to violent retribution.

One of the essential elements of our Republic is the idea of checks and balances. What congress has done is nothing short of shirking its Constitutional responsibility. S.J.RES 23 authorizes the President to use "all necessary and appropriate force." It goes on to free the President from his obligation to report back to congress within 60 days on the progress of any initiated military action.

Whether military action will prevent further acts of terrorism against the United States is questionable at best. It is the privilege, obligation and responsibility, to talk about when, how and where we go to war. In a conflict that promises to be as long and drawn out as this one, with ill-defined goals, outcomes and objectives, Congressional oversight is more vital than ever if the American people are to continue to support this so-called "new war." Representative Lee has taken a stand for that which so many have died to defend. She has fulfilled her obligation to ask questions before endorsing action. What are the rest of us waiting for?

It's Our Security, Stupid

Ryan Miller
Politics Editor

Following the attacks on the World Trade Center and the Pentagon, the Bush administration sent an anti-terrorism package to Congress last week designed to solidify the law enforcement front in America's new war. Among the legislation's provisions are long overdue measures to increase the government's domestic surveillance capacity. Democrat and Republican legislators alike have recognized the necessity of these requests, noting that existing intelligence gathering laws are obsolete.

Unfortunately, a bizarre combination of left and right wing interest groups has taken issue with the administration's proposals. But such reforms are badly needed. Why? Because when it comes to fighting a war against terrorism, information, not military might, brings victory.

US intelligence monitors terrorists abroad, but effective surveillance within America itself is also needed. Indeed, the hijackers and their accomplices are believed to have spent months preparing on US soil. While it is impossible to know if expanding law enforcement's investigative powers would have exposed the terrorists' plans in time to stop the attacks, sensible measures can still be taken to help prevent future acts of violence.

For one, restrictions on surveillance should be allowed to catch up with the digital age by granting the FBI the same authority to monitor suspects' e-mail as applies to phone conversations. In some cases, all that is needed is to plug loopholes in existing restrictions. For example, under current US law, courts authorize wiretapping for particular phone lines rather than particular individuals, which is somewhat less than useful when suspects have access to more than one telephone.

Although certain groups may assert that such changes constitute violations of privacy, polls indicate that about two-thirds of Americans are willing to give up some of their liberties to improve their common security. Regular, law-abiding citizens will see few changes in their daily routines, and they should welcome, not fear stronger law enforcement.

Your Views On...

Terrorism and the September 11th attack

"Are we any better then the enemy who came over here and tore our country apart if we turn around and do the same to them? Yes, I understand something has to be done, but do we want to be responsible for the next world war?...I believe violence is never the answer. I will respect whatever decision President Bush makes, but we are one nation under God, let Him fight our battles for us. Justice will be done in the end." - **Corrine E. Repaci**

"I'm not really a pro-war person, but I do agree with Bush's response. If America just turns the other cheek, the way we have after other terrorist attacks, we'll just look cowardly, and will all be living in fear. What would deter other terrorists from striking? I would rather go to war than have to be scared every time someone I know goes to a big city or gets on a plane. The way the Taliban is covering for a man that has killed so many makes me sick. We need to send the message that you shouldn't mess with America unless you're looking to get screwed."- **Kate Ceonzo**

"To effectively combat terrorism, we as a country will have to use our minds more than our might. Declaring war on terrorism is like declaring war on racism. To combat racism, you can't just kill the racists and expect to solve the problem. To combat racism you need to understand what would cause someone to hate another person because of his or her race. Once you have established a cause, than you can address the issue of how to kill the roots of this cause before it sprouts into a noxious weed that will eventually spread its seed and infect even more people." - **Jeremy Weber**

"I want to write a whole editorial about my standpoint, which is for the us to kill the enemy after finding out who they are. I like the other 90 percent of America feels this way, but the majority of Juniata doesn't feel this way according to the e-mail I receive daily." - **Michael Crake**

"The first thing that the president Bush has to do is to consider the cause of the tragedy... It might be a good opportunity for the government to change its foreign policy. We should try to take this opportunity to understand the other nations, cultures and religions. I will end my opinion by my favorite quote: "How can there be peace without people understanding each other and how can this be if they don't know each other" by Lester B Pearson, Canada's 14th Prime Minister, 1957 Nobel Peace Prize."- **Satoshi Kimura**

"The perpetrators of these horrific acts have tried to knock us down and break us apart, yet they have united us. Patriotism and an outpouring of faith have flowed from actions that they hoped would create pandemonium. They have brought many into churches when they hoped to send many into hiding. They have miscalculated the reaction of the people of this mighty nation. We may grieve, and rightly so, but we will rise up and defend our freedom, our hopes and our dreams. God Bless America." - **Kristofer C. Youtz**

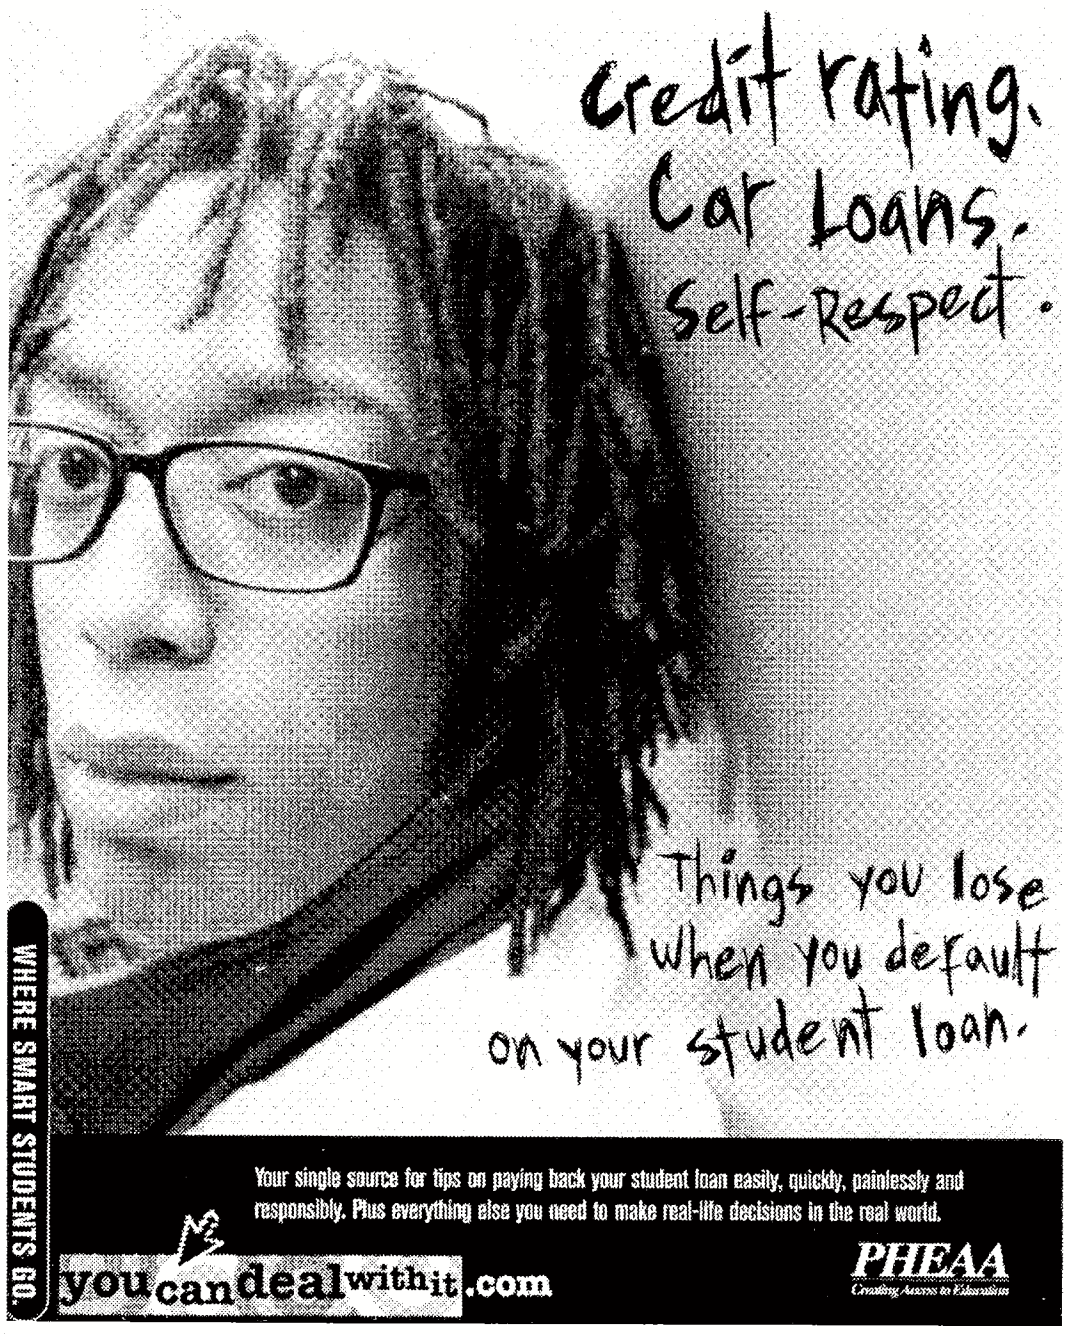
"As I watch the news each day, listening to the analysis of the terrorist attacks, I become more and more concerned over the rhetoric being thrown around. It seems our President has declared war on not just terrorism, but on evil itself. This strikes me as an almost silly concept: we can never completely eliminate evil without ourselves becoming evil. Likewise, we can never eliminate terrorists completely without becoming terrorists in the process." - **David Bowser**

"Here is what I think. Thousands of lives were lost in the attack, yeah, that is a tragedy. But why risk hundreds of thousands more in war? Also, everyone is doing all this donating of money and praying NOW.....what about before? Each day in this world at least 50,000 children die due to starvation etc....where were we then if we are the shining light of the world?" - **Yvette A. Carrano**

"The mere fact that American's were "surprised" by this event shows how far we've dug ourselves into lives of apathy. We thought nothing of the death and destruction that America's foreign policies brought to the rest of the world, and now that someone has brought it here, it's a "tragedy." - **Peter Susfal**

Bush's Foreign Policy Needs Retooling

Jon Hruska
Contributor



This is not the time to be criticizing our federal government and more importantly, our Chief Executive. We need to stand united as one nation, committed to the task of bringing justice to the merciless criminals who have brought misery and terror to the United States and her citizens. Our government and our nation have always displayed their resolve in times of national crisis.

However, when the smoke clears and the rubble has been cleaned up, some serious self-reflection needs to take place in the Bush administration, especially in the area of foreign policy. Since the day President Bush took office, he has not been exactly the warm, inviting, and cooperative replacement for President Clinton the world had hoped for.

Clinton involved the United States in the international landscape both economically and brought a sense of openness and concern to U.S. foreign policy; the latter being evident in his tireless efforts to negotiate a peace agreement between Israel and Palestine. Bush has pulled in the welcome mat and locked the door.

In the nine months that Bush has been in office, two prevalent examples of the United States' inward turn on foreign policy stand out. During negotiations for the Kyoto Protocol agreement this summer, Bush refused to sign the United States on because it would not be in our "national interest." Over 150 countries thought the agreement to be in their national interest. The United States, arguably "The" global leader, left. Bush also directed the U.S. delegation at the United Nations' Conference on Racism to withdraw instead of working more diligently towards a compromise.

The Bush administration is not to blame for the events of September 11th. No one is to blame but the criminals themselves. However, Bush needs to rethink his mind-numbing disregard for what the rest of the world thinks if the United States is to properly wage "America's New War."

Internships Prove Worthwhile for JC Students

Beth Skinner
Staff Writer

We all know that having a good internship is very important when looking for that first job or applying to grad school, but it's hard to know what's out there. Persistence and flexibility are valuable for finding a rewarding internship. Every summer many Juniata students have internships, which can be used to get a transcript notation through the career services office. I asked five students about their internship experiences during this summer. Their experiences show a broad range of the options that are out there.

Megan McElroy found an internship through her dad's company: Hughes Network Systems. The company produces satellites. In this case the internship program was open only to children of employees, but many companies have similar opportunities that only employees would know about. Ask anyone you meet who works in your field of interest if they know of any opportunities where they work. Megan's program was full-time and paid. Megan worked in the industrial hygiene sector, that meant that she was responsible for making sure the company was following regulations for chemical disposal and work place safety. She also was responsible for revising the company's regulations by researching on the internet and making phone calls to check on government regulations. Since Megan is an environmental studies POE the internship fit in perfectly and gave her a view of the corporate world. She was treated as a regular assistant to her boss and had plenty of responsibilities.

Another student who found herself in charge at her internship was Suzy Gardner, a chemistry POE. She worked as an assistant chemist at Hawk Creek Laboratory. She mainly assisted the head chemist there, but when the head chemist quit near the end of the summer Suzy found herself doing most of the chemist's work. When the new chemist arrived she had to train her. Hawk Creek Lab takes raw chemicals and makes them into specific concentrations. They also manufacture test kits, such as water testing. The job was full-time and paid. She found out about the internship by just looking through her area's phone book for chemical labs and writing to them.

Another good place to start the internship search is on-line. David Sutton, a communications POE, found his internship at the National Aviary in Pittsburgh by looking for non-profit organizations in the Pittsburgh area on the internet. Non-profit organizations often offer good internship programs. In David's case it was unpaid, but it was part-time, so it was possible to get a paying job on the side. An advantage of unpaid internships is that they are usually less competitive. His internship was about half communications, and half biology. He had to learn how to handle and train the birds as well as giving presentations to the public. While he was interning David rented an apartment with 2 friends in Pittsburgh. There are lots of interns in big cities looking for roommates during the summer, so even if you don't know someone it's usually possible to find somewhere to live.

Ryan Miller interned in D.C. over the summer and lived in dorms at American University. He was an intern for Congressman Gilcrest. His job usually consisted of attending house meetings and taking notes for the staffers or giving tours to constituents who asked the congressmen for a tour in advance. The internship program at Congress includes a lecture series with several prestigious speakers and interns are often invited to receptions. Ryan was studying abroad last year, so he couldn't go through the usual congressional intern application process. Instead he contacted the congressman's office directly. Last summer he worked at his campaign office, which may have helped him to get the position. There is also a preference for interns from the representative's own constituency.

Another way to solve the problem of finding an internship after you have been abroad is to find one where you are studying. Cynthia Cato, an Art History and Spanish POE, went on Juniata's summer program to Orizaba, Mexico. She studied at the school for four weeks and then interned for six at the Museo de Arte del Estado. Before she left one of her professors suggested that she might work at the Orizaba Art Museum. The international program office in Orizaba helped her to get the internship. She translated their materials into English and gave guided tours in English and Spanish. The art museum does have occasional interns, but not a regular program. The opportunity was unpaid, but very good experience and well worth it.

There are lots of opportunities out there, but they might in places or through people you wouldn't expect. Start looking early and be persistent.

Students Explore Study Abroad Opportunities

Heidi Neuhauser
Advertising Manager

Have you ever wanted to learn about another culture? Do you want to learn another language? Do you want to challenge yourself? If so, studying abroad is a perfect opportunity for you! Over twenty-four Study Abroad programs are offered in the summer, for a semester, or for a year. In the 2000-2001 school year, 104 Juniata students studied abroad. Simply put by Jarmila Polte, "even though we are in 'Cow Country USA' you can still become a citizen of the world."

First off, it is important to note that despite current events, this year's Juniata students who are studying abroad have departed and have arrived safely, and are adjusting to their lives in other countries.

As I walked into the Study Abroad Fair on Thursday September 20, I was amazed. I saw large numbers of people in attendance, heard someone announcing winners of t-shirts and other prizes, read information about many countries, and was persuaded by many students to go to the country they represented. At once, the festive and welcoming atmosphere was noticeable, from music being played to pictures and photo albums being displayed. Students representing the countries they studied in tried to attract as many interested people as possible to share their stories with. One of the most obvious was senior Lindsay Briggs, who studied in China for a year, was waving China's flag to attract interested students.

Reactions of students to the fair were very common: interested, eager to study in another country and overwhelmed with the many options available to them. Those in attendance appreciated the helpfulness of the students. Sophomore Sara Cain explained how they did a great job telling about the city, the cost of the program, and what the people are like. Sophomore Laurie Harden says that going to the study abroad fair "made [her] feel more confident about [her] decision to study in France."

Students who have already studied abroad describe to anyone interested about their many unique experiences. There are many reasons to study abroad, the most convincing of which I heard was that you experience things you would never have the opportunity to in the United States. Senior Sarah Barrett, who studied in the Czech Republic for ten months, tells how her experiences helped her to grow and mature. She describes her experience of being a foreigner, unique only to those who study abroad. Everyone who has gone abroad describes his or her experiences as being wonderful and life-changing.

Studying in another country is a once in a lifetime opportunity. If you have any interest whatsoever in studying abroad and expanding your horizons, contact Jarmila Polte.

Students Sign Petition for Peace

Ryan Miller
Politics Editor

When President Bush and the US Congress declared war on terrorism, Cynthia Cato '02, Megan Smith '02 and others in Juniata's Peace and Conflict Studies club were upset. "Where are all the protests?" they asked. Being frustrated with the lack of anti-war public demonstrations in Huntingdon, they decided that the time for talk had passed and that some sort of action was needed. In fact, they and other like-minded students on campus were so energized that they had intended to hold a huge protest in the area. "We were ready to storm the mall!," Cato told the Juniatian. However, after discussing their plans with PACS Professor Andy Murray, it was decided that a better idea would be to write a petition. With the help of Murray and German exchange student Felix Reifschneider, Cato drafted a "Petition for Peace," which the PACS club presented for signature at Baker Refectory on September 20th and 21st. Hundreds of JC students signed on. "I don't know what will come out of this," Cato said, "but I believe people should stand up for what they believe in."

The text of the declaration is as follows:

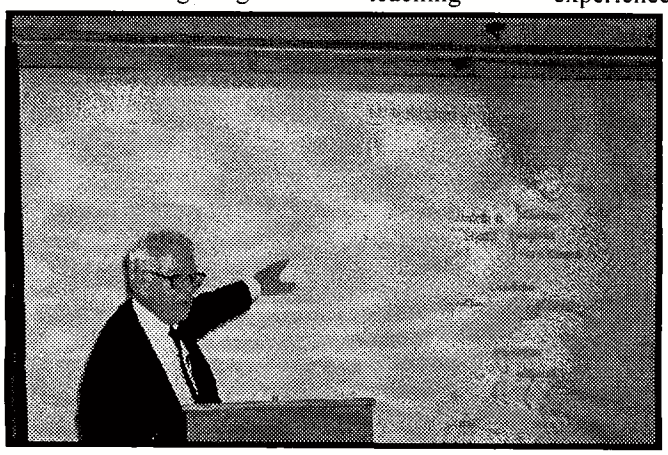
We, the undersigned citizens, understand the gravity of the situation that has come about as a result of the tragedies that occurred on September 11, 2001 involving the World Trade Center and the Pentagon.

We condemn these acts of terrorism, yet responding with violence only serves to create more violence and causes future generations to live in fear and mistrust.

We believe that it is necessary to punish these brutal terrorist attacks, but we also believe that the best way to respond is with regard to the values of respect and human rights, and find a punishment according to these principles.

Retired Professor Speaks on Pakistan and the Taliban

Justin P. Miller
Co-Editor in Chief



Dr. Craig Baxter, Professor Emeritus in Political Science, presented a talk entitled "Pakistan and the Taliban" at 2:30 p.m. September 19 in Alumni Hall in the Brumbaugh Science Center. The event was free and open to the public and drew the attention of local and regional media.

His talk centered on the history of Afghanistan and the repeated attempts-and failures-of Western powers to conquer the region and put their own governments in place. The point that the United States does not know what it is getting into was made and illustrated repeatedly.

Baxter has published eleven books on the history and politics of Bangladesh, India, and Pakistan, including the standard text book on South Asian politics. Among his overseas Foreign Service posts were Bombay and New Delhi, India; Lahore, Pakistan; Accra, Ghana; and Dhaka, Bangladesh. In the United States, he was senior political officer for Pakistan and Afghanistan, and officer in charge of international scientific relations with the Near East, South Asia, and Africa.

With nearly 30 years in the Foreign Service and teaching experience, Professor Baxter came to Juniata in 1981 as visiting professor of political science and diplomat-in-residence, and joined the permanent faculty as professor of politics and history in 1982. He became chairman of the Department of Political Science in 1991.

Baxter served in the United States Army, 1952-54. After completing a master's degree in political science and the course work for a doctorate in history, he entered the Foreign Service of the United States. He earned his Ph.D. while in the Foreign Service in 1967.

Dr. Baxter illustrates his point with a map. (Photo by: R. Bernhardt)

Hanna-Barbera is a God

Aaron Himmler
Contributor

Hanna-Barbera is a god. For those that are unclear about the physical nature of Hanna-Barbera he is actually many people fused together into a being with the power of a million men and the intelligence of six or seven computers from the future that come back in time to destroy humanity. I was going to write an article critiquing the Adult Swim on Cartoon Network on Sunday nights from 10 PM to 1 AM, but there is no way a mortal can stand in the presence of such shows as: Space Ghost Coast to Coast, The Brak Show, Birdman - Attorney at Law, and Sea Lab 2021 and be able to criticize Hanna. Hanna should be raised to the level of Greek and Roman gods and celebrations in his name should lead to orgies and vomitoriums. Vikings should burn their dead in a salute to him.

I should probably tell you what the cartoons are about and what they accomplish in a plot oriented world. However, they are only understood by the gods and us mere mortals are unworthy of describing their actions in the form of script. The only words I can give are to give into the power and piety of channel 38 when they give us the Adult Swim. There may be some pain from being unable to take it all in but if you are pure at heart the Hanna will take care of you and open your heart to laughter and the many thousands of weird creatures he created in the sixties and seventies when they just expected all the kids to be smoking large amounts of pot.

Juniata Professor Leads Forum on Terrorism

Jon Hruska
Staff Writer

On Tuesday, September 17th, Dr. Jack Barlow, Associate Professor of Politics on College Hill, led members of the campus community in a political forum entitled "Terrorism and Constitutionalism." JC Model UN & World Affairs Association sponsored the discussion.

The event was meant to foster open discussion on the tragic events of September 11th in New York, Washington, and southwestern Pennsylvania and how the American government's response to the situation and possible future actions both correspond to the US Constitution.

Dr. Barlow began the evening by providing a lecture on the history of the federal government's responses to terrorism. Historically, he stated, in times of national crisis or security threats, the American people and Congress seem more willing to extend numerous and far-reaching powers to the President. These powers are not always in line with what the Constitution says the executive's powers are.

According to Dr. Barlow, the most prevalent question that the United States must ask itself is whether its actions can conform to its commitment to the Rule of Law without being "the prisoner of its own actions." Certain procedures for threatening situations are already in place, but the Chief Executive can act "swiftly and secretly," especially with the power of public opinion.

Barlow noted that there are four key factors that keep the U.S. government restrained in times of hostility: respect for freedom and equality; respect for dignified treatment of humanity; bias against a police state; and delegation of powers to different branches of government. These four factors help to curb encroachments on the civil liberties of our own people as well, such as possible jail detainment of a person simply because they may fit a certain profile (in this case a follower of the Muslim faith or a person of Arabic descent).

"The Constitution does not require us to act wisely, but our commitment to the Rule of Law will sustain us," Dr. Barlow explained. "The U.S. must ultimately answer to world opinion and we must have knowledge of that opinion (to determine proper action)."

After Dr. Barlow concluded his lecture, those in attendance were invited to share their ideas, thoughts, and questions. Luke Widich, a Junior, brought up the possibility of increased investigative efforts on Arab-Americans. Dr. Barlow offered that, "in the short run," he could definitely see an increase in the profiling of people of Middle Eastern descent, which he said seems to be a common reaction after a crisis.

Another student stated that the media has constantly referred to the term "War," something that has had a profound influence on public opinion. Jesse Rhodes, a Junior, asked Dr. Barlow if he thought that the Bush administration would be more involved in shaping the direction of action for Congress and the nation. Barlow replied that he believes Congress will extend more courtesy and consideration to the President after recent developments. The overall consensus of the opinions shared was that the US needs to be very careful and thorough in proceeding with and explaining its actions.

Dr. Barlow also said that he hoped that it would be possible to arrange further opportunities for the campus community to discuss events resulting from this tragedy as they develop.

Humor in its Place

Matt Wolfe
Columnist

The names in the following piece have been changed to protect the innocent and the not so innocent.

A national tragedy, the most horrific event to happen in my lifetime, occurred to the shock of a nation. Lives lost, buildings destroyed, lives interrupted and everyone in America touched by the events that unfolded. So why is it that some had the apparent indecency to laugh at the situation?

How can one laugh at such a terrible atrocity? What is the brain chemistry that allows this to happen? Do people do this because they have no sympathy? Or is it to mask a hurting or a feeling that cannot be allowed to the surface? I realize that these are hypothetical questions and I don't really expect an answer to any of them, but they weigh heavily on my mind.

An example of what prompted this column: Kenny, Stan, Kyle and Eric were sitting around watching CNN for what seemed like the fiftieth hour, glued to the flickering images and riveting commentary. An interview with a military guy had just begun. He was introduced as the "rear admiral." At any other time, that would be hysterical. The four boys sat and laughed at that name as if it were any normal time. Stan immediately felt bad and stopped laughing. How could these nice, respectful guys do such a thing?

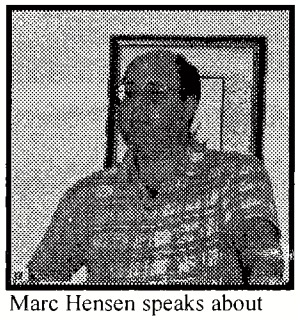
Am I worried about nothing? Perhaps a person needs to laugh in spite of such tragedy as a safety measure in their brain. Too much sadness and hurtful thoughts may be harmful to the psyche, so this is the brain's way of dealing and coping with the situation. I have no idea whether this is possible or not, but to a non-science major, it seems plausible.

I think the worst part about this tragedy is that many of us here at school will continue on as if little or nothing has happened. Many argue that a break in routine will constitute a win for the terrorists. I think that is a wimpy way out of a tough situation. By not confronting the situation and dealing with it, simply by continuing in a normal everyday routine, that appears to me as a sign of cowardliness. Taking the time to deal with a tough situation, that is the real strength.

Perhaps taken in that light, laughing is not the worst thing that one could do.

One final note: As readers of my past column can attest to, usually I write a funny, humorous column that wins lots of awards (awards not verified). At least, I attempt to write something funny, people may disagree on that point. Anyway, I wasn't in a particularly funny mood this time, understandably so. Maybe next time.

Reflecting on Race Unity



Genevieve Skelly
Staff Writer

The talk given by Marc Hensen on Wednesday, September 5, in the Faculty Lounge was an in-depth look at the beliefs and actions of the Bahai faith with regard to the topic of race unity in the United States. Marc Hensen is a native of Smithfield, II who is currently working as a social worker at a foster care center in Odilly.

Emphasis was placed on the Bahai'is "fundamental belief in the wonders of the human family" and the importance of tearing down the walls of separation man has erected historically and replacing them with unifying factors.

The issue of animosity and racism between black and white races in the U.S. was described as the "most challenging and vital issue" with the idea that other races surely follow and that addressing issues of racism and segregation has great implications for conflicts across the globe.

Hensen touched on topics such as slavery 135 years ago, and noted that the mistreatment of African Americans is possibly comparable in history only to that of Native Americans. The importance of building trust and forgiveness was highlighted, as was the importance of non-seclusion, or the tendency for people to 'hibernate' within their own racial communities. He preferred the analogy 'salad bowl' rather than 'melting pot' of America, arguing on behalf of the importance of truly recognizing, appreciating and enjoying racial and cultural differences among people. Hensen was also adamant in promoting inter-racial friendships, activities, dinner parties, conversation and laughter, asking the question, does fellowship lead to dialogue or dialogue lead to fellowship?

Marc Hensen speaks about race unity. (Photo by: G. Skelly)

Friday Night Live Inaugurated with Comedian

Lauren Nimal
Staff Writer

Friday, August 30 was the first Friday Night Live of the 2001-2001 school year. Friday Night Live is a series of events that the Juniata Activities Board brings to campus during the semester. At ten o'clock, over 350 students filled the cafeteria waiting for the show to start. The comedian, Tim Young, was a definite success, which would be expected from someone who has performed at over 150 colleges around the country. Young kept the audience involved by talking to people from the audience during his performance. He joked about everything from Huntingdon to Geo Metros to the Discovery Channel.

In addition to his college performances, Young has been featured on MTV's "The Jim Breuer Show" and "Apartment 2F," as well as headlining "Friday Night" on NBC. For three straight years, he has been a part of New York City's Toyota Comedy Festival and The Montreal "Just for Laughs" Comedy Festival. Tim Young's performance was a great kick off to the year. There are more shows to come throughout the year.

Juniata Softball Changes Coaches

Rebecca Hubsher
Staff Writer

The Juniata softball program is rolling, and already some major changes have been made. Kathy Ziga regretfully had to step down from her position as head coach because of a conflict with her graduate work at Penn State University. It was to be her third year as head coach, so it was naturally a difficult decision because she had only just begun. John Houck will be taking over for her. As the tennis coach, Houck already has a lot on his plate, but with the help of assistant coach Caroline Gillich, the Juniata Screaming Eagles will be ready for a new season. The team is made up of almost all returning players. There are only four freshman coming up this year, as opposed to last year's eight. This next season looks to be a promising one, and should prove to be a great leap in the right direction for Juniata Softball.

Sports Round-Up (Continued)

(Continued from page 8)

at his post. Juniata, which is ranked seventh in the most recent AVCA Division III Poll, wasted little time in disposing of host Widener. Sophomore opposite Danielle Hart (Central/Roaring Spring) led the Eagles with 10 kills, while senior outside hitter and Division III Player of the Year candidate Brandy Workinger (Dallastown/Dallastown) posted seven kills. Freshman setter Carli Dale (Cochranton/Cochranton) posted 13 digs and six aces. Sophomore setter/defensive specialist Melissa Berdine (Pine-Richland/Gibsonia) had 10 digs. Sophomore middle hitter Jill Davis (Worthington/Worthington, OH) added in a team-best three blocks. On Saturday, Juniata needed just one opportunity to send Bock off on "The Road to 1,000" after he picked up his 900th triumph on Wednesday evening. On Saturday night, the Eagles battled back from a 2-1 deficit to post a thrilling 3-2 win over visiting Division II Edinboro in the home opener for Juniata in 2001. The blue and gold walked away with a 30-25, 26-30, 30-32, 30-28, 15-10 victory over the Lady Scots. Hart led the Eagles with 25 kills, 20 digs, six blocks and three aces. Workinger posted 17 kills, 26 digs and one block. Sophomore outside hitter Johanna Holtan (Fargo North/Fargo, ND) tallied nine kills, 17 digs, four aces and three rejections, while junior middle hitter Niki Mueller (Bishop Guilfoyle/Altoona) ended the match with nine kills, a team-best eight blocks and five digs. Berdine had 23 digs, while Dale passed out 57 assists to go with 15 digs, five kills, three blocks and three aces.

WOMEN'S TENNIS (3-2, 2-2 MAC Commonwealth): Sept. 25 at Penn State-Altoona; Sept. 27 at Messiah; Sept. 29 at Elizabethtown. The Eagles split a pair of MAC Commonwealth League matches during the past week. On Wednesday, Juniata lost a heart-breaker at Lebanon Valley, 5-4. The third singles match lasted three sets and was the final outing to be completed on the day and it fell into the host Dutchmen hands after a tie-breaker. Senior Lisa Dumansky (Nutley/Nutley, NJ) posted a 7-5, 6-1 win at first singles, while junior Liz Osche (Acton-Boxborough/Acton, MA) won, 6-4, 6-2, at second singles. Dumansky and Osche recorded an 8-0 pro-set win at first doubles, while senior Bethany Eisemann (Ephrata/Ephrata) and freshman Teresa Ralicki (Biglerville/Gettysburg) earned an 8-3 win during their third doubles match. On Saturday, Juniata pasted Albright, 9-0 in league action. Dumansky won at first singles, 6-4, 6-0, and registered an 8-0 win at first singles with Osche. Osche was victorious during second singles play, 6-1, 6-2. Junior Jenny Thompson (Pittsford Mendon/Pittsford, NY) won at third singles, 6-1, 6-1 and recorded an 8-3 victory at second doubles with Eisemann. Freshman Libby Cooney (Forest Hills/South Fork) was triumphant at fourth singles, 6-0, 6-4, while classmate Steph Shaver (Central Cambria/Ebensburg) posted a 6-0, 6-2 win at fifth singles. Junior Alexina Thompson (Pittsford Mendon/Pittsford, NY) cruised to a 6-0, 6-1 win during sixth singles play. Shaver was paired with Ralicki at third doubles and the tandem turned in an 8-1 victory.

WOMEN'S SOCCER (4-4-1, 0-2 Commonwealth): Sept. 29 at Albright; Sept. 30, Pitt-Bradford. Juniata started a busy week of action with a 5-0 loss at York on Thursday. The Spartans owned a 1-0 lead at halftime. Freshman goalkeeper Kira Troutman (Line Mountain/Valley View) played the first half and made nine saves, while freshman net-minder Lindsey Treon (Hollidaysburg/Duncansville) posted 10 saves in the second stanza of play. On Saturday, the host Eagles battled back from a 2-0 deficit against Commonwealth Conference rival Moravian, but came out on the short end of a 3-2 count. Freshman forward Erin Harter (Penn Trafford/Trafford) got the Eagles on the board in the second half. Freshman forward Sarah Lester (Thomas Jefferson/Jefferson Hills) was credited with the assist on Juniata's first goal. Freshman forward Rebecca Shoaf (Madison/Madison, NJ) tied the game with an unassisted score with 11:45 left in regulation. The Greyhounds posted the eventual game-winner with 6:19 to go. Troutman went the distance in goal and made 10 saves. On Sunday, Juniata entertained Bridgewater (Va.) and the two squads ended the outing tied at 3-3 after two extra sessions of action. Freshman midfielder Janine Smeltz (Line Mountain/Herndon) tallied the first goal of the game and then Lester put the hosts up 2-0 with 6:15 to go in the opening period. Harter and freshman midfielder Kara Donoghue (Waynesboro/Waynesboro) each received an assist on Juniata's second score. Lester's second net-finder of the game, off assists from junior midfield/forward Rose Bender (Cambria Heights/Carrolltown) and senior back Amber Byers (Chambersburg/Chambersburg) gave the Eagles a 3-1 advantage. Treon played the entire game in goal and made nine stops.

WOMEN'S CROSS COUNTRY: Sept. 29 at Roanoke Invitational. Juniata made a trip to Messiah for an invitational on Saturday and placed sixth out of the 12 teams in attendance with 199 points. Messiah won the outing with 38 points. Messiah is the site of this year's Middle Atlantic Conference (MAC) championship in late October. The Eagles were paced by sophomore Stefanie Rynkewitz (Lewistown/Lewistown), who took 23rd in a field of 120 with a time of (21:42.9). Freshman Breanna Daum (Blue Mountain/Orwigsburg) was second for Juniata and 32nd overall (22:06.7), while junior Michele Palmer (Littlestown/Littlestown) placed 34th (22:14.3). Rounding out the top five for Juniata were sophomore Juliana Hillegass (Shanksville Stonycreek/Berlin) and sophomore Suzie Gardner (South Western/Hanover) and, who were 73rd (24:15.4) and 77th (24:27.5), respectively. The winning time of 19:53.5 was turned in by Gina Lucrezi of DeSales.

MEN'S CROSS COUNTRY: Sept. 29 at Roanoke Invitational. Juniata placed sixth out of 10 teams in attendance at the Messiah Invitational on Saturday. The Eagles posted 173 points, while Messiah took the team title with 41 markers. Freshman Justin Norris (Warren/Warren) led the blue and gold harriers at Messiah with a time of 29:16.2 to place 14th at an event that consisted of 107 participants. Freshman Will Cantara (West Branch/Allport) took 22nd for the Eagles and was clocked at 29:36.2, while freshman Jason Freeman (Thornton/Thornton, CO) placed 39th (30:48.7). Senior David Slat (Hollidaysburg/Hollidaysburg), who was 74th (32:51.4), and sophomore Jasen Lawrence (AuSable Valley/Upper Jay, NY), who was 77th (33:08.4), completed the scoring five for the Eagles. Ryan Gleason from Susquehanna won the race with a time of 27:33.4.

Juniata Celebrates Coach Bock's 900th and 1000th Volleyball Victories

Seung-Yul Jeong
Staff Writer

The Juniata College Woman's Volleyball Team's win over Division II Edinboro University secured Coach Larry Bock his place in Collegiate Volleyball history. A spirited crowd shouted with rejoice as Bock sat on the bench, looking a little tense; but, he was focused on his game. After the game and the celebration for the 900th win, he said with satisfaction and relief, "It was very special to win over Edinboro University, it is nice break after the W.T.C. incident." Bock has had many awards and recognitions throughout his coaching career.

He was recognized as the Division III National Coach of the Year in 1984, 1991 and 1993. Additionally, he was acknowledged as AVCA Regional Coach of the Year laurels in 1986, 1991, 1993, 1994 and 1995.

Recently, he collected that 900th win when Juniata won over Widener University. It is the 1000th overall volleyball win for Coach Bock. Also, he is the second NCAA women's volleyball coach to earn 900 wins (previously UCLA head coach Andy Banachowski won his 900th game as coach of their women's volleyball team). A proud graduate of Penn State's class of 1971, Bock is the director of athletics on College Hill along with his work as Juniata College Women's Volleyball Coach.

His past achievements include four NCAA second-place finishes, 20 consecutive conference championships and 226 straight conference victories. The Juniata women's volleyball program has reared 23 all-Americans and 18 first-team selections. Coach Bock said, "JC has terrific academics and thanks to people who play on the volleyball team: We have lots of good students who are also talented players."

The evening celebration of Coach Larry Bock's 900 wins included a big screen in the Memorial Stadium and many speakers give speeches, including Anne Bock, Larry's daughter, who is the proud graduate of the JC class of '98 and the former women's volleyball captain.

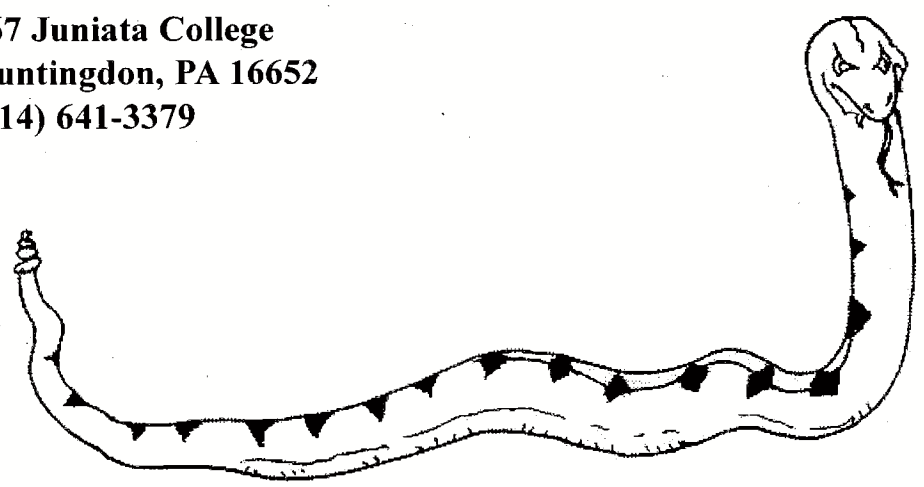
Juniata College President Thomas Kepple praised Coach Bock for his contributions to the college community and women's volleyball program. Juniata College Provost Jim Lakso delivered the faculty's praise of Larry's contribution to the community.

The Road to 1000 celebration for Coach Bock provided a break for everyone after the horrible events of September 11th.

Women's Volleyball Coach Larry Bock had his 900th win. (File Photo)

Sports Round-Up

FOOTBALL (1-2, 1-2 MAC): Sept. 29 at King's. Juniata slipped for the second time this season with a 34-20 loss at home to Wilkes in Middle Atlantic Conference (MAC) action on Saturday. The Eagles held a 6-3 lead after the first quarter thanks to a 75-yard touchdown run by sophomore running back Craig Moshier (Coudersport/Coudersport) with 2:44 remaining in the opening stanza. The Colonels came back to take a 10-6 lead at intermission and never trailed or had its lead tied for the remainder of the outing. Moshier added a 75-yard touchdown reception in the fourth quarter. He finished the day with nine carries for 77 yards and seven receptions for a team-best 108 yards. Senior wide receiver Lucas Kelleher (Bishop Guilfoyle/Altoona) hauled in seven passes for 42 yards and had a sparkling nine-yard touchdown catch with 8:05 to go in the game. Freshman quarterback Greg Troutman (Meyersdale/Meyersdale) was 27 of 54 in the game for 249 yards and two touchdowns. He was intercepted three times on the day. Senior wide receiver Andy Radomsky (West Branch/Morrisdale) had four catches for 35 yards, while junior wide out Nate Leach (Shade/Central City) posted four snags for 31 yards. Defensively, senior inside linebacker Josh Seiders (Wyomissing/Wyomissing Hills) paced Juniata in tackles for the third straight week with 15. Junior outside linebacker Matt Wharton (Cambria Heights/Dysart) tallied 10 stops and had a fumble recovery. Junior cornerback Paul Evans (Huntingdon/Huntingdon), junior defensive tackle Bill Bishop (Punxsutawney/Punxsutawney), junior defensive end Fred Taber (Calvert Hall College/Bel Air, MD) and junior cornerback Caleb Moses (Williamsport/Sharpsburg, MD) each had seven tackles. Taber had a sack, Evans had two pass breakups, an interception and a tackle for lost yardage and Bishop had a stop behind the line of scrimmage.



MEN'S SOCCER (1-5-2, 0-2 Commonwealth): Sept. 26 at Elizabethtown; Sept. 29 at Albright; Sept. 30, Pitt-Bradford. Juniata began the past seven-day stretch with an offensive display against visiting Marywood during an 8-0 win on Thursday. The Eagles were up, 5-0, at halftime. Senior midfield/forward Matt Bettting (Altoona/Altoona) scored three goals, while junior forward/midfield Noah Fredette (Weedsport/Weedsport, NY) posted a goal and an assist. Senior goalkeeper Chris Zimmerman (Westmont Hilltop/Johnstown), who had two saves, and freshman net-minder Erich Bluefield (Wakefield/Warrenton, VA), who also had two saves, split the shutout. On Saturday, Juniata lost at home to Commonwealth Conference foe Moravian, 4-1. The Greyhounds worked to a 3-0 lead before junior back/midfield Joel Abe (Archbishop Hoban/Akron, OH) took an assist from freshman midfielder Zachary Beckel (Hollidaysburg/Hollidaysburg) to get the Eagles on the board. Zimmerman made nine stops during the contest. On Sunday, Juniata dropped a 1-0, overtime decision to visiting Bridgewater (Va.). The visitors were able to score 3:53 into the first session of sudden victory. Zimmerman posted 12 saves.

FIELD HOCKEY (0-7, 0-1 Commonwealth): Sept. 25, Frostburg; Sept. 27 at Elizabethtown; Sept. 29, Widener. The Eagles suffered a pair of 3-0 setbacks to NCAA Division II foes this past week. On Tuesday, Juniata lost at sixth-ranked Indiana (Pa.), while freshman goalie Melonie Sappe' (Dallas/Shavertown) made six saves. On Thursday, Shippensburg won at Juniata. Sappe' faced 24 shots and made 13 saves for the blue and gold program.

WOMEN'S VOLLEYBALL (7-3, 1-0 Commonwealth): Sept. 25, Moravian; Sept. 28-29, ASICS Collegiate Invitational at Juniata. Head coach Larry Bock is one of the most recognized names in collegiate volleyball, and he solidified that fact yet again on Wednesday evening when he and the Eagle program posted win number 900 in the history of the sport with a 30-12, 30-24, 30-19 victory at Widener in Commonwealth Conference play. With the triumph, Bock, who is the only coach that Juniata has ever known in its 25 years of existence (1977-present), became just the second NCAA women's volleyball coach at any level to reach the plateau, as UCLA head coach Andy Banachowski posted his 900th women's volleyball victory on September 1st of this year with a 3-1 win over Kansas State. Bock owned a 900-153 mark at the time of the milestone. Banachowski, who is in his 35th year in charge of the Bruins, sits at 903-213, so the race to 1,000 is now officially on. In addition, the victory over Widener was the 1,000th overall volleyball win for Bock, who had a 100-91 record while in charge of the men's program for six seasons (1990-95). Only one other collegiate volleyball mentor has recorded 1,000 victories and that is UCLA men's head coach Al Scates, who currently owns a 1,019-167 record through 39 years

Wilson Fellow Al Young Visits Campus

Leah Dobrowolsky
Staff Writer

"Wilson Fellow-Al Young is ON!" This was the subject line of Professor James Tuten's e-mail on Mountain Day, Tuesday, October 2nd, assuring everyone that the lecture that would still take place. Those who experienced the Woodrow Wilson Fellow's lectures, readings, class discussions, and conversations throughout the week of October 1st could not have agreed more with Tuten's statement.

"Al Young is a true renaissance man," Professor Judy Katz told her Women and Literature class. "He has a vast knowledge and understanding in many different areas and yet he and his writing are real."

> "...Pursue your creative selves. This is the only hope for the planet."

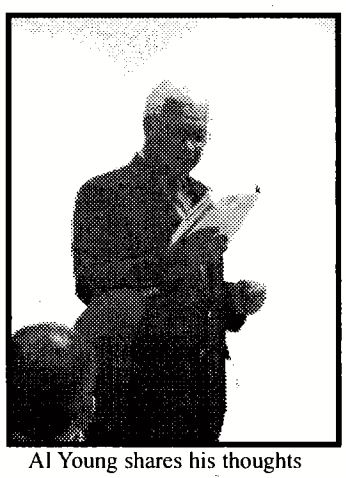
Young, a poet, jazz musician, novelist, editor, and screenwriter, came to Juniata to "invest in the future." He did so by sharing his numerous vocations and avocations

During his lecture on Tuesday, October 2nd, entitled "Creativity and Human Survival," Young presented a nexus of his interests. He used current events, recent readings, and personal observations and experiences throughout the world to highlight the importance of universal awareness and the interconnectedness of everything.

Young implored the younger members of the audience to reformulate the "unworkable thinking of the present" by using creativity, "a natural faculty of humanity."

"Nuclear warfare is irrational. Hunger is unnecessary. Pursue your creative selves," Young said. "This is the only hope for the planet."

In a discussion held in a Professional News and Feature Writing class on Thursday, Young instructed budding writers to pay attention to other people's styles.



"Don't steal the words, steal the way." he said. "And remember all of literature has yet to be written. All of life has yet to be lived."

Creativity and universal awareness were themes also emphasized in Young's poetry reading on Thursday afternoon, October 4th, in Good 402. Young read selections from his poetry collections entitled Heaven and Sounds of Dreams Remembered: Poems 1990-2000.

Professor Peter Goldstein, who teaches Poetry Writing and Contemporary Poetry, described Young's work as the "literate poetry of an educated writer.""Young's poetry is unique," Goldstein said, "because of his awareness of sound and the musical quality of words. His poetry demands to be read out loud."

Young shared his love of music with the college community by intermittently singing in his lectures and class discussions to emphasize certain points.

In his concluding lecture on Friday, October 5th, entitled "The Importance of Jazz," Young explained the significance of a common melody in jazz improvisation by do-wapping licks of George Gershwin's "I've Got Rhythm" in the style of Thelonious Monk and Louie Armstrong. The importance of jazz, "America's cultural treasure," was emphasized by a brief narrative of the history of jazz musicians and their music.

Al Young shares his thoughts with a packed house. (Photo by: R. Bernhardt)

"I'm in awe of the knowledge of that man," said Ken Sowers, a sophomore, after leaving one of Young's lectures. "I've been inspired to read as much as I can."

Collections of Young's work can be found in the college bookstore, campus library, and online. For more information on "that man" check out www.poets.org.

Tensions Emerge over New Policies for Student Clubs

Ryan R. Miller
Politics Editor

Student Government President Lavinia Kolarczyk tells the Juniatian that the Office of Campus Activities is overstepping its bounds this year and is encroaching upon the domain of student government by implementing new policies concerning student organizations.

Starting this year, clubs must obtain the signature of Dawn Scialabba, Director of Campus Activities, or one of her staff (in addition to that of one club officer) before making all purchase orders, reimbursements, cash advances, deposits, and other financial operations and activities. Traditionally, clubs only needed the signatures of two of their officers, or the faculty advisor in certain cases. Second, the Campus Activities Office will be responsible this year for providing clubs with their budget reports, previously a function of the student government treasurer.

Most club officers first became informed of the changes when they received a copy of the *Student Organization Handbook* in the mail, printed by the Office of Campus Activities. "We had no input in this handbook," said Kolarcyzk, who sees the new policies as the beginning of a threat to the independence of both clubs and student government. "Monitoring club financial activities like this is not [Scialabba's] office's business." Unlike Kolarczyk and the rest of student government, Scialabba is an administration employee, not directly elected by the student body.

Kolarczyk has declined to comply with a request by Student Dean Kris Clarkson to draft a letter to all club presidents and explain to them the changes herself. "I didn't do it because I don't agree with the policy," she stated. "The letter would have just made me look like I was going along with the administration." Kolarczyk emphasized that for the moment the concerns she is expressing are her own, since many student government members have not yet made up their minds on the matter.

Scialabba defends the new policies, saying that her office's signature is "not in any way an approval process," and that very little has changed. She told the Juniatian that the additional signatures were needed in order to alleviate the workload of the

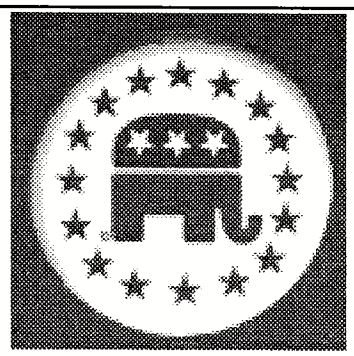
From the Left...

Jon Hruska
President, College Democrats

Last Saturday's anti-war protests in Washington, D.C. proved to be much milder than had been expected. Thankfully, only a few arrests and a few minor scuffles occurred. It was refreshing to see that the 7,000 or so protestors were practicing the peacefulness that they were preaching.



This had been the first national anti-war rally since the events of September 11th and, to say the least, those who turned out have been criticized as being "unpatriotic" and even worse, "un-American." In fact, anyone, not just active protestors, who has expressed any displeasure with the Bush administration's and Congress' decisions concerning military action, terrorism, and national security has been labeled these things.

This is a disturbing point in a country such as ours. In the First Amendment of our magnificent Constitution, our freedom of speech is expressly protected from encroachment. All would agree that this is an important guaranteed right for all Americans. We do not always agree with what others say, but we will stand up vigorously for their right to say it. This is one strength upon which our great democracy has been built.

Why then can prominent religious, military, and governmental leaders effortlessly brush off an obvious exercise of a truly American ideal as "un-American?" Most of this kind of behavior has been highly visible during the endless media coverage since the attacks. A serious concern with this is that, in a time of national uncertainty and fear, the American people look to their leadership for strength and direction. Our leaders should not be inciting the American people to slander and label other Americans who simply disagree with the majority opinion.

Disagree, argue, and debate with those whose opinions differ from you. We all have that right as Americans. However, do not look down upon them and ridicule them simply for exercising their right to disagree with you, for they are exercising their "American" rights just as much as you.

During the Weekend of September 29, protests took place in Washington, D.C. The Juniatian asked the campus "Left" and "Right" for their reactions.

...and from the Right

Jeff Spotts
College Republicans Member

What was planned to be an anti-IMF and World Bank protest quickly shifted to a peace demonstration, calling for a peaceful American response to the September 11 attacks. This was the case on the 28th of September, when Washington, D.C. police officers were called in riot gear to subdue rowdy protesters. Many of the "peaceful" people ended up in jail after continuing to violently call for peace, protest globalization, and some even blamed America for the September 11 attacks.

Cowards wore black masks and burned the American flag, a constitutional right, although detestable action. Likewise, those that protested globalization continued their streak of acting on unfounded impulses. Globalization strengthens the economies of the developed world and brings economic opportunities to undeveloped nations that could barely survive without the help of organizations such as the IMF or World Bank. Not all, but many of these protesters exhibited anti-American sentiments, in the name of peace.

Don't get me wrong, peace is an admirable aim and no one in his or her right mind wants war. But those who support peace in this instance are nothing less than supporters of violence and Bin Laden. The events of September 11 must be resolved with force. The United States tried peaceful negotiations through Pakistani intervention and that was unsuccessful. President Bush has done an outstanding job of making a judicious and well-thought decision in regards to what action should be taken, and it is indeed time for action to be taken.

Either bringing Bin Laden to trial or ending his life will perhaps lead to retaliation and further conflict, but this hateful man must be removed from our world. As Americans, we deserve to live safely. Where we have fought for independence, to restore the Union, and end Communism, we will fight to end terrorism.

"Politics" is Not a Dirty Word

Dr. Mary A. Hague
Assistant Professor of Politics

(The following comments were written before September 11th, in response to class discussion about stem cell research. I have added some comments to address the national and international challenges which we currently face.)

As President Bush and his staff explained his position on stem cell research, they were at great pains to note that deliberation on the issue was "above politics" and that Bush had not made "a political decision." From both parties, and from the most-highly-credentialed analysts to arm-chair spectators, politics (and particularly its adjective form, political) telegraph to Americans the message that personal, career, or partisan motives determine policy positions. During the 2000 election cycle, each of the major presidential candidates and their supporters tried to persuade us that he alone was the true apolitical leader.

Perhaps participants of Sunday morning talk-shows and members of campaign staffs could use a thesaurus, or an American government textbook with a healthy glossary, but certainly they need to expand their active vocabularies: calculating, electoral, opportunistic, partisan, defensive, pandering, cynical, manipulative, strategic, or any of a host of other descriptive words would better reflect what most people mean when they say political. A citizen, journalist, or pundit who thinks a politician is acting out of electoral or partisan motives should say so; characterizing the action only as political is lazy and inaccurate.

We frequently discuss the politics of sex or the politics of academia, referring to power (im)balances of various sorts and recognize that politics certainly includes aspects (some necessary, some inevitable, some unfortunate) that could be defined by the terms above. In regard to the ideas and institutions, the processes and parties of American government, there are other, fundamental aspects of politics, such as representation, deliberation, leadership, public service, community, public goods, principles, sacrifice, consensus, compromise and consideration which also deserve some affiliation with the word political.

Finally, when, in the coming months, we may be tempted to decry actions of our government and our representatives in response to the September 11th attacks as political, we need to ask ourselves do we really mean xenophobic, chauvinistic, or face-saving ? We have a responsibility as members of a community devoted to learning to force ourselves to make the most precise arguments we can, and not too hide behind the negative but nebulous current associations of politics and political, incomplete as these associations are.

Letters to the Editor

The Afghan People

If the United States decides to retaliate against Osama bin Laden and the Afghanistan government, the Taliban, it must not forget about the innocent citizens that still reside there. The United States' response must be civilized and respectable, in order to preserve life. According to CNN, Afghanistan's citizens are already fleeing from the cities into the countryside and neighboring countries. Two million refugees already reside in both Iran and Pakistan because of drought and warfare in the past few months, and more are expected to arrive, showing that the people of Afghanistan do not support their current government, and are not willing to stay and fight for it.

Retaliation by the United States must take every effort to support and protect the current residents in Afghanistan, who do not support the government and are not able to leave, meaning no aerial bombing of Kabul should be allowed because innocent citizens would perish. The only possible means of protecting the citizens of Afghanistan is limited ground troops, and the avoidance of highly populated areas.

The world community, including the United Nations, has begun to send food and medicine into Kabul in order to help the Afghan people. The UN reports that over 5 million Afghans need aid in order to survive. Khaled Mansour, of the U.N.'s World Food Program, reports that 200 tons of food are being sent into Kabul, in hopes of combating starvation.

The world has decided to isolate Afghanistan because of the government, but every effort must be taken to protect the innocent citizens that live there, both through humanitarian aid and responsible military action. Afghan citizens should not be sacrificed in order to bring justice to those responsible for the American tragedy.

Students for Peace

The prospect of massive international war is one from which all rational men shrink; yet this is the situation that confronts us today. However, the situation in which we find ourselves is not unique in history: we need only look back to the genesis of World War I to gain instruction on the possible outcomes of "War on Terrorism". Indeed, if we fail to remember this critical lesson from the past, we may be doomed to repeat that sad chapter of history, only with even more devastating results.

We, the students, must be confident in our abilities to mold this world into a better place. We must seize this opportunity now. If we are soon to inherit the world from our parents, we have to act immediately to ensure that the world will be in an acceptable state when we do inherit it. We must reject the popular belief that we are powerless, and we must abhor apathy.

What We Can do:

1. We must start where we are - We cannot be paralyzed by the enormity of the situation and our seemingly miniscule powers to effect political outcomes. In our lives there are opportunities to affect politics; we must identify and exploit them to the best of our ability. We must be willing to use our skills for the common goal. We must also be willing to make sacrifices of time and energy, which, while significant, will seem small in comparison with the price we may be forced to pay if we fail.

2. We must choose the direction we want to go - What do we aim to do? Do we demand that the federal government immediately cease all military activity, or are we willing to accept some degree of multilateral military action in order to achieve justice? How should we deal with terrorism in the future? These are questions that we, the students, must answer and, having answered for ourselves, make available to the public.

3. We must appreciate the fact that change takes time - We must plan and act with an eye toward long-term victory. In the early going, gains may be difficult to come by; perseverance and concentrated effort will be necessary to achieve success.

4. We must make others appreciate the costs of failure - The lessons of history are unmistakable on this subject: man cannot achieve lasting, stable peace through war. The scale and destructiveness of warfare increases with increased social complexity, greater international interdependence, and deadlier technology.

5. We must be guided by faith, hope, love, and respect for our opponents - Without these qualities any movement degenerates into ineffectiveness and inhumanity. In each person we must recognize a potential ally, and in each seemingly disadvantageous situation we must perceive opportunity. In questions of war and peace, the proponents of peace always make the superior ethical argument.

Only fools believe that human nature is static and destiny is inalterable. Man does not merely react to eternal and unchanging truths; he molds reality according to his assumptions. Knowing this, we must recognize man's false perception of reality (not man himself) as the real enemy of peace and justice, and focus our work on changing that perception. Although we have the opportunity to act to better our world, this window of opportunity is not necessarily indefinite. History shows that the earlier we act to prevent disaster, the less likely it is that we will have to react to it. It is a truism that time is of the essence. In our current situation no sentiment could be more true.

Jesse Rhodes '03

Backstage at Ballet Hispanico

Raina J. Miller
Staff Writer

Oller Hall was a hive of activity the weekend of September 29th, getting ready for Ballet Hispanico, this season's first Artist Series performance. Tired and over worked, Oller Crew, comprised of about a dozen Juniata students, worked away at a furious pace. The crew was up against a time crunch: at 12 noon on Saturday, the dancers would need to begin rehearsing, and many complicated and time consuming tasks needed to be taken care of beforehand. Thanks to John Teacher's gentle yet firm leadership, everything was ready on time.

With inhuman grace and agility, the dancers warmed up, performing amazing feats of flexibility that made on lookers wince in pain. For the crew, this awarded a welcome break from the intense grind of the last few days. One of the best parts of being an Oller Crew member is the wonderful experiences it offers; getting to watch world class dancers from five feet away, talking with them, helping them change costumes, actually being part of the show, even if in just a small way.

Backstage during the show, the floor vibrated slightly, and the air seemed to pulse with the carnal, tribal, music. The dancers appeared to glide around the stage with effortless ease as they spun, lifted, and spun again. One by one, the couples flew off stage, and once hidden by the black curtains, they rushed downstairs to change for their next dance, leaving a trail of sweat as they went.

Although breathtaking, and well worth all the work, the show presented some difficulties for the students on Oller Crew. Most of the crewmembers logged the maximum limit of 17.5 hours on Saturday alone. This is simply the nature of "theater work," where massive amounts of work must be done in a short time period. However, all the work that had been done, needed to be undone for 9:00 am the next morning to accommodate the Campus Ministry's Worship Service. This required the crew, that had been working since early that morning, to continued on until 2:30am. Normally this would not have been an imposition. However, since it was also Family Weekend, the Oller crew members had little if any time to spend with their parents and siblings. In fact, some students told their parents not to come because of the extreme time restraints.

John Teacher, Oller Hall's new Technical Director, was sympathetic to the burden on his employees. "It was very unfortunate that some students told their parents not to come, because they would be too busy. Unfortunately, that's part of being in an entertainment service area. I hope that with a little more planning next year, that won't be necessary."

When asked how he felt the weekend, including the performance, Teacher answered that "[Family] weekend was difficult but successful." Continuing on, Teacher said that "hosting Ballet Hispanico was a bit like trying to fit a Penn State football game onto our campus. Fortunately, the people from Ballet Hispanico were flexible...they were also very appreciative of the work performed by (and quality of) our crew. Their Production Manager from New York City characterized Oller Crew as "one of the best [student] crews I've seen." In fact, when they learned we were not able to make the reception for them due to the turnaround in Oller for the Sunday service, they later returned with food from the reception!"

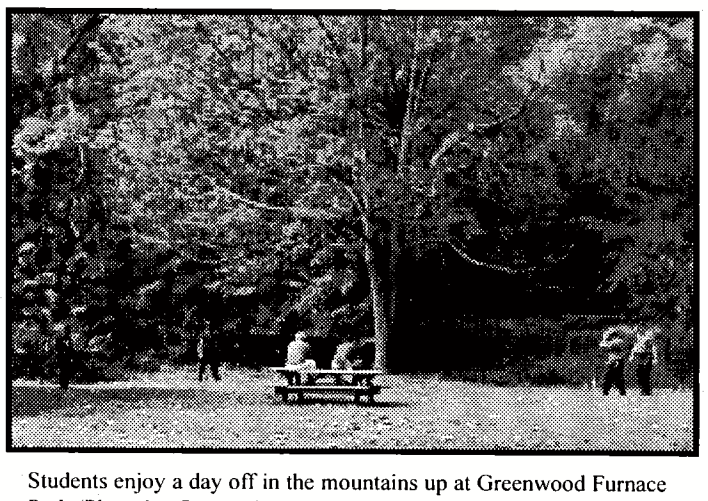
Juniata Continues Tradition of Mountain Day

Mike Crake
Staff Writer

Each year, Juniata RAs wake up their sleepy residents with an air horn and a loud bang on the door. The students grumble and go back to bed, but only after realizing that it is Mountain Day. This annual tradition takes place every fall. A select few people plan and know when it will occur. Many students speculate about when Mountain Day will take place. They look at sports schedules, when field trips are, and try to pin point what day it will happen.

Last Tuesday, Mountain started off with Justin Eskra running around campus with an air horn followed by his early morning cohorts. According to Ryan Silvis, the wake up call was slightly annoying, but looked past the irritation and was overjoyed that it was mountain day.

The picnic took place at Greenwood Furnace Park, which is about 15 minutes away from Juniata. There was a plethora of activities for students and faculty. Some students took hikes, while others played volleyball, flag football, or Frisbee. Jonathan Rissler said "he had lots of fun playing volleyball." Other students were seen waiting to get in on this competitive contest.



The food is also an important factor for students. There were students running for the food line. This year Sodexho served hoagies, chips, brownies, and pasta salad. According to Justin Reiter, the food was an improvement over the regular Baker menu.

However some students thought there was a need for improvement in the Mountain Day activities. Justin Reiter said "There weren't any beads at Arts and Crafts." Amy Fletcher thought the buses didn't run on time, and the bus driver drove too fast.

Russ Lagler thought the best thing about mountain was he had a chance to relax. Waking up so early might annoy some students, but most enjoy the day at the park, or falling back to sleep and forgetting about school for 24 hours.

The professors display creative problem solving strategies during the Student-Faculty Flag Football game. (Photo by: R. Bernhardt)

Muslim Students Speak at JC about Islam

Genevieve Skelly
Staff Writer

United Cultures of Juniata College (UCJC) sponsored a presentation on October 4th by the Penn State Muslim Student Association entitled "Islam and the events of September 11th." Two muslim students, Ramy Nasr and Sana Malik, opened the evening's discussion by asking audience members about their ideas and stereotypes of Islam and Muslims.

They continued by talking about the Koran, the meaning of Islam ("submission to God") and what it means to be Muslim. Their rhetoric throughout the presentation suggested that this was a defense of their religion and traditions, and was an attempt at breaking down some of the stereotypes and misrepresentations suffered by followers of Islam following the attacks of September 11th.

Nasr and Malik also expressed a desire to separate stereotypes and social problems stemming from political and social systems away from the Islamic way of life and system of beliefs. The main point of this presentation was that the recent terrorist attacks on US soil, for which Osama Bin Ladin has not claimed responsibility, was not an attack made by a religion, or in the name of any religion, but was instead an attack on U.S. foreign policy in the middle east.

Conflict over Clubs

(Continued from Page 1)

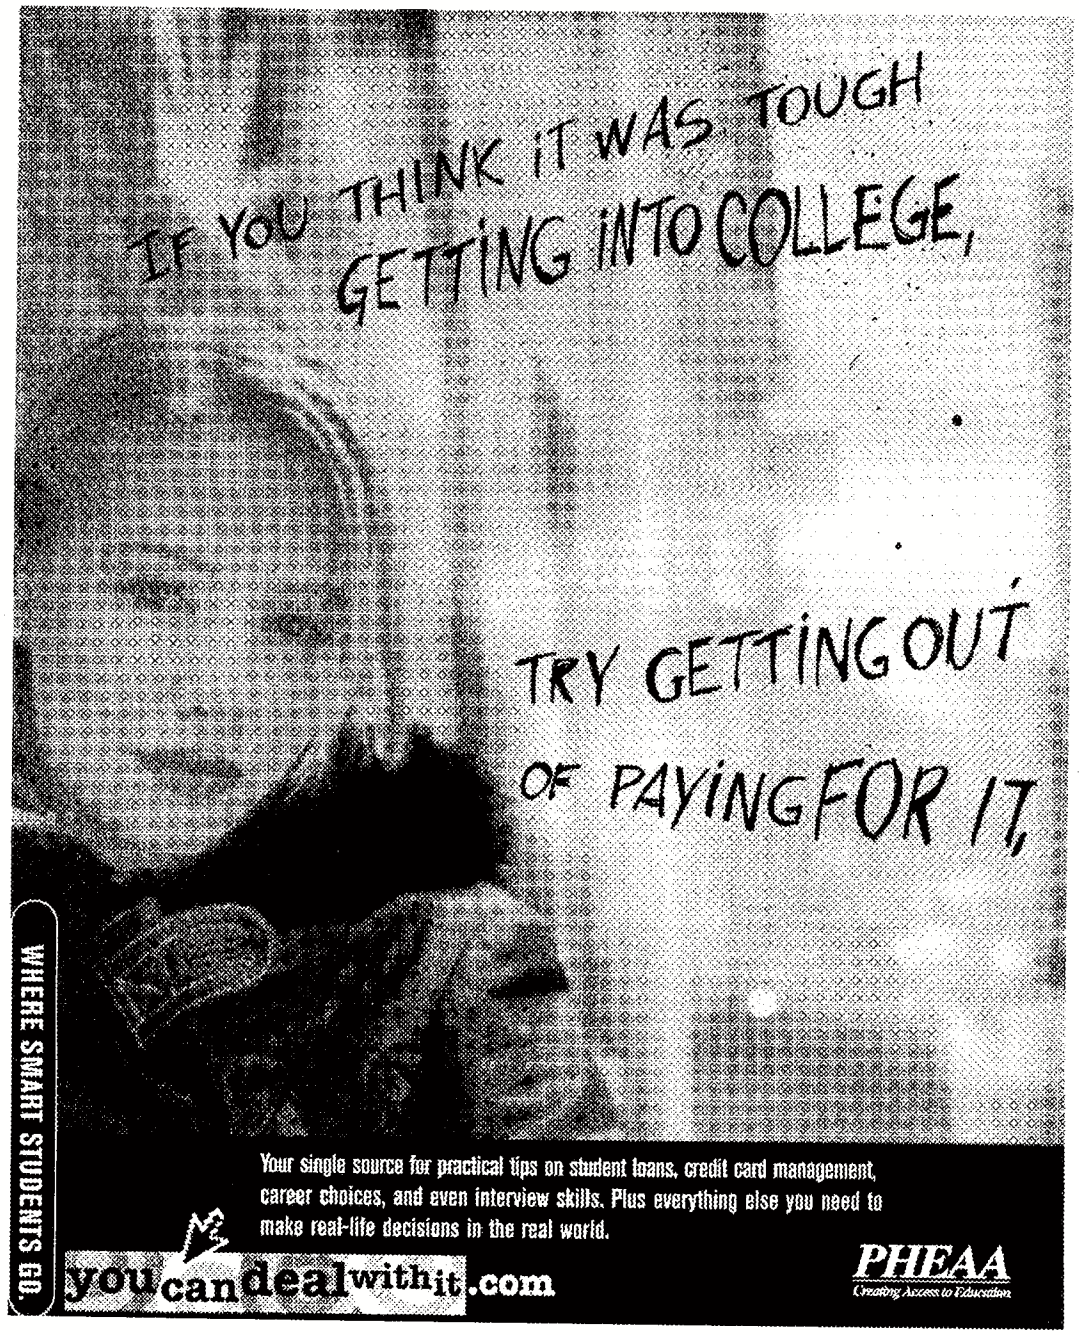
Accounting Office's staff, and "improve some of our responsible student financial practices through oversight." Scialabba stated that this latter area needed addressing because of administration concerns over the amount of financial transactions being carried out with only the authorizations of students. "A permanent college employee's signature," she said, "offers more assurance and continuity, in part because of the high turnover rate of student club officers." She said that her office is more logically suited for the job than club faculty/staff advisors because these individuals would be less easily available to students.

A number of student officers voiced complaints about the new extra step of the signatures. One student declared the new policy to be "ridiculous bureaucracy," and another said he was frustrated when he found no one in the office when he stopped in with a purchase order form, looking for a signature.

Regarding the question of budget reports and the role of the student government treasurer, Scialabba said that perhaps she and the treasurer could handle budget reports together. "I don't think it has to be question of either-or," she stated, saying that the change was made in the hopes of making it easier for clubs to obtain their balance sheets. Lindsay Briggs, a senior and former student government secretary is critical of this policy as well. She notes that many students perceive student government as a mouthpiece of the administration, and that she knew that Kolarczyk and the other executive officers this year wanted to establish themselves as an advocate for students. "Having Dawn Scialabba take away their responsibility here does not help their efforts," she said.

Scialabba contends that little has changed. "Student government plays an important role," she says, pointing out that it remains in charge club allocations, as well as the vehicle for student representation on important decision-making bodies. "I think its fine for them to continue supporting clubs as they have been." She also says that she hopes for a good working relationship with student government. The Office of Campus Activities, Scialabba envisions, "will be an additional resource to student organizations, and an office that nurtures them." She says that perhaps her office will eventually be able to perform all accounting office operations (ex: providing cash advances) for clubs, eliminating the need for students to go to two places.

Kolarczyk is concerned that the policies reflect an intention on the part of Scialabba and her office to carve out a sphere of influence in student government affairs. "I see a triangle forming, one with Scialabba on top and both JAB and student government beneath her," she explained. "I'm worried about her becoming to student government what she is to JAB. What these policies do is make her look like she is in charge of student government." Though Kolarczyk conceded that Scialabba's office does not approve or disapprove club financial operations at present, she claimed to be afraid of how this relationship could play out in the future.



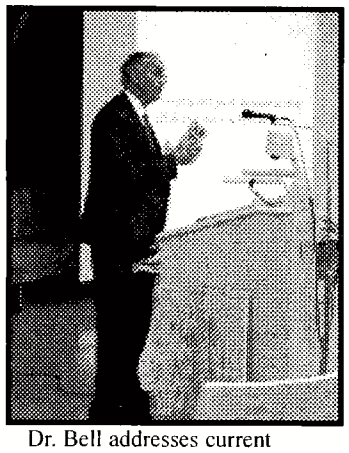
Briggs echoed Kolarczyk's concerns, asserting that Scialabba's office has tried for some time to involve itself in club money. She told the Juniatian that this trend started in the beginning of the 1999-2000 year. At that time, she said, Scialabba signed herself up as a second student government advisor (second to Kris Clarkson) without consulting the executive officers. Scialabba denies this, stating that she has "never served as an advisor in any official capacity." Several months later, Briggs said, when the budgeting process rolled around in Spring 2000, Scialabba asked to become involved in club funding allocation meetings, discussions normally reserved to student government officers. The President at the time, Brandon Zlupko '00, along with Briggs and others, refused Scialabba's request on the grounds that club money should not be influenced by Juniata's administration.

Scialabba insists that she had only ever tried to provide student government with information and resources, and never had the intention of influencing the budgeting process. She says that she did present them with some budget ideas, such as how student government could link budget decisions back to its goals, something that she feels could be looked into.

Briggs agrees with Kolarcyzk's perception of a triangle forming, believing that having learned her lesson from Zlupko's resistance, Scialabba decided not to ask before implementing policies on the student financial operations this year. "She saw her chance to move quickly and make gains for her office," she said. "Why? I think this is her first step of a transition towards becoming part of the budgeting process itself." Scialabba says that it was ultimately Kris Clarkson who made the decision, who then "strongly suggested" to her office and student government that the policies be put in place.

Kolarcyzk is presently considering preparing a proposal for changing the policy in some form, but urges students to send her their views on the issue. "I'd like to know what other students feel. I can't speak for students [as a whole] until I hear from them. If club officers come to me, saying what we can do, that pushes me to do more. I would invite them to write me or drop me an e-mail."

Have an opinion on this topic? The Juniatian would like to print it in our next issue's "Your Views" section. Send us an e-mail at: juniatian@juniata.edu



Dr. Bell: "Bomb them with butter"

Ryan R. Miller
Politics Editor

The Baker Institute for Peace and Conflict Studies hosted its second lecture this year on September 24 as part of its World Affairs Lecture Series. Dr. David Bell, Director of the York Centre for Applied Sustainability at York University, Toronto, delivered a presentation on "Sustainability and the implications for Peace and Security." His lecture presented the case that global sustainable development, or the preservation of economic resources for the future generations of all peoples, while meeting present day needs, offers a path towards a more peaceful international order. By looking out for other peoples' prosperity, the logic goes, one lays the groundwork for everyone's security. In light of September 11, Dr. Bell focuses much of his lecture on the Canadian perspective of the US war on terrorism, as well as factors fueling terrorist attacks.

Speaking on the first point, Dr. Bell said that there are a variety of opinions in Canada, ranging from full support for US retaliation to calls for a multilateral approach under the auspices of the United Nations. He did however say that Canadians are much less unanimous that Americans are on this issue, and that one finds much more of a public debate among the United States' northern neighbors. For example, he quoted one Canadian commentator who asked whether the US

Dr. Bell addresses current events in his talk. (Photo by: R. Bernhardt)

had in fact "created he conditions in which the twisted logic [of terrorism] could flourish" with its own foreign policies. Canadians, he contended, "debate the why question."

Rejecting President Bush's point in a major speech that the United States was attacked for its values, Dr. Bell maintained that misery and poverty lay at the root of the problem, and that alleviating the burden of these social ills would furnish true security better than would more violence. "I question whether preparing for war will achieve peace," he stated. He suggested that the US and the rest of the developed world should "Bomb them with butter" (meaning those living in poor conditions) and extend opportunity to all peoples of the world through compassion. Dr. Bell concluded by saying that if human beings are to be secure in the coming century, they will need to work together to reform many of their world's institutional arrangements.

In the Question and Answer period following the lecture, Politics Professor Emil Nagengast took issue with some of Bell's presentation, contending that suspected terrorist Osama Bin Laden was not fighting for better living conditions, but rather to rid Saudi Arabia of what he considered foreign infidels (American troops stationed in the country). "I think it is risky to draw parallels in this case," Nagengast asserted. PACS Professor James Skelly countered, arguing that since those troops were there to protect America's oil interests, sustainability logic could still be seen.

Party Common Sense

Matt Wolfe
Columnist

For those of you that haven't heard, on October 7, 2001, the first tower of East has been put under a 'party ban' for the duration of one month. This ban has been implemented because of people basically being stupid. Trash cans being dumped on the ground and people being disrespectful to the RAs, RDs, and security people; that kind of behavior is just ridiculous. People are having a good time at the parties and then some idiot ruins it by doing something stupid like the previous examples. I have no idea who did it, and it might not have been anyone that lives in the first tower (as I do), but it needs to stop.

First of all, the rooms in the first tower have been the only consistently good party rooms over at East this year, along with 207. I've been in 301 and 401 a few times and it's always a good party in there. Now that some idiot has caused these rooms to have a ban placed on them, which will effect the rest of the campus, since lots of people liked to hang out over there. Now you'll all have to hang out in 101, except it's only a quad, so only the first 20 cute girls will be allowed in...

This kind of behavior has never happened in the first tower before. This is eighth tower shit, not first. How cool is it to dump a trashcan? Or to act disrespectful to security? Don't you realize that security will not look kindly upon your room in the future if you treat them like shit? That's just common sense! Which leads me into this year's version of **Party Common Sense®**, which is fast becoming a yearly column for me...

o Do not piss off the RAs, RDs or security people. Do I even need to explain why?

o Do not walk around with beer visible, unless you are of age. This is why God invented backpacks and cargo pants with lots of deep pockets.

o If you start feeling sick, don't go outside to puke. Find a bathroom or trashcan, somewhere private, so an RA won't find you. If you are puking, and are underage, you could be written up for it. If you're so drunk that you're puking, this might be hard to remember, but do your best.

o Do not act like a tough guy or an ass in someone else's room, especially if you don't know the people that live in the room. That just leads to stupid confrontations and meathead type behavior. No offense to football players or any other athletes, I'm sure you know the type of behavior I'm talking about.

Follow these basic rules and this 'party ban' will not be repeated. You can have a good time, get a little crazy, and not piss anyone off in the process. Most importantly, you won't get written up or get a room written up.

This public service announcement has been brought to you by no one. Party on Wayne! Party on Garth!

Protest Organized Against Military Institute

Beth Skinner
Staff Writer

For the past two years, Juniata students have traveled to Fort Benning in Columbus, Georgia to participate in the annual vigil and protest against the School of the Americas (SOA). The SOA is a Department of Defense facility that trains Latin American military personnel in military tactics. Many of its graduates have been linked to atrocities committed in Latin America, leading many to feel that the SOA should be shut down. The issue has been in debate in Congress since the 1980s, and proponents of closing the institution have won the support of many representatives, but never enough to push through their proposals. Last year a congressional bill closed the SOA, only to reopen it the next day under a new name, the Western Hemisphere Institute for Security Cooperation (WHISC). Opponents of the school feel that the bill failed to make significant changes.

Juniata students are planning to return to the protests this year on November 16-18. They will leave Friday night in college vans, drive through the night, and arrive in Columbus around 9 am. They plan to leave Fort Benning at about 5 pm, Sunday and return to Juniata in time for Monday classes.

A vigil will be held on Saturday with speakers and singers in remembrance of those who have suffered in Latin America under military dictatorship, and perhaps through the SOA. There will also be peacekeeper-training sessions for protesters who would like to help keep things organized, as well as informational sessions for those considering "crossing the line" on Sunday. Although the base is open, crossing on to base property to protest is illegal. Military Police usually do not arrest the thousands who cross, but only a few who are involved in "high-risk" protesting. The SOA Watch, whose headquarters is located just outside the base, organizes the protest. Students interested in going can contact JC student Maria Bowman.

Tool plays Hersheypark

Lauren Nimal
Staff Writer

On Tuesday, September 25th Tool played at Hersheypark Arena. Since the release of their first album in 1992, Tool has gained a major following. In fact, Tool played two sold out shows recently, on October 1st and 2nd, at Madison Square Garden in New York. The Hersheypark show consisted of songs from every album, including their newest, "Lateralus."

In the background of every song was a video playing, and light figures were projected on many occasions around the walls. At one point, two band members climbed above the stage and performed while hanging upside-down off of cables from their feet. The show was wonderful- the songs played to perfection.

The audience went crazy when Tool came onto the stage, and did not settle down until the concert was over. At the end of the concert, Maynard James Keenan, the lead singer, told the audience to do something positive with the feelings that they had from the performance.

Massacre Survivor Speaks Out

Ruth Bernhardt
Co-Editor-in-Chief

On September 23rd, Juniata college was visited by a survivor of the four separate Río Negro massacres in Guatemala. Cristobal Sanchéz Osorio spoke of his experiences in the early 80s when the world bank funded a "development" project there to build the Chixoy (pronounced cheek-soy) dam.

In a moving and emotional presentation, Mr. Osorio described through his interpreter how the Guatemalan Military forcibly removed his people, the Maya-Achi, and other indigenous people from their homes, often using brutal methods.

Because of these events, Mr. Osorio lost his wife, 1 fi year old daughter, his mother, two brothers, and countless cousins. Overall, 440 members of the Maya-Achi were massacred in addition to the numerous other indigenous people massacred at the same time.

Following the relocation of the residents of the Río Negro area, his, and the 400 other communities destroyed by the Chixoy dam project are now living on mostly non-arable land in "shacks" provided by the Guatemalan government, without the resources to educate their children or plant crops, and cannot find work in their new area.

Mr. Osorio's interpreter, a member of Rights Action, explained that such "development" projects as the Chixoy dam affect communities around the world. Mr. Osorio's story is not unique, therefore human rights considerations must play a more vital role in future development projects.

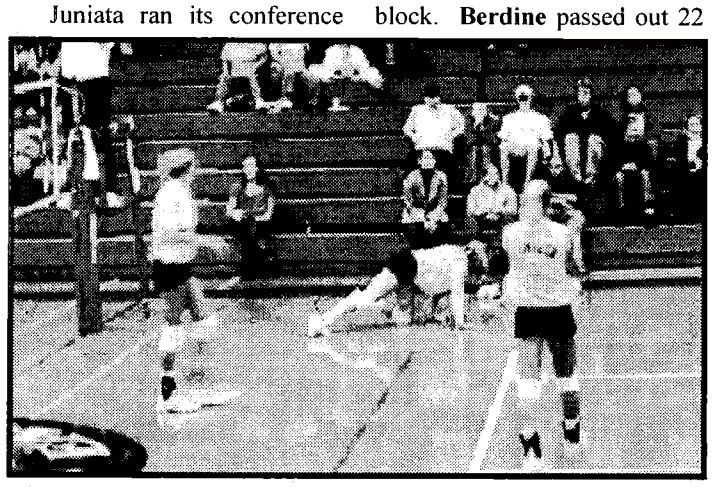
Hypnotism comes to JC

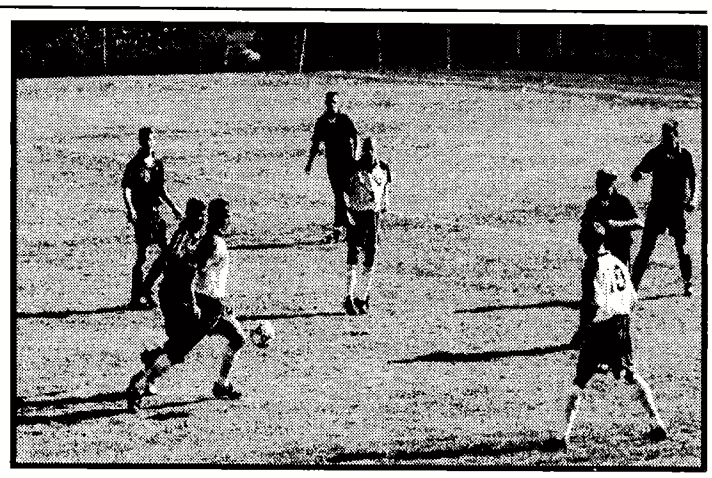
Lauren Nimal
Staff Writer

On Friday, September 28 Juniata Activities Board sponsored hypnotist Michael C. Anthony, who amazed Juniata students and their families. Anthony was part of the Family Weekend "Friday Night Live" performance. Students had to pay $2.00, and all others $3.00 to see the hypnotist, and the money raised went to JAB.

Baker Refectory was packed for Anthony's show, which began with him doing a card trick and telling the audience a little bit about hypnotism. He then asked for 20-30 people to volunteer from the audience. After being hypnotized, volunteers did everything from forgetting the number 6 to howling at the moon. One volunteer thought that she was a human seatbelt, while another was convinced that his name was Cha Cha, and that it went back generations in his family. The audience found the hypnotism highly amusing. All in all, the show was a hit, and everyone had an enjoyable night.



FOOTBALL (2-3, 2-3 MAC): Oct. 13 at Lebanon Valley.



A 23-yard touchdown pass from freshman quarterback **Greg Troutman (Meyersdale/Meyersdale)** to junior wide receiver **Nate Leach (Shade/Central City)** with 39 seconds remaining in regulation completed a come-from-behind triumph for the Eagles on Saturday afternoon at Knox Stadium. Juniata had trailed, 35-6, with 3:50 left in the third quarter, but the Eagles tallied 33 unanswered points over the final 18 minutes of the game to post a 39-35 victory over the visiting Greyhounds in Middle Atlantic Conference play. It marked the greatest comeback in the history of the Juniata College football program. No blue and gold team has ever come back from being down 29 points to win a contest. **Troutman**, who was named the MAC Offensive Player of the Week, completed 27 of 64 passes on the day for a personal-best 432 yards and three touchdowns. He also ran for 108 yards on 15 tries and had two rushing scores, including a 54-yard run to pay dirt with 3:14 left in the third period, which ignited the 33-point explosion by Juniata. Overall, **Troutman** had 540 yard in total offense on the day and was responsible for five touchdowns. Leach caught a career-best 13 passes for a personal-high 206 yards and hauled in scoring strikes of 31 yards and 23 yards on the day. Senior wide receiver **Lucas Kelleher (Bishop Guilfoyle/Altoona)** had three snags for 117 yards, including a 56-yard touchdown catch in the fourth quarter. **Kelleher** also returned five punts for 40 yards and one kick off for 22 yards Sophomore tailback **Craig Moshier (Coudersport Area/Coudersport)** caught nine passes for 94 yards and he had eight carries for 20 yards. Junior kicker/punter **Dusty Lehr (Bermudian Springs/New Oxford)** averaged 38.9 yards a kick on seven punts. He also nailed field goals of 28 and 19 yards and one PAT. Defensively, senior inside linebacker **Josh Seiders (Wyomissing/Wyomissing Hills)** led Juniata in tackles for the fifth consecutive week and was named the MAC Defensive Player of the Week. He had 16 tackles (five solos), two stops for lost yardage, one quarterback sack, one interception and a forced fumble. His sack, interception and forced fumble all occurred during the Eagle rally. Senior outside linebacker **Jason Stouffer (Newport/Newport)** posted 10 tackles, including two behind the line of scrimmage, while junior corner back **Paul Evans (Huntingdon/Huntingdon)** had eight tackles and his team-leading four interception of the fall. Senior defensive end **Kevin DeCarlo (Francis Scott Key/Westminster, MD)** and junior defensive end **Fred Taber (Calvert Hall College/Bel Air, MD)** each had seven tackles. **DeCarlo** had a sack, pass break-up and fumble recovery, while **Taber** broke up a pass play as well.

WOMEN'S VOLLEYBALL (13-4, 4-0 Commonwealth): Oct. 9 at Susquehanna; Oct. 12-13 at Wittenberg Inv.

Juniata ran its conference winning streak to 240 consecutive matches with two Commonwealth victories during its past week of action. On Wednesday, the Eagles downed visiting Messiah, 30-11, 30-11, 30-27. Freshman **Erin Wisor (Altoona/Altoona)** moved to middle hitter from her outside spot for the first time this fall. She displayed quickness and strength and led the Eagles with 11 kills on 18 swings with just one error for a .556 hitting percentage. She also had two blocks. In addition, senior outside hitter **Brandy Workinger (Dallastown/Dallastown)** had five kills on seven swings in just one game, while **Sadlowski** finished with five kills. Sophomore setter/defensive specialist **Melissa Berdine (Pine-Richland/Gibsonia)** had 14 assists, six digs, three aces, three blocks and three kills. Freshman outside hitter **Lindsey Habel (Canton/Canton, OH)** paced the club in digs with 10, while sophomore defensive specialist **Lauren Beasley (Valencia/Valencia, CA)** added in three aces and four digs. Sophomore outside hitter **Kelly Casperson (Columbine/Littleton, CO)** also had three aces on the night to go with five digs and four kills. On Friday, Juniata traveled to Albright to make up an outing that was postponed from September 11. The Eagles, who hit .614 as a team, defeated the Lions, 30-5, 30-11, 30-8. **Habel** paced the attack with 11 kills, a .600 hitting percentage and 11 digs. Sophomore opposite **Danielle Hart (Central/Roaring Spring)** had eight kills, five digs and a block. **Berdine** passed out 22 assists and came up with six digs, while **Casperson** posted 10 digs, three aces and six kills. Workinger played one game and had five kills on six swings to go with four digs and a block.

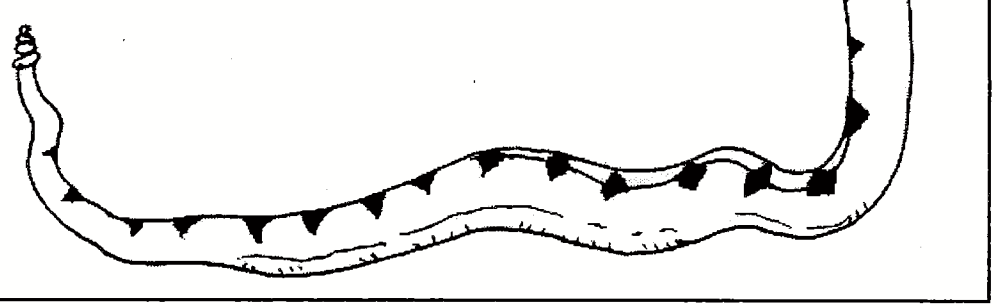
Men's soccer. (Photo by: J. Harper)



MEN'S SOCCER (1-10-3, 0-4-1 Commonwealth): Oct. 11, Penn State-Altoona; Oct. 13 at Widener.

On Wednesday, Juniata was shutout, 3-0, at Commonwealth Conference rival Susquehanna in its first game of the week. The Crusaders owned a 20-2 advantage in shots. Senior goalkeeper **Chris Zimmerman (Westmont Hilltop/Johnstown)** had seven saves for the Eagles. On Saturday, the College Hill booters lost a heart-breaker in overtime, 2-1, to visiting DeSales (formerly Allentown College). Junior midfielder **Joel Abe (Archbishop Hoban/Akron, OH)** put Juniata on the board with 3:19 remaining in the first half and gave the hosts a 1-0 lead at halftime. Sophomore back **Kodi Hockenberry (Red Land/Lewisberry)** was credited with the assist. **Zimmerman** had nine saves in the contest. On Sunday, the Eagles lost at Lycoming, 1-0. **Zimmerman** made seven stops on the day.

WOMEN'S SOCCER (5-8-1, 0-4 Commonwealth): Oct. 11, Penn State-Altoona; Oct. 13 at Widener.

Juniata started a busy week with a 2-0 loss in Commonwealth Conference action at home against Susquehanna. The Crusaders tallied two times late in the first half and that proved to be enough. Freshman goalkeeper **Kira Troutman (Line Mountain/Valley View)** made eight saves and faced 14 shots in the contest. On Saturday, the Eagles lost in double overtime at home to DeSales (formerly Allentown College), 1-0. The Bulldogs found the back of the net 3:32 into the second session of sudden-death overtime. The Eagles were out shot, 28-2, while freshman goalkeeper **Lindsey Treon (Hollidaysburg/Duncansville)** made 14 saves. On Sunday, Juniata lost at Lycoming, 2-0, while **Troutman** made two saves.

Senior Class, Dance Ensemble steal the show at Homecoming

Ryan R. Miller
Politics Editor

The Juniata Activities Board's annual Lip Sync competition kicked off this year's Homecoming weekend on Wednesday, October 17th. Each class (with the exception of the Freshmen who failed to show up) presented a 10-minute lip skit to their own choices of music. This year's theme was "Juniata, then and now." There were numerous criteria for the competition, including class participation, audience reaction, and technical creativity.

Third place went to the Junior class, whose skit made fun of the changes some of JC's faculty and staff have gone through over the decades. Skits revolved around Professor Barlow, Assistant Dean of Students Dan Cook-Hoffman, and others. In Second place came the Sophomores, focusing their skits on contrasting what college life was like at Juniata's founding with the current campus scene.

Though the Sophomores gave them some tough competition, it was Juniata's Seniors who emerged victorious with their theme of "Back to the Future," starring Nick "Bunny" Patterson as Marty McFly. Using an upgraded shopping cart as a time travel machine, with the help of Lee Cain as the "flux capacitor," Bunny traveled back in time to reminisce about life as a Freshman. Switching between Freshman and Senior year, the '02 lip syncers performed to several musical numbers, including "Piano Man," "If I had a Million Dollars," sung by Jim Krug as President Kepple, and Dan Figueroa's heartfelt version of Celine Dion's "All by myself."

To top off the evening, Lip Sync audience members were treated to a spectacular performance of the Juniata Dance Ensemble. Senior Kellie Martin led nearly two dozen dancers in dances to Guns 'n Roses' "Welcome to the Jungle" and "Survivor" by Destiny's Child. Their show included repelling from the Gym balcony, cool warrioress costumes, and quarterstaffs, helping to score thunderous applause after each of the numbers. Overall, this year's homecoming opened with a real bang.

A Month in the Rainforest

Beth Skinner
Staff Writer

The first of a series of brown bag lunches sponsored by the Environmental Science Society was marked by Ann Parry's presentation on her month at Tiputini Biodiversity Station in Ecuador. The presentation kicked off the beginning of an exchange program between the Juniata and the Universidad San Francisco de Quito. Students from the Universidad will study at the Raystown Field Station while living on campus until the Field Station expansion is completed, while students at Juniata live at the remote field station.

Students going to Ecuador should have a good command of Spanish, and although the program is mainly aimed at Ecology or Environmental Science students, Ann emphasized that it could be tailored to students interested in Anthropology or International Studies as well. Those who are involved in the program design and carry out an independent project as well as helping with the maintenance of the field station. Indigenous peoples live in the remote area of the field station. Tiputini is also subject to

Extended Orientation and Safe Sex

Should EO Instructors be required to show their Students how to use a Condom?

Erin Percinsky
Staff Writer

The normal Extended Orientation curriculum, which mainly consists of stress management, study, and social skills, while dealing with the pressures of being a freshman in college, now includes a new issue that has been added to the list of discussion topics, safe sexual practices.

EO instructors were taught how to properly use a condom and given information and statistics on rape, as well as questions to ask their students about safe sex, their views on sex, and about their views on personal mannerisms such as drinking and wearing sexy clothing. Behaviors which could lead to unwanted sexual contact. The instructors were also given a condom and asked to properly demonstrate how to use a condom in front of their classes.

Some of the Extended Orientation instructors did choose to show their classes how to properly use a condom on such items as bananas or peppers. Other instructors opted to tell their students how to properly use a condom, but

Unlock your voice, unlock your power

JC students embrace diversity among themselves

Lauren Ritchie
Contributor

Juniata College's ninth annual presentation of "Unlock Your Voice" will be held Friday, November 2 at 8:00 p.m. in the Ballroom of Ellis.

According to Dr. Judith Katz, associate professor of English, "The 'Unlock Your Voice' program is a great way for students to share works they love with a very receptive audience. Since the readers themselves choose the works they are going to read, there's always an interesting mix of writers and themes and attitudes, from works that are very frank and funny to those that are wrenching in their sadness. I always come away feeling uplifted by the energy and passion of the readers, and the diverse voices they bring to life."

Jessica Shenker, a student of the Women and Literature class, is reading a poem by Sylvia Plath titled "Mirror." She picked this poem because, "It depicts a women's horror of aging from a different perspective-from the point of view of a mirror." Another reader is Jillian Davis, reading "Every Woman" by an unknown author. Jill said, "I chose this piece because it is so inspiring and relieving to hear. It reminds women of everything that is wonderful about their sexuality." Some other readers include Janine Dudash reading" Women Over Bay City," a prose poem by Janet Kauffman, a Juniata graduate; and Kent Black, who will be reading poems by Emily Dickinson.

This is a free, must-come-to coffee house sponsored by the Women and Literature class and the English, Communication, and Theatre Arts department; it is co-sponsored by the English Club, UCJC, and AWOL. It's a great time to come and hear your fellow classmates share work they are touched by! Coffee and other refreshments will be available.

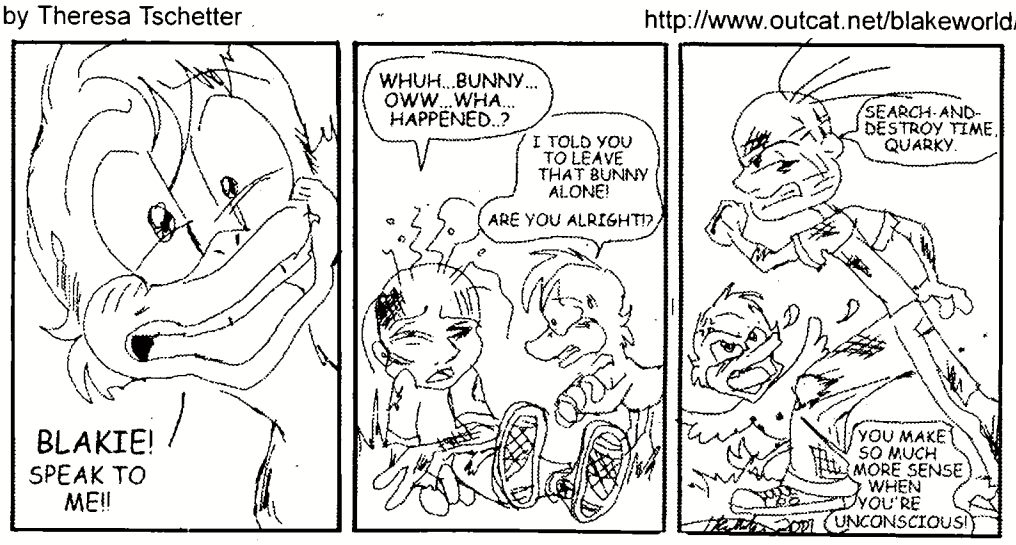
Professor Bichel Lectures on US War on Terrorism

Genevieve Skelly
Staff Writer

Dr. Bichel uses numerous maps to illustrate his points. (Photo by: R. Bernhardt)

For those of us who aren't clued in, Geopolitics is a method of political analyses emphasizing the role played by geography in international relations, stressing 'natural political boundaries' such as access to important waterways and other natural resources vital to a nation's survival.

Dr. Bichel, a Juniata politics professor, gave a graphic presentation on deconstructing Central Asia in geopolitical terms in relation to the current "War on Terrorism" October 8 in Good Hall of Juniata College. Bichel used about 16 different maps as illustrations regarding matters such as the significance of Central Asia's geographic location and national proximities. This was addressed with regard to natural resources, primarily petroleum, natural gas, gold and uranium, as well as to marketisation and the "raison d'etre" of Central Asian states, looked at from several viewpoints.



Also contemplated was how Central Asia is geographically defined as a region. Azerbaijan, Afghanistan and Eastern Turkey are sometimes included and sometimes excluded in defining the region, using two "Maps of Freedom," dating from 1999 and 2001. One map was color-coded to show which countries are free, partly free and not-free, and another map that showed a country's size as relative to their Gross Domestic Product.

Bichel also touched on the issues of ethnic violence, guns and drugs in Central Asia looking at language, ethnic distribution, state sovereignty,(which has become a privilege), and the integration of ethnic history, culture with regard to geography. Democratization and development in the region, the status of superpowers, our history of military activity in the region and the recent rise in Islamic fundamentalisms were issues additionally examined.

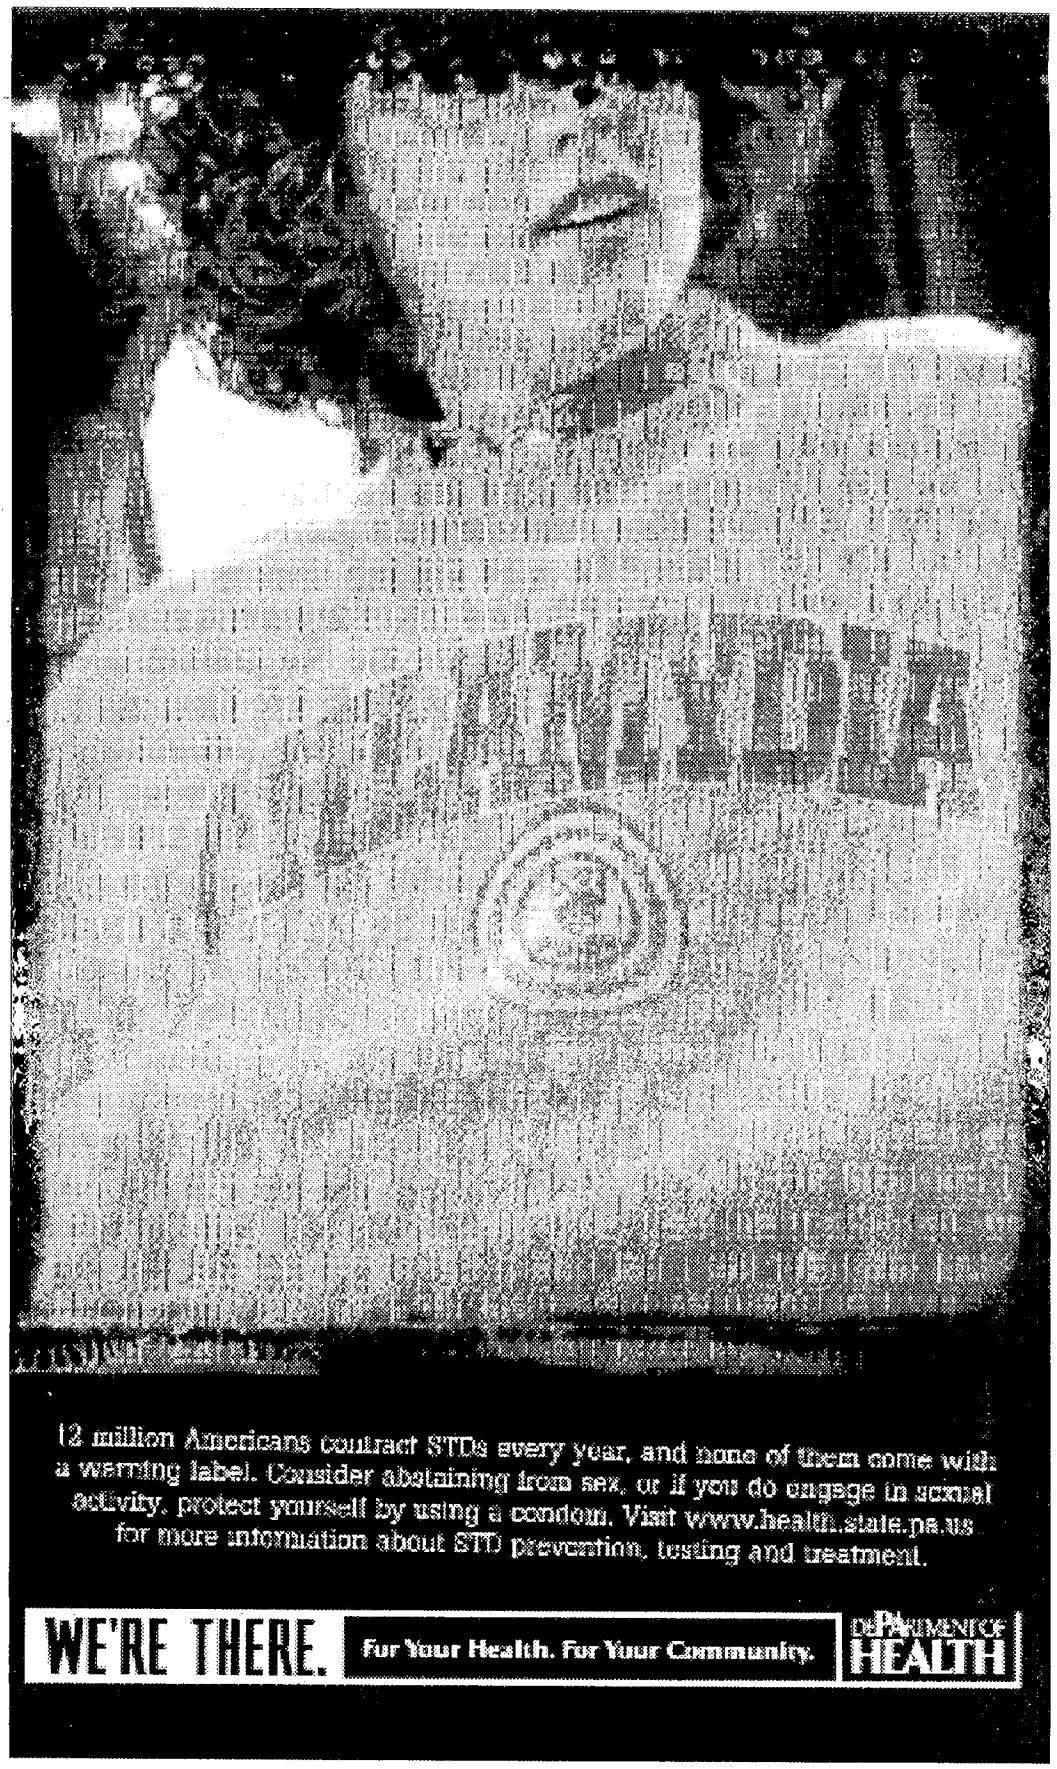
Open Mic is Alright

Genevieve Skelly likes what she hears

Genevieve Skelly
Staff Writer

The Thursday night eight o'clock line up at Billi's Bric-A-Brack Bagel Shop on October 11 included the likes of Juniata students Lee Cain, Josh Hicks and Nikolai Deskovitch. There was also a short appearance made by "Harmonica Bill," who stole the show with three or four songs very aptly played on a very small, if not miniscule harmonica, it was a truly amazing thing to see.



Lee performed a poem, something about "dumpin' a load by the side of the road and then walking away with a big smile on your face." I think that's what it was. Very inspiring poetry if I do say so myself. This was followed by half an hour of songs, sung by great voices and commendable guitar playing talents on the part of all those mentioned above. Some of the cover songs were by bands like Lighthouse and Tonic, and I did experience some spinal shivers listening to " ... how blue her eyes can be ... to get what you love ... the road less traveled," etc. I think that means a song is well sung. These were followed by some original songs and a request for an encore given by Mike Getz, the host of open mic and comedian/coffee host.

The following Thursday featured two musicians, one named Jack Treichler who is originally from California, now living in Huntingdon County, and has been writing songs for the last two years. Jack draws inspiration in his song writing from artists like Bob Dylan and Neil Young to groups such as Nirvana and Pearl Jam as well as from blues and Celtic music, producing a sound that is very folk-rock with lyrical themes of self-exploration, society and politics.

A particular song that stayed in my head was called "Peanut Butter and Jelly Theory". One line was with me the following morning as I put jelly on a muffin and read some Marx for class; "... I'm so sad, cause the world's so screwed up, I'm so glad 'cause the sun came up, I'm just here putting jelly on my bread."

Ricky Bell from State College was next in line. Ricky's band is Innuendo but he sang solo and mostly did covers. The set started on stage with a guitar and then moved to the piano. I am trying to get my hands on a cd but until then smooth vocals and powerfully performed love-songs combined with a light hearted atmosphere made for a very pleasant evening.

All Huntingdon residents should try to get to the open mic nights, as they are entertaining and who knows, we may even uncover a few stars in our midst.

Celebración de Español

Immersion Day a success

Heidi Neuhauser
Advertising Manager

Students, visitors, and faculty alike were required by Henry Thurston-Griswold to sign away their rights of speaking English for the duration of Immersion day.

The day of Spanish festivities began on October 20 at 1:00pm in the Stone Church basement. The afternoon was filled with a variety of games and activities such as Scategories (en Español, of course) and singing traditional Spanish and Mexican songs, followed by a sharing of favorite songs in Spanish.

An expansive buffet of Hispanic food, including almost any Hispanic dish you could think of, prepared everyone gathered to settle into a circle to hear the adventures of students who had studied in Quito, Ecuador; Barcelona, Spain; and Puebla, Mexico.

Once everyone was full of food and new tales to pass along, the music was turned back on and people began to dance and teach each other popular dances from Spain, Mexico, and Ecuador.

Immersion Day 2001 ended with the movie "Los amantes del círculo polar", or "the lovers from the polar circle". Immersion Day was an excellent learning experience as well as a lot of fun for everyone who attended and participated.

Rainforest

(Continued from Page 1)

the politics of the region. For example, researchers cannot remove anything from the country for study at home, due to government regulations. Getting to the field station is a long, complicated journey because the road that cuts straight through can't be used anymore because of political tensions in the region.

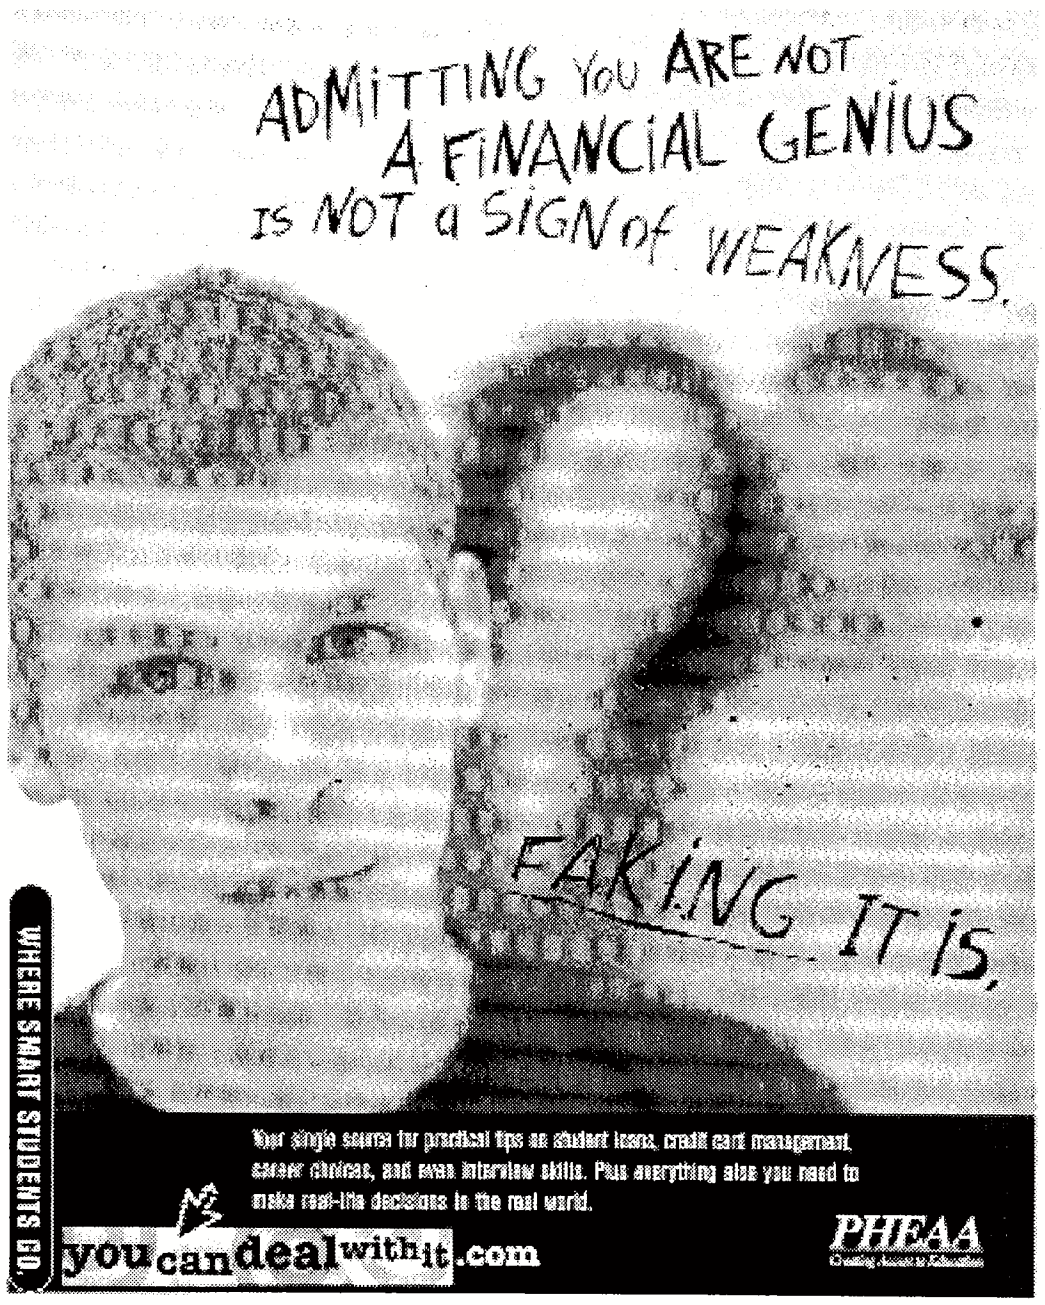
Once the students arrive they can expect to have a lot of their preconceptions about the rain forest changed. Ann pointed out that a lot of the animals the rainforest is famous for are very hard to see. She didn't see any big cats the entire time she was there. There were a lot of bugs though, "an overabundance."

Condom Controversy

(Continued from Page 1)

chose not to do a demonstration in front of the class, and some instructors chose not to talk about the topic due to personal reasons or a lack of time. Most, if not all instructors, informed students that condoms were available for free at the Health and Wellness Center, and if they were going to have sex, to please be safe.

Many freshmen felt that the condom demonstration was unnecessary and argued that they had sex education in high school and people should know how to use a condom by now, plus there are directions on the package. Other students argued that the demonstration didn't apply to them because they planned on waiting until marriage to have sex and felt abstinence was the safest measure of protection. In contrast to these opinions however, freshman found the demonstration to be helpful. Some schools don't offer sex education because they feel it is the parents responsibility to teach their child about safe sex and some parents don't teach their children sex education because they feel it is the schools responsibility to teach their children about it, so some kids never learn things like the proper way to use a condom. For others, it was helpful on refreshing their memory of the "proper" way to use a condom, because a condom used improperly is just as unsafe as having unprotected sex.



The fact is that there are still people who are college aged that don't know how to properly use a condom, and it is not their fault and it is nothing to be ashamed of. The safe sexual practices discussion topic is to help educate these people and refresh the memories of everyone else who knows how to use a condom. An EO instructors states that the demonstrations were "a bit awkward, but I don't think that hurt anyone. As the saying goes, it is better to be safe than sorry. I don't think that such a demonstration would change anyone's views on safe sex or their personal convictions regarding sex. I would hope that if anything it helped those who needed to be educated on safe sexual practices."

Cuba and Globalization

Dr. Emil Nagengast
Assistant Professor of Politics

I was in Cuba between October 5-14. Cuba is one of the few remaining countries attempting to exclude itself from the forces of globalization. Prior to my trip I had assumed that Cuba was a Latin version of the corrupt dictatorships that were set up and sustained in East Berlin, Warsaw and Prague by the Soviet Union. These socialist regimes met their deserved fate in 1989 when the Soviet Union forced them to sink or swim on their own. The Soviet Union also withdrew its support of Cuba, but why does Castro still rule over a socialist country twelve years after his East European peers were ousted and humiliated by their own populations? Part of the answer, I believe, is the continued strength of the three core principles of the Cuban revolution: unity, egalitarianism and sovereignty.

From what I was able to observe (and read), Castro has created one of the most egalitarian societies in the world. By contrast, "socialist" China now leads the world in the degree of income disparity. From the US perspective it appears that Castro has followed the simple strategy of guaranteeing equality at the lowest common level. But from another perspective, the Cuban government has provided a quality of life (measured in terms of state subsidized food, free health care and education) for all of its citizens that surpasses the living standard of the majority of the citizens in most (perhaps all) Latin American countries. The devotion to egalitarianism has meant that individual initiative in the economic realm has been crushed, but this egalitarianism has been a source of the unity that runs through all elements of Cuban society.

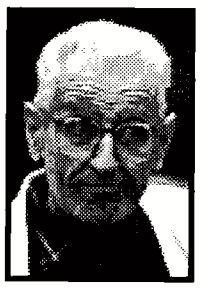
The government's success in defending Cuban sovereignty has been another source of national unity and pride. Even though Cuba is in desperate need of investment capital, the government has been careful about when and how it allows foreign direct investment in Cuba. The government's stance is that economic liberalization would mean the Jamaican development path. That is, a situation where the country gains nothing but a few minimum wage jobs from the flood of foreign investments: a country of luxury hotels and shacks.

Through their consistent prioritization of unity, egalitarianism and sovereignty the Cuban government sees itself as living proof that there is an alternative to the doctrine of free market development. But their strategy is inseparable from the stifling effects of political authoritarianism and state economic planning. This virtually guarantees that Cuba's hardships will increase to the point that the government will have no choice but to follow the Chinese by introducing market reforms to prevent economic collapse. Cuba will then see a dramatic increase in income disparities and an overwhelming influx of foreign capital. The spirit of the revolution (unity, egalitarianism and sovereignty) will become an obstacle. All this will mean a vastly improved lifestyle for many Cubans, but it will also mean hopeless poverty for a far larger number of Cubans. Cuba will then join Jamaica as a partner in globalization.

Awareness, not Apathy

Ryan R. Miller
Politics Editor

Nearly two months ago on September 11th, world events shook our normally apolitical campus perhaps like never before in the last decade. Students actually watched the news, attendance at topical lectures soared, and a cacophony of discussion on current events filled the dining hall.



Now, one month after the beginning of aerial bombardments, three weeks after anthrax cases began emerging, and two weeks after the insertion of US ground troops in Afghanistan, the situation on campus could hardly have more reversed itself. For one reason or another, Juniata students have become indifferent to the current conflict. In fact, many find the WWF wrestling sagas to be more pressing. The TV sets in Cyber Café are now tuned to ESPN or cheap Japanese cartoons, rather than actual news. Being an institution that prides itself frequently on the "global" experience that it gives its clients, Juniata College, or at least its students, is now once again stuck in the Ivory Tower of Huntingdon. Such lack of concern is deeply disturbing.

While the decline in interest is understandable in that the violence is no longer taking place so close to home, such a luxury is likely temporary, as recent crises at the US Capitol illustrate. Unlike in much of the world, including many westernized democracies, massive acts of violence have been unknown in America. Now that terror has come, with the potential for more on the horizon, our people's lives could change significantly. Juniata students need to realize this.

Do not get me wrong, panicking is no solution, and will ultimately result in victory for our nation's enemies. However, recognizing the arrival of this historical milestone is important, as is participating in deliberations concerning what must be done, if for nothing else than to shape the new world in which everyone shall have to live. This is therefore no time for apathy or indifference, but awareness and debate.

Curse of the Athlete

Matt Wolfe
Columnist

Injuries suck. That statement may seem a little obvious, but there is more depth to it than at first glance. For instance, I recently tore my lateral meniscus in my right knee. I know, I know, you feel sympathetic and want to give me money/lovin'/sympathy or any combination of the aforementioned. I would gladly take these things (hint, hint). However, those are the positive aspects of injury. Today I'm going to talk about the negative.

I know what you're thinking. You're thinking, "I wonder if I could score with that guy/girl in my 10 o'clock?" Hey, they say the average college student thinks about sex every six minutes*, so I'm just going with the percentages. However, you should be thinking, "I know the negative things about injuries, it's the pain." True as that is, pain is not the only negative associated with an injury. In fact, there are two types of pain: physical and mental.

The physical pain is obvious. For my injury, it pretty much hurts to walk around. So if you see me getting a piggyback ride somewhere, it's because I'm hurt, not because I'm lazy. Remember, not lazy, no matter what other people say. Anyway, for a while I couldn't bend my knee past ninety degrees. Think about that the next time you try to sit down, especially on the low toilets over in East. Good thing I have a handicapped bathroom in my quad and that handy rail is within reach. Although it did make me feel like even more of a cripple...

No, the pain I'm here to talk about is the mental pain. Do you have any idea how many times people have asked me, "Oh my! What happened?" after seeing me walk around in my immobilizer? Or a week later asking me how my knee feels? Or each time said person sees me that is the first thing to evacuate their mouth? Don't get me wrong, I appreciate the concern, but it gets so annoying and repetitive! It got to the point where I would make up stories about how I hurt my knee. Some of the stories include: Humping Johnny Miller's mom too hard; Fighting off a group of drunk meatheads that were molesting a girl at East; Stopping a speeding car with my leg in order to save a toddler that wandered into the road; etc, etc... Entertaining (and noble) as these may have been, the real way it happened was in soccer practice. Not even in a game, but damn practice. That just makes me happy.

I made up these stories to entertain myself, mostly, because it was so boring repeating the same old story over and over again. I wonder how many people that asked about my knee actually cared to know how it felt? Or were they just making conversation? If the latter is the case, save me the mental anguish and rage and just don't ask. If I want to tell you how my knee feels, I will. If you are honestly interested in my ongoing pain that my knee gives me, then I'll grin and bear another telling of my current status.

I imagine that most people with external injuries probably feel this way. I bet Julie, the girl with the cast on her wrist, could attest to what I'm talking about. So the next time you see someone with an injury, think before you ask. It could save a life. Or prevent a forest fire. Or something like that, anyway...

**Random statistic made up for emphasis. Sounds good though, right?*

Letters to the Editor

Students Expressing Concerns

After last issue's article was published, I received numerous responses from clubs about the issue in question. Many felt the same way I did; they were worried that independence of Juniata's clubs is in jeopardy under the new regulations. With the increasing amount of student feedback, it looks promising that something WILL be done to preserve the independence of our clubs. I am conducting a Senate meeting on Thursday, Oct. 25th, to discuss the issue more in depth by presenting to the Senate a formal list of problems with the new regulations. And with Senate approval, we will present the formal document to President Kepple and to the appropriate administration.

Student Government will not settle for this kind of treatment from the administration. We have listened to our student clubs and we are doing what we feel is necessary.

Lavinia M. Kolarczyk
Student Government President

Headaches, Not Help

Thanks to new policies on managing accounts, students are forced to go out of their way to conform to the schedules of the Student Activities and Accounting offices. Once a student makes the appointment either Dawn or Matt must approve the moneys being spent, and they, not the officer, fill in the blank as to what they feel is appropriate, (AKA designating $20 for a bill nearly $30)

It is Student Government's job to make policy changes regarding accounting club budgets and spending, not administration. Those moneys were designated to be spent by the clubs for activities they wished to participate in, not activities administrators and their assistants feel they should be interested in.

Where does the responsibility lie for all of these policies? Student Government seems to feel helpless, that their responsibility for budget reports has been stripped. The Student Activities office already is involved in so many projects it can hardly pencil in five minute meetings. Being closed for lunch during the few hours a student is guaranteed to be available makes things that much more difficult.

Someone needs to more clearly define who is responsible for what, why, and how that responsibility is to be regarded. It seems to me that this is just another example of how many shades-of-gray borders are exploited by some as a positive, as diversity, when really it is disorganization.

Mike Smith
Chess Club Treasurer

A Non-Issue?

Wow. I think that we have certainly stumbled upon a non-issue here. Everyone seems to be up in arms about not much of anything important. Etymologically speaking, does it make more sense for Student Government or the Office of Campus Activities to support the student activities on campus? I don't know the answer to that necessarily, but I don't see that it makes a huge difference. If nothing else, the Office of Campus Activities is manned by college employees who remain at Juniata while students enter and graduate, and this can help to add consistency over the years to how clubs are managed. But does it really matter that much?

Also, the presentation of Dawn Scialabba as an aspiring dictator literally made me laugh. She wants to give some advice on how to budget for clubs (that seems like it might be in her job description as Director of Campus Activities), and all of a sudden she appears to be in charge of Student Government? Not to anyone with any common sense, I hope. I will concede that, for all I know Dawn Scialabba is harboring some secret desire to take over the school and make all the clubs suffer, but I think that a bit more proof is necessary before we can see any "triangles" forming.

All in all, I think that someone is trying to rile us up with the thought of one more signature to get and one more conspiracy to watch out for. I'm not biting.

Martin Schettler '03

Student Activities Director Responds

I would like to present a few points of clarification regarding the issues presented in the article:

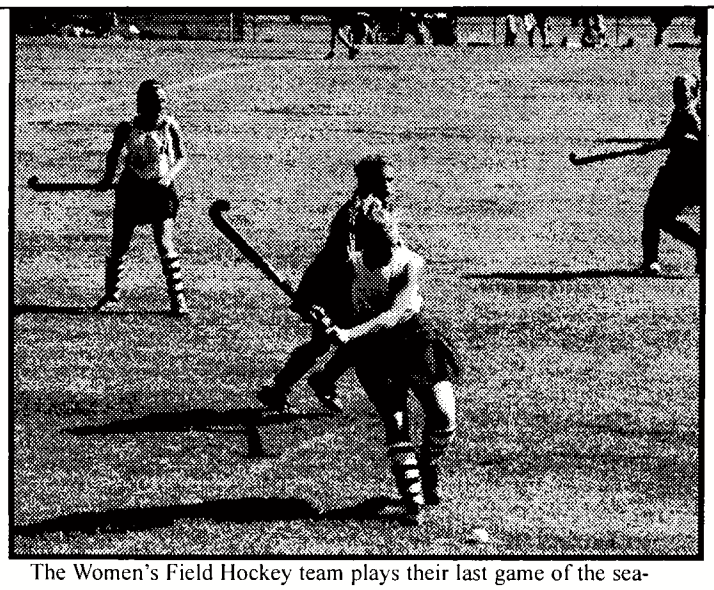
• What is the new procedure regarding signatures on student organization transactions? Effective with the beginning of this academic year, financial transactions by student organizations must have the signature of either the Director (me) or the Assistant Director (Matt Shaffer) of Campus Activities. This signature is in addition to a signature from one of the organization's officers, preferably the Treasurer. In the past, organizations were required to obtain signatures from two officers. This is NOT an approval process - Matt and I will not deny permission to the club to make the transaction as long as they have enough money in their account to cover the expense and as long as what they are planning is not a violation of College policy or state or federal law.

•Why was this procedure implemented? First, it was to comply with accounting practices suggested by the College auditors that we have an employee's signature on these transactions, rather than only students' signatures. Second, it was to provide more support and oversight of student organization finances so that clubs would use the correct procedures for their various transactions. It also alleviates some of the burden on the staff of the Accounting Services Office by having the Campus Activities Office staff handle the various questions that arise from student organization officers.

•How was the procedure implemented? Dean of Students Kris Clarkson recommended the new procedure in a meeting with the Campus Activities staff and the Student Government officers (except for vice-president Casey Hemmis who could not attend the meeting) that took place the week before classes started. No one present at the meeting raised any objections to the new procedure at that time.

We discussed various options, including having the club's advisor sign off on the transactions, but were concerned about making the new process as easy as possible for student organizations. We felt that the Campus Activities Office, located in Ellis Hall, would be more convenient and accessible to students who are in the building regularly for meals and to pick up mail. Student organizations were informed of the new procedure in a mailing that was sent to club presidents and advisors in September.

I also wanted to take this opportunity to state that this new procedure does not in any way take away authority from Student Government. Student Government retains the same powers they have had in the past which include allocating funds to the student organizations. Also, student organizations may still obtain budget reports from the Student Government officers, if that is more convenient for them than coming to the Office of Campus Activities.



I am a staunch supporter of Student Government and want to assist them in whatever way I can. Under no circumstances would I be interested in doing anything to undermine their authority. Yes, I have met with both the current and past Student Government administrations to offer guidance and assistance in their efforts to allocate funds to student organizations. However, I never intended to take over responsibility for making the allocation decisions or even to try to influence those decisions. My intent was to share information that would be helpful to them in their decision-making. For example, regarding the incident in the spring of 2000 that was discussed in the article, I had just attended a professional conference during which I participated in a workshop on student organization management. Much of the workshop discussed legal issues regarding student organization allocations, particularly in light of a recent Supreme Court ruling (Board of Regents of the University of Wisconsin v. Southworth) that was having a major impact on college and university allocation processes across the country. I thought that the Student Government officers at the time would find the information relevant and useful.

I was disappointed that Lavinia Kolarczyk, the current Student Government president, choose to air her concerns in The Juniatian article without discussing them with me first, but I have no doubt that her intent was to be an advocate for student organizations. However, I think that Lavinia and the other members of Student Government will find that I wholeheartedly share that goal and wish to work together with them to support student organizations at Juniata College.

Dawn M. Scialabba
Director of Campus Activities

FIELD HOCKEY (4-12, 2-5 Commonwealth): season complete.

Juniata completed the 2001 season with a split of two outings during the past week. The Eagles lost a 1-0 heart-breaker in Commonwealth Conference action on Thursday at Lebanon Valley. Juniata was out shot, 7-5, while freshman goalie **Melonie Sappe' (Dallas/Shavertown)** made four saves. The blue and gold put an exclamation point on Homecoming Weekend on College Hill with a 2-0 win over Division II Slippery Rock on Sunday afternoon and the final day of the season. Senior forward/midfielder **Charlene Brindle (Susquenita/Halifax)** and senior forward **Jen Thew (Line Mountain/Herndon)** played in their last collegiate games and each scored a goal on Senior Day. It was the first career goal for **Brindle**, while **Thew** capped her tenure with 35 points on 16 goals and three assists. Both scores were unassisted, as **Brindle's** tally came in the first half and **Thew's** occurred in the second stanza. Freshman goalkeeper **Melonie Sappe' (Dallas/Shavertown)** posted the second shutout of her career and had three saves.

The Women's Field Hockey team plays their last game of the season. (Photo by: E. Brunner)

WOMEN'S TENNIS (3-7, 2-5 MAC Commonwealth): season complete.

Juniata sent five representatives to the Middle Atlantic Conference (MAC) Individual Championship hosted by Lebanon Valley on Friday and Saturday and the Eagles came away with a second-place finish in doubles action as senior **Lisa Dumansky (Nutley/Nutley, NJ)** and junior **Liz Osche (Acton-Boxborough/Acton, MA)** took the runner-up spot The duo entered the weekend as the number-one seed after winning the MAC title last fall and giving Juniata its first championship at the event since 1977. **Dumansky** and **Osche**, who combined for a 7-1 doubles mark during the regular season this fall, received a bye in the first round after earning the tourney's top seed. The pair then downed **Lacey Leverberg** and **Julie Simms** of Moravian, 6-0, 6-0 to advance to the quarterfinals on Friday. A 6-2, 7-6 (6-4) victory over **Jen Olas** and **Amanda Bartkus** of DeSales (formerly Allentown) sent **Dumansky** and **Osche** into Saturday's semifinals. In the round of four, the Eagle duo produced a 5-7, 6-0, 6-4 come-from-behind win against sixth-seeded **Kristy Sturtz** and **Cristen Leaper** of Albright. However, in the finals, second-seeded **Jennifer Genevese** and **Corinne Kleinsmith** got revenge for last year's three-set loss to **Dumansky** and **Osche** in the championship tilt, with a 6-0, 6-1 decision in the first-place match. **Dumansky** and **Osche** ended the year with a 10-2 mark on the doubles court. In addition, **Dumansky** went 6-2 in singles play, 16-4 overall and will graduate with a 62-31 overall record for her career. The Juniata doubles team of junior **Lorissa Mahoney (Attleboro/Attleboro, MA)** and junior **Alexina Thompson (Pittsford Mendon/Pittsford, NY)** lost their opening outing of the weekend on Friday, 6-3, 6-3. In singles play, junior **Jennifer Thompson (Pittsford Mendon/Pittsford, NY)** was the lone representative for Juniata. She posted a 6-2, 6-3 win in the first round against **Selena Bednarz** of Wilkes, but then lost to **Abby Woodhead** of Drew, 6-1, 6-2.

WOMEN'S VOLLEYBALL (22-5, 6-0 Commonwealth): Oct. 24, Lebanon Valley; Oct. 26-27, Trinity (TX) Inv.

Juniata, ranked third in this past week's American Volleyball Coaches Association (AVCA) Division III Poll, began a 5-0 week with a 30-20, 30-19, 30-18 win at Elizabethtown during Commonwealth Conference play on Tuesday. The victory was the 242nd straight conference triumph for Juniata. Junior middle hitter **Niki Mueller (Bishop Guilfoyle/Altoona)** led the Eagles with 12 kills, a .611 hitting percentage and three blocks. Sophomore opposite **Danielle Hart (Central/Roaring Spring)** had 10 kills, six digs and three aces, while freshman outside hitter **Lindsey Habel (Glen Oak/Canton, OH)** added in 10 kills, a team-best 14 digs, two aces and two blocks. Freshman setter **Carli Dale (Cochranton/Cochranton)** had 32 assists, four digs and three kills.

On Friday and Saturday, the Eagles hosted the annual "Wid" Guisler Invitational and won the outing with a perfect 4-0 record. On the first day, Juniata took care of Carnegie Mellon, 30-18, 30-25, 30-25, to start the day and then completed action with a 30-26, 30-23, 30-20, victory over 12th-ranked Nazareth. However, the second victory of the day could have been a costly one as senior **Brandy Workinger (Dallastown/Dallastown)**, who was a first-team all-American last fall, went down with an ankle injury in the third game. Against Carnegie Mellon, **Workinger** had 17 kills, eight digs and two blocks. Hart had 13 kills, 13 digs, four blocks and three aces. **Mueller** added in eight kills and four blocks, while **Dale** registered 44 assists, six digs, three blocks and an ace. Versus Nazareth, **Mueller** led Juniata with 16 kills and three blocks. **Hart** posted 12 kills, 13 digs and two aces, while **Workinger** finished with 11 kills, 16 digs, three blocks and an ace. Sophomore outside hitter **Johanna Holtan (Fargo North/Fargo, ND)** had 10 kills. **Dale** had 49 assists, 12 digs and three kills. On Saturday, the Eagles downed Mount Union in three straight games, 30-16, 30-21, 30-15 to open the second day of action. **Hart** had 13 kills, eight digs and three aces. **Mueller** had nine kills and two blocks, while **Habel** finished with nine kills and a team-best 13 digs. **Holtan** had eight kills and 11 digs. **Dale** had 43 assists, five digs, two blocks, two aces and three kills. Juniata captured the Guisler Invitational crown with a 35-33, 30-23, 30-15 win over Division II California (Pa.) to close out the weekend. **Hart** had 19 kills, 13 digs and an ace. **Habel** posted 17 kills, 18 digs, three aces and a block. **Holtan** had 11 kills, 22 digs and an ace. **Mueller** finished with nine kills, three blocks and two digs. **Dale** ended the night with 55 assists, 13 digs, two aces, one block and one kill. **Mueller, Hart** and **Holtan** were named to the all-tournament team for their efforts during the weekend.

MEN'S SOCCER (2-11-3, 0-5-1 Commonwealth): Oct. 23, Messiah; Oct. 25, Waynesburg;

Oct. 27 at Pitt-Greenburg.

The Eagles were not in action this past week, but will return to competition on Tuesday at home against Messiah.

WOMEN'S SOCCER (6-11-1, 0-7 Commonwealth): Oct. 27 at Baptist Bible.

Juniata suffered a pair of setbacks during the past week. The Eagles fell at home to Commonwealth Conference rival Messiah on Wednesday, 6-0. The Falcons owned a 3-0 advantage at intermission. Freshmen goalkeepers **Kira Troutman (Line Mountain/Valley View)** and **Lindsey Treon (Hollidaysburg/Duncansville)** split time in goal. **Troutman** had eight saves in the first half, while **Treon** posted nine stops in the second stanza. On Saturday, Juniata lost on the road at conference foe Elizabethtown, 2-1. Freshman forward **Rebecca Shoaf (Madison/Madison, NJ)** gave the Eagles a 1-0 lead with just under 15 minutes left in regulation. It was her eighth net-finder of the year and that set a program record for goals in a single-season. Freshman midfielder **Janine Smeltz (Line Mountain/Herndon)** had the assist. The Blue Jays tallied twice under nine minutes to win the outing. Troutman went the distance in goal and made 14 saves.

JUNIATA FOOTBALL WINS THIRD STRAIGHT

EAGLES DOWN SUSQUEHANNA TO TAKE "GOAL POST" TROPHY

Juniata 46, Susquehanna 20

Huntingdon, Pa. - Freshman quarterback **Greg Troutman (Meyersdale/Meyersdale)** threw for 313 yards and four touchdowns, and ran for 86 yards on 17 tries, including a score, while sophomore tailback **Craig Moshier (Coudersport Area/Coudersport)** ran for 107 yards and two touchdowns as Juniata College snapped a five-game losing streak to visiting Susquehanna with a convincing, 46-20, win in Middle Atlantic Conference football action on Saturday afternoon.

The Eagles (4-3 overall, 4-3 MAC), who won their third straight contest, captured possession of the Goal Post Trophy (a prize the two institutions battle for annually) for the first time since 1995, while the Crusaders (2-5, 2-4) saw a two-game road winning streak broken in their worst loss to Juniata since a 40-0 setback in 1968.

Troutman hooked up with senior wide receiver **Lucas Kelleher (Bishop Guilfoyle/Altoona)** for a pair of touchdown passes as the Eagles won their third straight game. Juniata gained 565 yards of total offense, while holding the Crusaders running game to just 76 net yards.

Sophomore split end **Mark Bartosic** enjoyed his finest day as a Crusader with a school record-tying 12 catches for 176 yards and one touchdown. Junior quarterback **Mike Bowman** returned to the starting lineup and completed 23-of-41 for 281 yards and a touchdown.

The Eagles jumped on the board with 6:31 left in the first quarter as **Moshier** scored on a three-yard run to cap a nine-play, 49-yard drive to give Juniata a 7-0 lead.

After the Eagles stopped the Crusaders on fourth-and-nine at the Juniata 30, the hosts extended their lead to 14-0 as **Troutman** spotted a diving **Nate Leach** in the end zone for a four-yard scoring grab. The drive was keyed by a 37-yard completion from **Troutman** to **Kelleher** on third-and-nine down to the Crusader 13.

Susquehanna bounced back early on the second quarter as a 48-yard completion from **Bowman** to **Bartosic** set up a one-yard plunge by freshman fullback **Jason Eck** with 10:52 left in the half to cut the Eagle lead to 14-7. **Bowman**, the Crusaders' career leader in passing yards, surpassed the 5,000-yard mark with the pass to **Bartosic**, and finished the afternoon with 5,221 yards.

After **Eck's** score, a 36-yard kickoff return from **Jimmie Gray** put the Eagles back in business at their own 48-yard line. From there Juniata drove 52 yards in eight plays, capped by a three-yard scoring strike from **Troutman** to a diving **Kelleher** in the right side corner of the endzone. The extra point was blocked and the Juniata lead stood at 20-7.

The Crusaders came right back as **Bowman** found Bartosic down the left sideline for a 53-yard touchdown pass with 6:37 left in the half, but the Eagles blocked the PAT attempt to hold the score at 20-13.

Following the kickoff, **Troutman** fumbled on the first play and junior free safety **Nick Chesney** recovered at the Eagle 40-yard line. The Juniata defense turned the Susquehanna offense away as the Crusaders were stymied again on a fourth-down play in Eagle territory.

Juniata was able to take advantage of the defensive stand as the Eagles drove 68 yards in six plays, with **Moshier** dashing in from 27 yards out to give Juniata a 27-13 lead with 2:42 left in the second quarter.

In the second half, the teams exchanged punts before the Crusaders mounted a 14-play, 54-yard drive down to the Eagle six-yard line. However, sophomore defensive back **Brett Merrell (Danville/Danville)** picked off a **Bowman** pass at the Juniata one and returned it 28 yards to end the Susquehanna threat. **Merrell** added a second interception in the fourth quarter.

The Eagles turned the turnover into points. An illegal block negated a 60-yard touchdown pass from **Troutman** to **Leach**, but the Eagles overcame the penalty to drive 70 yards in 12 plays with **Troutman** running in from the three-yard line to give Juniata a 33-13 lead with 1:00 left in the third quarter.

The Eagle defense held the Crusaders again, and needed just three plays to score again as **Troutman** hit **Kelleher** in stride for a 50-yard touchdown and a 39-13 Juniata lead with 14:05 remaining.

Troutman wrapped up his afternoon by hitting sophomore wide receiver **Andrew Raup (Danville/Danville)** on an eight-yard touchdown pass with 4:16 remaining. The Crusaders closed the scoring on a one-yard run by freshman fullback **Bryan Strohl** with 56 seconds remaining.

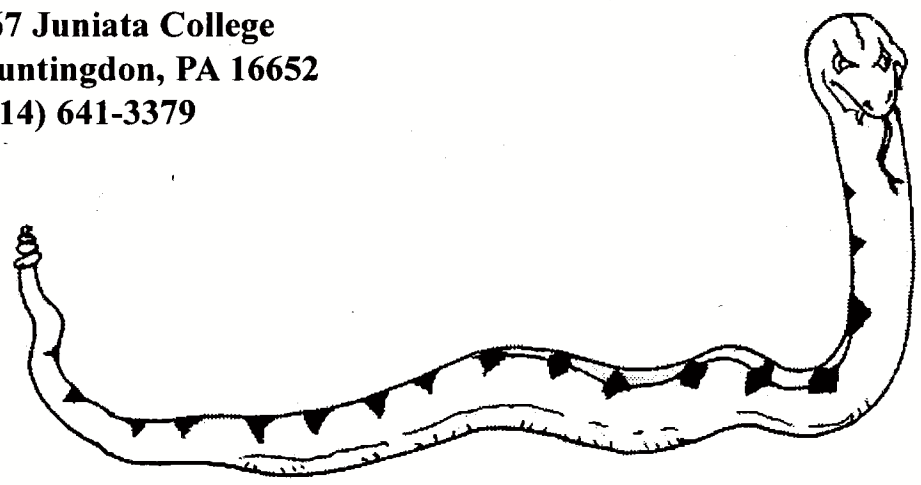
Leach ended with nine catches for 136 yards for the Eagles, while **Kelleher** added 116 yards on four receptions.

Juniata junior cornerback **Paul Evans (Huntingdon/Huntingdon)** had an interception for the fifth consecutive game and it was his sixth pick of the year. Senior inside linebacker **Josh Seiders (Wyomissing/Wyomissing Hills)** led the Eagle defense with 12 tackles, including two for lost yards. Senior inside linebacker **Sean Reed (Muncy/Muncy)**, junior defensive end **Fred Taber (Calvert Hall College/Bel Air, MD)** and Merrell each had eight stops for Juniata. **Taber** had a quarterback sack.

Nash finished the afternoon with 10 tackles while **Chesney** added nine stops to lead the Crusader defensive effort.

Sports Round-Up

(Continued from page 7)



MEN'S CROSS COUNTRY: Oct. 27, MAC Championship at Messiah.

Juniata traveled to Gettysburg College on Saturday to take part in a highly-competitive and attended invitational. The Eagles placed 19th out of the 25 teams in attendance with 503 points, while **Alderson-Broaddus** won the race with just 34 points. **Freshman Justin Norris (Warren/Warren)** led the blue and gold harriers for the fourth consecutive outing and posted a time of 28:38.05 to place 80th at an event that consisted of 206 participants. Freshman **Will Cantara (West Branch/Allport)** took 82nd for the Eagles and was clocked at 28:46.29, while freshman **Jason Freeman (Thornton/Thornton**, CO) placed 102nd (29:04.53). Senior **David Slat (Hollidaysburg/Hollidaysburg)**, who was 171st (31:41.51), and freshman **Chris Thompson (Topeka West/Topeka, KS)**, who was 180th (32:15.45), completed the scoring five for the Eagles.

WOMEN'S CROSS COUNTRY: Oct. 27, MAC Championship at Messiah.

The Eagles journeyed to the Gettysburg Invitational on Saturday and took 16th in a field of 26 squads with 483 markers. The host Bullets earned the women's crown with 91 points. Juniata was led by junior **Michele Palmer (Littlestown/Littlestown)**, who placed 64th (20:02.26) in a field of 194 contestants. Sophomore **Stefanie Rynkewitz (Lewistown/Lewistown)**, who is still bothered by a nagging injury, was 80th (20:23.79), while freshman **Breanna Daum (Blue Mountain/Orwigsburg)** was third for Juniata and 86th overall (20:29.88). Sophomore **Juliana Hillegass (Shanksville Stonycreek/Berlin)** took 139th (21:58.48). Rounding out the top five for Juniata was sophomore **Suzie Gardner (South Western/Hanover)**, who took 143rd with a clocking of 22:02.27).

ANTHRAX at Juniata?

Ryan R. Miller
Politics Editor

Early on the morning of Thursday, October 18th, Juniata Physical Plant employees were cleaning up the main gym in Kennedy Sports & Recreation Center when they spotted a white substance that made them stop dead in their tracks. Immediately, they called security, and JC Security Director Rocco Panosetti and his team set about securing the area and informing local law enforcement authorities. Examining the powder pile, Panosetti had a hunch: the suspicious substance may have been related to the Lip Sync festivities the night before. At this point he decided to call Dawn Scialabba, Director of Campus Activities.

At 11:30am Nick Damin '02 was having a normal semester day studying in his dorm room, when the phone rang. It was Scialabba, and she explained to Damin that security had contacted her with reports of a suspicious white powder that she thought he might know about, and was calling to confirm its harmlessness. Somewhat baffled, Damin reassured Scialabba that the suspected anthrax was merely sugar from the grocery store that he had smeared in his hair in order to play the role of "the Doc" in the Senior Class's "Back to the Future" skit (Lee Cain '02 was the Doc's "Flux Capacitor"). Afterwards, Scialabba thanked Damin for his assistance and said she would pass along the information to Security. Thinking the situation was resolved, Damin went back to his books.

However, 20 minutes later, the phone rang again. This time it was Security themselves. Physical plant, they explained, wasn't satisfied with Damin's explanation, and were asking for further reassurance. Until then, they were refusing to touch the stuff. The Blue Army had met its match: white confectioner's sugar. As such, Damin marched over to the gym from East. Meeting with Physical Plant, Damin lead them over to the ghastly glucose and explained the entire skit to them. Finally, they were convinced, and proceeded to get rid of that big, bad, white powder.

While the Lip Sync incident was a false alarm, it does raise the question of terrorist attacks at Juniata. As a precaution, JC Post Office Supervisor Susan Glenny has informed her student employees on how to spot suspicious mail, in accordance with US Postal Service guidelines. In the event that a piece of suspicious mail is found, which could include foreign, incorrectly addressed, or torn mail, they are to immediately hand it over to Security for inspection. Student employees are also suggested to wash their hands regularly. On the whole though, Glenny and her underlings are not overly worried. "Sometimes we joke about it in the morning," she says. "If the Lord wants us to get struck with Anthrax, we're going to have it, but the media is blowing it all out of proportion."

Across the hall in the Security office, Panosetti is less optimistic. "The possibility for an anthrax or other attack [at Juniata] does exist," he contends, pointing to seven new Bio-hazard suits, courteously of FEMA, piled in his office. Though acknowledging that College Hill may not be terrorist enemy number one, Panosetti insists that people should not abandon caution. "I have seen so many people say that this kind of thing will never happen to them...We can't have that attitude. You're letting your guard down...I still remember the Columbine shootings and the shock there. Bad things do happen in rural areas...We're so

(See 'Anthrax', page 3.)

Movement and Poetry combined in *The Body of Mystery*

Beth Skinner
Staff Writer

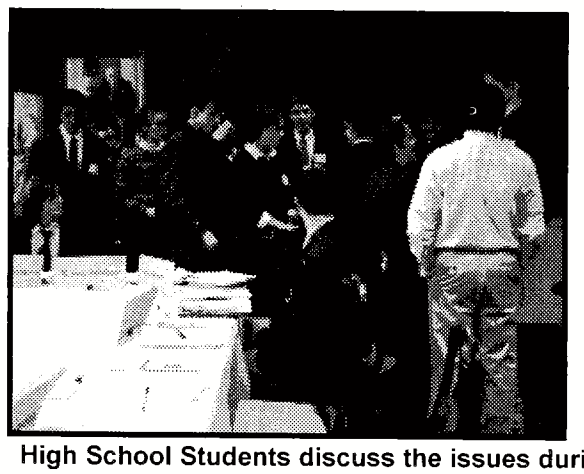
Originally conceived by Andrew Belser, The Body of Mystery drew from the creativity and experiences of the cast as well as the script.

October 25, opening night, opening show, the seats sold out shortly before the play began. Seating was limited to about 100 people per performance because of the intimate nature of the play, making it vital that the audience be able to hear and see everything. Each evening there were 2 shows, each followed with a "talk back" session, during which audience members could express their reactions and ask questions of the cast and director.

Much of the movement took

(See 'Mystery', page 3.)

Model UN Brings High School Students to JC



Justin P. Miller
Co-Editor-in-Chief

On October 26th, approximately 170 High School students and teachers descended upon Juniata for the JC Model United Nations & World Affairs Association's, (JCMUNWAA), third annual High School conference. Model UN is an intercollegiate organization whose goal is to promote international awareness through simulations of the United Nations system and other international organizations.

Each student represented an individual country or government official on one of six committees: the UN Security Council; the North Atlantic Treaty Organization; the Organization of American States; the UN Commission on Human Rights; the UN Environment Program; or the US National Security Council. Juniata students ran all committee simulations.

Dr. Nagengast, JCMUNWAA's Faculty Advisor, was quite pleased with the way things went. "This year was our most successful year yet," he explained. "Our students have a special commitment to Model UN, and I'm glad we were able to take advantage of this strength to offer the high school delegates a serious, intense simulation of the way things work in international relations." Nagengast also felt that Senior Lindsay Briggs, the conference's

(See 'MUN', page 2.)

MUN

(From page 1)

Secretary-General, deserved special thanks for the smooth way things ran.

The number of committees the club offers at its conference has so far doubled each year, as their first conference, first envisioned by Kristy J. Manning '00, started a tradition with only two.

In light of September eleventh, the US National Security Council, a special ad hoc committee, was added to allow students to discuss the US war on terrorism. Senior Ryan Miller chaired the NSC, playing the role of President George W. Bush. A humorous moment of the otherwise stern committee came when Miller, in response to student suggestions that the World Series be cancelled due to the risk of terrorist attacks, declared "You mean to tell me that I'm going to speak on national TV tonight and tell the American people that there'll be no baseball this weekend?"

The conference also featured some cool technology, compliments of the TLT center staff. Direct video links in the NATO and Security Council permitted delegates to communicate with JC versions of Vladmir Putin, Yassir Arafat, and Ariel Sharon. Felix Reifschneider and Ronald Seedoch provided the acting talent.

At the end of the day-long conference, each committee chair awarded a "Best Delegate" and two "Outstanding Delegate" awards to select students. Qualifications vary but can be generalized by saying that a "Best Delegate" is one who demonstrates knowledge of world affairs, has a firm grasp of parliamentary procedure, and who is competent in speech and negotiations. "Outstanding Delegates" are those who demonstrate the same qualifications but may have more of a need for developing those skills.

JCMUNWAA's TLT Liason, and JC senior, Andrew Magaro felt that the conference was a beneficial experience for both the high school students as well as the JC students in that it, "allowed us to work behind the scenes and see all the work that must be done in order to run a successful conference as well as allowed the visiting students to experience a little politics." Magaro also was responsible for coordinating the technology for the conference. "The TLT staff were great. Eric DePanfillis and Jacob Dickerson did an incredible amount of work on this, and deserve a lot of credit for their willingness to help us out."

JC Campus Shows Charity during Class Competitions

Erin Brunner
Staff Photographer

Every year, the Catholic Council sponsors a Homecoming food drive to boost supplies at local food banks around the holiday season. Huntingdon Food Bank and St. Vincent DePaul Society receive all food collected, which reached over 947 cans this year, making this the most successful food drive in the more than seven years it has been running.

The food drive took place over a span of three days, creating an easy way for any graduating class to earn points in the race to win JAB's Homecoming class competition. Students earned points by donating non-perishable food items to the cause, which brought their class a little closer to the victory. Catholic Council offered double points for Thanksgiving items such as cranberry sauce, canned pumpkin, and canned vegetables.

The total added up to over 1500 points with freshmen contributing 104 of them, juniors 280, seniors 362, sophomores 696, and faculty rounding it out at the end with 80 points.

Faculty and staff donated food items simply for generosity's sake since they weren't really in the competition.

The Homecoming Class Competition consisted of the food drive, Powder Puff football, and Lip Sync. The seniors took first in Lip Sync, juniors were victorious in the football game, and sophomores took the food drive.

Cloister Haunted House a Success

Heidi Neuhauser
Advertising Editor

Once again Cloister's haunted house was a success raising over $600 for the dorm's C-board, as hundreds of people came to experience the sheer terror of the rooms and corridors of the notorious building.

This year's theme was "scary movies", converting Cloister into a series of "theaters" showing various scenes from different horror films. The tour began by purchasing tickets from "Rosemary," and an explanation of the Haunted House by Chris Villa. Visitors were lead up the stairs and entered the haunted house filled with scary music, bloodcurdling screams and tortures of the imagination.

The first theater was showing Halloween., however , as the tourists continued exploring the halls theatre two proved to be closed due to an unexpected murder. Various zombies clutched and screamed at the visiting intruders as they made their way to theater 3, which included a frightening display of Silence of the Lambs. Next, they walked down the cobweb-covered stairway to the fourth theater where Dracula was showing. The blood-sucking vampire himself was searching out those with O+ blood type, followed by an exceptionally realistic depiction of The Exorcist. The final theater was of Children of the Corn. Upon completion of the horror movie theaters, all were directed to the lounge where "body parts" were in boxes for people to touch. Finally, they walked through Cloister's theater "the place that the ghosts of Cloister come to see their favorite films," where visitors received their final scare upon exiting.

Anthrax

(From page 1)

diverse at Juniata, you never know who may be a target. Your best defense is being prepared."

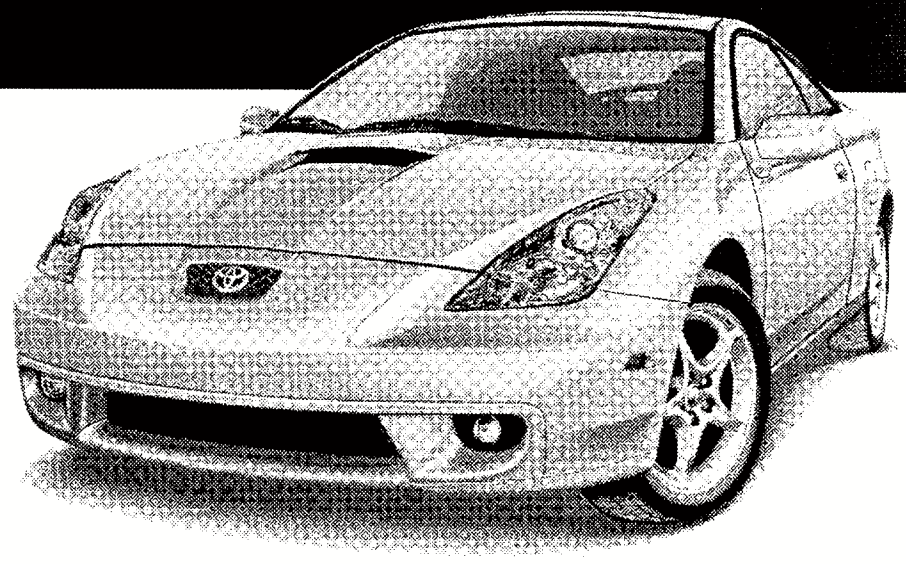
Regarding specific measures his office is taking, Panosetti said that the Fed's efforts were filtering down, and that JC security was "following all the precautions that the government has given us. We're in constant contact." So far, says Panosetti, the Lip Sync incident was the only significant false alarm on the campus.

In another, more humorous incident, the cast of JC Theatre's "Body of Mystery" was confronted by an audience member who had concerns about the use of white chalk in Professor Andy Belser's movement piece. "So, whose idea was it to put the Anthrax in the show?," barked an elderly gentleman during an audience-actor talkback session following an opening night performance. Belser explained to him that the white chalk had been in rehearsals from the beginning, long before Anthrax incidents began appearing the news (the man was later identified to be in fact Belser's father). Apparently unsatisfied with the answer given to his inquiry, the man afterwards approached actress Raina Miller '04 to press the issue. "So," he probed Miller, "when you were watching your fellow cast members walking through the 'chalk,' did you ever think of anthrax?" Not sure of the correct response, Miller could only say "Um..no, cause it's chalk."

Chalk or not, if fortune condemns Juniata with a merry "white" Christmas, just remember where seven brand new BioHazard suits are. "Sorry", says Panosetti, "These are for me," he said with a grin.

Mystery

(From page 1)



place on or near the ground, and the sound of the breath of the cast was a crucial link from scene to scene and as an identifying symbol throughout the show. The Bible stories lent a sense of reassurance to a play that felt like it was uncharted territory. Poetry, Bible excerpts, and cast experiences were alternated and linked with music for the duration of the piece, causing each scene to "run" into the next, sometimes with very little distinction. The common themes, symbolism and gracefulness of the cast made this possible, without making it tedious. The stories written by the cast helped to connect the audience to the play by being contemporary and like our own lives. The poetry gave an abstract and ethereal quality to the play. Tension was eased and heightened by alternating.

This incarnation of the piece was created by the cast and Belser during their rehearsals. The cast selected poetry and created movements to go with the words, and then Belser helped them to decide what worked from his perspective as a director. Movement and improvisational skills gave the cast tools to put the words to movement. A cast member would take a piece and improvise movement with it. The movements didn't have to make sense of or interpret the words. During the talkback audience members had lots of questions for the cast and director. How did they think of this movement? Why this poetry? These questions were asked in various ways over and over. Belser explained that sometimes it didn't have to make sense; it could just feel right. Belser also teaches a course titled "Movement and Improvisation" here at Juniata that is based on this new discipline. The discipline is being taught around the world under various names.

The cast of The Body of Mystery expertly represented various characters, and their grace made the movements seem natural, not forces or overemphasized. The "talkback" session was very helpful for answering the inevitable questions that the audience had after an abstract piece like this one. The piece was one not to be missed, the cast was memorable, and the creative talents of all involved were well incorporated, making The Body of Mystery a landmark piece for Juniata theater.

TOYOTA

Celica—
The Inside Story

On the outside, it's easy to see that Celica is race-track inspired. But the real excitement is on the inside...under the hood. Take the Celica GT-S...Toyota worked with Yamaha to build a 180 HP engine redlined at 7800 RPM...equipped it with Variable Valve Timing with intelligence...a computer that constantly monitors and retunes your engine for maximum performance...a cam with two sets of lobes to provide two ranges of valve lift and duration for more usable horsepower. There's direct ignition for greater reliability... iridium-tipped spark plugs for reduced maintenance...a stainless steel exhaust manifold...a water-cooled oil cooler. And mated with Toyota's 4-speed electronically-controlled automatic "Sportshift", you get transmission shift switches on the steering wheel...just like Formula 1 race cars. *Sweet.*

www.gettoyota.com

Driving a new Toyota is easier than ever —

because now your Toyota dealer has a special college graduate financing program available thru Toyota Financial Services that offers a lot of great advantages.

So if you're within 4 months of graduation... or if you graduated within the past two years...See your Toyota dealer for details.

Huntingdon Emergency Services Unite to Inform Area Residents

Neil Thorn
Contributor

November 1st was a beautiful day that belonged in September. Quiet until 5:00pm, when the peace was broken by the sound of screeching sirens, it quickly became apparent that this was not going to be a normal afternoon.

A throng of people and emergency vehicles rushed towards two cars set against each other on Sherwood lawn. If an unsuspecting stranger had happened upon this scene they may have thought it real. In this case, it was not. It was a drill, painstakingly planned by members of the Emergency Services and Safety Club and QRS 8.

This drill, which included personnel and equipment from Huntingdon's Fire Company 5 and Ambulance Company 500, Onieda's Fire Company 18, our own QRS 8, Juniata College Security, and MedStar II medical transport helicopter, was done to facilitate training in rescue and treatment techniques, as well as help review skills for people who have been out of training for some time.

The drill was conceived with the intention of raising public awareness as to procedures of EMT's and firefighters as they work on the scene of an accident, as well as seeing pieces of equipment that not often seen by the public, including the ever popular Medical Transport Chopper.

Keep your eyes open the next time you hear a siren -- it could be someone you know using the skills they learned that beautiful November day. Even though the injuries appeared real, no QRS members were injured in the making of this accident.

Rescue workers assess the situation at the mock accident. (Photo provided)

Juniata Holds First Annual Homecoming Parade

Seung-Yul (Michael) Jeong
Staff Writer

On Saturday, October 20 folks lined 15th, Mifflin, Moore, 19th and Scott streets to witness the first ever Juniata College Homecoming Parade.

Even though the parade was to celebrate JC's homecoming, the whole area enjoyed participating. Denique Conner, 10th grade, really enjoyed the parade. "While watching the parade, I was proud to be a Juniatian." Her favorite part was the East guy's float, which was themed of The Godfather; "I really enjoy the roll playing," she stated.

The Lesher girls performed a memorable dance ensemble. The Lesher girls are cute and vigorous in the dance performance. The ladies seemed satisfied with their hard work as they carried a big smile throughout their performance along the way toward Ellis Hall.

The parade was also an opportunity for visiting alumni to watch old friends and newcomers take part in the Homecoming festivities. 2001 graduate, Andrea Klingler felt she was "very excited about it. I haven't been back since the graduation and I missed closeness of Juniata." She lives in Boston and going to graduate school. Many alumni come back to show their unwavering support.

Other memorable points of the parade included Sherwood Hall impersonates Flintstone; WKVR shout on the air as they broadcast the football game; Huntingdon Area High School presents their marching band and plays along the way and in front of Ellis Hall.

This homecoming the parade offered a great eye-popping performance from Juniata and local high school students.

PRIDE Olympix

Heidi Neuhauser
Advertising Editor

Juniata's Phi Alpha Service Club was one among thirteen teams to compete in the annual PRIDE Olympix held on Thursday October 25 at the Huntingdon Holiday Inn.

This event is a fundraiser for Huntingdon PRIDE, an organization that deals with **P**romoting **R**ehabilitation, **I**ndependence, **D**ignity and **E**ducation. Each team of five people entering was required to raise a minimum of $250. All money raised was donated to assist citizens of Huntingdon County with special needs.

Juniata College was represented in this event by Phi Alpha Service Club. Five team members, Sarah Bellak, Laurie Harden, Mandy Gibson, Nicole Bowen and Heidi Neuhauser, and two cheerleaders, Brandi Whetstone and Randi Whetstone, were sent.

One game in the Olympix was "52 Pick-Up" where all participants had to put a deck of cards in numerical and suit order after being randomly thrown into the air. "Circles of Fun" involved all team members passing a lifesaver from one straw held in their mouth to the next team members straw held in their mouth until the lifesaver passed down the entire line. Other games included "Rubber band Archery," "Waste Paper Basketball," "Balloon Lagoon," "Hole in One" and a four-way Ping Pong Game.

Phi Alpha came in an impressive fourth place in the Olympix. Penn Central National Bank raised the most money for this event and also won the Olympix. A total amount of $9,000 was raised to support Huntingdon County PRIDE.

Choose to Choose

Jen Lewis
Lecturer in Communication

"It wasn't my fault." "I couldn't help it." "I didn't have a choice." I am willing to bet that we have all said or heard these phrases regularly in our daily interactions with one another at Juniata College, and beyond. We live in a society that not only accepts, but also condones, the "victim mentality." To say that we "don't have a choice" in a given situation is considered a perfectly acceptable justification for making poor decisions, for failing to fulfill our duties to the best of our ability, for saying something irrational and hurtful, or even for feeling discontent with our current life situation.

The rationale behind the victim mentality is that if we can attribute our thoughts, feelings, and actions in any adverse situation to forces that are outside of us, we will never be held liable for our weaknesses and failures. In other words, when we blame our poor choices on anyone or anything but ourselves, we absolve ourselves of responsibility when the consequences of those choices are less than favorable.

Whether we realize it or not, we maintain this outlook because, in a sense, it works for us. If we can attribute our undesirable situation to our family, our friends, our computer, our money situation, our education and training, our significant other, our body, our alarm clock, our hectic schedule, or our natural abilities (or the lack thereof), then we are not culpable for our unhappiness or questionable actions. We are thus protected from being held accountable for our actions, our attitudes, our poor decisions- and ultimately, perhaps our dissatisfaction or misery with our own lives. Or are we?

Although the victim mentality is convenient and comfortable, this point of view robs us of our power. By blaming outside forces for our shortcomings and adversities, we are, in effect, saying that we are passive recipients of whatever the universe chooses to throw at us. We turn ourselves into victims of circumstance, and we give away any sense of control. Life has done us wrong, and we can't do anything about it! Poor us.

I believe that we must become more active participants in this process of life. I would like to submit a personal philosophy, which has literally transformed the manner in which I live my life. I call this philosophy, "The Choose-to-Choose Concept." Here is how it works.

In any situation, we are presented with a number of choices. We have the opportunity to select from the various options at our disposal, and if it works, then great! Hooray for us! We made a good decision. If it doesn't work, then...well, that's more difficult to accept. Chances are, our knee-jerk response to this type of situation is to point fingers at others, or at our circumstances, in order to rationalize our behavior. Certainly, it is not fun to realize that we have made a mistake or a poor decision, or have acted irresponsibly. At this critical moment, there are a couple of different ways we could respond. We could choose to approach the situation as though life happens to us, and we have no control. However, we could also choose a worldview in which we admit that we make mistakes, take responsibility for our actions, and focus on a response that can make the situation better. Either way, it is our choice. In effect, we have the opportunity to "choose to choose": choose to learn from negative experiences; choose to have a positive attitude in a less-than-positive environment; and choose to dig in and do what it takes to transform our limitations into opportunities. We cannot continue to go through life, blaming others for our misfortunes and inadequacies. We must strive to respond to difficult situations with grace and confidence. When we take responsibility for both our successes and our failures, we become powerful instead of powerless.

Language, Mr. Wolfe, Language

Matt Wolfe
Columnist

This becomes most obvious when people are trying to describe something. Whether it is an object, a feeling, or an event, description is one of the areas of speech where one can almost "show off" in one's vocabulary and knowledge. And what phenomenon do college students attempt to describe the most? The most ubiquitous event, the "hook up."

So I ask you, what exactly IS a hook up? Could this term be any more vague? It could range anywhere from a kiss to sex, and anywhere in between. Hook up to one person may have an entirely different meaning to another person. So if person A tells person B that they hooked up with someone last night, what does person B believe? Since the term is so vague and specious, no true understanding can occur.

Let me give you a better example: This guy I know, the clueless bastard, had told me he hooked up with a girl over in Lesher one night. In fact, he spent the night over there. The best part is that Lesher had a fire drill the next morning. So imagine this scene: One hundred girls and one guy, whom everyone knew had no reason to be there, except one. Man, what I wouldn't have done for a camera and good timing that day...

Anyway, when he told me that he hooked up, how am I supposed to take that? Just sleeping over doesn't guarantee that sex occurred, so I can't assume that instance. Maybe they just made out a while and slept in the same bed? Who knows? This is a perfect example of a time where better description skills and a better vocabulary would enhance communication.

So the next time you tell someone about the hook up you had the night before, try to show off that fancy college education and use terms that actually mean what you are talking about. If you just kissed, say that. If you slept in her bed, say that. If you did more, well, I guess it depends on the person if you want to say that. Hell, you might as well just tell, because on this small campus it will get out the next day anyway, whether you want it to or not.

Charging Students for Using Printers?

Ryan R. Miller
Politics Editor

A few weeks ago, the issue of paper usage at Juniata emerged as a major issue at the Student Government-sponsored campus forum. Apparently, the cost of paper-wasting at JC worries some up top, enough to prompt Student Government to form a Special Committee for Recycling to look into the matter. Its findings? Juniata is using paper to a whopping extent of 30 pages per student daily. This must be brought down, says the committee, which is concerned that too many dollars may be flooding into the computer labs.

One of the committee's "ideas" included giving students paper quotas like at Penn State, whereby one is limited to say 100 pages per semester, and anything beyond that amount must be paid for. While such rationing may be perfectly acceptable for the People's Republic of State College, here at Juniata WE ALREADY PAY $25,000 a year to cover expenses like paper! We have a right to print out what we need to. One of the reasons people come to small liberal arts colleges like JC is to have an ample share of all educational resources. Because there are just a few of us, rationing is supposed to be unnecessary.

Granted, some people do not understand that clicking the mouse button more than once in superfluous, and indeed wasteful. But are paper quotas the right way to address he problem? No. Not only does it give us another thing to pay for, but also it discriminates against those who do not own their own printers. A better strategy would be to educate students on the correct way to print stuff out, such as by converting news articles to print-friendly text.

The simple fact is that we, as students, use paper and will continue to do so. Not only do our professors demand that we write papers that need printing out, but they also require that we carry out the research necessary to do them right. Sadly, to have sources we can look at when we have time, we need to print them out. In France, I saw students huddled around computer screens desperately taking notes on online sources, and making everyone else wait for a computer. I have seen the barbarism that occurs when rationing hijacks a student's education, and I urge Student Government to lay this matter to rest. Otherwise, it will be interesting to see how paper quotas play out in student government elections in the spring.

Letters to the Editor

Emotion and Intellect in Politics

This point in our lives, as young adults, is a period of incredible development intellectually and emotionally. These are two aspects of our character that are closely tied together, yet sometimes, divisively torn apart. My political thought has been forming and continues to form here at Juniata, now, at this time in my life. While I am fully aware that most on our campus are not politically motivated or moved, I find myself in a different position. I form and re-form my opinions regarding all facets of politics daily. From international relations to civil liberties to social programs, I continue to shape and form my position.

Two men have pushed me along on this path searching for answers in my personal development and political theory, while another has asked the questions. In the short time that I've known him and had a working relationship with him, my Politics Professor, Dr. Nagengast, has presented problems that I had not, before, contemplated. He presents information and I feel that I must come to a conclusion based on that information. One of our visiting professors, Dr. Skelly, continues to help me, whether he knows it or not, in keeping steady those values which control my heart, namely civil liberties, non-violence and sovereignty. These values have existed in me since I discovered my political ideals and leftist leaning. I would have never supported increased military spending, bombing Afghanistan or "spying" on American citizens and still do not, but I find that my mind and reasoning are going in different directions.

Mr. Terrell Arnold, a visiting lecturer and former member of the State Department, helped me understand that increased diplomatic and intelligence spending are necessary in the post September 11th World. He suggested that we re-think our approach to Israeli-Palestinian relations, in terms of the terrorism committed by both sides, which I am now doing. He also made an excellent point in suggesting that we take it upon ourselves to react to hostility and anger in our own communities before it has a chance to "blow up".

My heart and mind are now torn between values I held that went unquestioned two months ago and problems posed to me since that horrific Tuesday morning. It is unfortunate that I have to think about such dilemmas, but I feel that Juniata has given me quality opportunities to think about such things through its faculty, visiting faculty and guest lecturers. I am not promoting a political agenda or the fact that your agenda has to be politics, but I feel that in our "New World," we should all develop ideas on the changing role of everything we know. Quit being so damn apathetic!

Eli Finberg '05

The Bombing in Afghanistan

With most polls showing that well over 80% of Americans support the bombing in Afghanistan, I recognize that my position is indeed not popular. Nonetheless, I am obliged by my conscience to oppose this action.

Clearly the work of the terrorists on September 11, 2001 was shocking and horrific and whoever is responsible should be brought to justice. I have always believed, however, that the pursuit and capture of murderous criminals should be accomplished with the least amount of violence possible. We Americans rely on that principle every day in cities and towns across our nation. We generally do not accept the bombing of an entire building or city, and the death of scores of innocent persons, in the pursuit of a criminal. Fortunately, our law enforcement professionals do not have policies that allow for that type of "overkill" either. The incidents at the MOVE house in Philadelphia and at the Koresh Compound in Waco are two exceptions where law enforcement did use massive force to capture a wanted person or persons.

Now back to Afghanistan. Why do we hold a different standard when the situation is half a world away? I don't understand why we are willing to allow our tax dollars and our sons and daughters to be used to kill innocent civilians and to level towns and cities in one of the poorest nations on earth? Sure, we'd all like to see Bin Laden and his gang brought to justice, if they are responsible. But is it worth billions of dollars, risking our sons and daughters in combat, and killing (even accidentally) innocent families while they rest in the safety of their own homes?

Could we not have been more patient, developed better intelligence about Bin Laden's whereabouts, and then sent in a massive "SWAT-like" team of military commandos to capture him? It seems we should have at least tried something along these lines before we just go in and start tearing a country apart.

Relief agencies are announcing, with increasing alarm, that millions of Afghan men, women, and children are at extreme risk of dying of starvation and exposure in the coming weeks of winter. Many of them are living in refugee camps along the borders with Iran and Pakistan, where they have fled to escape the bombing campaign. Many others who have stayed in Afghanistan do not have adequate shelter, food supplies, and clean water. The bombs have caused this situation. Isn't it at least our responsibility to do as much for these persons as we're doing to try to capture Bin Laden? Sure the U.S. government is making a contribution to this effort. But relief agencies on the ground say the need is much greater than what the U.S. government is offering. We Americans ARE the U.S. government and the bombs being dropped are paid for by our tax dollars. That makes us responsible. Should we not, at least, be pressing our elected officials to also spend a sufficient amount of our money in bringing aid to the Afghan people who are as innocent, and in equally great need, as the persons whose lives were shattered in New York, Washington, and Pennsylvania on September 11th?

George Bush recognized this need, when he encouraged America's children to contribute a dollar to help Afghan children who are affected by the war. The need, however, is much greater. There are two things every U.S. citizen could do to help. First, contact your U.S. Representative and Senators and ask them to do more to aid the innocent Afghan people. Secondly, you can make direct contributions of money, food, and blankets, to one of the non-governmental relief operations. Detailed information about how to do this can be found at the websites of the American Friends Service Committee (www.afsc.org/mediarel.htm) and the Mennonite Central Committee (www.mennoniteccc.ca).

Daniel Cook-Huffman
Assistant Dean of Students

JC Traditions in Jeopardy

I only have questions - no answers, and I cannot remain silent much longer. I am not the only person who has asked these questions, although I, as well many friends, have heard these ponderances echo across now truly quiet little Huntingdon, Pennsylvania.

Do those working for Facilities Services have to obey quiet hours? Under whose orders are door locks attached with hammer nail and leaves blown away with 2,000 horsepower engines? What can residents really do about these violations?

Why is East so quiet? Is there a lack of motivation to party, drink, or simply clean up afterwards? Even when there is noise, why does it resonate from merely one room, leaving no selection as where to party? Is this a trend, which, starting last year, will continue until late-night, weekend duty RAs are phased out? Or is it simply possible that changing generations are finding new, quieter outlets?

Why are there so few Madrigal tents? Why is it the case that as of the second day last year, there were more than twice as many tents out there - even five days after the first pitch? Does anyone even remember last year's, "SHUTTLECOCK, TITMOUSE"? Do we attribute this, again, to lack of motivation, or simply the fact that we're constantly hearing messages that, "It's OK to be lame"?

We, as a college community are accepting too many excuses. Compassion is wonderful, and I commend those fighting the good fight. But being compassionate to those who can't be bothered to participate and preserve the life of tradition is, in fact, not compassion. That is ignorance, and allows these traditions to fester and atrophy until Juniata College is simply an expensive UPJ, with a blue army waking students at the ass-crack of dawn.

Seniors Blow Faculty Squad Out of the Water

Eric Orlowsky
Contributor

On a warm October afternoon at Greenwood Furnace State Park, the Class of 2002 sent a strong message to the faculty squad. Despite the pregame banter of one lanky physics prof (who we shall refer to him as Jim B. or rather J.Borgardt), the seniors rose up the occasion and ended the faculty's five year winning streak.

The faculty, captained by Dave Hsiung and Jim Borgardt, won paper, rocks, scissors over Eddy Luke and Eric Orlowsky, senior co-captains,to gain the opening possession. After 'Slim Jim' Borgardt had the game's first score on an interception return, the seniors settled down and kept Borgardt in containment for the rest of the game. Dave Damato caught a pass in the flat and scampered down the sideline to even the scoring at one a piece.

The seniors took the lead on a pass from John Boyer to 'Mad Dog' Orlowsky, who broke several tackles on his way to the goalline. Rugby star Karen Garner sacked Borgardt in the endzone for a safety to set the score at 2 and half to 1 (I don't know. I guess it counts for half). Then Big Eddy Luke picked off a pass and rumbled into the endzone to put the game away.

After this, it appeared the faculty had had enough. But Borgardt began taunting senior co-captain Eddy Luke by saying, 'Strap it on, Luke. Strap it on.' The seniors rallied around their leader to show what they were made of.

Despite the defection of Damato, Craig Solensky, and Dan Sahd (who preformed well before disgracing himself by playing for the faculty), the Class of 2002 had more than enough fire power to finish off the weary and battered professors. Once again, the vaunted senior defense rose up to the occasion. John 'The Hitman' Galiote and Bill 'Kill them all and let God sort them' Olstein combined to splatter Jay Hosler of the Biology Department. Also, Suzanne Krance sent Borgardt crashing to the ground. After that blow, he was just not the same player (In fact, he didn't even finish the game).

Both sides swapped two more scores. The seniors final two touchdowns came on passes to Jaime Irish and Garner,by Boyer and Orlowsky respectively. The faculty's last two scores came from Jeremy Santos of the Bookstore and Hosler. However, it was too little too late as the senior triumphed over the faculty, by the score of five and half to three. After the game, the seniors commemorated this win and their final Mountain Day by singing 'You've Lost that Loving Feeling'.

If you ask one of the faculty members, they might tell that this game was just for fun or it didn't mean anything...but it does. For the faculty, there will be other Mountain Days, other chances to pit their skills against their students, but forever the memories of this day and the class of 2002, will haunt them, especially Borgardt. For the seniors, this achievement will resound through Mountain Day lore for years to come.

Juniata, Seniors Finish on Sour Note

Mike Zimmerman
Sportswriter

The season ended for Juniata and the careers ended for fifteen seniors on Saturday as Juniata dropped a 42-14 decision to 15th ranked Lycoming. It marked the last game for seniors Ben Cole, Mike Williams, Butch Carfley, Lucas Kelleher, Josh Chubb, Andy Radomsky, Mike Zimmerman, Jamie Campbell, Russ Smith, Kevin DeCarlo, Nick Meyers, Sean Reed, Alan Rogers, and Josh Seiders. Jason Stouffer was also honored but he will be returning to College Hill next year.

In the first quarter, it appeared Juniata would handle Lycoming and possibly earn a playoff bid in the ECAC playoffs. The Eagles jumped out to a 14-point lead at the final gun of the first. Juniata's defense held Lycoming on its first possession. The offense took off from there. Troutman marched the Eagles 78 yards in 12 plays. With 7:05 left in the first Troutman hit Nate Leach in the corner of the end zone to give Juniata the lead. Not all was well for Juniata on the play. Leach injured his ACL on the play and did not return. Nate was replaced by freshman wide out John Woodward. Dusty Lehr's extra point was blocked and Juniata held a 6-0 lead.

Lycoming took the next possession and drove down the field but once again was stopped by the Juniata defense. Troutman and company start at their own 21 and drove the distance in seven plays. The capper was a seven-yard strike to Josh Chubb. Kelleher also caught the two-point conversion to give Juniata a 14-0 lead at the end of the first quarter.

Juniata did not know that would be the last time they would find the end zone this season. The Warriors, who entered the game with one of the best defenses in the country stiffened and held the Eagles scoreless for the final 45 minutes.

Lycoming on the other hand was just getting started. The cog in their offensive machine on Saturday was running back Tim Deasey who would score five touchdowns on the day. Deasey finished the day with 39 carries for 242 yards and was tabbed MAC Offensive Player of the Week. Deasey hit on touchdown runs for 12,3,8,3, and 1 on the day. Jon Neve scored the other touchdown for the Warriors on a two-yard plunge. The Warriors finished with 42 points, racked up 353 rushing yards, and totaled 100 plays in the ball game.

Juniata's offense was kept off the field most of the afternoon, running only 59 plays. Troutman finished the day 21-43 for 234 yards, two touchdowns, and one interception. John Woodward not only snagged his first pass, but he led the team with six grabs for 75 yards. Kelleher had five catches for 89 yards and Chubb finished with three catches for 22 yards. Pacing the defense was Brett Merrell who had 13 tackles on the day.

Juniata finished the season 5-5 and 4-5 in the MAC Commonwealth Conference.

MAC Football Honors Handed Out

Mike Zimmerman
Sportswriter

Monday the Mid-Atlantic Conference handed out their yearly awards and Juniata once again was well recognized.

Heading up the awards was freshman quarterback Greg Troutman, who took the conference Rookie of the Year Award. The Eagles placed one player on the first team. Dusty Lehr was named as the first team punter leading the league in average yards per punt. Nate Leach was named second team wide receiver. Three members of the Eagle defense are members of the second team. Junior defensive end Fred Taber, linebacker Josh Seiders, and Paul Evans was named second team defensive back. Jeff Spotts was named to the honorable mention team as an offensive lineman.

Midnight Madness on Tennis Court

Mike Zimmerman
Sportwriter

The Juniata men and women's basketball teams took to the court for the first time Friday night for a friendly exhibition. It gave the students a preview of the two squads and many opportunities to win prizes donated by local businesses and the school.

The night started with the first forty people receiving free midnight madness t-shirts. Giveaway began at eight, local businesses like Boxer's, Burger King, McDonalds, and The OIP, supplied coupons for food and dinner's that were won by the person in attendance with the correct ticket number.

The three big prizes of the night were the semester of free books at Juniata, a class ring, and $50. The free semester of books went to Scott Kyper who won the shootout. Matt Betting won the class ring on free throws after none of the contestants could sink a three-pointer. No one was able to win the $50 by making a half court shot.

The evening however belonged to the basketball teams. The first basketball event was the 2-ball. The winning team was Kelli Young and

(Continued on page 8)

Madness

Continued from Page 7)

Travis Martin. 2-ball pitted four teams of two, one guy and one girl, together for one minute. Two points were awarded for each make from the elbow, three points for each made shot from the wing, and five points for each shot made from beyond the arc. Martin and Young score over 25 points in both rounds to take the top sport.

The next event was the three-point contest. This pitted the men's teams versus the women's. Each shooter would have a minute to shoot five shots from five spots. Each make was worth one point with the fifth shot at each spot worth two. For a little incentive, the losing team had to do the chicken dance on the floor following the contest. After all four shooters had completed their minute the men had one the contest. The women's team was good sports and did the chicken dance in from of the crowd.

The final activity of the evening was an intersquad scrimmage. The women went first and played for fifteen minutes with just some basic offense, just giving the crowd a look at what is to come. To wrap up the evening, the Juniata men's team held a scrimmage and finished off the 2nd midnight madness.

Both units now get ready for their season openers, so come out and support both teams this season as they work towards the MAC playoffs.

Changes Make for Positive Attitude for Juniata's Men's Basketball Squad

Mike Zimmerman
Sportwriter

The past five seasons have not been the best for the men's basketball team on the campus of Juniata. Twenty-nine wins are all the squad has been able to muster in five seasons under former head coach Rick Ferry. Now with Ferry off to Albright College, a MAC Commonwealth Conference foe, whom Juniata will play twice this season, Greg Curley has stepped in to get the Eagles flying again.

Curley, a native of State College, Pennsylvania, takes over after spending a year as the assistant coach at Penn State-Behrend, and then he spent his last two seasons as an assistant coach at his alma mater Allegheny College. Previously, Curley assisted Coach Ferry in 1998, a season in which the Eagles went 3-21.

Greg was one of two candidates for the opening in the spring. The other was Tim Narrow, Ferry's assistant last season. Narrow however went with Ferry to Albright to aid him once again. That left the job open for Coach Curley and he took it.

Once Curley was hired he needed an assistant. He looked to a former coach at State College where he played his high school ball. Greg talked to Ed Dechellis the head coach at Division One East Tennessee State University and told Coach Dechellis he was looking for an assistant. Dechellis told Curley he had an idea in Jeff Nicholson. Curley hired Nicholson who was a volunteer administrative assistant at East Tennessee State.

The final piece in the coaching puzzle is mainstay Keith Black. Black, a native of Huntingdon is in his fifth year as an Eagle assistant coach. Black was a former player for the Eagles and lettered two seasons from 1970 to 1973.

Curley is extremely happy with his staff and believes they will do their best to help Juniata in the upcoming season and future seasons. "Jeff is going to be an excellent addition to the Juniata men's basketball program and the entire Juniata Community," states Curley. Greg also feels, "Coach Black is a vital part of our program and will continue to be a great influence on the future success of the program."

Being Coach Curley's first year as head coach he has realized he must make the tough decisions. In the past he was the assistant coach so he had to follow the decisions made by the head coach. Now as the head coach he says that he can be his own creative outlet. His decisions are the main ones and he can make the team based on his ideas. Curley now has control of his own offense and his own defense; he makes the substitutions, and decides who is going play.

Coach Curley and his staff have high hopes on the upcoming season and hope to improve on the 11-13 record of last season. However, Curley says he does not believe in setting team goals like number of wins, making it to conference playoffs or statistical season goals. Curley has set one goal for his team and that is to get better everyday, in practice, scrimmages, the weight room, and in games. Curley said, "I feel if we accomplish the goal of getting better everyday the other things will take care of themselves."

The Eagles come in to the season with many returning players from last year's team, which recorded the most wins since 1990. The Eagles lost senior captain and leader Nathan Hager who was a three-year letter winner, and the sharp shooting ability of Pat Sowerby who both graduated last season.

A core of three seniors who have been part of the system for all four years on College Hill will lead Juniata. Shane Crandall a six-foot point guard will run the offense for the Eagles. Crandall comes off his best season in an Eagle uniform in which he showed he could hit the three-point show with anyone in the conference. Crandall led the Eagles in scoring at fourteen points per game, and connected on 67 three-point attempts last year.

The Eagles are also looking for big things from senior shooting guard Brian Dietrich, but his contributions will be lost for half of the season. Dietrich will be out until mid-December with a knee injury, which required surgery in the summer months. In 2000-01, Brian was among the leaders in field goal and three point percentage in the conference and on for the Eagles. Until Brian is healthy he will assist the coaching staff in practice and games.

Dave Reddick, the third senior on the squad this year will take over the duties in the middle for the Eagles. Dave has been a rebounding force for Juniata over the past three seasons and looks to continue the trend this year. Reddick led the Eagles by averaging seven caroms per game last year. Reddick came on at the end of the season last year as his early struggles left him on the bench much of the time. Dave will need to continue his late season form to help the Eagles have a successful season under Curley.

The Eagles also return some very promising freshman from last year's campaign. The most touted of the sophomores is Ben Gallagher. Gallagher a sophomore forward from Butler came on the scene at Juniata and made a big impact for the Eagles. Ben was second on the team in scoring and rebounding and he led the team in steals. As a freshman Ben showed the poise of an upper classmen and had the moves to back it up. Gallagher's repeated whirling drives in the lane and on the baseline usually resulted in a tough finish over many defenders. Curley and company will be looking for some of the same flashiness from Gallagher this year.

Jeff Lau, Josh Tyler, and Travis Martin all saw substantial minutes last season for the Eagles. They will again look to contribute to the team's success. Lau is a forward who has a nice outside touch, Tyler is a big man who can post up and rebound inside for the Eagles and Travis Martin is a forward who can play inside and knock down the three with consistency.

Other returning players for Curley are junior guards Mat Bartholomew, Matt McCahan and Joe Kenneff. Sophomores Chris Adie, Phil Haas, Jef Hedrick, Melvin Swanson, and Craig Biller. Bart, an excellen defensive player, will look to play as the back-up point guard to Crandall. The others wil chip in when called upon by Coach Curley and help the team get better everyday in practice.

Curley and his coaching staff are excited for the upcoming season and feel they have a team that can contend to make a playoff spot in the MAC playoffs. The staff will have to be at their best to get the team going on offense and defense. The season begins with the annual Doc Greene Tournament on November 17th and 18th at the Memorial Gymnasium on Juniata's campus.

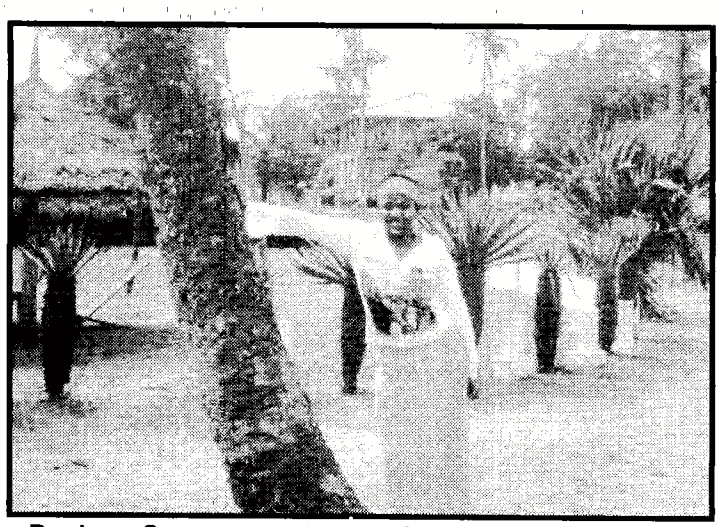
Juniata Student Travels to Africa for Peace, Philanthropy

Ryan R. Miller
Politics Editor

Denique L. Conner '04, an English/Communications P.O.E., participated in more than a two-week peace and philanthropy project in Africa last month. The Lilly Foundation, supported by the Church of the Brethren, runs the program and sends students from all of the Brethren colleges.

Conner and eleven other students traveled to Benin and Togo, two West-African countries sandwiched between Nigeria and Ghana. The project has two aims: to educate Americans about the conditions of the developing world and to assist people in these countries by raising money.



The majority of the group's focus was on the condition of women in Benin and Togo and the efforts being made to assist them. A graduate from Manchester started a program that helps women in African countries become entrepreneurs. The program gives loans of US dollars to get started and begin making profits.

Conner and the other students spoke to many of the loan recipients, both those for whom the program had been successful as well as those who still had not "made it." Generally, she and others got the impression that the program, which includes literacy efforts, health training, and education on civil rights, is helping.

As a whole, the twelve students were diverse and brought a variety of opinions to group discussions. The students included four Caucasian Americans, four African Americans, and four Hispanic Americans. While Conner and the others initially thought that this cross-cultural fellowship was a little creepy, the program guides reassured them that it was mere coincidence. Conner said that this diversity gave way to a variety of viewpoints on African development.

She also told the Juniatian that she thought that compared to others in her group she was "less of a radical" than the majority of the group. She said that many of them sought to blame capitalism and/or America for all of the problems they saw and that she "wasn't hearing it." She said that she preferred to concentrate on what could be done to help people out of misery, rather than

JAB Makes Changes Based on Student Poll

Dawn Scialabba
Contributor/Director of Campus Activities

Juniata Activities Board (JAB) is responsible for implementing many of the social activities and traditions here at Juniata College. Many of these events have been in existence for a number of years and the members of JAB felt that it was time to take a critical look at them and decide if they were still what students wanted. To find out students' opinions, JAB conducted an on-line survey asking JC students for their feedback.

Of the 266 total respondents, 77% were female and 23% were male. Thirty-five percent of those responding were freshmen, 24% were sophomores, 20% were juniors, and 21% were seniors. The survey asked students to rate the current JAB events on a scale of 1 to 5 (5 being most important and 1 being least important).

The survey also asked students to identify events that they would be willing to eliminate in order to have other activities in their place. Mountain Day showed up again as the students' favorite, with not one student voting to eliminate it.

As a result of the students' input, JAB has made the following programming decisions for the 2002-03 academic year:

Events that will be kept with only minor changes are: Mountain Day, Springfest, Madrigal, Major Concert, and Movies.

o Events that will be kept, but with major alterations are:

o The President's Cabinet has already decided to combine Homecoming and Family Weekend into one weekend. Scheduled for October 4-6, 2002, this special weekend will feature the dedication of the new William von Liebig Center for Science.

o Beginning this spring, May Day Breakfast will no longer be a women's celebration. Instead, it will be a student leader recognition event. JAB will be working with Student Government and RHA to plan this program.

o Winter Formal will be changed to a more casual dance or party-type event.

o The Friday Nite Live program will be expanded to include more events, both comedy and music.

o Trips to State College and Altoona will be added once or twice a month and trips to places such as New York City and Washington, DC will continue.

Events that will be dropped are:

o The Major Speaker program will not be scheduled in order to free up funds for the new additions to the calendar.

o Due to the Oller Hall expansion and renovation project, All-Class Night will be on hiatus for the 2002-03 year. JAB hopes to bring All-Class Night back during the 2003-04 academic year with renewed energy and creativity.

Students gave many excellent suggestions. Some of the suggestions mentioned most often were:

o To have more short trips to places such as Altoona and State College,

o To have more small concerts and/or coffeehouses, featuring local or regional talent,

o To have more weekend events and to provide more options so that students won't go home on the weekends,

o To have a casual dance or party instead of a formal

o To have a second Mountain Day in the spring semester!

For complete results of the survey, see Page 4.

Another Corner of the World

Weather getting you down?
Tired of the same old food?
Dreaming of anywhere but here?
Then you are in for a treat. In each issue of this paper, beginning February 15th, the international students in ESL 150 will be informing and entertaining you about different topics such as: "The Galapagos Islands", "Recipes from Japan", "Soccer in Brazil", "God in Mexico" and many, many more. Keep your eye on this corner and travel and dream while you hold this piece of the world in your hands.

The Non-Decline of the Nation State

Ryan R. Miller
Politics Editor

Following September 11th, some in academia have asserted that we are witnessing the beginning of a new world order characterized by an increasing irrelevancy of the nation state. "Transnational pressures," it is claimed, are likely to dominate the future political landscape, and national governments will become mere intervening variables in the conflict of societal groups. This argument is little more than an attempt by deluded post-moderns to say something interesting. Although it is true that technology has advanced sufficiently to make the individual more powerful, and by extension more dangerous, states remain just as relevant as before and are likely to take measures to ensure this outcome.

In any market, there arise situations where demand outstrips supply and a readjustment process is required. Similarly, one can point to the aftermath of 9-11 as a case where the demand for security has increased (due to technology), yet the state's current mode of functioning does not meet this change in domestic-level unit capabilities. But this objective assessment should not be assumed to indicate a static state of affairs. Indeed, history provides numerous examples where states have changed their tactics to meet the demands induced by a shift in their security environments. One such readjustment occurred with the proliferation of gunpowder. Suddenly, a lowly peasant if armed with a musket could bring down a nobleman on horseback. But did this new power of individuals result in the fall of governments, giving way to complete anarchy? Some revolutions succeeded, yes. Some did not. What is certain is that in the medium to long run all states adapted, responding with such measures as armor, controls on firearms, more powerful weapons as deterrence, and other policies that perpetuated state power.

In the present, one must take note of a number of factors. First, one must recognize the important link between terrorism and state action; the thousands of Al Queda members had the opportunity to train and organize in Afghanistan due to a large extent the actions (or lack thereof) taken by the effective government sitting at Kabul. Furthermore, it was the actions taken by other states (most prominently the USA) that have resulted in a crushing defeat for the organized terrorist groups based in that country. The deterioration of governmental control on world events, therefore, is exaggerated. Second, states are likely to restructure both their offensive and defensive security practices. On the domestic front, law-enforcement and "Homeland Security" are being shored up, and assumptions about personal liberties stand to be re-evaluated. Military doctrine will also be adapted to new realities, producing a stealthier, more mobile counter-terrorism force. In short, the nation state persists, and will ultimately prevail. Even the doubtful post-moderns are still seen running to John Ashcroft, and not Bill Gates, for protection.

JC Theatre takes Regional Festival by Storm

Ryan Miller
Politics Editor

On the morning of January 1st, while much of the world was still recuperating from the previous night's festivities, a dedicated group of Juniata theatre students were making their way back to the campus. Their mission? To take Professor Andy Belser's "The Body of Mystery" to Carnegie Mellon University in Pittsburgh, to participate in the American College Theatre Festival's (ACTF) Mid-Atlantic regional festival.

The students were returning for three days of rehearsal and technical preparations prior to leaving for the festival. John Teacher, Juniata's Technical Director, and his crew worked vigorously during break, building touring boxes, preparing lights, and packing everything into a large touring truck. On the performance side, Belser brought in a Master Vocal Coach to work with the actors on touching up the show's vocal quality. Then, on January 3rd, the mission began.

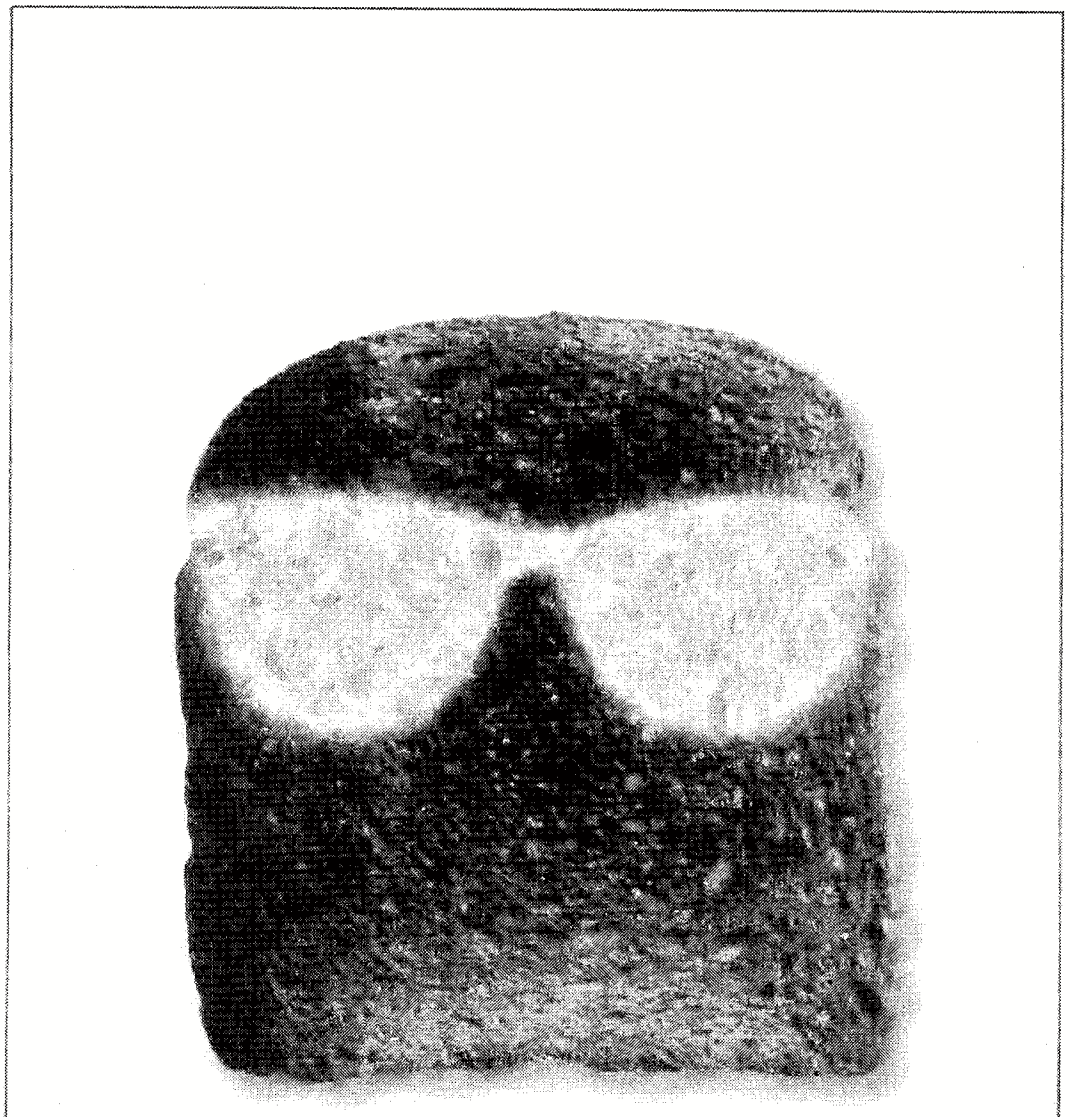
Though ACTF festivals are not technically competitions, many of JC's theatre students had other ideas. "Lets go meet the future losers," boasted one student as the group entered the festival hotel. This type of school pride permeated both the

(Continued as "ACTF" on Page 4.)

Students Explore Belief at World Religion Day

Erin Percinsky
Assistant Editor

The United Spiritual Council of Juniata College sponsored a lecture Sunday, January 20, about some of the different religions practiced by students at Juniata College. The United Spiritual Council is a newly formed group comprised of campus ministry and other religious groups on campus. According to campus Chaplin David Witkovsky "Our goal is simply to educate and sensitize one another so that we can learn the uniqueness, the gift, and the common points of different faiths practiced by members of the Juniata community."



The religions represented at the lecture included Catholicism, Hinduism, Islam, Protestantism, Wicca, and Baha'i. The student who was representing the Jewish faith was unable to attend.

The United Spiritual Council asked the representatives of each religion to give a brief background of their religion and it's major components, how their faith has been helpful to them, and how their faith has been a challenge to them. After each person spoke, there was a short question-and-answer period, where students asked the representatives about their specific religion.

Father David Arseneault, the campus priest, and Reverend David Witkovsky, the campus Chaplin, along with other members of the United Spiritual Council were also on hand to answer the students' questions about religion.

The night ended with plans to hold another informative session about the different religions practiced at Juniata, with the hopes that in the future more religions would be represented.

ACTF

(Continued from Page 3.)

cast and crew. Moreover, they shared a strong sense of community during the festival, going out as a group, and exploring Pittsburgh as a group, rather than mingling excessively with the students from other schools. Perhaps one thing that set them apart from the other 900 or so students at the Sheraton Station Square was that the vast majority of the JC crowd did not study performing arts as a major. Indeed, the diverse group of P.O.E.s represented included Biology, Education, and even International Politics, whereas most of those traveling with the other invited productions constituted straight theatre majors. All students were proud to be a part of their show.

Conceived and directed by Belser, "The Body of Mystery" was a movement-based piece of theatre that incorporated poetry, biblical myths, and personal stories of the cast. An interesting and amusing fact was that Juniata was alone in being the only non-musical production invited. The other shows, "Songs for a New World," by Clarion University, "Oh What a Lovely War," by The University of the Arts, and Point Park College's "Grand Hotel" all stood in sharp contrast for festival goers to the unknown dark horse production Juniata was bringing.These four shows were not in direct competition with each other; participation at the National Festival is determined by a group of three national judges who tour the country and select a limited number of shows from eight regional festivals to be able to perform on the Kennedy Center stage in April.

Load-in for the performance began on Sunday, January 6th. Juniata was given four hours to set up, focus lights, and allow the actors to warm up. Those who remember when Juniata hosted ACTF three years ago amid a huge blizzard will appreciate a wry irony: the moment the JC touring truck approached CMU's dock, it began snowing. While Juniata's set up took a little longer than expected, the performance left everyone stunned. Many audience members were crying by the end, and many theatre faculty present could not stop complimenting Belser and Guest Lighting Designer Craig Young. In fact, Belser had trouble avoiding the wide-eyed audience members' congratulatory remarks as he was trying to help strike the set and remain under the one-hour load-out limit. One of the ACTF respondents remarked at a public response session the next day that he felt like he had been "returned to the womb." Such praise filled the cast and crew with pride, and optimism about going to nationals.

Unfortunately, fate was not on their side; Juniata's production was not held for national consideration. What surprised everyone was that three of the other shows, which some considered to be relatively low on the evolutionary scale of theatre, were held. It is believed that the Kennedy Center, which caters to the D.C. Metro area theatre crowd, has a contractual agreement with ACTF whereby the theatre must be allowed to fill all seats of its Millennium Theatre with audience members. Such a task would be impossible for Belser's play, as the show used a stadium-style seating arrangement that limited the audience to 200. Many in the cast and crew felt a little snubbed. However, a few days later the Pittsburgh Post-Gazette ran a review of the shows performed and in fact praised "Body of Mystery" the most, likening it to London Theatre's Mystery Plays; no small compliment. Thus, even though the show was not selected, it did succeed in placing Juniata's growing theatre program on the map.

JAB Survey Results

The survey asked students to rate the current JAB events on a scale of 1 to 5 (5 being most important and 1 being least important). Students gave the following ratings:

Mountain Day	4.65
Concert	4.41
Springfest	4.01
Madrigal Dance	3.90
Madrigal Dinner	3.85
Movies	3.65
Friday Nite Live	3.65
All-Class Night	3.57
Speaker	3.43
Trips	3.06
Coffeehouses	3.02
Winter Formal	2.79
Homecoming	2.71
May Day Breakfast	2.59
Family Weekend	2.57

The number of students willing to eliminate each of the events is listed below:

Mountain Day	0
Springfest	10
Madrigal	11
Concert	18
Movies	27
NONE	29
All-Class Night	32
Friday Night Live	45
Homecoming	68
Speaker	74
Family Weekend	75
Winter Formal	81
May Day Breakfast	90
Coffehouses	97
Trips	99

Africa

(Continued from Page 1)

simply theorizing about the causes of such conditions. "They went back to making arguments about colonialism without saying what could be done now," she said of some Manchester students.

Conner maintained that the trip affected her both on a personal level and in terms of her professional outlook. She said that after seeing people who had to struggle for basic needs such as water, she was shocked at how much Americans take for granted.

Conner said she experienced a connection to the African people. "We see the other side," she contends. "We go to these countries...and now we all think differently about the world. These people in Africa are our brothers and sisters, and they need our help. We're all part of the human family."

She also said that her time there made her more seriously consider the possibility of working for a non-profit organization that deals in development issues.

On a side note, Conner told the Juniatian that she received many marriage proposals in Benin and Togo. When asked if she found any of them interesting or not, she replied, "Sure, but the men all had wives!"

Head of PA Deer Management Speaks at Juniata

Nathan Thompson
Staff Writer

During his two and a half years at the head of Pennsylvania whitetail deer management for the Game Commission, Dr. Gary Alt has commanded an enormous change in the program. However, if this year's proposals are passed, it will cover the state's deer hunting and management in so much research and science that Discover magazine is looking to do an article.

The whitetail deer is a very adaptable creature whose range extends from Western Canada to the coastal areas of Brazil and Peru. It is part of a unique family of mammals that is known for the male's ability to grow antlers, a form of bone, on its head at the rate of up to a pound per day, which then stays on the head six months after the bone is dead. It is also an important game animal and source of food. Millions of pounds of venison are consumed each year in Pennsylvania alone.

In front of a crowd of locals and students that nearly filled the bottom of Oller Hall, Dr. Alt informed all present that, "We are making some of the most sweeping changes in the history of deer management on this continent." He then explained the plethora of new studies and regulation proposals, stressing the need for better management of the deer's relationship with its habitat and the need to have older and larger bucks at the hierarchy of the deer herds.

Dr. Gary Alt addresses the audience in Oller Hall. (Photo: N. Thompson)

The most controversial issue of the meeting is the proposal to change antler regulations so that all harvested bucks must have at least 3 points on one side. Current regulations require 2 points or a 3-inch spike on one side. Mixed emotions on this issue were obvious throughout the crowd. "I think they aren't being given enough time to grow," one student explained, agreeing with this new regulation.

Josh Hayer of Juniata College had another perspective on the issue. He believed that the hunters will begin to get discouraged because they will not be able to shoot what they see. "I'm sure there might be a biological aspect for this, but I'm looking at the sociological view, and I'm afraid that the Game Commission will lose license revenue," he states, pointing out that discouraged hunters will not be as likely to buy hunting licenses.

"Lift Ev'ry Voice" To Celebrate Black History Month

Deanne Curry
Contributor

On Friday, February 22, ECTA (English, Communication, and Theater Arts) will be presenting "Lift Ev'ry Voice," a program to celebrate Black History Month. This event is co-sponsored by UCJC (United Cultures of Juniata College), AWOL (Alternate Ways of Loving), and the English Club, and is organized by students in the African American Literature and World Literature classes.

"Lift Ev'ry Voice" is a program of dramatic readings of literature written by African Americans. The name of the program comes from the poem and song composed by James Weldon Johnson in 1900. The song has strong meaning in the African American community and has been adopted as the "Negro National Anthem."

Students participating in the program are invited to choose poems and other works of literature by African American writers that have special meaning for them. Beth Superka, a sophomore in the World Literature class says she is reading "a strong piece that emphasizes a struggle for racial equality." Senior Nicole McClure says, "The message I get from my poem is that you can't know someone without knowing what they have been through and who they are based on their ancestors." Featured in the program will be works by Gwendolyn Brooks, Alice Walker, Langston Hughes, Frances Harper, June Jordan, and Al Young.

Dr. Judy Katz, professor of the African American Literature class and organizer of the program hopes that it will accomplish several things. She wants to give readers a chance to share literature that they find personal meaning and value in. She would also like the audience to be able to enjoy and be exposed to work that is still largely ignored. Dr. Katz says, "It is important to realize that American literature was not and is not written only by white authors. The African American literary tradition is a profound and brilliant part of our literary heritage in America." The program will be held at 8PM on Friday, February 22 in the Ellis Ballroom at Juniata College. Admission is free, and refreshments will be provided.

Student Government says No to Student Paper Quotas

Ryan R. Miller
Politics Editor

Speaking before the Student Senate on February 6th, Student Government President Lavinia Kolarczyk said that she and the other executive officers had decided against the implementation of student paper quotas. "There was a general consensus that students did not want to be charged" Kolarczyk said. Such quotas, whereby students would be allotted a limited quantity of free paper to print and anything beyond that would be paid from the student's account, were one of the ideas presented at the all-campus forum at the end of last semester. Kolarczyk explained that she and the other executive officers had met earlier with both the Recycling Committee and the ad-hoc Committee for Paper Conservation to discuss the decision.

Instead, she indicated, Juniata will seek to reduce paper waste through (1.) improved paper-saving educa-

The US and Israel

Ryan R. Miller
Politics Editor

Last week during one of the weekly Thursday night politics discussions sponsored by the International Studies Department at Billi's Bagel Shop, the issue of US policy towards Israel surfaced. Unfortunately, certain blocked the important issue from coming to the floor, and from furthermore becoming the following week's topic, insisting that they "would get too emotionally involved." As such, I am forced to bring up Israel here, on my own playing field, where Juniata's AIPAC fan club will just have to sit and listen, get emotionally involved, and then not be able to respond. So be it.

I concur that Israel needs US support, and that it is often in our interest to provide much of it. For one, Israel has relatively established intelligence activities in the Middle East region, essential for the war on terrorism. Second, there is something to be said for not permitting a nuclear-armed Israel to be insecure while surrounded by many states that would like to see I wiped off the map. But alas, US policy towards Israel is not driven by the national interest, but by electoral demographics. If you don't believe this statement, try following New York elections or check out the last names of many of the representatives and senators sitting on congressional foreign affairs committees.

This situation prevents America from objectively examining its relationship with the nation of Israel in a cost-benefit analysis. Don't get me wrong, terrorists should be pursued everywhere until they are all found and brought to justice. The Israeli people have suffered too many fatalities at the hands of extremists who show no respect for civilization. Moreover, they have a right to

Big, Dumb, Egotistical Elephants

Jon Hruska
Contributor

During the beginning stages of President Bush's State of the Union speech, he immediately displayed his new-found arrogance and his previously suspected, at least by this author, ignorance. By declaring an "Axis of Evil," in which North Korea, Iran, and Iraq were included as supporters of terrorism, Bush has eroded some of the needed international support for the global coalition against terrorism. More importantly, he may have inexplicably put the United States directly in the middle of a foreign policy firestorm, especially in the cases of North Korea and Iran, which did not need to happen.

In years past, North Korea may have been at the top of the list for countries that actively supported terrorism and were a direct military threat to the United States. However, under the leadership of former President Clinton, relations with Pyongyang had improved greatly due to the United States and South Korea offering to provide the North Koreans with fuel oil to encourage the closing of their nuclear reactors, thereby reducing their nuclear weapon capabilities. The Clinton administration also conducted negotiations to lift trade sanctions and to improve diplomatic relations between the United States and North Korea. There has also been no sign that the North Korean regime actively supports global terrorist organizations. Sounds like a pretty nice foreign policy gift to the incoming Bush administration right? Leave it to the Republicans to screw it up.

The Iraqis refuse to cooperate with anyone and are obsessed with nothing more than power. Iraq will never show signs of reform until Saddam Hussein is ousted. However, North Korea has recognized the need for improved diplomatic interaction with the outside world. Kim Jong Il knows his people are starving and the economy is in shambles. Threatening North Korea, especially at a time when it has shown signs of opening up, possibly like the Chinese, is a blatant sign of arrogance and ignorance.

Perhaps the angriest response came from the Iranians. Iran has publicly declared its support for the war on terrorism due to the terrorism problems the country itself is facing. Bush's inflammatory comments have also given new life to the hard-line conservative fundamentalists in the Iranian government who now believe they have a legitimate mandate to harshly criticize the United States. Granted, Iran has never been much of a "friend" to the United States, but there is absolutely no reason for the Bush administration to destroy the progress that has been made. Leave it to the big, dumb, egotistical Elephants to squander any chance for reform in Iran.

Maybe President Bush should actually listen to his Secretary of State, Colin Powell. Powell has a better understanding of the opinions in the international community and has been a moderating voice in the administration, although his voice is usually silenced or reshaped by the hawkish conservative elements. He understands the need for diplomatic resolutions before military resolutions, as demonstrated by his work in assembling the global coalition against terror. Instead, Bush has decided to begin a global game of "Cowboys and Indians" with his new crony and prominent war-hawk Secretary of Defense Donald Rumsfeld, and the damage that potentially be done may not be reversible.

Another Corner of the World

Cell-Phones in Japan

Miyuki Masuda
Contributor

I know that America is a car society, because most people have cars and can't go anywhere without them. Now I can call Japan 'a cell-phone society', because EVERYBODY has cell-phones, especially older students and working people. When we make a friend, we always say, "Please tell me your cell phone number."

As the number of cell-phone users is increasing, so the quality is, for example, colorful displays, harmonic sounds, email, games, Internet, etc. It's also possible to download music for the calling ring from Internet.

However, the cell phone society is making lots of problems. Some people speak loudly on the phone and don't care about others. In high school or college, ringings interrupt classes. The electronic wave of the cell-phone may be a serious problem for people with pace makers. Now there are signs which tell to turn off the power of cell-phone in classrooms, hospitals, buses, trains, subways, and so on. The most serious problem is that people can't live without cell-phones; they are always waiting for calls and email from someone. It is a kind of addiction. Cell-phones are really convenient, but I wonder if they are a good thing.

Having Fun in Puebla, Mexico

Valeria Aguilar Garcia
Contributor

If you want to visit Puebla, a city two hours south east of Mexico, the first thing you want to know is how to party. Young people usually like to go out at night to dance in clubs or just to drink in a pub so "la recta", a freeway between Puebla and Cholula is the place where most of the better clubs are.

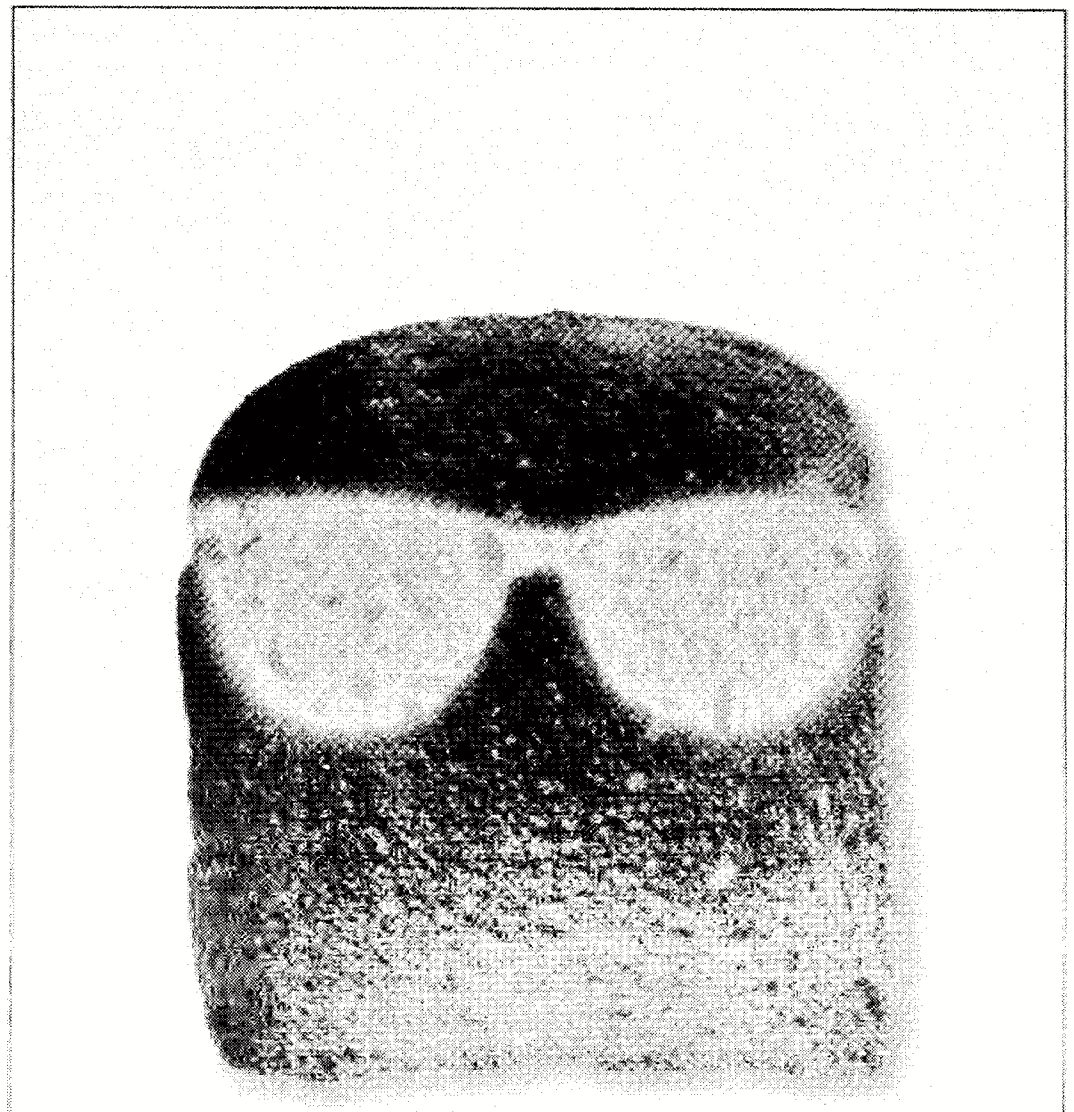
The first one is "El Alebrije" a big place where you can dance to pop music almost all night. This is a noisy place.

"El Portos Tropical" a place to dance salsa and merengue with live music. This is a crazy wild place.

"La Enamorada" is a pub where you can usually drink and listen to music, while an artist is singing and playing guitar almost all night. Here you can relax and hear quiet and romantic music.

The best club now is called "Shiva" which is a new club where people can dance to pop music and also, they have a special place upstairs which is dark and loud where you can dance to techno music.

All clubs are open from 10:00p.m to 3:00a.m through Thursday until Sunday, to people age 18 and older



Almost all the places cost $ 5 to get in, but if you want a good table you have to buy a bottle.

Remember we are waiting for you in Puebla. Come have fun!!

tion programs (the details of which will be decided later), especially with regards to printing MS Power Point slides; and (2.) and the purchasing of more double-sided Duplex printers. Student Government will purchase one such printer for the Cyber Café area, and the Recycling Committee will buy another. Another important front in the war on paper wasting that Kolarczyk underlined was the faculty's contribution to overall waste. She said that Student Government and other appropriate channels will work with the faculty to devise the appropriate means to deal with the common problem. These measures are designed to meet the goal of a 50 per cent reduction in paper waste by Spring 2003. "I know it's a big goal, but this is important," Kolarczyk stated.

Just one sunburn can more than double your risk of skin cancer. So if you're going to be outside, be sun smart. Wear SPF 15 sunscreen and reapply often. For more information call 1-877-PA-HEALTH or visit our website at www.health.state.pa.us.

Deer

(Continued from Page 1)

who previously worked for 25 years as the head of bear management in Pennsylvania. His work with the state's bear population is often credited for dramatic comeback of Black Bear in Pennsylvania. Within a few years, the Game Commission will have an enormous amount of data from the intensive research that Dr. Alt is currently beginning. Some of the large-scale field studies include a fawn mortality study, forest restoration studies, a study of road kill doe relating to embryo development, landowner surveys, hunter surveys, and the much-heralded "Buck Study."

Under the coordination of Eric Long, a local of Huntingdon and son of a Juniata Alum, the "Buck Study" will radio collar 600 buck from Centre and Armstrong counties in 3 years and study their movement patterns, antler development, reasons for death and numerous other details. The Game Commission plans to catch and collar 100 bucks per year in both counties. As well as tracking deer, numerous hunters from these counties will be equipped with GPS systems, which make it possible to study the deer movements in relation to the hunters. This study will also be able to examine poaching times and rates and could be the first intensive research ever done in the country on the effects of antler restrictions.

Dr. Alt's reasoning for the proposed changes in antler restrictions comes from reports suggesting that at least half of the "yearling" bucks (bucks which are a year and a half old at the time of hunting season) must survive to have a suitable number of older bucks. A recent study showed him that over 80 percent of harvested bucks in this state are yearlings. While a three-point regulation will be an effective tool of protection in most counties, some counties with excellent habitat and deer herds will need a four-point restriction to protect the majority of the yearling bucks.

This regulation will have various impacts. Dr. Alt admits that it will cut the buck harvest in half for the first season. However, by the next year, he asserts, there will be better quality bucks with larger antlers. Biologically, these bucks will be beneficial to the social organization and heredity of the herd. Because the quality of deer will be the same on both public and private land, where deer are purposely under-hunted, it will hopefully cut down on the practice of leasing land to hunters. This practice involves groups of richer hunters buying the hunting rights from landowners, and results in less open land for the majority of hunters. A show of hands at the end of his lecture showed that Dr. Alt that almost everyone present would be in agreement to try this regulation for a few years to see if it gets results.

Dr. Alt has also proposed other changes, such as concurrent buck and doe seasons that will hopefully cut back on the doe population. He hopes that this will allow more room in the habitat for the additional bucks as well as allow the deer population to be better controlled in areas where habitat restoration is greatly needed. The head of deer management then ended the meeting by informing the crowd that free videos were available as they left and promised, "The best deer hunting in Pennsylvania is yet to come."

There is also going to be a big push at the April 9th Game Commission meeting in Harrisburg for habitat-based management units, rather than the current political-based units, Eric Long mentioned in an interview afterwards. He explained that deer do not stop at township or county lines, so habitat-based management units would be better equipped to study and manage the deer populations within its boundaries.

The proposed seasons, restrictions, and other changes for the 2002-2003 Deer Season are as follows:

- Juniors may take an antlerless deer in any season with a general license tag.
- Antler restrictions: All antlered deer harvested in Allegheny, Armstrong, Beaver, Butler, Crawford, Erie, Indiana, Lawrence, Mercer, Washington, and Westmoreland counties must have four or more points on one side. Bucks harvested in other counties must have at least three points on one side.
- Statewide season dates:
  - o Archery: Oct. 5-Nov. 16, Dec. 26-Jan. 11.
  - o Regular Firearms: Dec. 2-14.
  - o Antlerless (Jr., Sr., and other special licenses only): Oct. 24-26.
  - o Antlerless Flintlock: Oct. 19-26.
- Special Regulations Areas (Allegheny, Bucks, Chester, Delaware, Montgomery, and Philadelphia counties):
  - o Archery (Antlered and Antlerless): Oct. 5 Nov. 16, Dec. 26-Jan. 11.
  - o Antlered: Dec. 2-14.
  - o Antlerless: Dec. 2-14, Dec. 26-Jan. 11.

If you wish to comment on these proposed changes, you are asked to send a letter addressed to Pennsylvania Game Commission, Attn: Deer Seasons and Bag Limits, 2001 Elmerton Avenue, Harrisburg, PA 17110-9797.

Israel

(Continued from Page 2)

their land; the continued presence of an Israeli state is not in question. What is important is that we insist that Israel, if it wants US assistance, start conducting its relations with the Palestinians in an intelligent manner.

The problem is not Israel's anti-terrorist policy, but rather the brainless strategies it puts in place to achieve its goals. Ariel bombardments on residential areas are no way to fight terrorism if one desires to target the enemy without adding to their cause. Furthermore, Israel uses these ineffective policies to no end. Machiavelli reminds us that violence, if it is to be utilized in pursuit of national security, "must be used once and for all; people will then forget what it tastes like and so be less resentful." Prime Minister Sharon would do well to remember this and refrain from drawn out military activities.

The best policy for the US to undertake would involve using the threat of seizing the cash flow that Israel receives from American-based diasporas to force Israel to carry out its campaign against terror with more self-restraint. No doubt such a course of action would be difficult to sell in New York, but it is in the interest of America as a whole to be respected by the world and taken seriously by our allies. It is too bad that American Presidents, Democrat and Republican alike, have failed to understand this.

UCJC Shares Culture with Eid Dinner

Paul Blore
Staff Writer

The United Cultures of Juniata College (UCJC) held their annual Eid Dinner Saturday, February 9. Eid is a feast celebration that marks the end of Ramadan, the holy period of fasting in the Islamic faith. Muslims use this celebration to give thanks to Allah for helping them carry out their spiritual obligations during Ramadan.

UCJC is devoted to raising awareness about cultural diversity at Juniata. Before dinner UCJC secretary Jaime Schwartz '03 gave an explanation of Eid and Samira Khan '05 read from the Qu'ran. Then came the highlights of the Eid Dinner: the food and the dances.

Approximately 175 diners were treated to a large buffet of delicious traditional dishes, beverages and desserts in the Ellis Ballroom. Twenty-seven students from the nearby Grier School were also in attendance and danced to a medley of songs.

Juniata students performed group dances and Heather Bridgman performed a belly dance. Finally, all were invited to the dance area to participate in a last group dance.

UCJC is selling cookbooks containing recipes for some of the dishes served at the Eid Dinner and other UCJC events throughout the year. To purchase a cookbook, send an e-mail request to UCJC@juniata.edu.

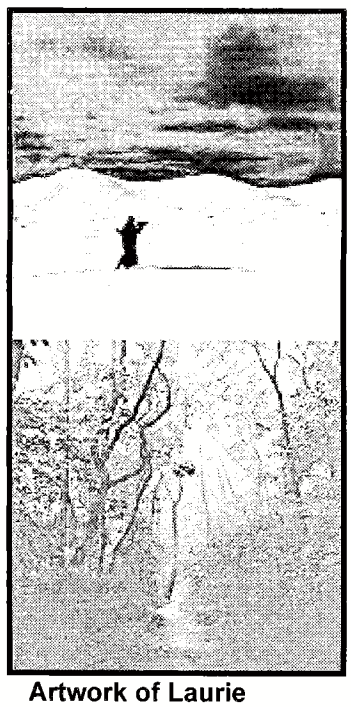
Hoopl

Nathan Thompson
Staff Reporter

Continuing its policy of avoidance with the normal and clichéd styles of drama, the Juniata theatre recently staged Hoopl: A Clown Play. One might automatically begin making assumptions upon hearing the word "clown" uttered. However, the play consisted of clowning in the Eastern European tradition, rather than the painted faces and red noses whose annoying acts of low comedy somehow became popular in America. There were no enormous shoes, tricycles or silly polka-dotted costumes at this play. Even one of the actors, Raina Miller, is scared of the American idea of clowns.

There was a rather gray area between what was scripted and what was improvised in the performance. Each showing was entirely different and relied upon the reaction of the audience (who were seated on an elevated stage extension) to determine which acts were extended. The cast itself had no previous experience in this type of performance. The cast ranged from people who had participated in acting before to a volleyball player. Rockit (Rick Brazener) made it known that he was a volleyball player by adding the traditional volleyball face-first slide to one of the portions of the production. As guest director Don Rieder explained, the actors' performances were "based on raw talent and the ability to let themselves be embarrassed."

Hoopl lacked actual speech and dialogue, and relied upon nonverbal communication among the characters as well as the audience. The only time language was used by a character was during Sparka's (Raina Miller) humorous performance of a miniature opera sung in another language.



The design of the stage was also quite similar to the set used in The Body of Mystery. The reason for this is the implementation of a recent design concept created by Randy Ward known as RALPH, or Radically Alternate Limited Production Habitat. This concept gives the stage itself a certain character, which is modified but never changed to fit the current production. For patrons of a theatre where RALPH is used, it adds to the experience because more significance can be placed upon the set by highlighting the changes within the set's unique form.

Hoopl was a very creative work that made being a member of its audience fun and exciting, yet quite relaxing at times. It was a much-needed break from the onslaught of impending midterms for all students present, and the children were thoroughly delighted. I have just one question. If there is clowning out there that is this cultured and this humorous, why have Americans preferred the painted faces and red noses all these years?

Museum Exhibition: Laurie Pruitt

Nathan Thompson
Staff Writer

On the night of Friday, April 5th the Juniata College Museum of Art held a reception for the creator of its new Photographs exhibition, Laurie Pruitt. Laurie is a photographer specializing in sepia toned gelatin silver prints of photographs showing human impact on landscapes. Most of her work originates from her home state of Michigan. She also had a considerable photographic collection of the Druidic structures of Scotland as well as numerous other landscapes from other portions of the world.

Artwork of Laurie Pruitt on display

In a brief interview, Pruitt explained that she originally majored in photography and dance at Western Michigan University. It was not until seven years after her graduation that she began to work with photography. She kept her work private for a long time, using it only as a personal way to understand the world. Eventually, she realized that her work was beginning to tell a story, and allowed it to become public. When Pruitt photographs, she does not go out with an idea in her mind of what she is trying to find. "I just go out and see what happens," she explained. Her goal is to capture some form of what she called "emotional resonance" rather than some form of universal understanding. Photography provides her with a sort of meditative relaxation she explained.

Pruitt expressed a preference for night settings in her photography, and explained that she was partial to the landscapes of Scotland and Wales. However, a brief tour of the local area piqued some interest in the photographer. She admitted her intrigue with the photographic opportunities around the Peace Chapel and the Field Station, and expressed a desire to experiment with the nighttime landscapes in these areas.

Pruitt's impressive photographs will be exhibited at the museum until September 14, 2002.

Letters to the Editor

The True Meaning of Freedom of Speech

Andy Magaro
Class of 2002

"I disapprove of what you say, but I will defend to the death your right to say it."

--Beatrice Hall, The Friends of Voltaire, 1906

Freedom of Speech means everyone. It is the right of any person in this country, and some would say in the world, to stand up and make their voice heard. This is not solely the right of AWOL, and neither is it solely the right of homophobes.

Where freedom of speech breaks down, however, is when one party demands silence from another. That is where the line is crossed. No one has the right to force another to remain silent against his or her will. This, however, goes in both directions: just as no homophobe has that right, neither does AWOL. I encourage people on both sides of this debate to speak, and to respect those whose opinions differ from yours. You may hate them, but allow their voice to be heard just as yours has been heard.

There is great danger both in repression of minorities and in over-political-correctness. One leaves minorities unable or unwilling to speak, the other leaves the majority unable or unwilling to speak (and thereby makes them resentful of the minorities in their midst). For true tolerance to emerge there must be no double standards, based on gender, race, religion, or orientation.

Why the US Supports Israel

Lindsay Briggs
Class of 2002

In response to the article "The US and Israel" I would like to say Mr. Miller has it all wrong. The reason we support Israel is not only the Jewish-American influence in American politics (though one cannot deny that does play a part, that is a separate editorial in itself), but because Israel has the moral high ground in the situation.

The first and most important reason the US supports Israel is to ensure the continuation of the Israeli state as the home to the world's Jewish population. I know everyone gets tired of hearing about the Holocaust, but it cannot be forgotten as the primary motivation for the establishment of a Jewish homeland. Moral arguments aside, the US has supported this Jewish call for self-determination just as it has for the many other oppressed peoples in this world.

From the beginning Israel has said that they will coexist beside a Palestinian state. But also from the beginning, the Palestinians, through various groups including the PLO and the PA, in addition to Hamas and Islamic Jihad, have resisted this compromise and have repeatedly called for the destruction of the State of Israel. It is only within the past few years that the PLO and PA have "agreed" to allow Israel to exist. Islamic Jihad and Hamas however continue to call for the

(Continued on page 3 as "Israel")

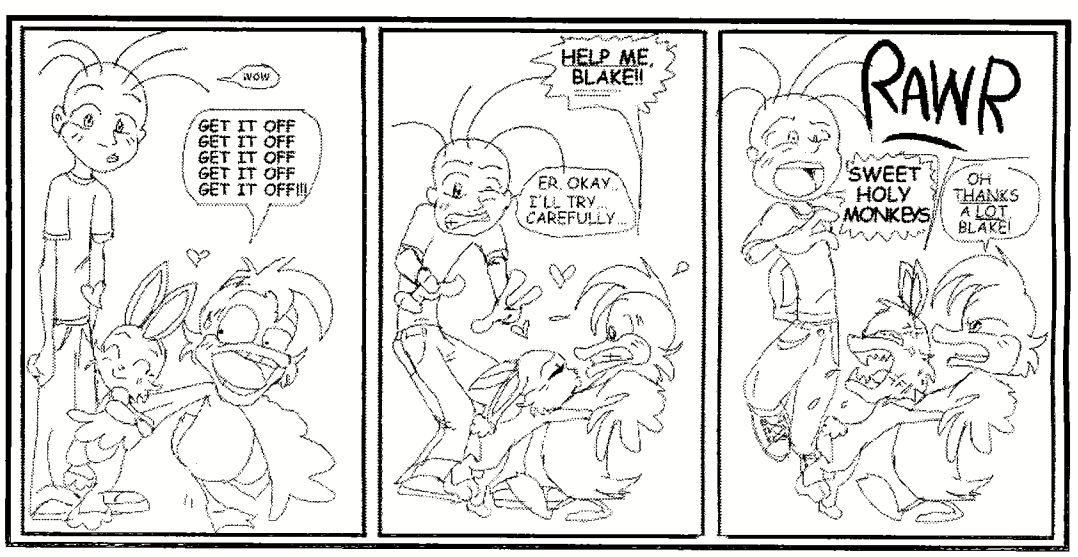
Flesh, Steel, and Courtesy

Daniel Cook-Huffman
Assistant Dean of Students

Many mornings, as I make my way to Founders' hall, I am struck by the blatantly illegal acts I observe as I stand at the crosswalk awaiting my turn to cross. This activity is not exclusive to students and, in fact, most often includes non-student citizens, as well as faculty, administrators, and staff of the College. I could name names, but will avoid that temptation and admit that I've pulled this illegal stunt myself a few times. "Speeding?" No, although that is also rampant. "Drug dealing?" No, thank goodness, that's not it. "Failing to yield to pedestrians?" Yes! Very good!

Many people aren't aware of the Pennsylvania State Law that requires motorists to yield to and stop for pedestrians in a crosswalk. Fair enough. I'm willing to give some latitude on the "ignorance of the law" defense. Were not most of us, however, at least, taught by parents and teachers to be courteous? From this point of view, there is no excuse.

Consider the following, not from a legal perspective, but rather, from an orientation of "courtesy." The motorist is driving a 3000+ pound hunk of steel. The pedestrian is a complex network of relatively soft bones, muscle, and flesh. Physical advantage: car. Moral high ground: pedestrian.



Despite having the moral high ground, however, many, many pedestrians are left standing and waiting each morning while the cars and trucks and school buses (amazing!) slip through without braking or slowing much at all. As I said earlier, I'm guilty of this crime myself and can recall once or twice when I was the third or

(Continued on page 3 as "Courtesy")

Blake

By Theresa Tschetter

http://www.outcat.net/blakeworld

Israel

(Continued from page 2)

destruction of Israel. The Israeli government does not call for the destruction of Palestine and is willing to come to the bargaining table and give up more land to the Palestinians. I think it is imperative that the US side with Israel to show not only our continued support for self-determination, but also to show our support for the continuation of Israel and our intolerance for people who wish to wipe them off the map.

In response to Mr. Miller's assertion that Israel uses "brainless strategies" of violence against the Palestinians I would have to point out that these military attacks he is talking about are all retaliatory strikes leveled after yet another attack by militant Palestinian suicide bombers. The Israeli army attacks areas where Islamic Jihad and Hamas have followers and support, including many places that happen to be controlled by the PLO. The fact that Islamic Jihad and Hamas even have offices should blatantly point out the support or at least ambivalence that the PLO shows for these two terrorist organizations. Could you even imagine if Al Queda had an office?! The Israelis have committed military action against terrorists in order to protect the state and its citizens while the Palestinians have conducted terror by blowing up innocent Israelis. I think it is obvious why the US supports Israel in this situation.

Now having said all this, I must put in my disclaimer lest people misinterpret what I say. I am not claiming Israel is always right in every action or situation, certainly things happen that I do not entirely agree with, but by and large I do support the Israeli cause. I believe that the Palestinians should have a home. This home should be right next to Israel, not instead of Israel. I think the violence should be stopped on all sides and that unprovoked on either side is wrong, but I will support, and believe the US will also, the Israeli's right to self-defense. I think that both sides need to work together to reach a peace settlement.

Courtesy

(Continued from page 2)

fourth car in a line and, in my selfish desire to keep moving and to get to my destination, I allowed the illegal acts of the drivers in front of me to give me permission to also break the rules. You know how it goes, in those few fleeting moments, as you debate whether you should stop for the pedestrians (and thus be delayed for a minute) or if you should just "push through" which will "only take a couple of seconds" you rationalize.

Most exasperating are the times when it's freezing cold, raining, snowing, or sizzling hot. Here the drivers are tucked away nice and cozy, high and dry, inside their climate-controlled cars and the pedestrians -drenched, freezing, or nearly combusting - stand on the sidelines waiting for cars to pass. Does this strike anyone else as untenable and ridiculous? It's not just a matter of law; it's a matter of courtesy.

Blood Donation Subject of Winning Bailey

Press Release

Leigh Ann Suhrie, a senior from East Stroudsburg, Pa. studying marketing and communication, received the first-place award in the annual Juniata College Bailey Oratorical by convincing a panel of judges that one of the missing lessons of the Sept. 11 attacks is that Americans should donate blood not only in response to a catastrophic event, but also on an regular, ongoing basis.

Suhrie, who received $500 for her award, and seven other contestants were asked to address the topic "Challenge us to re-examine the assumptions of the consequences of our actions, of our citizenship and of our place in the world." before a panel of judges and an attentive crowd, Tuesday, Feb. 26 in the ballroom of Ellis College Center on the Juniata campus.

Stephanie Durnford, a junior from Accokeek, Md. studying communication, received the second place prize, receiving $300. Rebecca Goodall, a senior from Calvin, Pa. studying English and communication, and Lauren Gutshall, a junior from Carlisle, Pa. studying politics and communication, shared the third place prize and each received $200.

In her winning speech, Suhrie said "Americans responded overwhelmingly to our national crisis by giving blood. However, we abruptly stopped giving blood soon after the media ceased its 24-hour coverage, while the need for blood donations did not cease. Blood donations made on a regular basis can help alleviate the ongoing need."

Bailey Oratorical participants and judges pose after the competition.

She went on to say, "Everyday 25,000 people need the hope that you can provide. The overwhelming response to Sept. 11 proved that people will give blood immediately, swiftly and generously. We should not stop giving blood. It is still needed."

Judges for the event were Christopher Scalia, a 1998 Juniata College graduate and corporate lawyer with the Harrisburg law firm of Morgan, Lewis and Bockius LLP; Shelley Whitcomb, a 1996 Juniata graduate and legislative assistant for U.S. Rep. Todd Platts of Pennsylvania's 19th District; and Robert Ascah, of State College. He is a Penn State University graduate and a member of the State College school board.

The original Bailey Oratorical Award was established in 1915 by the Honorable Thomas F. Bailey, who served as president judge of Huntingdon County from 1916 to 1936. The oratorical contest has a long tradition at Juniata College, as students from all areas of study can compete for the monetary prize. In addition, the name of the winner will be permanently inscribed on an antique loving cup.

Otters Return to Juniata

Beth Skinner
Staff Writer

The Pennsylvania Game Commission released otters into the Raystown branch of the Juniata River February 19. The otters are being reintroduced to the area through a joint project including the Pennsylvania Game Commission, Frostburg State University, and the Pennsylvania Department of Conservation. This project has been ongoing since the 1980s.

River otters were native to Pennsylvania, but pollution and fur trapping caused them to disappear in the late 19th century. Today clean water regulations and lower industrial pollution are permitting the otters to be successfully reintroduced. Suitable habitats for reintroduction are chosen by their potential to support an increase in the otter population. Otters that have been introduced at other locations seem to be thriving.

Sportsmen were concerned that the otters would decrease the trout population too much. However, studies that were conducted in Pennsylvania waterways indicate that otters mainly eat crayfish. They do eat trout when the trout population is high.

Dr. Tom Serfass who heads the project came to Juniata to speak about the reintroduction. These talks were part of a series of brown bag lunches offered by the Environmental Science Society.

American Football in Mexico

Marcos Viveros

Believe it or not American football is practiced by a lot of children and young men in Mexico. What a surprise don't you think?

This sport was born in Mexico in 1896 in the state of Veracruz when some Americans arrived to Mexico and started playing with that funny ball. Then people learned how to play and the sport began to expand through the country.

Football can be played by six-year old kids, but they can only play in clubs because it is not available in all the cities and schools. In college this is different, there are many universities with football teams, public and private. Usually private universities give scholar-

Springtime in Japan

Eri Miyamoto
Contributor

Cherry blossoms are the harbinger of spring in Japan. They bring hope and pleasure to us, because our new season starts in the spring. Now, what kind of tree is it?

Cherry blossoms have tiny pretty pink flowers in their big branches. We can see bunches of them on some streets or in parks. They look very beautiful and make us feel refreshed. Now, what is "the cherry blossoms front" in Japan?

In March, the cherry trees begin to blossom in the southern area. They spread toward the northern area in the middle of May. This flow of cherry blossoms is likened to a weather front and called the cherry blossoms front. There are

Soccer in Brazil

Rafael Tourinho
Contributor

The Brazilian soccer team is, without doubt, one of the best teams in all the world. But why are Brazilian people so crazy about soccer? How could this sport become so popular in that country? It is one of the most important pleasures for men in Brazil to both watch and play.

Brazilian people weren't good in any kind of sports and they began to practice a new game brought to Brazil, by Charles Muller, from England in 1950. It was cheaper than other sports like American football or basketball. People only needed a ball and a big area to do it.

In 1958 Brazil won the soccer World Cup and in 1962 it won again. Men like Pele and

Whale Babies in Mexico

Antonio Perez
Contributor

Have you ever been to Cancun? Did you like it? I am going to talk about another place in Mexico with great beaches and where the whales come every year for the birth of their babies. This place is Cabo San Lucas on the peninsula of Baja California and is a very good place to go on a vacation.

The principal thing for tourism there is the whales. They come every year in the months of December, January and February because the water is warmer than the ocean of the north, so the whales swim hundreds of miles for the delivery of the baby whales. You can also take a boat to go near the whales and take pictures, it is an amazing experience, I was there once, and I'm never going to forget it. First the blue gray mother rises to the surface and spouts 20 ft into the air. Then she dives and the baby copies her. It spouts 7ft and dives just a second behind her.

On the peninsula of Baja California you can see a very nice contrast between the great beaches and the barren desert. The water is warm and blue, the beaches are great the sand is light and there are some beaches with immense waves where surfers practice.

If you go to Mexico some day, don't forget visit Cabo San Lucas. I'm sure you going to enjoy it.

GALAPAGOS ISLANDS

Santiago Medina
Contributor

The Galapagos Islands are a large topic. The islands consist of thirteen large islands, six minor islands and over forty islets. The most important ones are: Santa Isabel, Santa Cruz, Baltra, and Santa Cristobal, but I am going to write about one beautiful and interesting tiny island called "Las Grietas del Amor" (Cracks of love), and a little bit about its formation.

Las Grietas del Amor is twenty minutes by boat from Santa Cruz Island. There was a mountain there which was split by an eruption millions of years ago. Once you reach the shore you walk across small black pointed volcanic rocks until you reach the top of the mountain. After that, you can enjoy the small lake in the middle whose shape is like a broken heart. You have to walk down among the rocks for two to five minutes. It is a place where tourist and residents of the Galapagos Islands like to jump from the split mountain top (75ft) into the heart-shaped lake below.

Finally, the UN declared the Galapagos Islands as "National Patrimony of the Humanity" and they remain a symbol of Ecuadorian pride.

Dance in Puebla

Silvia Diaz
Contributor

Puebla is a historical city in Mexico, rich in traditional food, but poor in art, specifically in dance, which changed when Sunny Savoy arrived in Puebla at UDLA University in 1996.

Sunny Savoy is a master in dance from the USA. She started her Laban Dance Movement in Monterrey (Mexico) where, thanks to her good work with the dancers, she was invited to work at UDLA Institution, which planned to start a major in dance.

Before Sunny Savoy accepted this job in Puebla, the schools of dance there were not interested in promoting dance. They only wanted to earn money. However, Sunny Savoy, with her love of dance, ended the poor age of this art. She taught and shared dance with a new human philosophy. She said: "Dance is not only a spectacle, it's not only a show, its sources are deeper, and they are born in the soul of the human being." Sunny Savoy's technique, based on Laban/Bartenieff fundamentals, taught, "to find the core of the body equals the balance of life. This is found in the abdominal part of the body, and in the rhythm of deep and smooth breathing." The movement starts in the core of emotions, the connection of the body with space, and in the relationship between soul, mind, and body.

Sunny Savoy made enormous changes in dance, in Puebla. Dancers realized that dance is not only beauty, business and spectacle. It is feelings, soul, and expression of the human condition.

OLD QUITO

Santiago Medina
Contributor

Quito is Ecuador's capital and has an old town in the middle of the city called "Light of America" and this looks like a Spanish city because part of Quito was built by Spaniards in the XVII century. I am going to write about churches although there are narrow streets, theaters, old houses, a lot of history, traditions and many legends there also.

Quito has about ten churches, and each has its own story. For example, "La Compania" Church is one of the oldest, and one of the most beautiful in South America. This church has about 350 years of history, and it has a lot of interesting things inside. It has walls and statues made of gold, also it has a picture of "Hell" which was painted by a priest 150 years ago. The picture shows the seven floors of hell and we can see how people will suffer there. Children are terrified of the picture of the devil.

Another important church is San Francisco, and there is a story about its construction. The legend says that this church was built by the devil, because there was a pact between him and a poor bricklayer called Cantuña. The pact said that the devil had to build the whole church and if he did that, he could get Cantuña's soul forever, but the devil missed putting one rock in, that Cantuña had hidden, so Cantuña saved his soul, because the devil couldn't do anything against the pact.

These are the two most important churches in Quito, and therefore, they are Quito's jewels

TREASURES OF MEXICO

Antonio Perez
Contributor

In old Mexico, there were three principal cultures. One of the most important and interesting cultures was the Olmecas, who lived around 2100 years ago and who made amazing sculptures and cities along the east coast of Mexico, Honduras and Costa Rica.

The Olmecas were great workers in several kinds of stones like basalt, emerald and jade. The principal sculptures of this culture are the big stone heads. These are from six to eleven feet high and weigh10 tons. There are 17 heads at this moment in Mexico. Something interesting about these heads is that they are made of basalt and there is no basalt near the Olmecas cities. As a result, the stones had to be carried by the people for around 40 miles from the rock quarry.

They also made many small sculptures with precious pebbles resembling the jaguar and the snake. These animals were sacred and the Olmecas used them in many art representations. The name Olmecas mean "the people of the rubber-tree country" and they also were called Tenocelome, it means the mouth of the tiger.

This culture was the first important civilization in Central America. They had a 365-day calendar and a 260-day religious calendar. The principal cities of the culture are La Venta, San Lorenzo, Laguna De Los Cerros, Tres Zapotes.

Food in Japan

Eri Miyamoto
Contributor

Why do people think that Japanese food is healthy? A typical Japanese food style basically uses various hearty beans, vegetables and seaweed. I will introduce the foodstuffs that are representative and essential for Japanese meals.

One of the most important beans is the soybean. We call it "the meat from the field" because of its enriched protein. We make to-fu, miso, natto, soy sauce and so on, from it. We usually eat at least one of them in every meal. Most root crops (ex. burdock, lotus root, turnip, Japanese radish) and seaweed

Food in Mexico

Marcos Viveros
Contributor

Hey! What kind of food do you like? I bet you like tasty and delicious food, don't ya? Well I'm going to talk to you about the typical Mexican "taquitos al pastor". Listen to me carefully! This is the first stuff you have to eat when you visit Mexico, ok?

The best part is that it is not difficult to find them. They are in every city, and on almost every corner, so don't worry. You just need to go out and walk, or get in your car and drive for no more than 15 minutes. I promise you'll run into them quickly.

The taquitos consist of this: filets of beef are inserted on a rod for the vertical grill and a pineapple is on top of the meat to give it special flavor. The mini-tortillas are heated on another grill with a little bit of oil. Then the cook takes the tortilla, slices the meat and pineapple into it. After this he takes onion and cilantro and adds it in your taquito. You can have as many taquitos as you want. Now you have your taquitos on your table, you just add the last ingredients like the salsa and lemon, if you like. Now you are ready for the big experience. You just take one at a time and eat it in one bite. On the way between the plate and your mouth you notice how you are already drooling and the fat of your taquito is dropping little by little. When it is approaching your mouth you can perceive the smell. It's delicious, you can't wait any more. Finally, you bite it, it's something incredible like in a dream. But now you face the worst moment when you can't stop eating them. It's like a drug, it's addictive, I swear you can eat 30 of them and you won't feel satisfied. Anyways, eventually when you see that everyone has left the place you'll understand you have to go.

Maybe you have been in Mexico and you have already tried them, but... if you don't know what I'm talking about, you weren't in Mexico! Believe me the "taquitos al pastor" are a whole experience and you have to try them. I swear you won't regret eating them. You won't leave Mexico!

"Life and Debt" a misleading portrait

Dr. Bradley Andrew
Department of Accounting, Business and Economics
Faculty Contributor

On Monday, February 11, a large crowd at Alumni Hall was treated to "Life and Debt", a documentary that chronicled poor economic conditions and the resulting poverty in Jamaica. The film producers placed the blame for Jamaica's difficulties on the IMF, the World Bank and other International Organizations (IOs). The IOs' attempts to place unreasonable restrictions on Jamaica, such as requiring them to pay back the money that they borrowed and opening up the economy to free trade, strangled their economy and led to this economic calamity.

The movie accurately portrays some aspects of the IMF, the World Bank and Jamaica. For example, International Organizations like the World Bank often have a "cookie-cutter" approach to economic development, assuming that all countries are alike and therefore proposing the same remedies. This remedy is known as the "Washington Consensus". Sadly, this approach ignores country-specific histories and institutions that won't mesh with Washington Consensus solutions.

Also, Jamaica has experienced economic distress recently. The country has a high debt burden. Gross Domestic Product, a measure of national income, stagnated in the late 1990s. Also, unemployment in the 1990s was high at about 16%. That's twice the EU's unemployment rate and almost three times that of the United States. More recently, Hurricane Michelle and the fallout from 9/11 have devastated the tourism industry.

However, I found many aspects of the movie dishonest and misleading. In particular, the lack of responsibility placed at the feet of Jamaica itself, especially the government, and the selective information presented. For example, the presentation makes one believe that Jamaican poverty is widespread and growing. In fact, according to various measures of poverty provided by the Planning and Statistical Institute of Jamaica, poverty has been considerably reduced during the 1990s. In 1990, 28.4% of the population was in poverty. By 1999, the proportion had fallen to 16.9%. The Gini Coefficient, which measures the degree of income inequality in a country, ranged between 0.38 and 0.42 during the 1990s. A score of 0 is perfect income equality and a score of 1 is perfect inequality. The average for a developed country is about 0.4-identical to Jamaica's quotient. Furthermore, it indicates that Jamaica's income distribution is more equitable than that of many developing nations.

The film portrayed government officials as honest people whose hands were tied by the IMF and the World Bank. While International Organizations do place restrictions on countries, that description is also dubious. Transparency International, an NGO devoted to eliminating government corruption, calculates a Corruption Perception Index every year. It takes survey data from up to eleven different organizations and distills it into one number that represents people's perceptions about the corruption level in a government. A score of 10 is the highest, meaning a very clean government, and 0 is the lowest. Jamaica scored a 3.8 in 1998 and 3.9 in 1999. For comparison, Denmark scored a 10 and the United States a 7.5, with Cameroon the lowest at 1.5 (all from 1999). This suggests that at least some of the money received by the Government from the IMF and the World Bank is going into the pockets of Jamaican politicians, not serving the purpose it was lent for. Contributing to this perception is Jamaica's role as the number one Caribbean producer and exporter of marijuana and a major transit point for South American cocaine en route to America (according to the State Department). Given this information, if I were the head of the IMF I'd hesitate before lending more money to Jamaica. Despite potential concerns, the World Bank recently awarded Jamaica a $75 million loan to help them deal with various shocks to the economy and to help protect the poor.

...if I were the head of the IMF I'd hesitate before lending more money to Jamaica.

From a personal standpoint, I found it galling that Stanley Fischer, the economist interviewed in the documentary, was portrayed as a heartless geek (He's not heartless-all economists by definition are geeks). From the answers he gave (since we never heard the questions), it was clear to me that he was asked technical questions about the IMF's relief efforts and answered them accordingly, not questions about the plight of ordinary Jamaicans. However, the juxtaposition of his answers and the interviews of suffering Jamaicans made him seem uninterested in their plight. That's manipulation and it's intellectually dishonest, especially for a documentary that is supposed to present the truth.

Even more galling was the smug, contemptuous tone of the narrator. Her role was apparently to shame us for wanting to take a vacation rather than joining the Peace Corps, going to Jamaica and helping them plant more vegetables (or perhaps more marijuana). Despite what some would have you believe, it's people starting businesses that employ people-entrepreneurship-that is the driving force behind economic development. Spending your tourism dollars in Jamaica helps the Jamaican economy and its people by providing a source of profits that can be reinvested in Jamaica. America's rapid economic growth during the 50 years between the end of the Civil War and the beginning of World War I was financed in large part by foreign investment, particularly British investment.

In summary, while the movie offers some important information, its misleading features paint an inaccurate picture. I truly hope people's opinions of NGOs and Jamaica aren't based solely on this movie. That would frighten me more than Stanley Fischer's tie.

Two Concepts of Freedom
A Comparison Between the USA and Europe

Felix Reifschneider
Contributor

Many misunderstandings between Europeans and US-Americans arise from different accounts on freedom. What is freedom? Liberty in Hobbes's famous definition "is ... the absence of external impediments." This is almost a "no-brainer;" disagreement starts with the meaning of "external impediments."

It seems that in the US especially the power of the government is associated with such external impediments. The biggest threat to individual liberties is the state that tends to overwhelm them with its powers.

The European perception is broader; they include also other institutions especially the capitalist market. On the market place the individual is confronted with the market forces that tend to dehumanize him or her. Since we do not live in a cockaigne work is required to make a living; the question that arises is what determines the individual's success? Individual skills? Talent? Luck? Family background? And is the individual able to control all these factors; in short: are they internal or external?

It seems that Americans adhere to the ideal of the 'rugged individual' and it is this individual that is responsible for his or her own success. Everybody who tries hard enough will get the chance to make a fortune; unemployment and misfortune are than the results of individual failure. The market provides the chances but it is up to the individual to seize them.

Europeans have a twofold approach the individual's success. They, too, stress the importance of the willingness of the individual to actively seek for and seize opportunities. However, from a European perspective, chances are not god-given. The forces of the market are not at all abstract but represent the very concrete material interests of certain groups; some just have greater power to influence the outcomes of market processes than others. Wherever these forces are not subject tc democratic control they are illegitimate. Multinational corporations have transaction volumes far greater than the GDP of many states; big corporations can engage in long and costly lawsuits - most individuals cannot. Obviously, the market place is far from evenly distributed power among the various actors. Some actors can concentrate more power on him or her than others and hence not every actor has the same ability to control his or her own fate. In turn this means that some other actor's abilities are limited by another one. This is an important external impediment and it is the responsible of democratic institutions to counter these forces so that the individual is truly without external impediments - or at least that it has not to suffer from more than other do.

Another Corner of the World Continued

Football

(Continued from page 4)

ships to players and for this reason these universities have better teams. Scholarships are different in each university but the most common help for players is the whole tuition which includes courses fees, room board and a meal plan.

Football is a sport which opens doors to you that you ever imagine. UDLA, the university where I study, is very expensive and I couldn't pay it without the help of the football scholarship. I'm proud to play football because otherwise I wouldn't be able to become in an Industrial Engineer which is my goal.

It's amazing how this sport has been adopted by a completely different culture. This is a good example of the expansion of football not just in America, but in all the world.

Japan

(Continued from page 5)

are used for Japanese cooking very often and involve rich dietary fibers and low calories, but these are difficult to find in the U.S. We usually boil them or roast them with a little oil. All of them are indispensable in Japanese daily life.

I can say that the foodstuffs in typical Japanese home cooking are originally quite different from those in the U.S. and need less oil. In other words, Japanese food is well-balanced, law-calories, and also plain (less salt and sugar) compared to American food. Now, you know why Japanese food is called healthy.

Springtime

(Continued from page 4)

many cherry blossom festivals everywhere in Japan. Sometimes we illuminate the trees with spotlights and enjoy the sights in the evening.

You can also see cherry blossoms on postcards, souvenirs and in pictures. And, the cherry blossom theme is found in traditional Japanese songs, which are so old we don't know who wrote them. Through them, we show their wonderfulness and share our joy with others. Cherry blossoms are the symbol of spring and our pride.

Brazil

(Continued from page 5)

to capture them.

The Portuguese, themselves, didn't want to work in the new colony, and they decided to take black people from Africa, because they "needed" new slaves. Those slaves worked in the sugar-cane farms northeast of Brazil. Black people stayed as slaves until the end of the slavery in the 19th century. The first Brazilian princess, born in Brazil, created the law in which children of slaves born in Brazil would be free.

In the beginning of the 20th century, a lot of immigrants from countries like Germany, Japan and Italy, went to Brazil believing that they would gain money working in place of black slaves on farms.

The mix of these different cultures made a people who are open- minded to everyone in the world. It is easy to see couples of different races and mixed families when you walk on Brazilian streets.

Soccer

(Continued from page 4)

Garrincha became heroes in their country.

In 1964 a dictator ship was established in Brazil, and the authorities, trying to cover up what was really happening in the country (imprisoning protesters, killings and people fleeing the country), put soccer on TV, radio and everywhere. In 1970, with government investments, Brazil won another World Cup.

Since that time, soccer has become the principal focus of Brazilian men, and in 1994 Brazil won another World Cup.

Soccer is in fact the principal Brazilian's pride.

Wedding

(Continued from page 5)

money there, then when the couple is dancing the guests break the vase at their feet, and the money is used for the honeymoon.

One more tradition: The next day after the wedding the families of the bride and groom meet in the new couple's home. The husband has to go outside and break a vase in front of everyone if the wife was a virgin, then the celebration can continue. On the other hand, if he doesn't break the vase this means the bride wasn't a virgin, and the marriage is considered finished and the families became enemies.

Those are some traditions in Mexican weddings, but you can find much more. If you go to Mexico, don't forget to enjoy this kind of celebration that could give you a pleasant moment.

Art Exhibit Showcases Student Work

Nathan Thompson
Staff Writer

This year's Student Art Exhibit once again represented the proof of Juniata's dedication to the understanding of the fine arts. The exhibit opened February 15 with fifty or so pieces that will be in the museum until March 23. The fine arts faculty recommended these pieces and the Museum Studies students set up the display. The collection stems mostly from works created by art students during the fall semester.

As Dr. Earenfight explained in a brief interview, one of the best things about Juniata's Student Exhibit is the fact that it is not limited to only a select group of students. At most colleges, exhibits like this feature the art of only the senior class. By allowing all art students the possibility of having their work displayed, it acknowledges the talents of all the students, rather than a select number of them.

One of the pieces at the entrance to the exhibit was a collage by Jenna Beck. This collage emphasized the central purpose of most of the exhibit's works, to show beauty in the world through art.

The most notable eye-catcher was Kent Black's three-foot wood-fired cistern. This wonderfully constructed vessel was created in pieces and seemed to be the key piece of pottery in the exhibit.

Perhaps the most moving work of art was Clinton Williams' mixed media representation of the World Trade Center attack. The work represented the Twin Towers with two columns created from a collage of diverse faces. The viewer seemed to be sitting atop a nearby smaller building. Even the sky in the background suggests a sort of brokenness and disorder. Dr. Earenfight was also impressed by this piece, commenting about its "literal yet sophisticated" design and how it avoided the clichés that might be expected in such a work.

The entire collection was widely varied, and contained many great displays of pottery, impressive digital artwork and photos, and some excellent paintings and graphite self-portraits. President Kepple enjoyed the entire exhibit, stating, "I like this year's exhibit, it's one of the better ones I have seen."

MAILAND McILROY AWARDS

A total of Juniata College 22 student-athletes were honored at the sixth Mailand McIlroy Athletics Awards Ceremony on Sunday evening held in Oller Hall. McIlroy worked at the Huntingdon Daily News for 41 years and was the sports editor for the local newspaper for 37 of those years. "Mac", who died on April 1, 1998, was a friend and confidante to many Juniata coaches and athletes during five decades of covering sports on College Hill. Each team's most valuable player award winners were announced, while the recipients of the "Big Five" senior awards (Stanford Mickle, Charles Bargerstock, Carolyn Stambaugh, William R. Smaltz and John E. Blood) were also recognized.

Senior Brandy Workinger was bestowed the Carolyn Stambaugh Memorial Award for her strong leadership role on the playing surface and her solid academic credentials. She was also presented the John E. Blood Memorial Award as a senior student-athlete with one of the highest grade point averages and at least four varsity letters. The William R. Smaltz Award, presented for to a male athlete for excellence in the classroom and on the playing surface, was given to both Jamie Campbell, a senior football and baseball standout, and senior basketball player Brian Dietrich.

Senior Lucas Kelleher was presented the prestigious Stanford Mickle Award for overall athletic achievement and contribution. He also earned the baseball squad's most valuable player award, which is donated by Charles Goodale '39. Senior Brandy Preslovich earned the Charles Bargerstock '47 Athletic Memorial Award for overall love of athletics and outstanding performance on the playing surface. Preslovich also earned the Gayle Wampler Pollock '68 most valuable women's basketball player award for the second straight year.

Senior defensive end Kevin DeCarlo was presented the George Weber '40 most valuable lineman award. Senior linebacker Josh Seiders earned the Dr. J Harold Engle '23 most valuable back award.

Junior back Nathan Ayers picked up the Fran Zimmerman '54 most valuable men's soccer memorial award. Senior Lisa Dumansky was selected as the winner of the J.M. Haskell '65 women's tennis most valuable player award. Senior back Amber Byers copped the women's soccer most valuable player award. Junior Jess Hebel was presented the Dr. Thomas Robinson '66 most valuable field hockey plaque for the first time in her career.

For the second straight year sophomore Stefanie Rynkewitz was selected as the women's cross-country most valuable athlete donated by William F. Berrier '60. Freshman Justin Norris earned the C. Clifford Brown '29 most valuable runner award. Junior middle hitter Niki Mueller picked up the Arthur Evans Most Valuable Women's Volleyball Player Memorial Award.

Sophomore Kim Allen received the women's swimming most valuable competitor award for the second straight year. Senior guard Shane Crandall was given the Jack Oller '23 Men's Basketball Most Valuable Player Memorial Award for his performance in 2001-02.

Sophomore opposite Javier Garcia picked up the Mike Wojcik '87 most valuable men's volleyball player award. Senior Ethan Gibbel picked up the men's tennis most valuable player award. Senior pitcher Christie Matthews copped the Judith Rodgers Pheasant '65 Most Valuable Softball Player honor for the first time in her career.

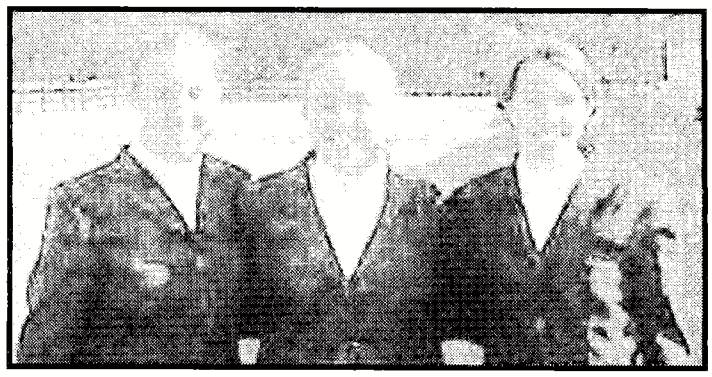
In track and field, freshman Kira Troutman was tabbed as the most valuable women's performer. On the men's side, junior Dusty Lehr earned the J. Foster Gehrett '16 most valuable performer award.

Sophomore Julia Saylor was picked as the outstanding cheerleader award winner.

Equestrian Team Finally Noticed

Kate Leisey
Sports Writer

Juniata has an equestrian team! First off, what is an equestrian? It's simply a fancy way of saying horseback riding. The fact that the Juniata College Equestrian Team exists has been a little-known fact for the past three years.



In the fall of 1999, under the leadership of Amy Mohr '02, a small group of three riders began competing as a club-sport through the Intercollegiate Horse Show Association (IHSA).

Each year the team competes at ten shows against local universities and colleges. Riders compete both as individuals and as a team. The goal is to earn enough points to qualify for regional competition and then zonal and national competitions.

During competition last semester, Beth Superka earned enough points to go to regionals this spring. Superka competed in the Advanced Walk-Trot-Canter class. She is the first Juniatian to qualify for regional competition. When asked how that makes her feel, she responded, "I have always been excited to just have the opportunity to ride for Juniata. Now that I am going to regionals, the excitement is overwhelming."

The Juniata College Equestrian Team's season ended in March with the last two shows. The team competed at Indiana University of Pennsylvania (IUP) on March 17 and Westminster College on March 24.

Four team members rode at the IUP show with all of them earning ribbons in their classes. Beth Superka '04 competed in the Novice Equitation on the Flat class and won fifth place. Jessica Antonik '05 won fourth place in the Advanced Walk-Trot-Canter class. Amy Mohr '02 rode in the Beginner Walk-Trot-Canter class and won second place. This gave Mohr enough points to compete in the Advanced Walk-Trot-Canter class in future shows. Crystal Swan '04 received a seventh place ribbon in the Walk-Trot class.

Equestrian team members: (left to right) Kate Leisey '02, Kristin Stiles '02, and Amy Mohr '02. (Photo: Provided)

A week later the entire team of six riders competed at Westminster College. Kristin Stiles '02, Beth Superka '04, and Essie Pfau '05 competed in the Novice Equitation on the Flat class. Superka won third place and Pfau won sixth place. Amy Mohr '02 and Jessica Antonik '05 rode in the Advanced Walk-Trot-Canter class. Antonik placed fourth. Crystal Swan '04 placed fifth in the Walk-Trot class.

This year the team earned 60 points. Of the nineteen teams in the region, Juniata ranks fifteenth. Mohr commented, "Overall, the team is doing very well for the number of girls we have riding and the number of classes we have girls in." The team only has riders in three different classes. That means that there are only three riders to earn points for the team. In comparison, teams like Penn State and West Virginia have 75 riders and someone is competing in every class at every show.

For more information on team totals and upcoming events visit www.ihsa.com and look for information on Zone 3 Region 3.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

SEPTEMBER 18, 2003 | JUNIATA COLLEGE | VOLUME 85, NUMBER 1

Unwired!

Nate Drenner
co-editor in chief

Plug in the power cord. Keyboard. Mouse. Printer. Cables spring from the back of a computer like snakes from Medusa's head.

This summer saw a new initiative from Juniata's Campus Technology Services (CTS). A set of wireless connection points were installed in academic buildings and a few other areas of campus. Laptops, Palms, and any computing device using a standard called 802.11b can connect to the network wirelessly.

Juniata is responding to the trend of mobile computing. Students can leave their rooms but not necessarily go to labs to do class work.

"The world is moving to wireless. [For Juniata] it wasn't a question of if, but when," according to Rob Yelnosky, associate director of The Solutions Center (TSC). TSC is the branch of CTS that interacts with end-users: staff and students who connect to Juniata's network.

This new wireless connectivity was funded by an increase in students' technology fee. That fee doubled since the 2002-03 academic year, rising from $50 to $100 per semester.

Though actual figures are not available, Yelnosky pointed out that, "A higher percentage of new students brought laptops. Mobile computing is becoming more popular."

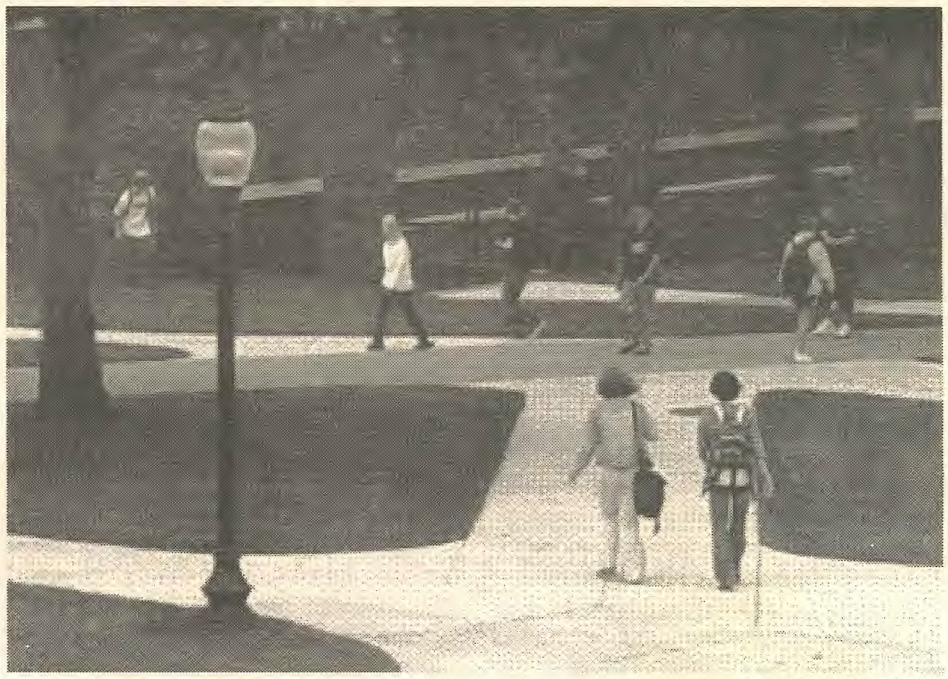
Students are not required to purchase wireless laptops for this year or next. However, Yelnosky said that mandatory wireless laptops are being discussed. A decision has not been made.

Students without laptops can borrow one of 30 mobile computers purchased specifically for student use and the wireless initiative.

Connections available in

Beeghly Library
BSC
Carnegie Hall
Ellis Hall – 3rd Floor
Good Hall
Humanities Building
Alumni House
Raystown Station
South Hall Lounge
Swigart Hall
TNT Lounge
von Liebig Center

Fifteen laptops reside at the help desk in the Brumbaugh Science Center (BSC) for student use within that building. A small area at the help desk contains external monitors and keyboards, and part of BSC Main Lab was removed for groups to use the new laptops.



"I spend a lot of time in the geology wing [of BSC] and [the laptops] are helpful to have, especially when P107 is being used for classes," said student Laura Little.

"I'm also not too sure about the hours for checkout. Right now it seems like it's only during the day," Little continued.

The BSC laptops are available from 8:00 a.m. to 1:30 a.m., which has not been widely publicized.

The remaining 15 laptops are in Beeghly Library. They are currently used in the writing center but will be available for public use in November.

Cara Yancey/ Juniatian

As Juniata begins the fall semester, students make their way to classes on old 18th Street.

"Poisonwood" infects JC

Caitlan Zlatos
staff writer

This summer, "The Poisonwood Bible" seeped through campus and infected readers with its religious and cultural insights. One reason the novel was chosen as summer reading was that it would potentially have broad appeal. Apparently, this prediction was on target. So many Juniatians showed up September 4 at Neff Lecture Hall for a related discussion that the group had to move to Alumni Hall.

Professor Philip Jenkins, PSU's Distinguished Professor of History and Religious Studies, was the guest lecturer. His discussion, "Christian Missionaries in Africa: Still Poisonwood?" had 300 to 400 attendees.

The summer reading program began several years ago with freshmen as its primary target. Since then, it has grown to encompass the Huntingdon community. Dr. Donald Braxton of the Religion Department says the participation of the community, faculty, and administration now roughly equals that of the student body.

Last spring, the search for the summer reading book began. A combination of

Baker's back - and it's bluer than ever

Meredith Pink
staff writer

Mouths dropped, eyes glazed open, and pure astonishment crossed the faces of all who entered Baker. *What the...? Who the...? Where the...? It's blue!* These were just a few of the comments overheard when students saw the cafeteria for the first time.

"I would have loved to put a video camera in the entryway to see everyone's reactions when they walked in," said Hal McLaughlin, the general manager of Juniata's Sodexho account.

Juniata College and Sodexho Catering Services have wanted to do this renovation for a long time. Sodexho granted the school a loan to renovate the facilities in exchange for a ten year contract. The goal of this renovation was to jazz up the cafeteria, to make it trendy and welcoming. The aesthetics were carefully altered to create the ideal atmosphere for eating and socializing.

The round tables were selected because they are more conducive to seating a larger number of people. There are fifty additional seats (bringing the grand total up to 560 chairs) to accommodate the ever growing population of Juniata. Most will agree that it is cramped, but rest assure that Baker is still a work in progress and suggestions are welcome.

To appease the variety of tastes of Baker diners, new food stations were created. There is a vegan bar, which has been a huge success. The grinders line is an enhanced version of the sandwich station. It offers additional sandwich choices like meatball subs.

The physical appearance is not the only thing that changed at Baker. There is a new executive chef, Patrick Goodman. He also runs the Student Food Committee, which gives students the chance to offer their opinions and suggestions to help enhance the dining experience. There will also be a drawing for "Dinner with the Director," held periodically throughout the year. Three students will be chosen to enjoy a free fully-catered dinner with McLaughlin.

RFC - the place to be!

Katey Glunt, Meredith Pink, Michael Vella, and Caitlan Zlatos staff writers

The week after finals, when most students had returned home for the start of summer break, an eager group of 40 students and four faculty set out from Juniata on a 42-hour drive across the country. No, they weren't on the run from the law. This group was on their way to the southwest for the Remote Field Course (RFC) 2003, a 2-credit, 16-day learning experience.

The students, along with Professors Jim Borgardt, Ryan Mathur, and John Matter, piled into the four college vans on May 12 and began their long journey to the first stop: Grand Canyon National Park. There, after meeting up with Professor Paula Martin, the students took in the amazing scenery and worked up a sweat hiking the Kaibab Trail. Students took part in three self-chosen modules from one of four disciplines—ecology, environmental science, geology, and physics—as well as interdisciplinary modules.

From the Grand Canyon, the groups separated and embarked on journeys to various destinations. The "Southwestern Geology" module headed south to view landmarks such as the Painted Desert, Petrified Forest, and Canyon de Chelly. Meanwhile, the "National Park Use" module spent more time at the Grand Canyon.

The "Ecotonal Transitions" module drove to the North Rim of the Grand Canyon. They hiked down the trail, observing vegetation and animal life changes with altitude.

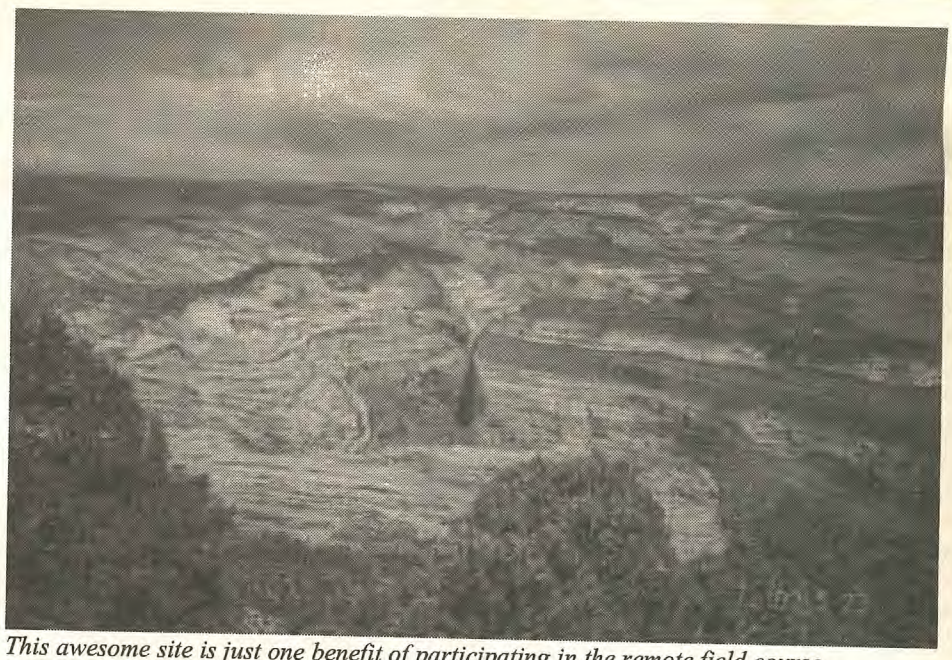
Students in the "Astronomy and Meteorites" module witnessed a lunar eclipse and observed Jupiter and some of its moons at the Lowl Observatory.

Following these adventures, all groups met in Moab, Utah, the base campground for the remaining action.

Every year professors notice that some students who struggle in the traditional classroom setting are excited at the prospect of learning through experience in the field.

Professor Martin says that RFC offers the faculty "a good chance to see a side of students that you don't see in the classroom."

The students agree. "You really get to know the professors as friends and enjoy hanging out with them, while learning at the same time," said sophomore Lauren Forster of the experience.



"Nothing will ever compare to the experience of learning about the natural sciences with some of the most scientifically amazing natural wonders in the world as your classroom. I think everyone became a student and a teacher; the line typically drawn between professors and students in school disappeared. RFC has definitely become one of my most favorite memories of my time at Juniata and in my life," says sophomore Sarah Bay.

Favorite memories included white-water rafting on the Colorado, visiting an actual dinosaur dig (where we were given actual dinosaur bones and watched Dr. Matter beg on his knees for a vertebrae), soaking up the sun on a houseboat on Lake Powell, horseback riding, mining for peridot, hitting up a local karaoke bar, walking the streets of Moab, and listening to senior Bob Krause's amusing stories.

Although unnecessary, potential RFCers are encouraged to have a science background. Required written work for the trip consists of a journal record of daily experiences.

The trip is limited to 40 students, accepted on a first-come first-served basis. Information for next summer's trip will be given out in November. Modules and instructors vary yearly. The course costs about $1300, but a $350 scholarship is awarded to Juniata students in good academic standing.

Check out the RFC website at http://departments.juniata.edu/geology/newrfc/index.html.

This awesome site is just one benefit of participating in the remote field course.

Poisonwood

continued from page 1

campus-wide emails and contact with past participants produced a list of 30 to 40 nominees. Nominees were both fiction and nonfiction. The summer reading program forum, headed by Sarah Clarkson, Director of Academic Support Services, and Dr. Braxton, narrowed the list to 8-10 books. The forum used criteria that included having the potential for wide appeal, being appropriate for the present time period, and being suitable for *summer* reading (i.e., something people could read at the beach). The voting process included both the regular forum participants and the entire campus (through e-mail votes).

"The Poisonwood Bible" won the vote, though there were several runners-up. These were Barbara Ehrenreich's "Nickel and Dimed," Louise Erdrich's "Last Report on the Miracles at Little No Horse," and Matt Ridley's "Genome." The forum specifically recommended these along with the selected novel.

Among other reasons, "The Poisonwood Bible" won the vote because it is a novel (something people will more likely read, especially in their free time), and because of its challenge factor. It challenges most readers to think about how they would deal with living like the Price family in an unfamiliar place and culture. Advocates of the novel hoped it would also uncover the world of missionaries to the college community.

Kingsolver's novel additionally provokes thought about the influence of Christianity in general on Africa. As Dr. Braxton stated, "no one can afford not to understand religion and its power over people in the world."

Another reason for the choice was the fact that "The Poisonwood Bible" could be used as reading for several courses. This semester, a few College Writing Seminar sections and other courses did so.

Two discussions on the reading occurred toward summer's end, to which about 40 different people went. A few students were able to attend the discussions.

Because of the campus's enthusiasm for the novel, at least one open discussion will occur later this month.

Making the connection

Nate Drenner
co-editor in chief

So a large portion of the campus has wireless access. Great. But how do I get my computer to work wirelessly?

To configure a computer for a wireless connection, students need to create a Virtual Private Network (VPN) connection. This VPN helps resolve some security issues inherent to wireless access.

Some points to remember:

Wireless adapter – You will need a wireless network hardware adapter that uses the 802.11b standard. Bluetooth cards will not work with Juniata's network.

Read the setup guide – Visit a lab and print a copy of the wireless setup guide. It is found at http://services.juniata.edu/cts under the section called "Get Connected."

Check it – Once you've used the setup guide, you can enter your Juniata username and password wirelessly. However, at the login screen you must check the box indicating "log on using dial-up connection."

Location, location, location – To use wireless, you must be in one of the areas where a connection point is installed. Check the list and make sure you are in the right building.

Borrow it – The thirty laptops available in BSC and Beeghly Library are already set up with a VPN connection for wireless usage.

Any problems with a wireless connection can be reported to the help desk (x3619).

"We are interested in feedback and to help resolve [wireless] issues," said Yelnosky.

Unwired!

continued from page 1

Juniata's current wireless setup is only the first step of network upgrades. CTS will decide whether to move to campus-wide wireless based not only on finances but also on usage of the current system and security issues.

Few students have signed out laptops or contacted the help desk for assistance with personal wireless connections. Exact figures are not available. However, it is still early in the semester.

> **"The world is moving to wireless."**
> ***Rob Yelnosky***

"I've only used the wireless laptops twice so far," said Little.

Theoretically, anyone with a wireless-enabled laptop could enter the campus and reach sensitive information on the network.

"There is a public road running through the middle of campus," noted Yelnosky when asked about security concerns.

For security reasons, any Juniata wireless user must create a Virtual Private Network (VPN) connection.

"The VPN solution allows us to validate those people who wish to access the network by having the user type in their EagleNet username and password," said Dave Fusco, Director of Campus Network Services.

Once the user creates a VPN connection on his or her computer, logon can occur as usual.

A wireless connection is also slower than a wired connection.

"[Wireless is] not for heavy downloads. It's not going to be the solution for everything," said Yelnosky. That is why the wired infrastructure currently in dorms and all other campus buildings will remain.

Good and BSC Renovations

Sarah DePasque
staff writer

Though our eyes easily focus on Von Liebig (VLB) when we look for the latest additions to campus, it was not the only construction completed recently. This summer both Good Hall and Braumbaugh Science Center (BSC) underwent renovations. The contracting went to C.E. Wood, and D.C. Goodman.

The majority of changes in BSC are in the upper level south wing. The south wing formerly housed the chemistry department, which has moved to VLB, giving information technology a new home. The administration hopes to move the communications and business departments to that wing in the near future.

Provost James Lakso said that decision resulted from a "collaboration of those three departments in developing the IT POE."

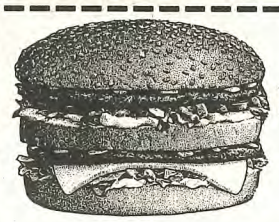
Though there were no structural changes, according to Juniata project director Robert Shafer, it was a 13,000 square foot renovation. Twelve offices, two common spaces, one lecture hall, one seminar room, and four lab spaces were created, and one classroom was redone. New electrical, telecommunications, and lighting systems have been installed, making the space particularly appropriate for IT majors. The wing's roof has been replaced, as well as its floors, ceilings, walls, tiles and carpets.

According to Lakso, Good Hall's surgery was mostly cosmetic, unlike last year's priority additions of a handicap accessible unisex bathroom and electronic doors. This summer five new offices were created on the ground floor and the hallways, ceilings, and floors have been redone.

Tristan delGiudice, director of facilities services, explained that part of Good's overhaul involved installing new chilled water lines to cool the building more efficiently. Putting more buildings onto the central cooling system saves money and natural resources.

Provost Lakso said Good Hall has somewhat of an "old middle school" feel, and felt the cries of faculty and students partial to the humanities were justified, considering all that has been done for the sciences.

If you think that one floor in Good Hall does not compare to Von Liebig, not to worry. "Big plans" said the Provost, are in the works for Good Hall, and the realization of these plans will occur as space and money become available.



JC Emergency Services

Michael Vella
staff writer

The Emergency Services and Safety Club's Quick Response Service (QRS 8) provides campus coverage 24 hours a day, 7 days a week. When 911 is dialed on campus, trained emergency medical technicians and first responders of the QRS 8 respond to the scene along with Huntingdon EMS. With an average response time of less than 90 seconds, members of the QRS provide care until the ambulance arrives.

This fall the club is sponsoring a first responder class starting Thursday September 18 and finishing November 24. Anyone interested in learning about basic medical and trauma care is encouraged to attend. The cost is $71, and classes run on Mondays and Thursdays from 7-10pm. For slightly more advanced training, an EMT class will be offered from January 12 to July 14 following the same weekly schedule. The cost is $69. For more information feel free to contact the ESSC at esscqrs8@juniata.edu or visit its website in the club section on the Juniata College homepage.

Bowling for Propaganda

Jeffrey Anderson
staff writer

What better way to start off our college careers than to make us feel shameful for being American? Michael Moore's "Bowling for Columbine" is meant to send a message of hope for peace among our own people. However, the movie attacks our culture and tries to make everyone who isn't on Moore's side look like a bad guy. You see, in America, everyone grows up thinking they are destined to save the world. Whether it's through curing disease, uniting the races, separating the races, abstract art or expression, provocative writing, politics – whatever it may be, American children all grow up to believe that they will do something. We are also taught to organize our thoughts and stay brilliant in our own minds until we are ready. This is why most of us become part of the rut. Mike Moore was just one of those children that ran with his idea, and I give him props for that.

The movie had a good message, I think. I mean, people in America are killing each other in the streets. And I guess white people have a tendency to be afraid of other races. However, the film does not offer any solutions. It is more or less two hours of this man "crying for the nation." It seemed like Mike had this idea, he ran with it, and he got winded right after he identified the problem. The movie then reinforces the idea that we are all destined for greatness but does not prove much.

It's the little cheap shots that bother me. Things like asking Charleton Heston if is guns are loaded. Suppose they weren't. Is Charley going to announce to the world that they aren't? How about K-Mart? Let's attack the PR woman because she's ignorant to the fact that it was K-Mart who caused all the death at Columbine. And the stupid kids behind the counter, laughing at their own stupidity, dropping packs of bullets, and being stupid Americans. I doubt, though, that if you are pushed to the point to murder, that the lack of bullets at K-Mart will make you reconsider. And attacking our president's intelligence. Everyone has a special relationship to their country, their home team. If you don't like your country or how it's run, what does that say about you?

America has more murders than other countries, but what makes us different? It can't be our violent history, because other countries have bad history and they are still not as trigger-happy as Americans. What could it be? Maybe our drinking age is to blame. About 70 out of every 100,000 teens die each year from violent deaths. Probably because we got all these cranky kids running around trying to get a buzz, shooting off guns. And anyone who survived the first 21 years can't handle their liquor because they didn't build a tolerance as kids. Did you know that the drinking age in Russia is also 21? Did you know that they have almost ten times as many homicides as the US?

I know, it's got to be fat people! Think about it, America has about five and a half homicides per 100,000 people. Also, 54 percent of Americans are overweight. Americans are notorious for being vicious and fatter than other countries, especially compared to Europe, where there are only a couple hundred murders per year. Russia is just as fat as America, and in 2000 it was reported 50 homicides per every 100,000. In South Africa, where it is 20 per hundred-thou, the headlines are reading, "S.A. women just as fat as American women." Hey Mike, maybe people like you are to blame. Of course I don't stand by these statements, because the majority (54 percent) can't be wrong.

Perhaps the moral of the story is that ignorance is bliss. If we would mind our own business and stop stirring up controversy and pointing fingers, people could relax a little and not blow each other's brains out. Anti-Americanism is not the answer.

Freshmen Orientation

Kate Leib
staff writer

The transition from high school to college can be a hard one. One day you're a big, bad senior and the next, a naïve, clueless freshman. Colleges always offer some sort of Orientation program, but do they really help us, or are they a complete waste of time? I'm sure I speak for most freshmen when I say that the Orientation program is, for the most part, pointless.

Let's begin with a Summer Orientation tradition: the hike to the Peace Chapel. A quick poll of students was taken to see what people thought of the general experience and 17 out of 20 students absolutely hated it. "It was traumatizing," said freshman Sara Kotora. After hiking and roasting under the sun, freshmen were forced to participate in a variety of useless "getting to know you" games. When we came back in August, how many of us remembered anyone's name or their favorite food? There was also free ice cream at the top, but that's hardly a consolation in my book.

> **"It was traumatizing."**
> *freshman Sara Kotora*

The "New Student Social" was the next exhilarating event at Orientation. I felt like I was at a bad school dance. The people that did go were either hanging out at tables or on the couches. Some were lucky enough to catch part of "Rocky" on TV before one of the orientation leaders turned it off. I give those orientation leaders a lot of credit for the decorations, and for trying to get everyone involved. Since most of us felt pretty awkward, a lot of us decided sleeping was better then hoola-hoops and free candy.

Now on to Opening Weekend, where freshmen were handed the weekend's busy schedule filled with "mandatory" events we were expected to attend. Ahh, yet another freshmen social, how horribly refreshing. The few people I know who went said there was a bad turnout and the only decent part was the rock climbing. Here we have a similar problem of students feeling awkward and wanting to go back to their rooms rather then go to a social.

I'll admit that the Orientation leaders were really great and gave us a lot of insight on things that college brochures and most Juniata faculty can't really talk about. They talked about the parties on the weekends, what teachers to watch out for, situations you should avoid, and just some general tips about roommates and homework.

Now I'll leave you with some ideas on how to improve Orientation. Since most of the students' complaints about the Peace Chapel hike were about the heat, maybe next year the hike could be during the evening when the sun has gone down. The social during Opening Weekend should be moved to the following weekend when the freshmen have settled in and the upper classmen can bring some life to the party. The best improvement Juniata can make to next year's Orientation is to let the students float around Raystown Lake while the parents see how far they can make it to the Peace Chapel.

The Juniatian accepts letters to the editors from students, faculty, staff, and alumni. E-mail juniatian@juniata.edu, or write to Juniatian, Juniata College, Box 667, Huntingdon, PA 16652. Letters may be edited due to content or length.

Something To Think About

Pamela Bodziock
co-editor in chief

How far do you go to shake people up in one hour?

And even more importantly, is it really such a good idea in the first place?

The Diversity Workshops at Juniata College are almost a rite of passage for the freshmen. Part of the Extended Orientation class, these hour-long sessions are held every fall to discuss and debate issues on the topic of diversity. The first Diversity Workshop I attended – as a freshman in 2000 – was a night of tension. Actually, "hostility" is the better word. Students made their points that evening by standing up and shouting arguments at one another. The freshmen in the audience – the ones that spoke aloud, that is – were on the defensive, feeling as though they had been accused of close-minded attitudes and shallow ethics. The panel of older students, who led the discussion, looked surprised at first by the outpouring of anger, but eventually they too became rather heated as the session wore on.

People were *mad*. The students that I talked to afterwards were either mad at the panel for verbally attacking them, or they were mad at their fellow freshmen classmates for being so close-minded to the ideas and ideals of diversity. Whether on the side of the offended or the offenders, however – and who exactly the offended and offenders were, is debatable – no one seemed to have taken the experience lightly.

And why should they have? The goal of the hour-long, one-time session, after all, is to shake up the audience. Assistant dean Dan Cook-Huffman was clear about this. "The workshop is intended to shake people up, to get them thinking. You can't expect to change anyone in an hour. The workshop mirrors what you will struggle with during the entire Juniata College experience."

Which is fair enough. You can't do much more with a single hour-long event than shake people up. And sometimes it's a good idea to get people thinking about something radically new to them. But ever since that first explosive diversity workshop I attended that fall, I've wondered if maybe the workshops go too far in the opposite direction.

Don't get me wrong, here. I'm not saying that it's a good idea to stay close-minded, to never listen to an opinion other than your own. But think about what's being done. Juniata College is an institution designed to further academic education, but what they are trying to teach the incoming freshmen with this workshop is some ideas that fall more into the categories of morals and ethics than anything academic. Learning to tolerate and appreciate all people — of every race, creed, color, gender, age, and sexual preference — is important. In fact, in today's world, it may very well be a requirement of surviving in the working world. Prejudice is not allowed in our modern-day society – at least not prejudice that is spoken aloud.

So no one can argue that it's a bad idea to learn about equality for all. My only question is whether or not people should be *made* to learn. Should they? Should the school really require freshmen, some of whom have come here from small country towns with small country populations and whom have had almost no experience with diversity (I should know, I was one of them), to come into their new school and immediately be bombarded with this? It's a good experience for them, to be sure; it was a good experience for me. My question, however, is if it's a school's responsibility to give them that experience.

I don't know, maybe it is. Surely a necessary part of higher learning is learning how to be open and accepting of all people, whether they are just like you or not. But does a school have the right to teach it? I know personally of at least two students who left Juniata because they found the liberal atmosphere of the college too stifling. One of last year's freshman, who I was talking to over the summer, said that he had no intention of returning here if there were going to be any more of those "diversity seminars." I assured him that they were only mandatory for freshmen, but he didn't seem convinced. He did not return for his second year.

Some people greatly enjoyed the experience they got out of the workshop. Some have said that they really liked the way in which they had been presented with new ideas, challenging them to think in new ways. I, for one, continue to go to the workshops each year, interested in seeing if the changing formats – bringing in guest speakers, putting professors on the panels, etc. – will have any positive or negative effect on the reactions of the freshmen. And, indeed, each year they go a bit differently, some of them better than others.

But one thing remains the same each year: everyone leaves the hour-long session with something to think about. Whether it's something that will eventually affect them positively or negatively remains to be seen. And whether our school has gone too far, or just far enough, might never be known for sure. All I know for certain is, the freshmen diversity workshops always give the students something to think about. What that is, is up to them.

President Kepple will answer students' questions in every issue.

If you have a question for him, e-mail it to juniatian@juniata.edu Questions will be considered based on relevance to the student body. Reasonable comments will be appreciated.

Ask President Kepple

What are your plans to expand Beeghly Library?

Major changes to Beeghly Library are likely to be part of the next Capital campaign. That won't start until several years after this campaign is completed, on June 30, 2005. I suspect that the library will be expanded, and also renovated inside. The real plans will be developed with the library staff, a library consultant, input form the student body and faculty, and an architect. This will certainly be a significant project.

When will the Halbritter Performing Arts Complex be completed, and why was that facility chosen for renovation at this time?

We anticipate that the Halbritter Center (renovation of Oller Hall/Rosenberger auditorium and the addition of a theatre, theatre lobby, new restrooms, shop space, faculty offices, rehearsal space and dressing rooms) will be under construction this coming spring, and finished around May 2005. The beginning of construction is contingent upon successfully completing the fund raising needed. At this point we are one million dollars short of our $6.5 million goal. We do, however, expect to close that gap.

The Halbritter Center was selected because of the major impact this project will have on the performing arts, the artist series, and the speaker series at Juniata. As you know, we are having trouble scheduling Rosenberger for all the events we would like to have on campus – including things like Mr. Juniata. Not only will we have a cutting-edge theatre, but Rosenberger auditorium will be improved for speaking and music events. Adding air conditioning will also improve the use of Rosenberger. I believe this new building will have just as much impact on the performing arts as von Liebig has had on the sciences.

New heights of relaxation

Brittany Barbera
staff writer

We've all been there before. In fact, most of us are there right now: overworked, overwhelmed, overcommitted, overly tired, and in way over our heads. We're swamped with reading assignments, projects, and presentations. You name it, and we were supposed to have it done two days ago. It's somewhere in between memorizing note cards, and having a panic attack, that it hits you. You realize you can't take it anymore. You must either 1) take a study break or 2) be committed to an institution.

For those who opt for choice number one, I have just the place for you to go. It is a place where you can release your tensions, neglect responsibilities, and relax. Where is this place of solitude, you ask? The answer is … just a few minutes away. So, grab a few equally-stressed friends and walk down Moore St. (towards BSC). Then make a left on Prospect Dr. (the third block) and follow the gravel path straight back. You will eventually stumble upon several cliffs, trees and if you look down, a river.

This place you are now standing - "the Cliffs", as we Juniatians call them - serve as an escape from the world. They are also a reminder that beauty is everywhere; we just have to look for it. If you who somehow still have energy to burn, hike around the little paths. If you are feeling a bit lazy, then simply lay out on one of the Cliffs and enjoy the scenery. Whatever you choose to do, you will enjoy yourself.

So, the next time you are debating whether or not you should continue memorizing detail after detail or save the little bit of sanity you have left, do yourself a favor. Walk to the Cliffs. You won't regret it—I promise.

Cara Yancey/ Juniatian

The cliffs supply daily doses of awe-striking beauty, which hits the mountains at sunset.

Church search

Brittany Barbera
staff writer

Whether this is your first or seventh semester, if you're interested in connecting with your spiritual side— you're at the right spot. On campus, our Christian Ministry Board (CMB) provides services which allow students to explore faith, fellowship, and spirituality. So take advantage of these opportunities and get involved.

Most Bible studies meet early in the week for an hour. Areas of study vary according to each group, so there is something for everyone. Between 8 and 9:15 p.m. on Wednesday evenings, students gather in Sherwood Lounge for Footsteps, a non-denominational praise and worship service. The Fellowship of Christian Athletes (FCA) meets on Thursdays at 9 p.m. in Lesher Lounge. Members explore practical ways in which Christianity relates to sports.

Every Sunday at 6 p.m., Father Dave Arseneault says Catholic Mass in the TNT Lounge. Students may choose to be part of Catholic Council, Brethren Student Fellowship, or the United Spiritual Council. Everyone in the Juniata community is welcome to attend so be sure to watch your email for weekly events. Check the Campus Ministry website for more information.

Interested in finding a church in the Huntingdon area? You can meet in the lobby of Ellis at 10 a.m. on Sunday mornings (until September 28th) and visit the local churches with a group. Or, you can go online to the Juniata Homepage>Campus Ministries>Area Churches for a complete listing of churches and service times.

In addition, you may contact Rev. Dave Witkovsky (x3360), Father Dave Arseneault (x3362), Father Tim McCormick (x3362) or Cindy Megill(x3361) with any questions about your church search.

Escaping Baker

William Bishop, staff writer

As all upperclassmen know and freshman will soon find out, around mid-semester you will "acclimate" yourself to the food of Baker. In other words, you'll want something a little different sometimes. It's not that the food is bad (because we all know how delicious it is), it's just that occasionally you'll need to eat something else. I have reviewed three restaurants in the area to let the freshman know what their options are, and where they can go for a change of pace.

Mimi's Restaurant

First on the list is Mimi's Restaurant. This is one of the finer dining establishments in Huntingdon and offers a great selection of entrees. This is a slightly expensive restaurant and you may want to come here when your parents come to town. With a full menu along with a complete bar, Mimi's has become the first class restaurant of Huntingdon.

Location: 312 Penn St. From big Sheetz, go across the railroad tracks. Go to the street with a stop light and take a right. Mimi's is on your right.
Classic choice: Seafood Alfredo

Specials: Extra Large cheese pizza delivered for $9.99.
Price: Average of $8 - $12 per meal

Downfall: High prices make this restaurant not an everyday stop, but a great place to visit on a special occasion.
Contact Information: 643-7200

Boxer's

A second off-campus dining option is Boxer's. This quaint restaurant/bar is a staple among the Juniata community and one of the classics in Huntingdon. Since it is a bar, all minors must be out by 9 o'clock if not accompanied by a parent. Anyway, this restaurant is a sure bet to provide you with some of the best dining in the area, while hardly putting a dent in your budget. A must-experience for old and new Juniata students alike.

Location: 410 Penn St. From Big Scheetz go across the railroad tracks and to the stop light. Take a left, and Boxers is on your left. But be careful because the street is one-way parking the opposite way.
Classic Choice: Chicken Cheese Steak with a plate of cheese fries. (WARNING: A large fry is a meal for two or three)

Specials: Tuesday night, starting at 7:30, is wing night with some of the best wings in town.
Price: A great restaurant that is not a bank-buster. You can get any hot sandwich for $3- $5. Definitely can hit this one up on a low budget.

Downfall: Not the location where you want to bring a crowd. If your party is six or more, make reservations. This is not a big restaurant and sometimes you have to wait to be seated, but well worth the wait.
Contact Information: 643- 5013

Main St. Cafe

The third escape from Baker for new Juniata students can be found a quick 15 minutes down the road in the town of Alexandria. The Main St. Café is fine dining establishment that is a medium-priced. At this restaurant you can find more along the lines of seafood dishes and specialty steaks. This is more of a family restaurant that the previous two, with a lot more seating room and a more extensive menu.

Location: 241 Main St. Alexandria, Pa. Follow Route 22 west to Alexandria. Turn right into Alexandria and then turn right after you cross the bridge. The Main St. Café is on your right.

Specials: Wings every day, and a great selection of entrees
Price: Slightly expensive. Average $6- $9 entrees.

Downfall: Great restaurant with large selection of items; however, the 15 minute drive can be a pain.
Contact Information: (814) 669- 4494

Billi's Bric a Brac and Bagels

Holly Brown, staff writer

Billi's Bric a Brac: Bagel and Books is a place to go for a welcome change from pizza and pasta. Open for breakfast and lunch, this restaurant's menu is full of delicious deli sandwiches on a variety of bagels, as well as salads and soups. On the menu also are 8 varieties of ice cream and Italian ice. They deliver to the college and have bagel and sandwich platter options for groups and parties.

It's open Monday-Friday 7:00 am - 4:30 pm, and Saturdays 8:00 am - 4:30 pm. They deliver up to 2:00 p.m. on all orders over $15. Cappuccinos and lattes are also available for delivery.

With bagel flavors such as sun-dried tomato, spinach, cranberry orange, sprouted wheat, sesame seed, and garlic; and sandwiches titled "Gobbler & Garnish," "Cowbell Come & Getter," and "Gretchtable Melt;" Billi's Bric a Brac is one place in Huntingdon you don't want to pass up.

Location: 4th and Penn. To get to Billi's you leave from the college and turn left on Moore Street, travelling into downtown Huntingdon. Turn right onto 7th Street and walk down three blocks to Penn Street. Follow Penn left until you reach the restaurant, which is at the corner of 4th and Penn.
Classic Choice: My Little Chickadee – chicken salad on sunflower bread, with grapes, walnuts, and lettuce.
Specials: Suit Yourself Serve Yourself – an assortment of 15 bagels with two tubs of cream cheese of your choice.
Price: $1.75 to $5, platters from $17.99 to $44.99
Contact Information: (814) 644-6568, or fax an order form to (814) 644-5978

Original Italian Pizza

Holly Brown, staff writer

The Original Italian Pizza Restaurant, or "OIP", is one of the great pizza places in Huntingdon. The two locations — on Route 22 and downtown on Washington and 7th – offer much more than just good pizza. OIP has a menu full of pizzas, subs, strombolis, platters, salads, appetizers, and a range of dinners including spaghetti, fettuccini, ravioli, veal, egg plant, sausage, chicken, and a variety of sea food. All are available with a side order of fries, of course. With good prices and a great selection, OIP is a good alternative to Baker.

Location: Corner of Washington and 7th Street, and Route 22. To get to the OIP in town (which is for take out and eat in), you want to leave the college and turn left onto Moore Street. Follow Moore around the bend until you get to 7th Street, where you'll want to turn right. After that you only have 3 blocks until you reach Washington Street, where you'll see OIP on the corner.

Classic Choice: Spaghetti dinner with bread and salad.

Price: Dinners — $5 to $8.25. Subs, strombolis, etc — $3.75 to $6.

Contact Information: For downtown store or takeout – (814) 643-0665. For the Rt. 22 store and free delivery — (814) 643-5520.

What a good crowd

Nick Reger
staff writer

Troy Thirdgill, a 37-year-old Oregon native, has been a comedian since 1988. He entered and won the 1989 Portland, Oregon "Young Comedian's Laugh Off." After that, he moved out to Los Angeles and his career began skyrocketing.

Thirdgill appeared at Juniata on September 5 as part of JAB's Friday Nite Live series.

He has been featured on "In Living Color," NBC's "In The House," Officer Washington on "Beverly Hills 90210," "Martin," and currently has his own pilot in UPN's "The Working Guy." He has also appeared in BET's Comic View, "An Evening at the Improv," "Friday Night Videos" on NBC, and on the Showtime Comedy Club Network.

Troy also took part in the USO Comedy Tour, where comics travel to many US military bases around the world. He has toured in over twenty countries, including Australia, Egypt, Greece, Iceland, Kuwait, Singapore, the United Kingdom, and many more.

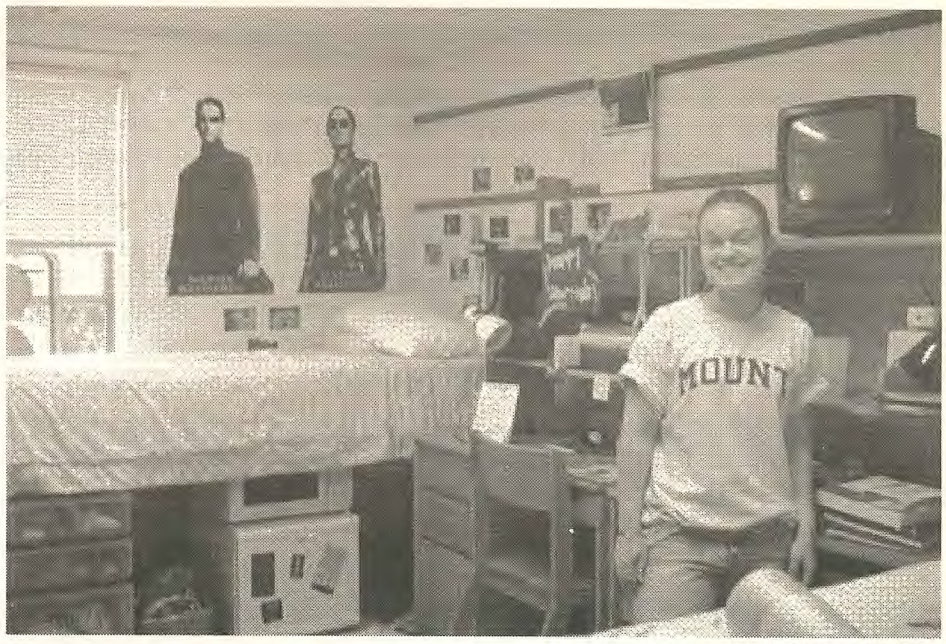
Troy was asked when he knew he wanted to be a stand-up comic, and he answered, "At five years old, when I realized I couldn't do anything else." He said that his biggest influences in the comic world have been Richard Pryor, George Carlan, Daymon Wayans - and his trainer in Los Angeles, Caitlin Adams.

And in the famous words of our most recent comedian, "I've gotta get out of here and do laundry. 'Cause I'm down to nipple tassels and a kilt," so farewell for now.

Wet paint

Holly Brown, columnist

Every year we walk into hundreds of nearly identical rooms. We each take one look at the off-white walls, halogen lights, and tile floors and think the exact same thing: "This *has* to change."



And it does. With the aid of Target, Walmart, and the yearly poster sale, we each manage to turn four white walls into a cozy, individual living space. But what's the best way to brighten up a room? To make it reflect you? To utilize all of your storage space? In "Wet Paint" I'll be trekking across campus looking for the smartest, brightest, coolest, and weirdest rooms out there.

I've started at Lesher, my home base. Second floor Lesher carries a reputation for awesomeness, and I didn't have to look far to find a cool room. Freshmen Kathleen "Arms" Candando and Leslie Christman live in room 217. They have several essential elements that make their room "Wet Paint" worthy.

Kathleen and Leslie have gone with a standard "U" shape, putting their desks and beds against their respective walls. This gives them a ton of open floor space in the middle, which is ideal for watching movies, eating pizzas, and just hanging out with a big group of people.

All of the beds in Lesher this year "loft" – not in the traditional bed/desk combination, but instead raising up a few feet for more storage room. Leslie and Kathleen have taken advantage of this feature and have fit all of their extra furniture and storage bins underneath. The lofted beds not only give the room a more open look, but also create room to hide mini-fridges, microwaves, and ugly storage bins.

Their floor is almost completely covered in bright cream carpet, which Kathleen says makes a huge difference in the room's comfort level. Carpets and rugs are essential to dorm rooms, and realizing this, Leslie and Kathleen have chosen an ideal floor covering.

Holly Brown/ Juniatian

With a standard approach and respect toward each others' side, the rearrangement of furniture gives optimal space.

A favorite decorative item (of the roomies and me) is a bonsai tree. No room should be without its fair share of greenness, and exotic plants get extra points. Bonsai trees, orchids, and cacti are all great and unusual ways to liven up your windowsill.

One of the last but most essential items in decoration is what you chose to put on your wall. Your posters and pictures are probably the most defining and unique elements in a room. Leslie and Kathleen have their fair share of fun posters and photos, but the best of all is a set of two "Matrix: Reloaded" posters. Since our dorm rooms are painted in such light colors, dark posters are not overpowering and help to desterilize the feel of the room.

Lofted beds, super storage, exotic plants, and awesome "Matrix: Reloaded" posters all combine to give this room two thumbs up.

Do you have a room with awesome features, or know of one that does? Would you like to be in the next issue of the Juniatian? If so, contact me, Holly Brown, at juniatian@juniata.edu

next issue: SUNDERLAND HALL

THE RANDOM ELEVEN

Matt Russell
layout editor

Matrix: Reloaded: I always love the movie on the lawn. But, I didn't understand why the projector was set up so the image was only ˇ the size of the screen. A pat on the back to the projector crew, though. They hand-spun a reel for half an hour when it stopped working. That's dedication!

Badly Drawn Boy: I downloaded 20 of their songs on Kazaa, and soon couldn't stop playing them. I decided the band was a keeper so I plunked down the $60 for three of their records (which covers me for every MP3 I downloaded so save the subpoenas). Would I have bought those albums without downloading them first? No.

Eat 'n Park: I recently had the greatest chicken alfredo I think I've ever tasted while dining there. Surprised? So was I.

Blaster Worm: The Blaster Worm has been wreaking havoc on the campus network because students are not patching their computers. Check out Theresa's article on page 9 for more info. Do your part: get the patch!

John Locke: He may have, created the entire, line of thinking, our, way of life is, based on, but, he used too, many damn commas.

Freaky Friday: All right, so I got a little misty at the end. Both actresses gave believable performances that were absolutely hilarious. Great flick.

Me to Sodexho employee: "Can I have some potatoes and three pieces of French Toast?" [I get a plate with some potatoes on it]
Me: "Could I get the French Toast too?" **Her:** "How many did you want?"
Me: "Three." **Her:** "I can only give you two."
[My mouth hangs open in amazement as I have to go get back in line] (15 minutes later)
Her: "What would you like?" **Me:** "French Toast."
Her: "How many?" **Me:** (sarcastic) "As many as you are *allowed* to give me."
[I'm handed two pieces of French Toast] Is French Toast that precious??

Furthermore: The purpose of Muddy is an alternate to Baker's predictable meals. Despite that, they've gone and made its "International" line identical to the "Exhibition" line in Baker. If I don't like it downstairs, why would I like it upstairs? It's only been two weeks, and Sodexho is already making my head hurt.

Friday Night Live: JAB's first booking was an awesome success this year. I've come to trust their selection of comedians, and this was no exception.

No More Macs: All right, I'm not a Mac hater, but this is just too funny: http://www.oneeleven.tv/mac.html

Random Deep Thought from Jack Handey: "If you ever crawl inside an old hollow log and go to sleep, and while you're in there some guys come and seal up both ends and then put it on a truck and take it to another city, boy, I don't know what to tell you."

Geekspeak Central

Theresa Tschetter
columnist

What caused all the network slowdowns during the first few days of the semester? Viruses and filesharing were to blame for the bulk of the trouble.

About two and a half weeks before the start of the school year, a new worm called Blaster emerged. This worm is a special type of virus that copies itself from computer to computer. Because it tries to find and connect to machines on a network, it can create a vast amount of network traffic. Blaster was the primary cause of the slow network speeds at the beginning of the semester.

The Solutions Center **strongly urges** all students with Windows XP, 2000, or NT to run the Blaster fix that can be found at P:\!CNS\Antivirus\Blaster\ . Additionally, all RAs have a CD containing the fix.

"Filesharing," or the digital copying and distribution of media or programs, has been addressed extensively through several recent campus-wide emails. This activity can be illegal because of software copyrights. Many students at Juniata use downloaded music files, such as MP3s, on their computers as their primary music source. Strictly speaking, some of these files may be illegal.

Some returning students may remember JAIN, the Juniata Auto Indexing Network, from last year. This student-written database application "crawled" across EagleNet and found open network shares with music files, then listed them on a website for easy access. JAIN was soon disabled, however, and students with open shares containing music files were asked to remove them.

What motivated the "crackdown?"

Dave Fusco, director of technology operations at Juniata College, said, "For the most part, it is a way for Juniata to take steps towards eliminating the amount of illegal filesharing on the network. The music industry is placing more and more blame on campus networks for allowing this activity to continue."

According to chief information officer Ray Chambers, the Digital Millenium Copyright Act holds colleges and universities accountable for the actions of their students. If the owner of a copyright finds out that a student has been sharing files with that copyright illegally, it is the responsibility of the institution to "pull the plug," as it were, on that student's network access.

Sharing copyrighted material, from programs to music to movies, is illegal. It causes a vast amount of network traffic as well. According to a September 2 report from Computer and Network Services (CNS), a whopping 81% of outbound Internet traffic from Juniata College was used up by peer-to-peer filesharing over a 1-hour period.

But students do understand the implications of filesharing. One student saw filesharing as an ideal trial method for music and software: "Half the CDs in my wallet I heard via MP3 first," she said. "And I certainly wouldn't have plunked down $500 for graphics software I'd never used." As for legal issues surrounding filesharing, the student felt that people should not download gigabytes of data with no intention of paying for any of it. "It's all a matter of degree," she said.

Theresa Tschetter is a PC Technician for the Juniata College Solutions Center.

Clifton 5

Rachelle Luther
staff writer

Built in the 1900s, The Clifton Five is downtown Huntingdon's cinemaplex. While the stage and luxury boxes of another era still grace at least one of the screening rooms, the theater now houses five screens. Combined, the theatre can hold a maximum of 629 people. Its largest viewing area seats 142 people.

Prices run $6 for adults and $4 for children and senior citizens. Juniata students can catch a flick for $4 on Tuesdays. Movies change every Friday. Matinees begin at 1:30 p.m. with evening show times beginning at 6:50 p.m. Flyers with movie listings and start times can be found at the Info Desk in Ellis Hall, or call the theatre at (814) 643-3310.

Directions:
-Begin on Moore Street in front of Good Hall. Walk toward the Stone Church.
-Follow Moore Street past Scheetz and around the curve until you reach 7th Street.
-Make a right onto 7th and travel three blocks. At the corner of 7th and Washington make a right. You'll pass a tattoo and body piercing parlor.
-When under the ice cream parlor awning, look up and you'll see the Clifton's marquee.

Going to the Chapel...

KateyGlunt
staff writer

It is ironic that, to find inner peace, most people go outside. When everything starts to weigh upon you, lighten your load with a trip to the Peace Chapel.

The Peace Chapel is a tribute to the vision of Elizabeth Evans Baker, cofounder of Juniata's Peace Studies program. It was designed and constructed from 1988 through 1989 by artist/architect Maya Lin. In addition to this two-site sanctuary, she created the Vietnam Veteran Memorial in Washington, D.C.

No violence allowed at this soul-unwinding spot.

Not next door, but easy to access, the Peace Chapel is less than a 15 minute walk from campus. Though there is parking about halfway up the road to it, no motor vehicles are allowed.

From East Apartments, take the first street out of the parking lot, Shady Side Avenue. Following it to its end, bear right up a little hill onto Warm Springs Avenue. Cross carefully and make a left onto Peace Chapel Road. This gravel track leads up a mild hill, which become steeper nearer the Chapel.

Twenty four granite steps lead the last bit of the way. At the top of the rise, with a wide view of the surrounding woods, an open field spreads out from the larger, better known site. It is a simple circle of inset stones, open yet encompassing. The bench-high blocks of salt-and-pepper granite form a perfect setting for group conversation.

Higher up the hill and to the left, rests the smaller of the two features. A solitary four-foot disc of granite within a grove of trees, it overlooks the community location a few hundred yards distant.

Beyond the yearly visits by freshman orientation groups, the Peace Chapel has been used for Earth Day celebrations, poetry readings, weddings, and worship services. It is an ideal place for sketching, studying, and star-gazing. Surrounded by 14 acres of the Baker-Henry Nature Preserve, hiking and trail running are excellent options as well.

Escape, or at least relocate, your schoolwork and worries- if you're going to the Chapel, then you're going to get merry.

Raystown Lake

Rachelle Luther
staff writer

Raystown Lake, Pennsylvania's largest man-made lake, is about a half-hour drive from Huntingdon. It offers a vast amount of entertainment to those who enjoy the outdoors kind of life. Raystown stretches across 29,000 acres of pristine forests and waters. There are a few portions of the lake which are developed to make it more "user friendly." The developed sections consist of the Raystown Resort, Seven Points Marina, and Juniata's own field station.

The Raystown Resort offers many attractions. It hosts a water park, lodge, campgrounds, a restaurant, and the Proud Mary Tour Boat. At the Seven Points Marina, there's also a restaurant, The Princess Tour Boat, and great fishing. Both marinas offer boat rentals.

The Raystown Field Station, established in 1974 by the U.S. Army Corps of Engineers and Juniata College, is used as a place for education and the advancement of environmental research.. Our facility encompasses about 365 acres of Raystown's serene natural beauty. Last year renovations and additions began in hopes that in about five years a total immersion curriculum will soon be possible. What does this mean? Approximately forty-eight students can both live and study at the field station. They will be able to devote an entire semester or year to field research at Raystown.

The lake can be used for a vast variety of water sports. Jet skiing, water skiing, fishing, and even scuba diving are on the list of possibilities. As far as boating goes, there is no limit on the horsepower of your motor and boats can be rented at both marinas. The list of rentals includes canoes, kayaks, jet skis, and motor boats. Swimming is also an option from Memorial Day through Labor Day. Scuba diving is also a growing pastime. It is suggested that if you chose to do so, you should consult Scuba Escapes, the local dive shop.

Aside from water activities, Raystown boasts six separate hiking trails, camping, picnicking, and bird watching. For more information on Raystown and the activities offered, you can visit www.raystown.org and browse the site, or direct an e-mail to info@raystown.org.

Directions:
-Begin on Moore St. and go south toward Seventeenth St. for approximately 0.75 miles.
-Turn right onto Seventh St. for 0.19 miles.
-Turn right onto PA-26 for 0.27 miles.
-Turn right again onto Pennsylvania Avenue and follow PA-26 for about 13.33 miles.
-Turn left onto Fouse Crossing Road and travel there for approximately 0.62 miles.
-Turn right onto T400/ Backbone Road and continue there on for about a mile.
-It should take you about 27 minutes to reach Raystown from time of departure from the college.

Special thanks to RaystownLake, Juniata College Magazine, and MapQuest.com for the information provided in this article.

Football Season

Robb Patty
staff writer

In the 2002 campaign, the Juniata Eagles football team finished the season with a record of 5-5, 4-5 in the Middle Atlantic Conference. The Eagles look to improve upon last season's record by handing the football off to first team all-conference running back Craig Moshier. Moshier broke the school rushing record last season gaining a total of 1,177 yards. He also broke the single game rushing record last year by compiling 222-yards against Lycoming College. Coach Kevin Burke is entering his sixth season as the head man of the Eagles compiling 22-28 over that span. Coach Burke said, "This year's team will need to be enthusiastic and play hard – and good things are going to happen."

Cara Yancey/ Juniatian

Juniata football players went into Saturday's came with high expectations but came up with a struggling loss.

No doubt that Saturday, September 6, the Eagles did play hard – but it was not enough to beat the Red Devils of Dickinson University. The Eagles lost their home opener at Knox Field by a score of 28-11. The Red Devils had everything going in the first half as they compiled a total of 128 yards on the ground, thus taking a two touchdown lead into the locker room. Juniata's offense would find their rhythm after halftime, and in the third quarter scored 11 unanswered points to cut the Red Devil's lead to 14-11. Dickinson would not allow the Eagles to get any closer in the fourth, as they scored twice to close the door on Juniata.

Offensive running back Craig Moshier rushed for 101 yards on 29 carries, and quarterback Greg Troutman finished the day 11-37 for 178 yards and a touchdown. In the Eagles' next home game, on Saturday, September 20, they square off against MAC opponent Delaware Valley. Game time is scheduled for 1:30.

Eagles swing into action with solid nucleus

Jeff Gill
staff writer

Gala Baker heads into her second year at the helm of the Juniata College Women's Tennis program, hoping that the Eagles can improve on last year's 5-6 record and 3-4 Middle Atlantic Conference record.

"Without a doubt, we are looking to improve over last season," Baker said before the match. "We have a lot of experience on this team, and the girls have really improved their skills. I hope that leads to us playing better tennis."

Leading the way for the Eagles is senior Debby Mensch, along with Junior Stephanie Shaver, who finished with 2-2 doubles record and a 4-6 singles record and hopes to improve on those marks. Elizabeth Cooney marked a perfect 2-0 record in singles last year. A trio of sophomores –Lindsay Dipaola, Aimee Boore, and Liz Ghebreselassie – looks to lead the future of the Juniata tennis program. Dipaola led the Eagles last season with an overall 13-4 record. She compiled a 6-5 singles record and a 7-4 record in doubles play.

Cara Yancey/ Juniatian

Juniata tennis girls line up to slam Lebanon Valley with all they've got.

"I think some of the younger girls will have an opportunity to prove themselves this year," noted Baker. "We have a freshman right now that can hit a drop shot with a spin or a slice, and that is pretty hard to beat. We have had good practices and we are ready to play. We just have to go out there and value every point we get – and win each game. That should give us the victory."

Baker chose Stephanie Shaver as her team captain this season, and Shaver shares Baker's enthusiasm for the season.

"I think if we are able to pull out a couple more conference wins, we should be in good shape."

Co-captain Debby Mensch said, "If every player on this team improves as the season goes on, I think we will do well. This is a strong team overall."

Co-captain Elizabeth Cooney noted that the team is strongly united and has the potential to do anything it puts its mind to.

Cross country program "running" well

Michael Vella
staff writer

The men's and women's cross country teams enter the fall season looking to top last year's 9th and 8th place finishes at the Middle Atlantic Conference Championships in November. With 15 men and 21 women, this year's team is the largest ever under head coach Jon Cutright (11th year women/7th year men). Looking back on last year, Coach Cutright is impressed with the progress the team has made. "Last year our men's team was very young, but the season provided a good learning experience. We improved each week from race to race. On the women's side there was certainly no lack of effort, but we were set back by a few injuries." This year's squad adds more depth and experience to the program and has displayed excellent leadership. Cutright says he is impressed with the fitness level of the runners entering the season.

Seven freshmen will be joining the women's team this year. Although inexperienced with collegiate running, Cutright says they will have an immediate impact on the team. The men's team adds 3 freshmen to its squad, which is also showing promising potential. Cutright hopes both teams can finish in the top 5 at the conference championships on the challenging course of DeSales University. Both the men's and women's teams face strong inter-conference competition, including men's defending champion Elizabethtown College, and the women of Moravian College. With an increase in weekly mileage and quality hill workouts, both teams have the ability to exceed Cutright's expectations.

The Eagle cross country teams opened competition with a three-team meet at Gettysburg College on September 6. Justin Fritzius (Sophomore/Central York) finished first for the Eagles in 22nd place, followed by sophomore Michael Vella (Hollidaysburg) in 26th place and junior Will Cantera (West Branch) in 30th place. Jeremy Lampert (Sophomore/Portsmouth) and Jason Freeman (Junior/Thorton) rounded out the top five, finishing 31st and 32nd, respectively. On the women's side, sophomore Nancy Hayes (Westminster) led the eagles with an 11th place finish followed closely by freshman Elena Amato (Notre Dame Prep) in 12th place. Freshman Lauren Gates (Bishop Guilfoyle), Stefanie Rynkewitz (Senior/Lewistown), and Sarah Bay (Sophomore/Central Dauphin) earned 18th, 21st, and 24th places, respectively. Both teams placed third in the meet.

The cross country teams will be hosting their only home meet of the season at the Huntingdon Country Club on October 25th. Both races look to hold very strong competition. The women's 6K race will start at 10:30 am followed by the men's 8K race at 11:00. All are welcome, so come out and support the team!

Is this the year?

Ryan Genova
staff writer

The Juniata Women's Volleyball team will again stand out as one of the top-ranked teams in the nation. This year the women spikers are favored to finally end the season on top.

The most recent American Volleyball Coaches Association poll put the Eagles at #1 nationally after kicking off the 2003 season with a 3-0 record at the Wittenburg Invitational. Juniata dominated the tournament, downing Georgetown 3-0 in the first match, John Carroll 3-0 in the second, and then capping off the weekend with a 3-1 win over host Wittenburg.

The Eagles have gone to the Division III Final Four for 18 consecutive years, but have come up short each time. Experience is the key ingredient that will put the blue and gold ahead of the competition. The team returns this year almost entirely intact. Trying to fill the shoes of All-American Nikki Mueller could be tough, but there should be plenty of talent to fill that hole. All that's left to do is win the last match of the year.

"We lost Nikki [Mueller] – and while she was a big factor on the team, there are a lot of experienced people coming back. We have a really large upper class compared to other years, and the return of Danielle Hart from her knee injury will be great for the team," commented Johanna Holtan, a 2002 first team All-American selection. Holtan, a four year starter, is just five digs away from moving into second place on the Eagles' record book.

"We had a really good season last year, and we were so close to a national championship. This year we'll be more experienced in the end," added Holtan.

Key returning players from the 33-6 campaign last year include Junior All-American setter Carli Dale, junior outside hitters Erin Wisor and Lindsey Habel, middle hitters Jenn Habel '04 and Katie Laucks '06, as well as opposites Katie Charles '05 and Danielle Hart '04.

All things considered, blue and gold fans can expect another traditionally intense and entertaining season of volleyball in Memorial Gymnasium. Why? Because they've been there before.

JCFH set to 'finish'

Cara Yancey
photo editor

Juniata's field hockey team is going into the season with a determined mindset. Caroline Gillich, head coach since 1998, expressed her enthusiasm for this year. She summed up the team's goals by saying, "We want to get a birth into the MAC tournament, which is going to lead to the NCAA's."

This team is no stranger to making, then meeting goals. Last year the team made some serious academic objectives. Sophomore player Andrea Way said, "We were not going to be the team that missed the 3.0 GPA again. Since we have achieved that, we're moving onto our next goal, the MAC tournament."

Caroline Gillich
When it comes to shots on goal, nothing works better than a good stroke and intimidating game face.

To make their on-field success match their classroom accomplishments, the players began with a preseason conditioning that has been known to startle the freshmen. Coach Gilich said, "This is definitely overwhelming, and not an easy program to step into – but I will not cut based on athletic ability. I cut based on attitude." That philosophy and the work ethic it creates are working for Coach Gilich and her players. Last year's 2002 team more than tripled the number of wins it had in 2001 going from 4 to 13.

The current field hockey squad looks to carry on with another successful season. To do so they will count on the existing level of communication, a versatile defense, and a desire to "finish" all of their games. The team has a tough schedule ahead with back-to-back games and sore muscles from heavy conditioning, but they understand their goal: to remain a *team*.

Unfortunately, this weather has held back practices and games causing frustration in the players. "It is aggravating when we have poor weather. Our games are cancelled or we have to practice indoors, which never has full effectiveness due to differing surfaces," Way stated.

Coach Gilich also feels the strain of the wet fall weather. She commented, "I feel as if I cannot give the girls a quality experience when we are only able to use the field four days out of two weeks. I hope to have turf at Juniata within the next five years."

Even with limited field time the players are off to a good start. The attacking offense and risk-taking defense has led the team to three big wins and two one goal losses. The first game against Neuman was a shutout at 5-0, with a third game victory at Indiana University of Pennsylvania. Thus far Juniata has outscored its opponents 11-5.

The next home game is on September 25th at 4:00pm. Go cheer them on to another shutout victory!

Eagle men look to build on success

Tommy McConnell
staff writer

Last season, the Men's Soccer team came just short of playing in the Commonwealth Conference playoffs. This season's edition will look to build on that success, and then some.

The Eagles' quest for a playoff bid will rely heavily on their ability to play as a team. Coach McKenzie describes his Eagles as a team, "with a sense of togetherness, a sense of team," and with no dominant ego. This does not mean that the Eagles lack leadership. Senior Captain Kodi Hockenberry (Red Land High School) and Junior Captain Mike Alianiello (Altoona High School) are the leaders of this relatively young squad. The two captains will anchor the team with their skill as well as their experience and maturity. The team will be looking to them in the close games, and it will be their role to step up and deliver in those clutch moments.

Juniata will play at an up-tempo pace this year. The Eagles are very deep and have tremendous team speed. They will use both of these advantages to run at opponents and wear them down. This possibility has Coach McKenzie very excited: "We have a wonderful ability to run at people," giving them options as to how they attack opponents. There is concern that the Eagles are not big enough and may get pushed off the ball. They will have to rely on their speed, as well as their toughness – both mentally and physically – to overcome a lack of size.

Although they lost a noticeable amount of talent and leadership from last year, this year's team has brought in some fresh faces to replace them, and will also redefine the roles of some others. Freshman Mark Guthridge (DuBois High School) and Josh Cady (Malvern Prep. High School) have come in and earned starting roles, and much is expected from them. They join an already-talented cast, looking to improve on last year's season.

The 2003 campaign looks very promising for Juniata, as skilled new members will mesh with the established leadership, giving the squad a healthy mix of youth and leadership. The result, says Coach McKenzie, "is 24 guys who all want to win, all feel the same way, and can all count on each other."

Confidence the key for Eagle women

Tommy McConnell
staff writer

The 2003 Women's Soccer team fields one of its most athletic – but also one of its smartest – teams in recent memory.

Their roster is full of talented, athletic players. Seven different players scored goals in an early season match up. But what has Coach Scott McKenzie most eager to play is his team's mental awareness. Says McKenzie, this team's greatest strength is their "tactical awareness of the game – it is so much improved. They think like soccer players."

That knowledge, along with their remarkable athletic ability, will allow the Eagles to make a serious run at a Commonwealth Conference bid. To get to the playoffs, they need to pick up a few early season wins. September dates against Lebanon Valley and Widener are crucial. While giving them an early leg-up in the standings, it will also provide confidence. They will be able to carry that confidence into late season games with playoff implications.

If the Eagles' confidence waivers, they need to look no further than their Senior Captains, Kimberly Campanaro (N. Arlington High School) and Jenn Hurley (Lyndonville Central High School) for a boost. "They are the link with our program's history," Coach McKenzie says, "and they can keep perspective." The other members of the squad will be looking to them for leadership.

Juniata will look to utilize their athletic ability and their depth. Emily Endres (Warren High School), Janine Smeltz (Line Mountain High School) and Rebecca Shoaf (Madison High School), the Junior Captains of the team, will epitomize this scheme. The three are critical pieces to Juniata's playoff run.

If they have an Achilles' heel, consistently finishing would be it. However, when they are finding the back of the net with consistency, they are quite a powerful offense. The seven-goal outburst against Kings will attest to that.

As the season unfolds for Juniata, expect to see more performances similar to the Kings game.

Trio brings unique music to JC

Jeff Gill
staff writer

What do you get when you blend various styles of music to a quiet setting and the soft sounds of acoustic guitars? The answer: the California Guitar Trio. The trio of Bert Lams, Paul Richards and Hideyo Moriya, all playing acoustic guitars blend the sounds of classical music, jazz, rock, blues and surf music to form a very unique sound.

The trio performed at Juniata's Oller Hall on Tuesday, September 16. Six hundred fifty concert-goers showed up for the event.

The trio was formed in 1991, after the three were students of Robert Fripp's Guitar Craft Course in England. The three aspiring musicians toured with Fripp and his League of Craft Guitars, a group made up of Fripp and his students. When the tour ended, the three met in Los Angeles and discussed working together.

"I think the thing that drew us together was our interest in classical music," Richards said in a telephone interview. "While we come from different backgrounds, the love for classical music was the key."

Richards, a native of Utah, along with Belgian Lams and Moriya of Tokyo, set out to bring the diversity of their musical styles together to form the trio. Richards has a background in rock and jazz, Lams is classical and Moriya is surf music. But you really can't pinpoint what type of music they play.

"It's of difficult to describe the style of music we play," noted Richards. "The best way I can describe it is a variety of different influences on acoustic guitars. The advantage of that is that we are able to bring a very unusual sound to the audience."

The threesome hit the "big time" when Fripp and his band King Crimson had CGT open for them during their 1995 world tour.

"That just open a lot of things for us," said Richards of the tour, "we were able to play before thousands and it just went forward from there."

The Utah native went to into detail of how the different styles and influences keep things at an even keel when it comes to coming up with fresh ideas for the recording studio.

"It's exciting for us," said Richards. "We can go into the studio with fresh ideas because one, if not all us have valuable input to what we want to record. Bert has the classical influence and that is really one of the keys for us. We all bring something to the table and we are able to work on our different ideas."

The trio's latest CD entitled, "The First Decade" is a compilation of the trio's recordings and brings some of their best music forward. The blend of music on the CD can soothe the soul and let the listener enjoy different styles of music.

"We really don't try to pinpoint a certain audience," Richards continued. "The music can be appreciated by the young and the old alike. If someone really likes classical music they should really enjoy the show. But, if someone younger, who doesn't listen to classical music may be able to appreciate that style of music the way we present it."

The band's greatest thrill came this year when they appeared on Tony Levin's "Pieces in the Sun" CD. The song "Apollo" was nominated at this year's Grammy's for the Best Rock Instrumental Performance.

"That was a great honor. For us to be noticed by our peers and the music industry for some of our music was a great thrill. Although we didn't win the Grammy, it was just really nice to be nominated."

CGT is not in the mainstream music, and that does not bother the trio. Richards stated, "Not being part of the mainstream music scene is fine with us. We have a good following, and we recently changed booking agencies, and we are happy with where we are at. There is a certain freedom that you get when you are not in the mainstream."

The California Guitar Trio performed at Juniata's Oller Hall. Nate Drenner/Juniatian

The trio currently on the final leg of their tour considers the tour thus far a success. The tour started September 4th in Houston, TX and will end in Atlanta, GA the 20th. They played in Covington, KY before coming to Juniata College. (JC is the lone college setting on the group's tour.) After a couple of weeks off, they will venture into Europe.

"The tour has been very good," claimed Richards. "I think the highlight so far was the two shows that we did in Austin, where both shows were sold out. We play small intimate venues and it makes things a lot nicer when we tour."

When asked about coming to Juniata, Richards seemed excited about playing here. "I think we will get a mixed audience and that is what we are aiming for. While the classical music may be appealing to some of the audience, some of the music should appeal to the college-aged members of the audience. I think we have something special to bring to everyone who sees the show."

HUNTINGDON, PENNSYLVANIA

OCTOBER 2, 2003 | JUNIATA COLLEGE | VOLUME 85, ISSUE 2

Former UN High Commissioner visits JC

NateDrenner
co-editor in chief

A former head of state visited Juniata College on September 23.

Mary Robinson gave a lecture titled, "Human Rights at the Crossroads." Robinson is the former president of the Republic of Ireland and United Nations High Commissioner for Human Rights. She currently serves as director of the Ethical Globalization Initiative.

Prior to the lecture an honorary doctorate degree was given to Robinson. Juniata's President Tom Kepple and James Skelly, Senior Fellow of the Baker Institute for Peace and Conflict Studies, presented the degree. As Robinson noted, Juniata has "a long tradition with peace and justice issues."

Robinson defined human rights as not only freedoms of religion and from oppression, but also as access to food, safe water, education, and health care.

Robinson also spoke on the need for human security in areas like Iraq where women are raped and have families taken away from them.

"The world needs the UN now more than ever," she said.

Robinson's visit was funded by the Will Judy Lectureship Series. The series is the result of a gift to Juniata College by Captain Will Judy, a 1911 alumnus. The lectures were established in 1960.

The yearly Will Judy lecturer is selected by a committee comprised of faculty, administration, and students. Assistant Provost Jim Tuten chairs the committee. Student representatives are Andy Bogdanski and Cat Sheely

I think the committee made an excellent choice in Mrs.Robinson as many students here are interested in peace and conflicts studies and organizations that uphold human rights," said Sheely.

"We try to pick a lecturer who is not just big in name but also in substance," said Tuten.

Photo: Hannah Rauterkus

Robinson noted that The Ethical Globalization Initiative puts pressure on world governments. Those governments have agreed to implement access to needs without discrimination.

"Mrs.Robinson made the point in her speech that most people in poverty do not want compassion or to be patronized, but rather they want their rights as human beings to be recog-

File sharing and felonies

Pamela Bodziock and
Matt Russell
editors

The little-known rumor on campus is that a student was recently expelled for illegal file-sharing. File-sharing – the sharing of free songs and movies from computer to computer – is very common on our campus and on campuses across the country. So hearing that a fellow student was expelled for one too many songs on their hard drive has some of us feeling concerned. But in truth, the files were more serious than copyrighted music – and in reality, no one has been expelled.

It started several weeks ago when a freshman was looking through the files on the students' shared directory. But what the student found was something else entirely, some highly offensive material among the movies and mp3s. Shocked, the student immediately reported what had been found to CNS (the Computer and Network Services). CNS notified the Dean of Students, and he asked CNS to disconnect the student from the school's network. The student, according to Dean Kris Clarkson, was honest and fully apologetic, immediately admitting to the unacceptable material that had been found.

Could you be next?

The student was up-front about what had happened. While still at home, the student had used the popular file-sharing program Kazaa to download files. However, in addition to music and movies, Kazaa also downloaded files onto the student's computer that were described as highly inappropriate – files, that when shared, would constitute a felony-level offense. The files were downloaded onto the students' computer, where and he did not bother to delete them before returning to Juniata. Because of the nature of the files, Juniata was obliged to report them to the authorities, and the student still faces the possibility of legal prosecution.

Many of us use Kazaa, but most of us don't know as much about it as we should. Kazaa is a *predatory program*. It allows Kazaa's parent company to do pretty much anything it likes with computer it's installed on – track where you go on the internet, collect information about you, use free processor power for programs it specifies, and it frequently downloads other files to the hard drive in addition to the ones the user has specified. The program literally wraps itself around the computer, and has capabilities of affecting it in a vast variety of ways that you might never even be aware of.

According to the Juniata student, a command was never given to download these inappropriate files – the real mistake the student made was in allowing the

continued on page 3

Space issues

Jefferey Anderson
staff writer

As Juniata grows in numbers, accommodating all students and faculty for classes is becoming difficult.

According to Athena Fredrick, the campus Registrar, the ideal class time is from 10 a.m. to 2 p.m. Most freshmen are accustomed to waking up at 7 and being in class by 7:30, so waking up for a 10:00 class is perfect for them. Since a large amount of students are involved with athletics, having class past 2 o'clock is out of the question.

MWF 10 a.m. is the time that every student wants class. A lot

nized. This made me think about volunteer organizations and community service projects in a new light." said Sheely.

Robinson touched on human rights from a broad perspective. She noted how environmental issues and development affect human rights. For example, clean water is an environmental concern. It is also a project for development in areas where predominantly women must walk miles per day to reach a source of water.

"What got my attention the most [... was] when a student asked a question to the effect of water being a human right versus it being a commodity. This question surprised me because it was something that I wasn't even thinking about," said Bogdanski.

Robinson concluded the night with an open dialogue. Attendees were invited to share questions and comments.

I really got the impression from most students that they enjoyed the speech and her openness to questions and dialogue following it," said Sheely.

Robinson was asked her opinion on how the Bush administration handled human rights in Iraq.

"Horrible things are happening in other countries, and we're not intervening," she said.

Former Will Judy speakers include Stanley Kunitz (1961), Isaac Asimov (1971), Thomas Eisner (1983), and Ralph Nader (2002). Tuten describes all past lecturers as, "a sort of intellectual Who's Who of the second half of the 20th century."

"Speaking events stay with you for a very long time. They can impact a student more than any given class," noted Tuten.

"Human rights" is a year-long theme for the lectures at Juniata this year. Tuten notes that it is a broad theme that can be addressed from multiple disciplines.

Photo: Hannah Rauterkus

Mary Robinson reserved plenty of time after her lecture for dialog with students, faculty, and visitors. Above, she answers a question from a student.

Newsbits!

Fiesta Latina

Katey Glunt, staff writer

Come one, come all! This November 1, at 6:00pm in the Ellis Hall Ballroom, make your way to a celebration of Hispanic cultural heritage: Fiesta Latina. Food from Latin America, Spain, and Portugal will be prepared and offered buffet-style. Other entertainment usually includes dancing. This event is sponsored by the UCJC, Club International, and the Spanish Club. Tickets will be available at the Information Desk, $3.00 for students, $5.00 for everyone else. All are welcome – and encouraged – to attend.

Singing Syd

Cara Yancey, photo editor

Friday October 3, 2003, Juniata Activities Board sponsors Syd, a singer/guitarist. His music is a blend of John Mayer and Dave Matthews Band. The event will be taking place in Baker, where admission and drinks will be free. Syd definitely has a contagious foot-tapping beat. Don't miss out on this great Friday Night Live at Juniata.

Special Olympics

Nick Reger, staff writer

On Sunday, October 5 th Juniata will be sponsoring the Special Olympics. It starts at 8 in the morning for all you early risers. The events are being hosted by the Juniata Active Volunteer Association. The athletes will compete in events like soccer, softball, t-ball, basketball, floor hockey, and motor activities, as well as others. Everyone is encouraged to stop and cheer the athletes on.

Legally Blonde II

Rachelle Luther, staff writer

Elle heads to Capital Hill to fight for animal rights while planning her wedding in the second installment of MGM's "Legally Blonde ." Show times are October 3, 2003 at 7:30 p.m. and October 4, 2003 at 8:15 p.m. The movie will be shown in Alumni Hall, Brumbaugh Science Center. The cost is $2.00.
Sponsored by the Juniata Activities Board

American Woodblock Prints

Rachelle Luther
staff writer

"American Woodblock Prints" is the new exhibit featured at the Juniata College Museum of Art, put together by the students and for the students, under the guidance of curator Dr. Nancy Siegel. The new exhibit, on loan from Syracuse University, will be with us from September 26 through November 8, 2003.

According to the brochures, woodblock prints were historically used to create images for newspapers and magazines. It was brought back as an art form in the twentieth century.

While the prints are visiting our museum, approximately 30 of the 50 pieces that make up the collection will be on display. Each of these pieces will be hand selected by Dr. Siegel's Museum Practicum class. In fact, Dr. Siegel said that the Practicum students do most of the work. They do everything from taking down the old exhibit and painting the walls, to selecting the pieces and designing the lighting. Dr. Siegel insists on giving her students a chance to develop a "curatorial eye." What this experienced curator means is that she wants the students to learn how to create an exhibit which flows from one piece of art work to another.

Each print in the exhibit will be labeled. On each label, the process and reason behind the art is explained. As far as Dr. Siegel is concerned, "No formal background is needed. Whether enjoying an exhibit for visual satisfaction, aesthetic joy, or intellectual curiosity [etc.]…everyone can find some level of pleasure, even if it's just picking out what you like or dislike."

Get cultured. Go visit the museum. Take a break from studying or stop by between classes. Museum hours run Monday through Friday from 10:00 a.m. to 4:00 p.m. and Saturday from 12:00 noon to 4:00p.m. And just a hint for you freshman looking for EO cultural events – art exhibits are highly cultural *and* painless. No one should miss this extraordinary exhibit.

Dr. Siegel also passed on a final word of advice for all JC students:

"It's important for all students, even if they are interested in art or not, to visit the museum as part of their liberal arts education, but also as part of their history at Juniata College."

This reporter would have to agree.

Thanks to Dr. Nancy Siegel for all the information regarding the show.

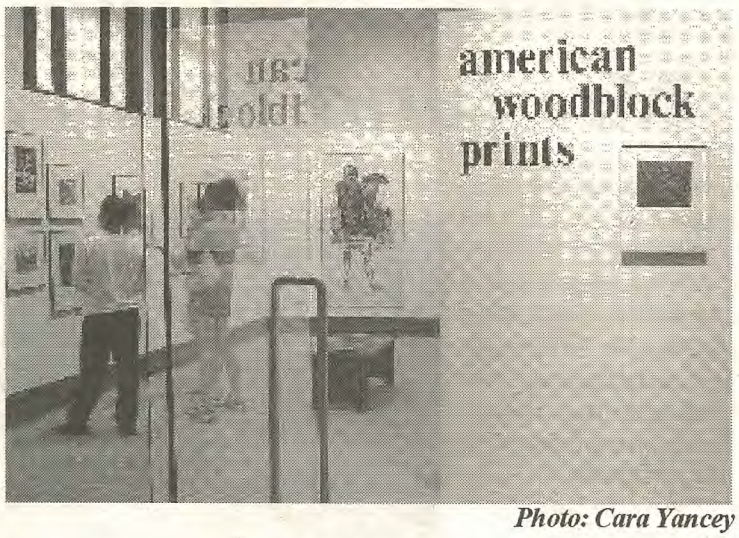

Photo: Cara Yancey

Students gathered at the art exhibit of woodblock paintings while also learning about the artist and their techniques."

Space issues

continued from page 1

of students feel the 55-minute periods are less stressful and that 10 a.m. is not too early, yet over in time for lunch. However, most professors try to get TTH classes to cut back on their travel time.

There is a good chance that morning labs will be available next fall. This is expected to help athletes who cannot commit to afternoon classes. However, morning labs will take up the 10:00 to 2:00 time spot that most students and faculty prefer.

As far as students being unhappy about their schedules, Fredrick says she is, "surprised how quiet [the students] are, because [Juniata has] the largest enrollment this year." She also observes that besides athletes, most of the student conflicts revolve around getting to lunch the same time as their friends.

Besides time and scheduling space problems, accommodating faculty and student clubs is also about balancing. Many faculty members who are planning on retirement are going through a period of phasing out. This means a professor who is retiring will teach one or two courses while replacements are being made. In the meantime, the new professors and phasing out professors both need office space. In addition, many student clubs want offices and rooms they can call their own.

This is not a problem yet, but potentially could be one in the future. Juniata is growing in numbers and the need for more space will grow greater as well. To help out, many professors who are married to one another are sharing offices. The phasing-out professors are being flexible by taking smaller offices to make room for new ones. The old room 420 in Good Hall has been made into an "example office," in which one classroom was turned into three offices.

If you are new here and are worried that you won't get the classes you want, don't fret for long. Scheduling problems tend to sort themselves out by the spring semester.

Next Issue: *See part 2 of Anderson's Space Issues Report, focusing on parking and residence halls.*

File sharing

continued from page 1

files to remain on the computer in a shared directory.

"I truly believe that the student was not even fully aware of the ramifications of those files," said Clarkson. "This student claimed it was never an intention to share such highly inappropriate material. It was a case of extraordinarily bad judgment."

Given the magnitude of potential judicial charges, the student has withdrawn from Juniata. The student was not suspended, but instead decided not to return to Juniata until matters are fully resolved.

If you have downloaded Kazaa on your own computer, something like this could happen to your own computer – and to avoid such a situation, uninstall Kazaa immediately. Then go to www.download.com and find Adaware and Spybot Search & Destroy – two programs you should download and run immediately. They'll wipe out the remnants of Kazaa and any other nasty surprises left from your internet journeys, legitimate or not. This should also dramatically reduce any pop up ads while surfing.

Run the programs about once a month; you'll be surprised how much will accumulate on your computer in that small time.

Mr. Juniata contestants danced their way into our hearts, with their silly antics and comical poses. Pelvic thrusts seemed to be the popular motion of the night.

I now pronounce you Mr. (and Mrs.) Juniata

Brittany Barbera
staff writer

What do you call a hurricane, cancelled classes, a Mr. Juniata pageant, and a proposal? According to junior Scott Keefer, you would call it "the perfect day."

To say the least, September 19, 2003 was a day Juniatians will never forget. Hundreds of students and members of the college community filled Rosenberger Auditorium in Oller Hall, expecting to see twelve talented men dance the night away.

The annual Mr. Juniata pageant is organized by members of Circle K (Co-Chairs: Alaina Cominskie, Megan Allison, and Christine Cutting). All the proceeds from the pagent are donated to the Make-a-Wish Foundation, who in turn grant a sick child his or her wish. Mr. Juniata is a unique tradition which helps unite our campus, as well as raise money for a respectable charity.

The evening began with shouts of anticipation and cheering for Bub Parker, Master of Ceremonies for the fourth consecutive year. Ann Laird sang, "Wind Beneath My Wings" and the Dance Ensemble "stomped" onto the stage with attitude.

Choreographers Jen Gerhart and Nicole Fernandez had taught the guys sexy dance moves at rehearsals. At the practices, the men bonded and developed friendships with each other. Jayme Fye said, "When I was dancing with all the guys, I'd be crying from laughing so hard."

"My favorite thing was watching Genova do anything that takes coordination," commented Jack Frost.

Although Tim Cole and Casey Dale said they didn't like missing volleyball practice to learn the dance, they had fun hanging out with all the other guys. Everyone's hard work paid off during the opening dance routine, when the men shook their booties and threw their shirts out into the screaming audience.

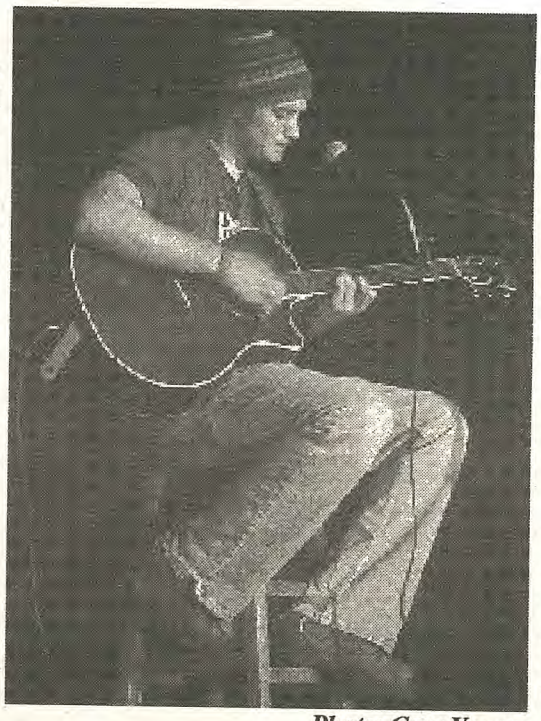

Photo: Cara Yancey

Mike Meadows sits and sings a solo about the One and only.

Michael Meadows opened the talent portion of the show by playing his guitar and singing. Neil Diamond – that is, Scott Keefer – and band performed "Sweet Caroline" as the audience belted out the song lyrics. "Piano man" Scott Noerr also had the audience sing along as he played Billy Joel's classic hit.

And a Mr. Juniata Pageant would not be complete without at least one cross dresser. Dave Saintz and Jayme Fye dressed as women and pranced around the stage to the song "Sisters."

Several unexpected animal guests also appeared on stage during the talent competition. Chris Belinda's animal guests included a kangaroo, a monkey, and a very exotic Mrs. Potato Head species. In addition, a gorilla jumped out to eat the banana Dave Bullock found in his "phone booth."

Whether he was George Bush Sr., Dr. Evil, Fat Bastard, the Crock Hunter, Keanu Reeves, or a motivational speaker, Kevin Kasun knew how to keep the crowd laughing. The guy with the gift for impersonations said he wanted his talent to be "fun, energetic, and interactive." He definitely succeeded.

Kevin's gift of humor extends beyond the stage as well. In fact, when asked what his favorite part of Mr. Juniata was, Ryan Genova said, "anything with Kevin Kasun."

Perhaps the biggest shock of the evening was during the formal wear competition. Scott Noerr proposed to his escort, Leah Creighton. When Scott started to kneel down, everyone gasped and shrieked with excitement. Scott's proposal was accepted, and the two shared their first dance as an engaged couple on the stage

The judges had the extremely challenging task of choosing the top three contestants. The competition was close, but the judges voted and Mrs. Kepple crowned Scott Noerr as Mr. Juniata 2003. Michael Meadows and Scott Keefer were the runners-up.

Despite the fact that a winner must be chosen, the men simply enjoyed performing and were not worried about who would win. Said Chris Belinda, "It's a competition, but it's not really competitive. It's very jovial and after doing this, everyone knows you."

Everyone who participated would agree with Dave Bullock's comment: "[Mr. Juniata] was an awesome opportunity and we had a lot of fun with it."

At the end of the night, the Mr. Juniata Pageant had raised $2,068.34. Together, the Juniata community was able to enjoy a night of entertainment while supporting the Make-a-Wish Foundation. Thank you to all who planned or participated in the pageant…you helped "Unwrap the Gift of a Dream."

Exercise your brain

Club Highlight: Philosophy Club

Sarah DePasque
staff writer

After a sluggish last year, the Philosophy Club is back in full swing, with Professor Xinli Wang advising and freshman Mary Gardinerpresiding.

The club meets Sunday nights at 7 pm in Cloister Lounge, though it is not unheard of for them to run longer than the scheduled hour. These weekly meetings take the form of excited discussion and debate. This coming Sunday, the topic will be ontology – the philosophical science of what is real.

Though 40 people are on the mailing list, only seven to ten people usually show up at any given meeting. However, Gardiner feels a small group is ideal for discussion.

"Habitat- they need that manpower," Gardiner said, "But for us, if you had forty people show up on Sundays, no one would talk. This way, we all get to say exactly what we want to say." The atmosphere of the club is laid back, she says: "If you want to show up, show up."

Also on the agenda for the Philosophy Club are monthly debates, open to the entire campus. Of about 20 students and faculty who showed up for the gay marriage debate on the 14th of this month, essentially everyone was in favor. Gardiner hopes to have a wider range of opinions at next month's debate, scheduled for the fourth week of October. The topic is currently undecided.

Apparently when the club started four years ago, there would be as many as one hundred people coming to the campus-wide debates, a target the club aspires to achieve again this year.

Gardiner hopes to squash the, "I'm too stupid for the philosophy club" mentality. "You don't need to have the full works of Plato under your belt, or smoke a pipe and watch 'Masterpiece Theatre' to know what you really cherish, or to be able to talk about what's important to you. I would say that most members do not have a set of beliefs they strictly adhere to or portray as the 'right way,' as if they are smarter than anyone. They are there to pose the questions in an effort to learn."

The questions members of the Philosophy Club ask are questions anyone might ask, just perhaps not while sitting around the lunch table in Baker fifteen minutes before your next class. "Everyone thinks about these things, but they may never be in a position to talk about them. We want to make it fun for people to think," Gardiner says. The club's motto is, "We like to get people angry." As Gardiner says, "When you get angry, you reevaluate what you are thinking. To put yourself on the edge, and challenge your belief system, is just…fun."

Want to join the fun? Show up in Cloister this Sunday night, or send an email to philosophyclub@juniata.edu.

Nature's custodians

Club Highlight: Conservation Club

Caitlan Zlatos
staff writer

Photo: Greta Feeser

The Conservation Club doesn't stop at involving the college. The community also participates in their activities.

Skulls. Diaper Damsel. Osprey. Captain. Acorn. No, these are not the names of comic book or cartoon heroes, though they could be likened to the Planeteers from "Captain Planet." In reality, these are nicknames of some of Juniata College's Conservation Club members.

One of JC's many service-based clubs, the Conservation Club stands out, according to club president Amos Desjardins, as "a service and education club whose aim is toward environmental conscientiousness." This active club is perfect for nature lovers and conservation-minded students.

The club has over a dozen members this semester, and has many plans. The biggest project the group plans to undertake is its second annual "Earth Celebration Day." This event will take place around National Earth Day (April 22nd). Its purpose is to promote environmental awareness around the campus and surrounding community (and in a fun way).

Last spring, the first annual celebration was here on campus. Local organizations such as the Susquehanna River Basin Commission, PA Cleanways, and Blue Moon Organic Farm came to set up informational booths. JC's own Recycling Committee had one as well. Local acoustic guitarist/singer Eric Himan provided music for the festivities, while a goat and a sheep could be found running around delighting the crowd. The club sold homemade recycled paper, t-shirts, and the club's environmentally- friendly tote bags.

Conservation Club hopes its "Earth Celebration Day" attracts many more students and community members this coming spring. Although every day is Earth Day to the club's members, they think having one big celebration is an effective way to get people thinking about the environment.

Other plans for this year include involving the local high school's environmental club in projects, cleaning up the streets of Huntingdon with the mayor, and making fair trade coffee available to anyone (by donation) in the Environmental Science and Studies (ESS) lounge. Reusable mugs will be used.

As usual, the club will often be found along the 2.5-mile stretch of the Petersburg Pike it adopted several years ago. Club members usually pull a lot of trash out of the woods on either side of the Pike. Almost every time they go, the club is able to collect glass bottles from cleanups to recycle. They take them back to rinse out and then deposit at the recycling center. Additionally, club members generally earn their unique nicknames through funny things that happen at cleanups.

One of the things club members look forward to is the traditional triple-decker peanut butter and jelly sandwich lunch at cleanups. Another favorite event is outings to Patrick's lodge, where the club bonds while climbing trees, hiking, and playing hide-and-seek in the dark.

Though senior Amos Desjardins is the president of the club, the relatively small club voted to share duties as needed. Desjardins provides direction, but members generally make decisions as a group. Dr. Paula Martin of the ESS department is the club's advisor.

Interested in helping the environment? Want a cool nickname? E-mail the Conservation Club account, or keep your eyes out for e-mails about cleanups at the Pike. As the club motto goes, "it's time to start giving back."

Have fun, help humanity

Club Highlight: Habitat for Humanity

Katey Glunt
staff writer

If you grumbled as you were diverted from Baker to the Muddy Run Café for dinner on September 20, you should know that your mild mealtime inconvenience was for a good cause. The dining area was converted into a dinner-theatre/auction hall and became the site of the Huntingdon Area Habitat for Humanity (HAHFH) Annual "Dinner & Show & Silent Auction".

As the name suggests, it was an action-packed evening. This multifaceted event is the HAHFH's only fundraiser. It was, in many ways, a huge success. Not only was attendance up from last year (about 215 vs. 130), but the amount of money raised doubled from $8,000 to approximately $16,000 after expenses. All monies raised will go toward the HAHFH's goal to eliminate substandard housing and provide affordable homes to area families in need. $16,000 is enough for nearly one-third of a house.

The dinner-theater/silent auction was, like all of Habitat for Humanity's activities, made possible only through generous donations. Each guest paid $50.00, and all of the auction items were given by local businesses and artists. Among the many items were: season passes to the Performing Artist Series or to the Playhouse at McConnellstown, a Huntingdon Country Club golf package, His/Hers tool sets, and a personal CD player. Intense bidding wars began instantly on the three professor-hosted ethnic-fare dinners and on much of the donated art. The original pottery and photographs were popular, as was a framed drawing of honeybees by Jay Hosler.

Photo: Habitat for Humanity JC Chapter

Juniata's Habitat Chapter on the Spring Break 2003 service trip to Valdosta Georgia

There was more than this excitement to entertain the nicely-dressed guests. Chuck Ferrell of Channel 10 News served as celebrity guest emcee. As they ate, everyone enjoyed the jazz stylings of *Scenic Route*, featuring Juniata students Muhammad Abdul-Jami, Nicholas Daddario, Ryan Richards, Chris Kochel, Joseph Viscomi, and Joe Chung. The final scheduled entertainment was from the Playhouse at McConnellstown. The group performed "Back to Broadway."

HAHFH's Chair of Fundraising Patricia Kepple was happy about the evening's success. "I have heard people say they are ready to mark their calendars for next year."

For more information about Habitat for Humanity, or for the opportunity to make a donation online, visit http://clubs.juniata.edu/habitat/ and click "Habitat for Humanity International".

Special thanks to Patricia Kepple for all of her help and information about the event and the organization.

The HAHFH would like to apologize for relocating the students from Baker Refectory and thanks them for their understanding.

Underworld

Movie Review

Holly Brown and Rachelle Luther
staff writers

"Underworld," starring Kate Beckinsale (Selene) and Shane Brolly (Kraven), is a modern tale of an ancestry war between vampires and werewolves. Scott Speedman (Michael Corwin) is a human with bloodlines that allows him to be both werewolf and vampire. His blood can breach the gap between the two sides and end the war.

Rachelle: Ok, we've got another film echoing Shakespeare's "Romeo and Juliet." Boy-from-wrong-side and girl-from-right-side fall in love and are condemned for it. The only difference: characters are immortal fantasy beings. Fantasy, blood, and gore usually appeal to me, so I went into this one with high hopes, but ended up disappointed.

Let's get on with the rundown, shall we? This movie is nothing but fantasy with vampires and werewolves, people getting shot and not missing a step . . . the list goes on. Costuming was terrific, if not slightly "Matrix"-like, complete with loads of black leather, long coats, big boots, and a shiny leather suited heroine.

Speaking of heroines, Beckinsale delivers a decent, "girl power" performance. The good guy is mediocre. Michael is the typical cutie who gets sucked into a war between immortals and is confused, much like the audience. The scenery is great, especially if you enjoy sewers and dark rainy weather.

The special effects left a lot to be desired. The CG werewolves just weren't up to par. The worst part about this movie was the immense use of guns. Werewolves and vampires don't need guns. They should have been chewing on one another, not riddling each other with bullets.

Holly: Movies need to learn they can't all be "The Matrix." Or "Resident Evil." Or "Blade."

Since before Bram Stoker, people have been exploring how cool vampires can be. Len Wiseman, director and screenwriter, decided to forget about tradition and gives them guns instead. "Underworld" looks a lot like the horror and action flicks of the past five years. All the characters wear black leather, jump easily from insane heights, and shoot things a lot.

Michael is "the one" that everyone is searching for. Unfortunately, he has fewer lines and less personality than Keanu. Beckinsale is a great actress stuck in a stereotypically boring female role. Brolly and Bill Nighy give moderately intriguing roles as the double-crosser and ruthless leader. Robbie Gee and Michael Sheen also give tolerable performances, but no memorable lines.

There were a few interesting points, such as the movie's theory that vampire leaders are put into hibernation and awoken every couple hundred years to rule. This "awakening" is done by hooking them up to a bunch of tubes and infusing blood into their systems. We get to see this from the inside out. Very creepy.

This movie had potential. Things like vampires and werewolves' respective powers, history, social structure, and ancestry could have added to the plot, or at least provided us with some eye candy to break from the dull script and monotonous black scenes.

Wrap Up: Overall, "Underworld" will keep you wondering what's happening, but in a mildly disinterested way. Wait for the rental. This movie just didn't have enough bite.

Best part: "Resident Evil" trailer. Pure genius. **Grade:** C-

Sodexho: an editorial

Nate Drenner
co-editor in chief

Some people may not consider the topic of this editorial to be valid. It's not a political issue. It's not a moral or social issue. But it is an issue that affects Juniata students daily.

According to the last Juniatian, Sodexho food services recently signed a ten-year contract with Juniata College.

It is commonly known that students on campus do not approve of our college's food quality. We even have a reputation off campus. I recall visiting Susquehanna University as a prefreshman. I mentioned that Juniata was another choice, and the tour guide responded, "Oh, no… their food is *awful*."

She was blunt, but she did have a point.

Baker lacks fresh food. Vegetables tend to be limp and overcooked. Starches abound, and meat is chewy. Apples and bananas are not rotting, but they are often over-ripe. Pizza tastes like frozen supermarket fare.

Food is consistently drenched in thick, oily sauces. You'll find this not only with gravy in the Classics line, but also with sauces in many of the Exhibition meals. The Sauce was even used at the new Vegan line when I sampled it for the first time last week.

Yes, this year saw a vegan line added to the refectory. Excellent – variety is a good thing, as is support for alternative diets. However, the chefs at Baker are missing a key part of variety, not only in "lines" but also in the meals themselves: Menus are simply repeated every two weeks. This predictability adds to the drudgery of the weekday.

For students' physical and mental health, Baker needs better food. A wider variety would help, and fresh food is a must.

I also want to address Muddy Run Café. First, the meal exchange rates are too low. My plan of 14 meals per week comes to about $6.36 per meal. Yet the dinner exchange at Muddy Run only allows $4.00 of food. And, for some reason, the exchange can only be used on certain items at Muddy.

This year Muddy's International line is the same as the Exhibition in Baker. My understanding was that students visit Muddy as an *alternative* to Baker. Now I find myself spending more time at the unhealthy grill than at international because the latter is the same thing I just passed by downstairs.

One credit I will give to Sodexho is that the staff is consistently friendly. They even smiled the time I showed up for dinner and complained that Baker was not yet open… and I had forgotten to reset my watch for Daylight Savings Time.

Jitters, the new coffee shop, is perhaps the best of Sodexho at Juniata. Again, the staff is friendly, but the drinks and food offered at Jitters are also quite yummy. Why von Liebig, though? Wouldn't it make more sense to expand Muddy as a coffee shop/café? My guess is that Jitters's location has more to do with proximity to the Sill Board Room than students' desire for lattes, but Sodexho shouldn't be blamed for that.

I doubt it will happen soon, but I'd *really* like to see an expansion of Muddy/Cyber. Jitters is nice, but it is no place to have a relaxed dinner or hold events. Neither is the cramped Cyber lounge or the fast-food approach to Muddy.

Perhaps lack of a central student lounge space is best left to another editorial.

I knew of Juniata's food before I even applied, yet I still chose Juniata and am glad I did so. However, food nutrition and variety must be addressed. Fair meal exchanges need to be investigated. Look for more on Sodexho in future Juniatians.

Ask President Kepple

"Why are there no recycling bins in VLCS? I had to carry my empty plastic bottle all the way across campus to find a bin."

There are at recycling containers on each floor at the center of the building but I agree there should be more and two are now on order for the lobby and Pheasant lounge. Good idea!

"Is there a policy stating that professors must let students out of class five minutes before the hour? Sometimes students are late to class because the previous class went over time."

This does come up periodically. While faculty should be mindful that students have to get to other classes, they sometimes keep a class later than they should. Provost Lakso will remind the faculty that they need to pay attention to the clock.

Letter to the editor: Freshman Orientation

I am writing to you in regards to the Freshman Orientation Article *[September 18 Juniatian]*. Myself, and a few of my friends, were very offended by claims that the author made in the article.

I believe that Freshman Orientation is far from "pointless." When I moved to Juniata for the school year, I felt much more comfortable after spending a night here already, and I saw familiar faces from Orientation. The staff at Juniata is trying to make us feel comfortable and like we're part of the community at Juniata – thus the reason for the socials. As for the parents hiking to the Peace Chapel instead of us, it is a tradition that is still honored here at Juniata (much like Storming of the Arch or Madrigal). Having the parents hike instead of the students would ruin that tradition. And besides, they deserve to float around on Raystown, since (for some of us) they're coughing up the 30 grand per year to go here. I think that maybe after the freshman are here for a while, and they look back on Orientation, they too will see that it was worthwhile and not at all "pointless."

Rebecca Jankowski
Class of 2006

The Juniatian accepts questions for "Ask President Kepple" and letters to the editor in response to articles. E-mail juniatian@juniata.edu or write to Juniatian, Juniata College Box 667, Huntingdon, PA 16652. Submissions may be edited due to content or length.

Juniata, relocated

Carolyn Keller
staff writer abroad

Aah, study abroad. That territory where the brave, the curious, and the culturally inclined yearn to be. (Or is it "flee"?) You've seen the pictures, you've read the brochures, your countless professors have wheedled and needled you into checking it out – and over the next year, I'm here to tell you what it's really like.

Let's start with the basics. First, where I am: I'm spending the year in Sevilla. It's a lovely city in the southwest part of Spain, and right this second I'm in the computer room on the second floor of a small but beautiful home, surrounded by works of my host mom's beautiful artwork, typing this up and trying to train my fingers to remember where everything is on the Spanish keyboard, an interesting task in itself.

I've been here a few weeks, and getting here was an adventure. Between driving to the Philadelphia airport, and making various flight connections, it took me about 24 hours until I found myself transported to an amazing country that at times looks strangely like my mother's description of California: Blue sky, green trees, brown grass. And very, very HOT!

But I landed safe and sound, took a cab to the Universidad Pablo de Olavide, my "Juniata" for the next eight months, and located the international office, with my life in luggage in tow. Lucky for me the office was on the ground floor. Once there, Joanna, program director and speaker of an exorbitant amount of languages, met a sleep-deprived, jet-lagged me to take me to *mi casa*. Due to an unforeseen conflict, my host family was in Madrid until late that night, so it was up to me to get settled. After spectacularly knocking a plant down the steps as Joanna and I attempted to heft my massive bag I found myself in a nice little side room that I get to call mine. Joanna left, I reinstated the plant and all its dirt in its rightful place, and I set out to shower, unpack, and try to make sense of the fact that I was in *Europe*, of all places, and will be for quite some time. After accomplishing items one and two on that list, I settled for a nap.

In the past few weeks, I've discovered some very interesting things. Despite all the hard goodbyes when you leave, and the jet lag and the great big newness of everything that can be intimidating at times, SPAIN IS BEAUTIFUL. It´s gorgeous. The people are friendly and helpful, from the ones you meet on the street to the students who are your partners in study-abroad crime. The city is amazing, the food is great, you can drink the water (hey, in some countries you can't!), and the culture consists of an embarrassment of riches. Definitely check it out, or another country that catches your eye. Do some research, make your plans, and GO! You won't regret it.

Wet paint

Holly Brown
staff writer

This week's mission brought me to Sunderland 231, a quad. Now, I realize that very few people on campus have quads, but Megan Junkin, Maria Welch, Candi Hamilton, and Sarah Zentmyer set a great example for everyone to follow.

The first great part of this room isn't hard to find. The women have hooked up a marvelous star-shaped doorbell to let them know when there are visitors. After ringing and explaining I wasn't just some weirdo invading their room for no reason, I was invited in.

Photo: Cara Yancey

The residents of a quad in Sunderland rearranged their room, allowing a luxurious futon and coffee table in their "living room."

The second thing I noticed about this room is the size. With four lofted beds placed up against the walls, all the space in the middle is left open. This has been turned into a veritable living room, with a futon and chairs set up around a makeshift coffee table. This is a nifty, comfortable space where many people can sit and socialize. In fact, the room was host to a Video Music Awards party, where many Sunderlandians were attracted to this inviting space.

This living space is incredibly important to every dorm room. Even if you go elsewhere to party on the weekends, your dorm room is going to be a stopping place for your friends, family, and visitors. It's a miserable experience to go visit a friend only to have no comfortable place to sit and feel unwelcome. It's important to have at least one chair, pillow, or ottoman for visitors.

The other essentials are also present. Cool room decorations – such as string lights, lots of posters, a Route 66 sign, and a light-up "Lounge" sign – litter the room. In addition to the snug living space and nifty décor, a vase of fresh flowers was sitting on the coffee table.

Flowers and other plants are one of my favorite things to have in a dorm. They bring a feeling to the room that is completely different from cold brick and wooden desks. Plants are soft and green and alive and refreshing. They are also a great alternative next to a messy fish tank, and easier to take care of. Get a cactus that needs to be watered once a month for low-maintenance plants. Want something that will make people look twice? Follow Katey Glunt's initiative and grow cherry tomatoes in your room. And if you're really devoted, get something different like an orchid and treat it like your baby. Not that I have experience with that or anything.

Keeping freshly-picked flowers is also a great way to brighten up a room. Picking flowers from around Huntingdon, or even buying them from some of the great flower shops downtown, can breathe fresh life into a room and take your focus away from strange smells from the laundry basket or the paint chipping away from the wall.

The main problem of the room was, of course, storage. A trip to Wal-Mart got them tons of plastic stackable storage and drawers that organize their things and hide messes.

But Sunderland 231 seems to do everything right. They have quirky decoration items, fresh plants, funky storage, and comfortable hangout space. This is the essential checklist for any room on campus.

Next Issue: South Hall

Contrivances Amok

A Tech Column

Theresa Tschetter
staff writer

Jell-O(TM) is a great tool for comparison, especially in the realm of computing. But it needs more positive press, as almost everyone has had a negative experience with it. It occurred to me that the obvious solution to popularize this jiggly snack would be to compare it to network traffic. So without further ado, I give you the Condensed Guide to the Jell-O-Net.

Juniata College is supplied with a total of five T1 lines. For the uninitiated, a T1 is a *fat pipe*: at 1.544 megabits per second, a person could easily download a music file in a matter of seconds (legally, of *course*!) One T1 line is used for phone traffic. One is used by the I.T. students on the first floor of South Hall. The other three T1s are provided by MCI, Juniata's Internet service provider, and they are our connection to the outside world.

It's a stretch, but visualize three fat PVC pipes with high-speed Jell-O coursing through them. Different flavors and colors cruise along the line, intended for different destinations. You're in your dorm room, downloading a Homestar Runner cartoon (http://homestarrunner.com) and the data you want is speeding along these lines to you in a neat little chunk of raspberry Jell-O.

According to network manager Anne Wood, the first thing your Jell-O chunk encounters in its race to reach you is the external router. A router is very much like what it sounds like: it routes traffic between networks. It sends your Jell-O off on the correct path to the network of its destiny.

The next stop in this Jell-O journey is the firewall. If some jerk on the outside took a bunch of Swedish Fish and jellybeans and tossed them in the pipe, the firewall would filter these out. Only Jell-O of the right flavors and types is allowed past the firewall. Additionally, the firewall has rules in place to restrict someone from the inside from making really terrible or strange Jell-O and trying to get it out to the Internet at large.

After the firewall, your data hits the packet shaper, which monitors what types of packets go through it and classifies them in order of importance. Now, stay with me here, because the packet shaper is crucial. If you're surfing webpages, your traffic will be given a higher priority than MP3 downloads via KaZaA, for example. The intent of the packet shaper is to allow legitimate users more bandwidth. Without the packet shaper, your little raspberry Jiggler would have to compete with the constant stream of peer-to-peer filesharing that plagues both inbound and outbound traffic. Look at inbound traffic. Without the packet shaper 65% is filesharing, dwarfing the 18% used by legitimate websurfing. With it, 35% is webpages and filesharing is kept at a modest 31%. Your little raspberry Jiggler may rest secure in the knowledge that it's much more important than other, less tasteful things.

Its journey nearly complete, your artificially-colored snack now encounters the internal routers and switches that bring it to your building. Since the Eaglenet is actually comprised of many different smaller "subnets," a router on the inside will send your Jell-O to the correct network. Finally, after going through the switch in your building, your chunk of Jell-O arrives fresh from your network port. Mm-mm, good.

So that, in short, is the story of your Jell-O's journey on the Eaglenet. Now, who's up for some lime Jell-O with pears?

Theresa Tschetter is a PC Technician for the Solutions Center.

Women's volleyball

Robb Patty
staff writer

The Juniata College women's volleyball team entered the Washington (MO.) Invitational tournament as the number one ranked team in the country. They also left with that ranking. In the American Volleyball Coaches Association (AVCA) Juniata defeated the fourth and second ranked teams in the country.

On the first day of the tournament the Eagles squared off against #4 Washington and won easily by scores of 30-24, 30-19, 30-16. Danielle Hart and Katie Charles registered kill totals of 17 and 15 respectively while getting 15 digs and 45 assists from setter Carli Dale.

The next day would prove to be much of the same for the Eagles. After a 31-33 first game lose to #2 Trinity, Juniata came back to win the next three games by scores of 30-13, 30-24, 30-20. Their last match of the tournament came against Baldwin-Wallace and won decisively in three games 30-26, 30-19, 30-22.

Middle hitter Katie Charles said, "It was very important to win this tournament we proved to ourselves and everyone else that we can compete with anyone."

The Eagles swept the tournament and sit atop the AVCA rankings with an 11-0 overall record. They will put that undefeated record on the line on October 3 & 4 when they will be competing in the ASICS Invitational.

"We have an incredibly talented team that has worked extremely hard to get where we are and we will continue to work hard to achieve all of our goals," commented setter Carli Dale.

It shows as three members of the Eagles were named to the all-tournament team; they included middle hitter Katie Charles, setter Carli Dale, and opposite Danielle Hart.

Senior Danielle Hart leaps in the air, slamming Princeton with a taste of what Juniata is all about.

Cross Country teams finish in top 3

Michael Vella
staff writer

The Juniata cross country teams recently competed at the Roanoke Invitational in Salem, VA, with the women capturing a second place finish in a field of 10 teams and the men bringing home the bronze. Sophomore Nancy Hayes (Westminster) led the way for the women's team, finishing fifth overall. Senior Stefanie Rynkewitz (Lewistown) was close behind in 6th place, followed by Lia Bella (Morris Catholic), Sarah Bay (Central Dauphin), and Lauren Gates (Bishop Guilfoyle) in 13th, 14th, and 21st places, respectively. Rynkewitz's top-10 finish marked the fourth time in as many years she has received an award in Roanoke. "It took a lot of hard work, heart, and determination. I feel like I actually competed on Saturday with a goal in mind: to get that fourth t-shirt and finish in the top-ten for the fourth year in a row."

"I thought Saturday's meet was a good opportunity to compete against teams outside of our conference," added Eagle top finisher Nancy Hayes. "I had a stronger performance because I worked with my teammates in the beginning of the race [in order to] put ourselves in good positions for placing."

The men captured a third place finish in a field of eight teams. This competition marked the first time the men's team has earned a medal in head Coach Jon Cutright's tenure. The Eagles were led by sophomore Chris Sheaffer's (Central York) 12th place finish. Sophomore Justin Fritzius (Central York) placed 14th, followed by Will Cantara (West Branch), Michael Vella (Hollidaysburg), and Jason Freeman (Thorton), who placed 17th, 22nd, and 23rd respectively. "We ran as a team better than any meet in the last two seasons, which is why we earned the first award for the men's team in Coach Cutright's history. This is definitely a sign of what is to come for our young team- we just continue to run better every race," says Fritzius.

Although both teams are making progress, Cutright says there is room for improvement. "The teams are starting to get out better, but we need to work on the second half of the race. The women have come a long further because their race distance is shorter."

The teams also competed at the Western PA Championships hosted by St. Francis University earlier in the month. On an extremely challenging course, the women placed 4th out of six teams. Hayes again led the way with an overall 9th place finish followed closely by freshman Elena Amato (Notre Dame Prep) in 11th place. Led by Justin Fritzius and Michael Vella, who placed 21st and 35th, the men finished 6th out of 6 teams.

The Eagle's host their only home meet of the year on October 25th at the Huntingdon Country Club. The women start at 10:30 am followed by the men at 11:00. Come out and support your teams on this very spectator-friendly course.

The Irish Elks

Kate Leib
staff writer

The Irish Elks Ultimate team was started five years ago here at Juniata. The sport used to be called Ultimate Frisbee but Frisbee is a trademark name so now it's just called Ultimate. The team has expanded rapidly since last year and now about half the team is made up of freshmen. When asked why they decided to join, many of the players agreed they tried it once and were hooked. "It helps keep away the freshmen 15," said Jay Trovato a.k.a. "Lip," a nickname he earned the first day of practice when the first throw hit him on the mouth.

Generally games last until one team scores 15 points. The tournaments the Irish Elks compete in are 4 games are all played in one day. There are no referees because the players abide by the "Spirit of the Game." The players make all the calls and rely on everyone's honesty. "It's all about sportsmanship and just playing the game," explained one of Ultimate's captains, Diana Frazier.

Ultimate is also a great way to meet new people. The players are more then just teammates, they're also friends. "It's not just about playing, it's about doing stuff together," said Julia Williams. "We sit together at dinner and hang out."

Players' views on the team seem very optimistic. "We have the potential to win," said freshman Ben Hoopes. With new talent and dedicated players who are willing to play in rain, sleet, hail and snow, the Irish Elks are sure to give the competition a run for their money.

Captain Ed Lorentz encourages anyone who's interested to "come out and give it a try." The team meets at 6 Sundays and Tuesdays and at 5 Mondays and Thursdays. Their first tournament is on October 5th and Juniata will host a tournament here in the spring. For more information visit www.upa.org or Ultimate's site off the Juniata clubs website.

Eagles Trying to Get Back on Track

Tommy McConnell
staff writer

The women's soccer team has struggled to get wins so far this season. However, they've managed to compete against most opponents in and out of the conference. And when they have won, they have won big.

Juniata opened the season with two wins and two losses. In the wins, the Eagles offense absolutely exploded, scoring seven goals in both wins over King's and Thiel. Juniata's offense has proved to a very deep and balanced unit. Twelve different players have goals in the first seven games. The defense also stepped up its play, allowing only one goal in the two romps.

After the 2-2 start, Juniata dropped three straight contests. Two of the losses came in the conference, which will hurt the Eagles ability to make a playoff run. Juniata was competitive, however. In a 1-0 loss to Lebanon Valley, the defense clamped down after allowing a first half goal and did not allow a score in the second half. That kind of second half play is what Juniata will need down the stretch.

If the defense continues to play as it did against Lebanon Valley, the offense should have opportunities to establish themselves. The balanced attack, lead by high scorer Amy Tyler, should only improve as the season progresses. The Eagles will also need to shake off the rough start to the season and focus on the games ahead. "We definitely need to win our conference matches, and step it up mentally," Junior Captain Rebecca Shoaf says of the rest of the season.

Currently at 2-6 and 0-2 in the conference, Juniata needs to put together a few wins and get some momentum going. They will have four non-conference games to build some steam before several key conference dates. The end of the season is loaded with conference opponents. However, says Shoaf, "every game we play is a big game, because all of our opponents are so good." The first chance Juniata will get to tally a conference win will come on October 9, when they host Susquehanna.

Women's soccer players challenge each other in a scrimmage, so that they can get a better feel for each other's moves when playing future competitors.

JC Football vs Delaware Valley

Robb Patty
staff writer

Juniata was back at home September 20 and squared off against the Aggies of Delaware Valley in their second MAC game of the season. In a game that saw Juniata gain a total of 398 yards, 238 on the ground the Eagles were unable to defeated the 3-0 Aggies and were narrowly beaten 23-18. Juniata got things started in the third quarter when they blocked Delaware Valley's PAT attempt Brett Merrell picked up the lose ball and returned it to midfield. He then pitched it to teammate Mike Brown who took it the rest of the way for a two point conversion. This started the Eagles comeback as they scored again when quarterback Greg Troutman found receiver Anthony Lipple with a 15 yard touchdown pass to cut the Aggie lead to 23-12. The Eagles weren't done as the defense made a huge fourth and one stop at midfield to give the ball back to the offense. Craig Moshier did the rest as he rumbled 46 yards to Delaware Valleys five yard line. He then capped off the drive two plays later with a five yard touchdown run to cut the lead to 23-18.

Juniata would have one final shot at coming away with a win as they drove from their own four yard line down to the Aggie twenty-one but Delaware Valley intercepted Troutman's pass in the end zone and ended the Eagles chances of a comeback win.

"This game came down to one play, the MAC is a tough conference, but we plan to work hard and win the rest of our games", said kick returner Kurht Engle.

Quarterback Greg Troutman commented, "Right know we are 1-2 and are not doing things correctly. I have a feeling when we start doing what we need to do we will scare some teams. We just need to get back on track and start doing all our assignments right on offense and defense."

Each week the Juniata football gives a member of the Juniata staff a chance to help be an honorary coach for the week. For the Delaware game, it was Professor Amy Mathur. She worked with the quarterbacks during the week and had the opportunity to rely calls into the huddle during game day.

In its first MAC conference game of the season the Eagles traveled to Bethlehem, Pennsylvania where they took on the Moravian Greyhounds. Offensively it was quarterback Greg Troutman who led the way for Juniata as he rushed for 169 yards and a touchdown, as well as throwing for 122 yards and a

JC Rugby: Bring What You Got

Ryan Genova
staff writer

There's no coach. The competition level is high. Practices are tough. Games are real. This is the podium that the Juniata Men's Rugby team stands on, something that few other clubs on campus can compare with. The team is most noticeable on rainy days when they walk around all muddy and wet. Since rugby isn't a Varsity sport at Juniata, the team doesn't receive the recognition that many of the other sports do. None of the players were recruited. No scholarships were handed out. There are no packed stands to play for.

So why do these guys love it so much? Senior Eric Bressler, or "Dirt," enlightened me on some of the finer points of rugby at Juniata. "I like rugby because you get to hurt people. It's a full-contact, no mercy sport," said Dirt. This isn't a game for the fragile: the players are tough, they don't wear pads, and the red stains on those striped jerseys aren't food coloring.

The 36 "River Rats," as they are also known, held their first game of the season Saturday, September 20th against Geneva College and walked away with the program's first victory in two years. The River Rats ran them off the field with their superior physical conditioning, putting up 35 to Geneva's 17.

But the essence of the game isn't based on wins and losses. Rugby is something that anyone at Juniata can be a part of, regardless of size, shape, or athletic ability. "There are no cuts. You pay your dues and show up, and you'll get to play," said senior Randy Ogle, Rat co-captain this season. "At the Division III level, for a lot of people it's better than playing a Varsity sport because there's more freedom. You're not putting in the hours of a varsity sport." The no-coach, less-committed aspects of the club is a big draw for many athletes seeking a more casual atmosphere that Varsity sports don't offer. "Since we have no coach, we can just run it the way we want to. It's just good fun," said Ogle.

One event where the Rats do get to be the stars on campus is the age-old tradition, "Storming of the Arch." Each September, those students that feel like getting hurt crowd outside of Cloister and rush the arch with the intent of getting by the entire men's rugby team. Instead, the stormers get tackled, thrown to the ground, or smashed into a wall. It's fun to watch until someone's head gets split open on the sidewalk. "It's a wonderful tradition. There's no way any freshman is ever gonna get through there. I hurt the guy wearing duct tape," said Dirt.

The Juniata Men's Rugby team plays three more league games, one at Geneva College and one home and one away versus California University. For more information, go to the team's official website at clubs.juniata.edu/mensrugby.

JCFH crushing opponents

Nick Reger
staff writer

Don't make the mistake of these ladies being the gentle type. So far they have crushed their opponents with a current record of 5 and 2.

The team played Messiah on the 25th and suffered a 3 to 1 loss, with Sierra Dickman scoring Juniata's goal. They suffered through the loss however and came back to win against Widener two days later. When asked if the loss to Messiah just two days prior had any effect on how they played against Widener, player Suzanne Lerner said, "Yes, [the loss] inspired us to give it our all out there on the field." The game was an intense one, and at first it looked like Juniata might not come out on top. Widener drew first blood, scoring their only goal within the first 10 minutes of the game. Juniata didn't score until 5 minutes before regulation time. Senior Jean Silvey scored the first goal. Then in overtime Juniata rose to the challenge and scored the game-winning point. This time it was thanks to an assist from sophomore Elise Zimmerman to junior Grace McClusky. The McClusky-Zimmerman team beat the Widener keeper and Juniata

Juniata Continues Push for Playoffs

Tommy McConnell
staff writer

After a rough start this season, the men's soccer team has begun to turn things around.

Opening the 2003 campaign 0-4 looked like a tough task to overcome for the Eagles. They managed to get on the right track in the consolation round of the SUNY Fredonia Tournament. Although they didn't get the win they would have preferred, they were able to come up with a tie against Warburg Southern. Juniata's tie was due in no small part to Jeff Gehring, who scored both goals in the 2-2 draw.

The Eagles then stretched their unbeaten streak to three games. First, they handily beat Mount Aloysius, 9-1. The win was a team effort. Five Eagles would get on the scoreboard, punctuated by freshman Josh Cady's first career hat trick.

Juniata carried the momentum of the blowout win over to their first conference game of the season. Against conference foe Lebanon Valley, Juniata blanked the visitors, 2-0. Mark Guthridge played well in the net to earn his first career shut out. He was helped by a superb team defense that limited Leb Vall to only four shots on goal. Guthridge would stop the only shot he faced. The scoring duties once again fell on Gehring, and he obliged with a two-goal effort.

For his efforts, Gehring was honored with the Conference Player of the Week Award. Gehring appreciated the honor, but also gave his team credit, too. "It was nice to be honored with it, but everyone on the team deserved to be recognized. There are no superstars, we are a team," said Gehring. In Juniata's two wins over Mount Aloysius and Lebanon Valley, Gehring recorded four goals and an assist. His 13 total points – all in the last three games - have already exceeded last year's output, and there is no reason to think he will not continue to improve. Since returning from an early season injury that kept him out of two matchups, Gehring's play has been marked by more Juniata wins.

After the three game unbeaten streak, Juniata again fell on tough times. The Eagles lost two in a row, with one loss coming in the conference, to Widener. Juniata is now 1-1 in the conference and 6-4-1 overall. What will it take to pick things back up and resume Juniata's run to the playoffs? Says Gehring, "It all comes down to how much we want it, and you won't find one person on this team that doesn't want to make the playoffs."

Photo: Cara Yancey

The women on the rugby team do not put anything forward other than their best. Aggression is an absolutely great quality to have, but to control that anger in the game marks a complete athlete. Everyday these women, also known as "ruggers," put their bodies on the line to get a little one on one contact. Their next home game is October 4th. Go and see that this is not just any ordinary club of women; these players define pain.

The ball is in your court!

Meredith Pink
staff writer

Last weekend the women's tennis team claimed a home match victory against Widener. The score was 7-2. The only other victory so far in the season was a 6-3 win against Penn State-Altoona. "I think we were able to pull out those two wins because we are finally getting comfortable with the positions we're playing. We've also gained more strategy and mental toughness," senior Deborah Mensch said

Unfortunately, the Eagles got off to a rocky start this season. They lost their first four matches to Lebanon Valley 0-7, Lycoming 1-8, Indiana University at Pennsylvania (IUP) 0-9, and Moravian 0-9.

Among these schools, IUP ranked as the toughest opponent. They are a Division II school outside the MAC conference. "We all played to the best of our ability, and it was good practice for up coming matches," sophomore Lindsay DiPaola commented.

"The four losses at the beginning of the season were really just a learning experience for us. We have a fairly young team and seeing where people rank and who plays well together always takes awhile" Mensch said.

Their following contest was against Susquehanna. The match was very tough and resulted in a 1-8 loss. Despite this defeat sophomore Elizabeth Ghebreselassie said, "Susquehanna is really good and has some great hitters. This match was our best performance so far as a team."

The Eagles have a challenging few weeks ahead. The next five of their matches are away games. Good luck ladies.

Matt Russell, layout editor

E-mail, part 1: Someone actually apologized for getting poopfingered! Did you catch that one? He did a reply all to the poopfinger in his name and said, "Someone else sent that e-mail." Oh, gee, no kidding?

24: The greatest television series ever has its season premiere on October 28th. Don't miss a minute!

Hot Topic: They keep extending their selection of Nintendo t-shirts, and I love it. I just picked up a Luigi shirt; I've waited 10 years for that one.

E-mail, part 2: Hurricane Isabel created some wind… a little rain… and, oh yes, a deluge of e-mails telling us to be careful, lest we be swept to Oz by the mad tempest! I particularly enjoyed the one with the line "Fires are uncontrollable in Hurricanes." We're talking about the same thing, right? The big storms with lots of *water?*

Once Upon a Time in Mexico: A bit gory, but it had great acting and good story. I recommend it to everyone without a weak stomach.

Retro Cartoons: The Teenage Mutant Ninja Turtles series has been revived! They went back to their roots (no Krang or Dimension X nonsense) and I think they did an excellent job. A new Raphael action figure is sitting here on my desk as I type this. It's the least I can do to support the show that created a word as cool as "cowabunga."

Penn DOT at its finest: Driving back from Altoona I see this sign: "Left lane closed 500 ft." A block later I see this: "Right lane ends 100 ft." Wait a minute...

E-mail, part 3: I love it when people click "Reply all" instead of "Reply" and we therefore get extra bonus junk mail. Last week, I got one such e-mail… in French. A "Reply all"… in *French*. That just shattered the limit on the Worthlessness Scale.

Founders Hall has a Basement: I had the odd need to go down there last week. It's sort of like a sci-fi movie, with two eerie halls of offices that just don't feel right. Everyone seemed to sense that I didn't belong down there and looked at me funny so I quickly escaped. If there's no Random 11 in two weeks, you'll know why.

E-mail, part 4: JCEL, stop sending all your redundant e-mail! "In case you missed the meeting…" Yes, I got the e-mail about the meeting, I ignored it on purpose, and it further aggravates me that you assume this must be some error on my part. It's *not!*

Sodexho: Whoa, wait a second… this bit is actually about praise! The other day they replaced the standard crummy pizza for French Bread Pizza, and my taste buds said "yum." Apparently so did those of several others, since the Ciao line actually WAS a line for the first time this year.

Traditional timeout

Sarah DePasque
staff writer

To be jolted out of sleep at 5 am by banging pots and air horns is not an exciting or happy way to wake up... unless you are a student at Juniata. Then it means one thing: it's Mountain Day. Classes are cancelled for a day of outdoor festivities.

The joyous occasion occurred this year Tuesday, September 30, at Canoe Creek State Park. Juniata supplied free bus transportation for the event, which made the round trip from Ellis every thirty minutes from 10:30-2:00.

Food supplied included party subs, red-skinned potato salad, veggies with dip, whole fruit, assorted snack chips and pretzels, ice cream novelties, Jell-O salad, and assorted beverages. One notable item absent from the food tables this year was the ever-popular Rice Krispies treats.

Photo: Cara Yancey

The surprise of Mountain Day made a relaxing day for students and faculty.

When asked why the traditional Mt. Day dessert didn't make the coordinator Dawn Scialabba explained that the treats usually attract bees. Since this year we've had a particularly high bee count the Mt. Day committee did not want to risk anyone's comfort or safety by keeping the sugary delights exposed all day.

The regularly-scheduled touch football games that pit separate classes against each other ended up being a free for all that saw teams of multiple classes combine forces. The large open area of Canoe Creek State Park also provided enough space for as many as three games to play out at the same time.

The marquee match-up of the day though was the faculty-senior class game. Avenging its earlier loss in the tug-of-war competition, the faculty routed

Honor society created

Caitlan Zlatos
staff writer

On September 12, 2003, JC initiated five students into a new chapter of something called Sigma Gamma Epsilon (SGE). Though its name may make it sound like a fraternity or sorority, SGE is in fact an honor society. Similar to Tri-Beta, the honor society for biology students, Sigma Gamma Epsilon is for geology students with high GPAs.

The birth of Eta Mu, Juniata's chapter of SGE, has been long awaited. The final process for creating the chapter occurred early last spring through the combined efforts of Dr. Ryan Mathur of the Geology Department, several upperclassmen geology students, and National SGE Vice President of the Northeastern Province Dr. Cindy Carney.

Junior Theresa Detrie said about Eta Mu, "The geology professors encouraged us to apply for the chapter because they didn't have the ability to give out many awards at Awards Convocation, nor could geology majors get specific distinctions each year at graduation."

Dr. Mathur confirmed this in saying, "Geology students rarely get any recognition for their achievements. Sigma Gamma Epsilon gives them a chance to be rewarded for their efforts."

Geology students benefit from being part of SGE in many ways. Members can pay reduced fees for geological conferences and have the option to publish their research in the society's periodical, "The Compass." It is even possible to apply through the society for research funding. Additionally, officers may choose one member per year to win a special award. In general, being a member of the prestigious organiza-

Issues concerning
Muddy Run Cafe

Michael Vella
staff writer

The Muddy Run Café is often the focal point of students' criticism. Complaints include low meal exchange rates, small portion sizes, lack of selection, and absence of meal exchange policies on weekends. While these issues raise practical concerns, Juniata students might not appreciate the reasons behind these policies. In addition, changes are taking place that will improve the dining experience in Muddy, changes in which students have a strong influence.

Meal exchange at Muddy is worth $3.50 for lunch and $4.00 for dinner. Each swipe of the card at Baker costs $5.95 and $7.50 for lunch and dinner, respectively. This is significantly more money than is given to students who wish to eat at Muddy Run.

> **"I enjoy going to Muddy to eat, but when I leave I'm often still hungry."**
> ***- Soph. Bryan Tokarchic***

According to Hal McLaughlin, Director of Food Services at Juniata College, costs explain the discrepancy. "The meal exchange rates cover the cost of food and that's it. Muddy is set up as a retail store and that entails having controlled portion sizes."

As more students choose to eat at the newly renovated Baker, attendance at Muddy is decreasing. This adds to a decrease in café income. Last year, an average of 400 students ate lunch at Muddy each day. This semester, the average is down to 250 students. The same can be said for the number of students eating dinner, which is down to an average of 75 students per day.

Meal exchange cannot be offered on weekends because too many students leave campus. This decreased attendance cannot pay the employees and support the costs of food

While students eating at Baker enjoy unlimited access to many different foods, those who choose to eat dinner at Muddy Run get a typical-sized meal, including a sandwich (or a single plate of the daily special), drink, apple, and a cookie. Many students do not think this is enough food. "I enjoy going to Muddy to eat, but when I leave I'm often still hungry," says sophomore Bryan Tokarchic.

A solution often proposed by students is for Baker to permit the use of take-out boxes. Many students take advantage of Muddy as a quick food stop when they have little time to eat. Take-out boxes from Baker would not only be a faster alternative to a sit-down meal but they also would offer more food. However, the contract between Juniata College and Sodexo (the company in charge of food services at the college) states that all foods, excluding fruit, cookies, coffee, and ice cream, must be eaten in the dining area.

When questioned about these issues, McLaughlin replied, "I am going to take a close

Music vs. comics

the truth behind the battle

Rachelle Luther
staff writer

There is a definite rift between the amount of music and the amount of comedy on campus, and the students are demanding an explanation. To cease the tongue lashing of the Juniata Activities Board, here is the lowdown on who chooses and how.

Friday Night Live (FNL) and the major concert are chosen by the student-run Juniata Activities Board (JAB). Just like their fellow students, they want to see quality entertainment come to JC, including music. However, the process is neither fast nor simple.

First of all, there is the budget to contend with. JAB, like every other club on campus, is given money by Student Government. What money they get covers both FNL and the major concert. JAB attempts to get the most entertainment for their buck, and this year they have succeeded. Usually there aren't as many FNLs, but they ended up with some great deals on comics this time around.

So why the lack of music? Well, overall, music just isn't cost effective. Dawn Scialabba, Director of Campus Activities and advisor for JAB, expressed the fact that attendance for music is always lower than for comedy or other variety acts.

This fact was also reiterated by Nicole Lewis, JAB Vice-chairperson for External Relations. Lewis, a sophomore, stated, "People like music on campus, but only want to hear their own kind ... FNL needs to appeal to a larger number of the student body."

But what about the major concert? They promised us music, and now we're getting comedy, again. At the beginning of each year, JAB and its agent compile a list of groups in its price range. The list is then sent out for the campus to vote on. When the votes come in, JAB makes an offer to the top choice. Unfortunately, this year, not only the number one choice, but the top ten were all booked or touring on the other side of the globe.

Another problem was that JAB didn't have many options as far as dates go. The cause is lack of venues on campus. The main gym can't support another major concert due to structural strain on the gym floor caused by the spring 2002 Rusted Root concert. Oller Hall is the only option and is possibly the most heavily booked building on campus. This year, only one weekend was free. This left JAB with virtually no ground for negotiation.

When all of the top ten were exhausted, the agent offered another list of artists in the JAB price range. As fate would have it, the only big names on the list were comedians. Finding more bands with recognizable names was nearly impossible, and major music groups are too expensive. Scialabba stated that the entire budget for Campus Activities would equal only about a third of the cost for Dave Matthews or the Rolling Stones.

Scialabba said, "We considered holding the money for this year and having a bigger show next year, but when it came down to it, the JAB students decided that they couldn't rob this year's students of a big show when they had already promised them one, especially the seniors. It just didn't seem fair."

As of now, the spring semester has not been booked for FNL. If you have an idea for a smaller show, like a campus-based band or a well-established local group, suggest it. JAB meetings are open to all students and occur every Tuesday night at 8 p.m. in the Ellis Hall faculty lounge.

The Special Olympics Athlete's Oath reads, "Let me win, but if I cannot win, let me be brave in the attempt."

For those of you who missed this all day event, the Special Olympics were held Sunday, October 5th here on campus. It was a huge success, with many members of the student body volunteering their time to help the athletes. Many businesses and groups in the community supported the Olympics as well. Some of these sponsors were Sheetz, McDonald's, U-Haul, Giant, and even our own Sodexho.

According to Jennifer Tresp, the Senior Competition Director for Special Olympics PA, the Special Olympics have been at Juniata for almost 20 years now. She has been with them for 9 years now, and hopes to continue with them until, "They fire [her]." When asked if she had any plans of expanding the events held at Juniata, she replied "Yes, as of now we have five sports here: Bocce Ball, Long Distance Running, Power lifting, Soccer, and Volleyball. There are six total fall sports, and sometime in the near future I would like to add it to our schedule. The sixth sport is Roller-skating. I just have to figure out how and where to add it." With the addition of such sports as roller-skating in the autumn and snowboarding in the winter, it may not be too long before the Special Olympics hosts its own form of the X-Games as well.

Photo: Cara Yancey

Tresp continued, "The events were a huge success this year, and the leadership from the student committee was superb. I know that they're doing a good job when I have time to sit down at talk to you. I feel useless, and that's a good thing in this case."

Several of the volunteer students agreed that participating in the Special Olympics was an emotional experience that was also incredibly fun. Even the EMT team enjoyed it, despite the few minor injuries they had to cope with. The Special Olympics this year had a great turnout on behalf of the student body and local community, and remember: everyone is a winner.

Space issues

Part 2 - continued from last issue

Jeffrey Anderson
staff writer

Living space and parking space are two issues that are on most students' minds. There are many rumors going around right now about what the plans are for the future for both of these issues.

Twenty-four students in eight rooms are tripled this year. However, this may not be a sign that Juniata's dorm space issue is worsening. Consider that in 2000, there were 36 tripled rooms. Tim Launtz, Director of Residential Life, says, "Tripling is not a bad thing for the college, but we don't want to make a habit out of it." To understand how these things happen, you must look at how the Department of Residential Life (DRL) places students in the halls.

Every school year, the DRL develops what are called "future housing options." Last year, four models were developed. The plan is developed based on how many students are enrolled for the next year and housing trends from previous years. One plan is picked, which this year called for a capacity of 1141 students to live on campus. 1130 students actually requested to live on campus, which fits the plan. However, the plan calls for a certain number of female and male students. Twenty-six more male students requested to live on campus than planned, which is why 24 are now tripled.

Some talk around campus was that houses on Moore Street were to be purchased by the college and to be used as apartment housing for upperclassmen, creating space in the residential halls. However, Launtz says that this is a rumor and nothing is planned like this for the immediate future.

Many students feel that living in a tripled room could create problems. Freshman Kyle Narsavage says, "I'd rather live in a double because there are less personality conflicts and less disagreements." Not everyone is happy that they are living in triples, and having to live there could make it feel like they are being penalized.

This is not always the case. One could even argue that it is academically better to be in a tripled dorm room. A study done at Juniata in 2000 shows the average GPA of the 108 females in tripled rooms was slightly higher than females who were in rooms of two. The study suggests this may be because there is an extra person to study with.

Parking is another problem at Juniata, not only because you can sometimes not find a space but also because you have to pay a fee to have your vehicle registered. JC student Mark Springer asks, "How come after all the tuition we pay, we have to pay an additional 25 dollars to park here?"

When that question was passed along to Rocco Panosetti, Director of Campus Safety and Security, it seemed to upset him. "No student pays to park here. You park for free. However, you have to pay a fee to have your vehicle registered."

Every once in a while you may have a problem finding a spot to park. Although students like Mark will say that this is not to much of a problem yet, as the school grows, it may become a problem fast.

Consider that if you are an upperclassman who owns one of the 658 registered vehicles, you have 560 spots to choose from spread all around campus and 547 if you are not handicapped. If you are a freshman, the options are limited because freshmen may only part in South Lot and the Cold Springs Lot. Of course the regulations say that parking spots are not guaranteed, and there is always street parking available.

Mountain Day

continued from page 1

the seniors (42-14). After the seniors scored first, the faculty showed no mercy. Geology professor Ryan Mathur led the offense with six total touchdown throws (two to Biology professor Jay Hosler). Professor Dave Hsiung (History) and President Kepple anchored the defense with relentless pursuit of the seniors' quarterback and devious attacks on the whole team's psyche.

Clearly, Hsiung's shouts of "Hey, do you still want to graduate?" caused at least two seniors to drop crucial passes. The junior class should start planning a strategy now to deal with the faculty's potent attack.

Other fun options included making frames in the pavilion with chalkboard paint, and then captioning them yourself with chalk, which can be changed when you change the picture. People put their kayaks in the water, threw frisbees in the air, and kicked soccer balls on the field. Two volleyball courts seemed constantly occupied throughout the day, and by the time the last bus rolled away a volleyball game was still in full swing.

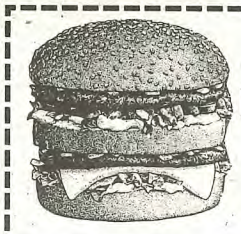
This tradition stems from an instance in the late 1800's when Juniata closed because of an epidemic, and a few students who were too far to return home stayed up in the mountains until the school reopened. The date of Mountain Day was not always unannounced. In the early 80's it was just an announced day, but because of low participation and behavior problems the night before, the administration decided to make the day a secret.

JAB, responsible for making Mountain Day run smoothly, rotates the location every year between four different parks. "Each park has its own personality," Scialabba says. "Everyone has a favorite. But since most people will be here for four years, it means they get to see each park and have Mountain Day be a little bit different every time."

How successful was Mountain Day? Scialabba estimates 650 to 700 students attended. She thinks a major reason of why it's so successful is that "our faculty is so supportive. Other schools have called who want to try something like this, and the professors really have to be willing to give up an entire class and they have to be willing to not know when it will be."

Honor society

continued from page 1



tion is a résumé booster.

Junior Beth Diesel, the chapter's president, is glad for the ability to publish research in *The Compass*. Diesel said, "Professional geologists that are also members of the society will be reading these articles. This is a great way for geology students to gain recognition for their research, and there is always the possibility that a future employer or graduate school could be reading these articles."

Along with Diesel, each of the other members of the new chapter has a corresponding position. Junior Alex Zirakparvar is the vice president, junior Todd Bonsall the secretary/treasurer, Detrie the corresponding secretary-editor to *The Compass*, and senior Jason Abplanalp is the coordinator of activities and communications.

Chapter Eta Mu plans to initiate more students in the future but they do not have a set date. Requirements for induction are a minimum of 16 credits in the geology department, with a 3.0 average or higher for these courses. Overall GPA must be at least 2.67. For more information about Sigma Gamma Epsilon, visit the society's website at http://www.earth.uni.edu/SGE/index.html.

New views in New York

Cara Yancey
photo editor

On October 4, 2003, Juniata Activities Board organized a day trip to New York City, with an opportunity to see the Broadway show "The Producers." About 90 Juniatians and their guests pulled out on two charter busses at 6 a.m. destined for New York City. Approximately five hours later, the buses pulled into the city. Upon arrival, every eye spanned the streets. All minds were either revisiting memories or creating new ones. This was not only an opportunity to get away from Juniata College but to embark on a novel adventure.

Many of the students and faculty met at 2:00 p.m. to see "The Producers" with Kathy Bunce, assistant director of campus activities. Sophomore Hannah Rauterkus went to the show and commented, "'The Producers' is classic Mel Brooks. It was hilarious, racy, a tremendous talent showcase, and made everyone's sides hurt from laughter. I absolutely loved it!" While many students attended the show, numerous others chose to explore the city.

> **"The Producers' [...] was hilarious, racy, a tremendous talent showcase, and made everyone's sides hurt from laughter. I absolutely loved it!"**
> *-Hannah Rauterkus*

All aspects of New York City were awe-inspiring. Rockefeller Center maintained its beauty from the movies to real life. Times Square, filled with so much noise and so many lights and people, can make a person with a short attention span lose her mind. While in the neighborhood, we had to explore the three-leveled Toys R' Us. No child, or adult for that matter, could deny the temptation to play with the enormous amounts of Legos.

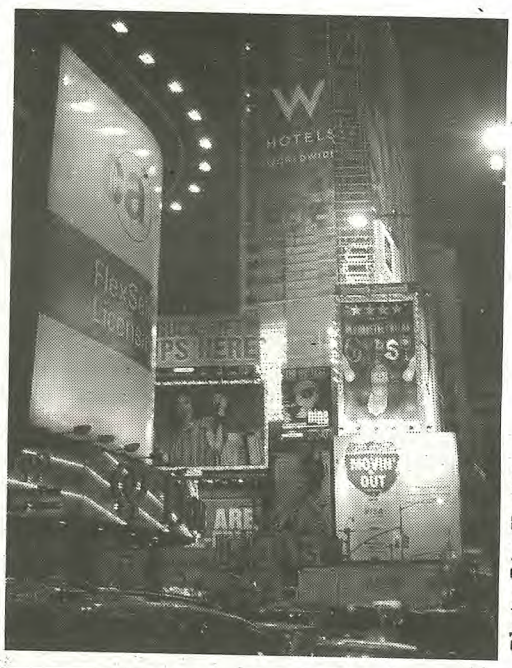

Photo: Cara Yancey

Something a girl just cannot pass up is a trip to the top of the Empire State Building. With foreheads plastered to the glass, 88 stories up, it was an all too sweet "Sleepless in Seattle" moment. Greenwich Village is a hip-trendy neighborhood with overpriced thrift stores and mouth-thrilling desserts. Random musicians filled the subways, while the streets seemed to be painted with taxicab yellow. The Statue of Liberty stood proud and strong, while, at Ground Zero, everyone still gasped at the September 11th tragedy. All of New York City fit the expectations yet intensified when experienced first-hand.

After 9 hours, tons of pictures, and a lot of sore feet, we left the city. "Monster's Inc." played on the way home to distract those who could not sleep. Finally at 1:30 a.m. we arrived back in Huntingdon, with one more journey under our belts. Sophomore Jennifer Marshalek, who helped organize the event said, "The New York trip was a huge success as always. The student body really seems to appreciate it, and 'The Producers' turned out to be a great show to see."

Grease!

Juniata's Musical Theatre Club will perform "Grease!" the weekend of October 17. Evening performances begin at 8:00 on Friday. Saturday shows are at 7:00 and 10:00, and a 2:00 matinee is scheduled for Sunday.

All performances will take place in Rosenberger Auditorium, Oller Hall.

The cast is presenting an abbreviated version of the musical accompanied by a dessert social. Servers dressed in 50's attire will be part of the atmosphere.

Since its inception in 2001, the club has previously performed "Snoopy!" and "Once Upon a Mattress."

Wet paint

Holly Brown
staff writer

My mission this week was to a room in the corner of South Hall. Joe Wills and Robin Cordier live in room 317.

Rule number one in this room is to take off your shoes at the door, because Joe and Robin have the comfiest, cleanest white carpet ever. Padding underneath makes it feel "just like being at home" according to Joe. This homey luxury is perfect for enjoying what is probably the coolest part of this room, the amazing entertainment system.

The DVD player, five-speaker surround sound system, and 20" TV screen is a huge step toward making the room an entertainment zone. "Zoolander" was the room's premiere, with about 12 people fitting easily on the regular and shag carpet (yes, shag carpet!). The entertainment center can also hook up to Joe's computer, so he's able to play his mp3s on surround sound. Watching movies like "Black Hawk Down" is his favorite, because they take full advantage of the five speakers.

When asked, Joe said that there wasn't anything he didn't like about his room. "It's pretty much exactly how I wanted it."

Much of the room's coolness is attributed to South. Joe lived there last year and said he wouldn't want to live anywhere else. The closets and dressers are huge, the desks are great, and there's a ton of floor space. Still, the room's high-tech outfitting and outstanding comfort level make 317 an exemplary transition from ugly dorm room to an inviting atmosphere.

While Joe feels that women generally have better setups and pay more attention to color schemes and matching, his room certainly sets a great example for the male population.

Secondhand Lions

Rachelle Luther and Holly Brown
staff writers

Haley Joel Osment shines in "Secondhand Lions" as Walter, a young boy left by his deadbeat mom into the care of his mysterious and eccentric great uncles.

Rachelle: This movie made me laugh, cry, and fall in love with it. There's Haley Joel Osment, a bunch of ridiculous hounds, a pig who thinks he's a dog, two of the most loveable men you've ever met, and an actual storyline. It doesn't go overboard to be a Disney-type family flick. It includes its own adventure and spunk.

The setting puts you on a ranch in the heart of Texas. A dilapidated house and barn seem to hide a hundred secrets. The absolute best part of the setting is the quirky signs warning of radioactivity and other dangers lurking on the old property.

"Lions'" characters are loveable, with a few that you'll love to hate. Haley Joel Osment gives a stellar performance proving that his acting ability isn't fading with age. Robert Duvall and Michael Caine are stunning in their roles as two old men with exciting lives both in front of and behind them. Walter's mother, played by Kyra Sedgwick, is one of those love-to-hate characters – a deadbeat mom you wouldn't wish on your worst enemy. Nicky Katt's character, Stan, is an abusive, manipulative jerk that will weasel his way right under your skin.

The plot line is good without being terribly cheesy. It's real life mixed with seemingly impossible adventures that in the end aren't exactly tall tales. This movie gives you something to believe in. It teaches you what it means to live and that there is a time for everything in your life.

Grade: B+

Holly: "Secondhand Lions" is a good movie with much creativity. What I liked most is that it has the feel of adventure tales I remember reading as a kid. The adventure mixes with real life as the movie deals with actual issues of aging, self worth, and morality. Combine that with the escapades of the uncles and a quirky sense of humor, and you've got a decent movie.

I can't handle
cheese
-Holly

My biggest complaint deals with transitions. Often the mix of flashbacks, modern storytelling, and the current antics of the uncles feel like individual stories thrown together on one screen. Each one is interesting, but, without a clear path, the movie starts to drag. The climax is abrupt and a bit confusing. Along with scenes not flowing well, whole minutes are spent watching a character perform some pointless task. "Lions" could have used one more editing job.

The only other grudge I have deals with the ending. I can't handle cheese; however, most of the movie manages to not be cliché by its pluck and adventure. The ending, with its cheesy lines and a contrived twist, makes the film finish on a bad note.

Grade: B

Wrap Up: It's quirky, cute, exciting, and even a little sad, but won't run you through the emotional ringer unless you are a card-carrying member of the weak hearts' club like Rachelle. This is a family flick, but not overly cheesy. We enjoyed this one.
Worst Part: Waiting for the trailer for "Return of the King," only to be devastated by the lack thereof.

Contrivances Amok

A tech column

Theresa Tschetter
staff writer

Ah, the dreaded poopfinger. Who by now isn't familiar with the undying nomenclature of this special type of mass e-mail? If an unsuspecting user carelessly forgets to log off a workstation, prankster passersby inevitably send joke e-mails from the open account. A mixture of amusement, annoyance, and consternation mark this impeccably-named aspect of campus computing.

Let's take a look at the technical side of this issue (I apologize, gentle readers, that this time around I have no colorful Swedish Fish analogies to make.) Many organizations manage their computer log-ons with a directory service. Imagine setting usernames and passwords by hand for every single user for every single machine on campus. You'd be busy for weeks—and what if someone had to change a password?

A directory service keeps user information, such as usernames and passwords, in a central location so it can be managed easily. Juniata uses Microsoft's Active Directory service, which enables Windows computers to join a domain easily and use network drives.

For all the beauty of this type of system, it is tragically flawed in that it depends on the user to be conscientious.

According to Dean of Students Kris Clarkson, the poopfinger started in around 1996 or 1997. Why is this mass e-mail called by such a nauseating name? "Adolescent male humor," said Clarkson. Legend has it that a student (whose name is long forgotten) decided that the term was outlandish enough to grab attention. Thus, the poopfinger stuck (for want of a better verb).

Recently an epidemic of mass e-mails ensued from several disgruntled students responding directly to a poopfinger to the campus at large. The students publically disagreed on the viewpoint, and the entire campus had the opinions delivered to their inboxes.

Clarkson said, "There are obvious ethical issues, i.e., using someone's account without permission, intentionally trying to humiliate others, deception (misleading subject lines), and offensive material." Though not in effect at this time, a draft of proposed measures for system abusers can be found at http://services.juniata.edu/cts/forms/MassE-mail_draft.pdf .

Fortunately, the mail server fears no poopfinger. Upgrades in 2002 allowed mass e-mails to be sent much more smoothly and easily than before, according to network manager Anne Wood.

continued on page11

Muddy Run

continued from page 1

look at meal exchange," adding that he might do away with it completely.

McLaughlin's solution to meal exchange and portion size problems might include eliminating set prices on meals. Students would then be given a set amount of money each day (more than the current $3.50) to spend on a variety of foods.

The selection at Muddy Run is another student concern. Food choice has been limited, especially this semester when food in the Baker exhibition line matches the daily Muddy specials. When the two lines offered different foods in the past, money was lost and food wasted as more students chose the entrées at Baker. However, as students probably noticed, McLaughlin added a salad bar to Muddy over fall break. Students can choose between various vegetables and dressings when making their own fresh salads. McLaughlin wants to "find a balance between healthy and not-so-healthy foods," and offer more selection. Muddy Run has also started to order wheat bread delivered fresh from a local bakery every day. These wheat rolls are larger that the traditional 6-inch breads, so students get more food for their money.

Muddy Run was renovated in the summer of 2000, but more changes might be on the way. New windows were installed this past summer, and McLaughlin hopes to convince the college to make additional renovations in the near future. McLaughlin says, "In my business, five years is a long time to go with the same concept." Hopefully the students at Juniata will see changes in Muddy before 2005.

Students are encouraged to make suggestions about the dinning services. McLaughlin emphasized that his "doors are always open. I enjoy talking one on one with students to better understand their concerns and ideas about the food on campus." He wants to know how students feel about the possible changes mentioned in this article.

The bulletin board outside Baker will soon be cleared to allow students to express their concerns, comments, and suggestions about Muddy Run and other dining services on campus.

OPINION

Ask President Kepple

"On Mountain Day this year all support staff needed to come to work in their various offices around campus. They were permitted to leave work for some time during the day to attend Mt. Day lunch with the rest of the campus—but then they needed to return to their offices for the rest of the day. I wonder why that is. If all students and faculty have the day to enjoy together – without working – why don't staff members have this opportunity as well? Doesn't this policy make support staff personnel seem as if they are lesser members of our community?"

Here is the official announcement about Mountain Day – some employees attend Mt. Day; some are needed on campus to work on important deadlines, and some just take the day off. We do encourage everyone to attend and enjoy the day. I also had a couple of critical things that had to be done that day and did return to work at about 3 p.m.

"All College offices will be open the morning of Mountain Day, and employees should report to work as normally scheduled. Those choosing to attend Mountain Day may leave work early to attend the event as well as dress appropriately for the event. If you are not attending Mountain Day events, you are expected to be at work for the full day. Employees are encouraged to attend this traditional event and enjoy the afternoon." – Gail Ulrich, Director of Human Resources

"What is the status of the Alfarata building project? When will the new student housing be available, and how many students will be able to live there? What else will the building be used for?"

We are just about to start construction on the renovation of 5,000 square feet of Alfarata for the Bob and Eileen Sill Business Incubator. When the incubator is completed in mid winter, it will have a variety of spaces and resources needed by Juniata students and others to create new businesses. The remaining part of the building (about 32,000 sq. ft.) will be renovated into apartments housing 60 students. The current plan has the space divided into 17 apartments with 2 to 5 single bedrooms in each. Each apartment will have its own bathroom, living room and small kitchen. We expect to begin the project in several years as student enrollment grows and funds are raised to pay for it.

The Juniatian accepts questions for the "Ask President Kepple" column. Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Reasonable comments are appreciated, and questions will be considered based on relevance to the campus community.

Part of the community

Pamela Bodziok
co-editor in chief

My favorite example of being a commuter at Juniata College comes from the fall semester of my freshman year. I had been in college for maybe two months, and I hadn't yet settled into the comfortable groove of college life. In short, I was still a nervous basket-case about myself and my surroundings.

One morning on my way to class, I was greeted by a professor I knew, and we stopped to chat. After saying hello, he asked, "So. Did you decide to commute here every morning after all?"

I knew where this was going and dreaded it. "Yes," I said. "I didn't change my mind over the summer or anything."

"Oh." He looked at me intensely. "That must be quite a drive to make every morning."

"It's only about forty minutes one way." "Wow, that's pretty far to go every single *day*, you're going to get tired of it quickly."

"Well, maybe, but I like it a lot right now." "Going to be pretty hard to do when it starts snowing."

"Well, you know, I'll just have to take it slow." "It's supposed to be a pretty rough winter this year, too." "Huh."

"Have you been able to make any friends? It's a lot harder to do when you live off campus." "I've made a few." (Which I had.)

"Well." He looked at me for a few moments longer, kind of shaking his head slightly, then said, "Well, have a good day!" And he walked off.

Yes, this is the support system that Juniata College has in place for its commuting students. And let me be clear: I'm not singling out one professor in one instance – I had the same level of support (or lack thereof) from other faculty, the administration, fellow students, and the occasional random person I might bump into. Commuting is not accepted as a popular lifestyle choice here.

This is ironic, when you think about it. Here we are, at a liberal arts college, a college that claims to embrace diversity and to accept all people regardless of their lifestyle choices – except when it comes to choosing *where* you live. If you are one in the minority that decide to forgo the dorm room living arrangement, well, all bets are off. Acceptance doesn't apply to *you*. Does anyone but

continued on back page

You do speak Spanish here, right?

Carolyn Keller
staff writer abroad

So let's recap from last week. I arrive in Spain, safe and sound. What's next? The language of course! It was an obstacle to be tackled upon the arrival of my host family: a mom, a host sister, a host sister's boyfriend and a brother. Joanna (from the last column) told me my Spanish was pretty good for just having got off the plane, so in turn I was feeling pretty good about my ability in general.

Yeah. Let's just say first impressions aren't always the ones you should go by, at least not when it comes to Andalucian Spanish. It's a little different. Different as in my host mom introduced herself and I suddenly wondered if I landed in the right *country*. Surely this couldn't be *Spanish*! The infamous Spain-Spanish lisp (which, along with barking dogs and freakishly loud motorscooters, are the preludes to culture shock, I am sure) is one thing. But here they were missing whole letters of the alphabet! Valuable, essential s's and d's, just...GONE!

The world seems to be speaking with a wad of cotton shoved in its mouth, and of course there's that whole other verb tense that nobody teaches you because you'll only need to know it if you're going to Spain. Hum. Luckily it's pretty easy to recognize, though at times I felt (and sometimes still feel) like I got knocked on the head... and came to as a kind of IQ-deficient Spanish Forrest Gump, sans the classic witticisms or the million dollar shrimp company.

But alas, my job is not to scare you. So if it helps, one of the more surprising discoveries, at least for me, was just how prevalent English is here. Be not afraid, potential *Sevillanos*, you will be surrounded by English speakers, sometimes to the point of annoyance (depending on how much you want to learn Spanish). Most of the international students are American. Unless your language skills are exceptional, they will be your classmates as well. There are even several classes you can take that are taught in English.

As far as Spanish goes, *no te procupes*, after the initial shock, you start to enjoy the challenge. And to put any fears to rest about this crazy tongue, you adjust to it really quickly. I still maintain that Spanish is not a language my History of Spanish Art professor speaks, but other than that, you adapt. If you make it here, you can make it the rest of the way. Call it evolution.

THE ROOKERY

The artists' plight

Brittany Barbera
staff writer

It happens sometime late in August and then again in December. You casually sift through your mail and stumble upon the dreaded but inevitable letter. You know what is inside before you even open it: a tuition bill...along with a bundle of stress. You freak out because you don't know how you will pay for your college education.

Although Juniata provides students with financial aid, it often seems insufficient because our tuition is so expensive. Many students are not even aware of the existing Nomination Scholarships until the deadline passes and are ineligible to apply after their first year. Therefore, several qualified individuals do not receive additional aid and graduate with more debt.

This situation is particularly stressful for a minority group on campus: Art POEs. In a world where science students are the first priority, Art POEs are often ignored. I have come to realize that art will probably never be the most popular field of study here. But, that doesn't merit the right to pretend the art students who are here do not exist. Thus, I feel it is my duty to make the plight of the artists known to the rest of the campus community, in hopes that something will be done.

> We learn in the most dilapidated buildings on campus and pay extra for it!

Students who study art receive a "special" tuition bill. For almost every art class we take, an additional fee ranging from $15 to $260 is attached. Since all students need at least 45 credits in their POE to graduate, anyone studying art pays quite a bit more for education than their peers. So, on top of tuition (which theoretically pays for our education) and all the additional fees (which we pay for almost every class), we have further expenses. Since the additional fees only cover the basic supplies of the course, we must supply our own tools, paints, and any other materials necessary.

As if that isn't bad enough, our money isn't even going toward renovating the studios in which we spend the majority of our lives every semester. A liberal arts college such as Juniata should support artists much more than it does. Whereas the science students learn in state-of-the-art facilities, we learn in the most dilapidated buildings on campus...and pay extra for it! Case in point: take a walk over to the pottery shop. I am sure it will be a valuable experience for you. The "pot shop" was a hardware store at one time, but has since been converted into a rundown studio that is crowded and often visited by little rodents. For nearly thirty thousand dollars a year I think we deserve a little better than that. The least Juniata can do is provide the shop with a proper ventilation system so the clay dust doesn't cause damage to our lungs. Or install a more efficient heating system so we don't have to wear hats and three shirts just so our bodies don't go numb. I don't think anyone should be subjected to work under these conditions. It is absolutely ridiculous.

Given the circumstances, Art POEs often wonder what kind of a statement Juniata is trying to make. In the words of sophomore Holly Brown, "We call ourselves a liberal arts college, but the imbalance of majors and cost would make it seem otherwise." Is Juniata trying to take the "art" out of liberal arts? Based on the lack of support I have seen, I would say it definitely seems like it is. What's the deal? Shouldn't every student have equal opportunity?

I am not implying art students have more difficulties than other students. Nor do I wish to suggest science students do not deserve the luxuries they have. I simply want to shed light on these issues, which are incredibly important to artists. It is the responsibility of Juniata College to uphold its integrity in all disciplines, even the ones with a smaller percentage of students.

Letters to the Editor

Sodexho editorial short-sighted

I found the editorial on food service by Sodexho *[October 2 Juniatian]* to be extremely short-sighted. While it is true that poor food quality is probably one of the biggest complaints on campus, you and everyone else that complains have failed to consider many factors that make the food here what it is. Having served on the Student Food Advisory committee for Mike Ferrari, the former head chef, I learned that he and his staff were under strict guidelines, the biggest limiting factor being the budget. I can't tell you how many people at Juniata use this phrase: "For $28,000 a year _____" (insert complaint here); first, there are very few people that pay full price, second, it is a fraction of that price that goes to Sodexho's budget. If the school were to increase the cost of room and board, people would doubtlessly complain about this increase. Face it, we get what we pay for!

> "If you want better food [...] urge the school to increase room and board costs."
> *- senior Catherine Sheely*

Budget is a limiting factor in the variety of foods that are available to us. Another issue overlooked is the fact that food must be served to huge numbers of people over a span of several hours. Vegetables may come out of the kitchen at the perfect crispness, but after they sit in a steam tray or warmer for two hours they tend to get a little soggy. If Baker was only open for one hour I'm sure the food would be consistently piping hot and the vegetables would be crisp, but people would be irate due to shortened hours.

If you want better food there are numerous options for you: urge the school to increase room and board costs, join the Food Advisory Committee, or just talk to the chef. You would probably come out with an entirely different view on food service at Juniata.

Catherine J. Sheely, Class of 2004

Refuting Sodexho comments

I must say I was thoroughly disturbed by the comments on "Sodexho: an editorial" *[October 2 Juniatian]*. A comment was made about Sodexho services saying "it is commonly known that students on campus do not approve of food quality." Well, I don't know exactly who you are talking to but the people I know think Baker is pretty good for a college campus. Sodexho tries to make everyone happy. They even added a vegan line! Another comment was made about food being drenched in gravy in the Classics line, when I always request gravy on the side or no gravy. Was that hard? Same thing with the Exhibition line. You can kindly ask Norm, he IS one of those nice workers you spoke of, not put as much sauce in your serving or none at all.

Sodexho also spent thousands of dollars to re-do Baker over the summer to try and make us, the students, more satisfied. Sodexho gives more variety than ANY school I visited on college tours, or have ever been to in my life. You say that on a college tour a tour guide stated "The food is horrible there" speaking of Juniata. Well, good thing they don't come to school here because I know the Moravian athletic teams like the food at Baker so much they come here to eat before games instead of eating at a restaurant.

Remember, there are comment cards available, so I suggest you stick to those before writing an article bashing your own school's cafeteria.

Rebecca Shoaf, Class of 2005

Good idea, wrong method

I'm so glad someone finally took some initiative and reported every single negative thing about Baker...oh wait, the smiling faces were mentioned as the "ONE credit" given to Sodexho. This is such a good way to get things done around campus! Where would we be if we stopped the incessant complaining and actually praised a company of hard workers for serving us meals every single day? Apparently, this would get us nowhere, if you define nowhere as Sodexho trying to meet our requests as a student body. I'm quite confident that if these matters had been addressed with Hal McLaughlin, general manager, he would make every attempt to meet our needs, with the resources he has available. But, if I read an article attacking every aspect of the company I run, I'm not so sure instituting changes would be the first thing on my mind. Don't get me wrong, there are suggestions that should be brought to Sodexho's attention, but addressing them in the manner that the editorial did is most certainly not the way to go about it.

Angela Davidson, Class of 2006

Serving it up and dishing it out

Katey Glunt
staff writer

Juniata College is home to the number one Women's Volleyball team in the nation, as ranked by the American Volleyball Coaches Association (AVCA).

These women have triumphed over everything in their path. Against them, even Division I schools have fallen. At the Juniata Invitational, Princeton University lost in three matches. At the ASICS Collegiate Invitational on campus last October 3-4, the Juniata team soundly defeated, among 3 others, the AVCA top 25 team from Williams College (30-20, 30-16, 30-20).

On Wednesday, October 8, the Eagles went up against conference rival Messiah College, where they dominated the game. The Falcons were denied even reaching 20 points; the matches ended 30-11, 30-15, 30-18. In Conference play, Juniata's winning streak lengthened to 259 matches.

Junior Katie Charles, named to the all-tournament team at the ASICS Invitational with teammates Carli Dale (junior) and Katie Laucks (sophomore), seems to be proud of the team's work thus far. She said, "The competition has been good, and we've [all] been playing well."

Photo: Cara Yancey

In all their high-achieving accomplishments, the women's volleyball team still gathers to make sure the focus is completely on the game.

Dale, when asked about the secret to the women's amazing success thus far, stated, "We work hard everyday in practice and in the off-season. Everyone is committed to the same goal and we work as a team. We don't care about ourselves or individual accomplishments. All that matters is how the team does."

That said, there have been an amazing number of laudable performances by individual members of this extremely accomplished team. Laucks was also chosen the Commonwealth Conference "Player of the Week" during the first week in October. Senior libero Johanna Holtan, in passing the 2000-dig mark, stands second on the all-time Juniata career digs list and ranks 24th in the NCAA Division III. These recent successes have brought Coach Larry Bock almost within 20 games of the 1000-win mark. At 979, he is the winningest women's volleyball mentor in the history of the NCAA.

The team traveled to Emory University in Atlanta, Georgia over Fall Break to battle some of the top 25 teams in the nation. The best among these included LaVerne and Emory, teams ranked 4th and 11th respectively. The Lady Eagles returned home on October 14 for a conference match with Elizabethtown.

Their next home tournament, where they will be playing opponents from Divisions II and III, is on Homecoming weekend. Come witness this record-breaking team and wish them the best toward continued success!

Juniata self destructs in second half

Robb Patty
staff writer

Junior quarterback Greg Troutman completed 20-43 pass attempts for 256 yards and a touchdown, but it wasn't enough to get Juniata its second win of the season. Susquehanna limited the Eagles' ground game to just 59 total yards. Senior running back Craig Moshier had just 23 yards on 14 carries as the Eagles fell to 1-3 overall and 1-2 in the MAC Conference.

Juniata fell behind early in the game 10-0 until kick returner Kurth Engle took the Crusader kickoff 88 yards for a touchdown. This was Juniata's first kickoff return for a touchdown since 1995. The return cut the Susquehanna lead to 10-7. It was 17-14 at the half, and Juniata was in great position to have a big third quarter, as they have done in the past. This, however, was not the case as the Crusaders

Athletes off the field

Bill Bishop
staff writer

Juniata College specializes in creating well-rounded individuals. All aspects of the college education are geared toward preparing the students to succeed in the real world. That is one of the reasons that the athletic department here strives to involve JC athletes in community service.

Junior defensive back Matt Garner says, "The goal is not only to develop good athletes, but create highly productive people in society." The football program here at Juniata College places an emphasis on off-field development.

Head Coach Kevin Burke believes that all student-athletes are just that, students first then athletes. He does this by reminding his players daily to "stay on top of their academics." Coach Burke keeps his emphasis on the classroom so that he can keep his student-athletes grounded and their heads in the right places.

Basically it comes down to the idea that a student-athlete has three fields in which to perform: the classroom, the playing field, and the community. The classroom and playing field are the easiest two for the coach to build up, but the athlete's work in the community is just as important. In order to work in the community, Coach Burke has set up certain programs in which student-athletes can participate. For example, the PRIDE telethon is an event that takes place in Huntingdon to raise money for the community. PRIDE is a group that plans monthly activities for handicapped adults. The fundraiser is a huge event and, every year on their closing Saturday night, the Juniata College football team goes to the Smithfield Fire Hall in order to assist in moving equipment and tables. This is a good time for the people in the area to get to know the players that they watch on Saturdays and has become a hallowed tradition amongst the players.

Although all players participate in this and many other activities with the team, there are some student-athletes who go above and beyond in their community activities.

Garner, a junior biology major who carries a 4.0 GPA, is currently involved in both football and baseball here at Juniata. Even though busy, he still sees the importance of working in the community. Garner is an active participant in the "Take a kid to the ballgame" program. This is a National Collegiate Athletic Association (NCAA) sponsored program that allows young children to go to college sporting events and have mentors on various teams. This allows the children to get to know the players, receive autographs, and find new role models.

Garner also volunteered for a full-time position this past summer at the Altoona Hospital. He spent his whole summer volunteering in the hospital and says that "it was worth more in personal satisfaction than any paying job could ever be."

Along with the support from coaches and administration, student-athletes like Matt Garner have been able to impact the community and open the door for future athletes to make a difference.

Cross Country Men poised for strong finish

Tommy McConnell
staff writer

Juniata Men's Cross Country team continues one of its finest seasons ever under current head coach Jon Cutright.

After placing third at the Roanoke Invitational in Salem, Virginia, the Eagles moved on to the Penn State Altoona Invitational and dominated the field of five schools.

Sophomore Chris Sheaffer won the event with a time of 28:14. The win marked Sheaffer's first career invitational win. He also set the course record at Penn State Altoona.

Sheaffer was not alone atop the leader board. Sophomore Justin Fritzius finished in second place, just eleven seconds be-

continued on page 10

Eagles unite for two more victories

Kate Leib
staff writer

The Juniata field hockey team has been working hard over the past few weeks to improve its record which is now 8-4. Last season the Juniata team was able to set a program record for the most goals in a game against Washington and Jefferson with a score of 14-0. This year Juniata was again able to dominate W. and J. with a final score of 7-0 on October 2.

Seven minutes into the game, Junior Betsy Kusniez scored the first goal followed by Junior Grace McCluskey who scored two more. Senior Dana Groff added to the Eagle's lead while Senior Joanna Acri scored on an assist from Junior Billie Richenbaugh, who also assisted McCluskey with her first goal. Senior Jean Silvey assisted McCluskey with her second goal.

In the second half, Freshman Sarah Bender was able to score again for the team with an assist from Senior Alison Holst. McCluskey scored once again with an assist from Acri. Overall, the team was able to get off 25 shots at Washington and Jefferson's goalie, Heather Browne.

On Saturday October 4, the team was narrowly defeated during their overnight at Houghton. In the rain and occasional flurry the team led for most of the game with a score of 1-0 thanks to a goal made by Billie Richenbaugh. Houghton came back to tie it up late in the game and they advanced to overtime. Seven minutes into overtime Houghton scored again to end the game. Commented Juniata senior Allison Holst, "It's unfortunate the game didn't go our way but we made them play the game of their lives and they worked for every inch."

On Tuesday the 7th, the team took on Frostburg State and came out on top with a score of 3-0. This was the team's fourth shutout of the season. The three goals were made by Silvey, freshman Sierra Dickman, and McCluskey. This was McCluskey's seventh goal of the season.

Photo: Cara Yancey

The women's field hockey team planned to keep the ball from Frostburg State and that's what they did, winning the game 3-0.

The team is 2-1 in the conference and sits in fourth place, which is good enough to move them into the postseason. Their next conference game is on the 9th when they travel to Elizabethtown. Go Eagles!

Football

continued from page 9

would score 28 unanswered points, defeating Juniata by a score of 45-14. The Crusaders also had six plays of 40 yards or more that hurt the Eagles. Susquehanna was also able to convert 12 of 17 third down conversions which kept the Eagles defense on the field for just over 34 minutes.

Junior free safety Matt Garner said, "Susquehanna disguised their run package a little better than we had seen in the past week, which I think threw off our run support a little bit. The big plays were a combination of [this] as well as missed assignments."

Defensively Juniata was led by free safety Matt Garner who registered 12 solo tackles along with forcing a fumble. The Eagles look to bounce back next at home against conference opponent Lebanon Valley.

Cross Country Women will stay on right track

Tommy McConnell
staff writer

Juniata's women cross country team garnered its first win of the season at the Penn State Altoona Invitational, in convincing fashion.

The Eagles dominated the field of five schools, placing five runners in the top six. They monopolized the top of the leader board, scoring 20 points in the victory. Freshman Elana Amato finished second with a time of 25:00. Her effort was only eight seconds off the winning time. Amato described the team win as "amazing, huge. To...take first was pretty incredible."

Juniata owned places two through six. Stefanie Rynkewitz finished third, followed by Nancy Hayes in fourth. Lia Bella earned a fifth place finish. Katey Glunt rounded out Juniata's leaders in sixth place. After Amato's second place finish, the cluster of runners in the three through six spots were all very close. Only 29 seconds separated Juniata's third runner from its sixth.

Juniata has steadily improved as the season has worn on. "We started slowly," says Amato, "but each meet we get progressively better." This has the team, as well as Amato, excited for the MAC Championships, to be held on November 1. As long as they stay healthy and do not let the usual wear and tear affect them, they should be competitive in the Championships. "We've done better than expected," she said. "We're pretty confident we have a chance at MAC's."

Men's Cross Country

continued from page 9

hind his teammate. Fellow sophomore Mike Vella earned a fourth place finish, while junior Will Cantara finished fifth. Jason Freeman, another junior, the fifth Juniata runner in the top ten, finished in ninth place. The win has not satisfied the team yet. Says Sheaffer, "Our team has met (preseason) expectations, but every time we meet one, we set another goal."

Coming off a twelfth place finish at the more competitive Roanoke Invitational, Sheaffer used the momentum to get his second career first place finish.

Juniata plans to build on their first win of the season. The team has three more races left before the Juniata Invitational, an event to which they are looking forward. Sheaffer encourages everyone to come out and watch the only home race on October 25, saying, "it's a lot better than reading about it."

The end of the season should prove to be exciting for the Eagles. "Its been a long time since we've been this good," says Sheaffer, "We'll continue to get better and things are looking even better for the end of the year."

Club Ice Hockey

Ryan Genova
staff writer

One of the lesser-known clubs at Juniata is the Ice Hockey Club. With the nation's increasing interest in the sport, the members hope to move toward changing the vagueness of this fine club. Established in 1999, this is a fairly-new organization, but the athletes are determined to look toward the future. Said junior Zach Zettle, a 2 year member, "We're trying to build a team from the ground up. It's only been around for 4 years and our eventual goal is to play other college teams."

The interesting aspect of the club is that they don't go against other colleges. Kyle "Carl" Mish '05 says, "We play in what is called a 'beer league.' It is said that we play a bunch of old men, true, but they are pretty good old men that like to fight us 'younguns.'"

The 15 members play at the Galactic Ice Arena in Altoona between the months of October and January. Sundays and Wednesdays are game days, and getting people to make the 45-minute drive is a large focus of the members. "We really need to build up a fan base. We are trying to show the higher-ups on campus that we're a real team. We always let the campus know when the games are and hope they try to make it to at least one," said Zettle.

Photo: Zachary Zettle

Although the ice hockey team is only a club, they bring one mean face of intimidation ready for a challenge.

As always, however, the main goal is a good time. "We go out there to have fun, if we win, we win. If not, then at least we get some experience," said Mish. "We really focus on building skill, so we try to get everyone equal time on the ice."

If you are interested in becoming a member of the Ice Hockey Club, or would like more information, contact Kyle Mish or Zach Zettle. You can also log onto the club's official website for a Mission Statement at clubs.juniata.edu/icehockey.

Offense erupts against Mt. Aloysius

Robb Patty
staff writer

In the women soccer team's last game, Sophomore Nikki McLellan had a huge seven point outburst in an 11-0 route to Mt. Aloysius. McLellan scored three goals and assisted on another four to give the Eagles their fourth win of the season. Juniata out-shot the Mounties 38-2, and in their victories outscored opponents 38-1.

To start off the month of October, the women's soccer team traveled to Pitt-Greensburg. After falling behind in the first half 2-0, the Eagles fought back to cut the lead to one on sophomore Amy Tyler's goal in the 78th minute of the game. Juniata thought that they had tied the game at 2-2, but the official disallowed the tying goal. On the play, junior goal keeper Lindsey Treon punted the ball, while freshman Alicia Walsh assisted to sophomore Nikki McClellan, who then placed it in the top right-hand corner of the net. This goal would then tie the game to 2-2. However, the goal was disallowed by the official because he said that Treon stepped over the penalty box line before putting it away causing a hand ball. This took the goal away from Juniata and gave UPG a free kick and the winning goal.

Freshman defender Kelly Howard said, "The play was very frustrating because we worked hard to get back into the game, and then it was taken away from us."

Juniata currently sits at 4-7 on the season and has eight games left.

Freshman Alicia Walsh commented, "We had trouble at the beginning of the season, but knowing that most of our games are at home might give us confidence."

Men's Soccer still has shot at postseason

Robb Patty, staff writer

The Men's soccer team started their October off on the wrong foot as they lost a non-conference game to York College by a score of 4-1. Though the Eagles are 2-8-1 on the season, they still have a great shot at making the postseason. The Eagles currently sit at 1-1 in the section. Five of their next six games come against conference opponents, and with some strong play they could get into the playoffs. Against York, sophomore Kyle Dunn registered the lone goal for Juniata, while freshman Mark Guthridge made three saves in net, while giving up three goals.

Guthridge commented, "We need to make sure that we don't let down if we give up a goal. We have to stay on top of our game and we should be fine. If we play like we know how, we will make the postseason."

On September 28 the Eagles were scheduled to take on Pitt-Bradford however, the game was postponed. The women's team had played earlier and tore up the field, resulting in unplayable field conditions.

The Eagles are in action Wednesday when they take on section opponent Messiah.

Contrivances Amok: The Poopfinger

continued from page 6

To keep traffic down, messages over 100Kb cannot be sent to the major distribution lists. "I would still consider it a nuisance," she said.

Students have their own viewpoints. Said one, "We get enough useless things in our e-mail even without poopfingers."

Another agreed that, "The trash-talking against groups or minorities is pointless," she said, but added: "Sometimes poopfingers express valid opinions that people might be afraid to voice."

Juniata is not the first to have a tradition involving mass e-mail. According to the Jargon File at http://catb.org/esr/jargon, the practice of "baggy-pantsing" began long ago at Georgia Institute of Technology when mischievous observers, spying a user's unlocked terminal, would use it to post messages to newsgroups about just how baggy the hapless user's pants were. Occasionally the "baggy-pantsers" would alter the user's webpage content, but the practice was largely harmless. Any modified files would be thoughtfully backed up so that the user could easily return everything to normal.

The dreadful poopfinger shows no signs of being so benevolent anytime soon.

Theresa Tschetter is a PC Technician for the Solutions Center.

DiPaola and Coursey shine on the court

Rachelle Luther, staff writer

Beginning Thursday, October 2nd the women's tennis team took to the road for a long weekend of tough matches. It all started at Clarion University with a 1-7 loss. The team then headed to Albright and left with a 6-3 victory. The Eagles rounded out the weekend back home with a match against Messiah.

Clarion, an NCRA Division II school, was a difficult match. Even under the pressure of facing a great team, Lindsay DiPaola and Molly Coursey were able to win the first doubles match 8-5. The Eagles were forced to default one match when they came up a player short, while snow and sleet actually called another match.

The match versus Albright gave the team their fourth win of the season. The win was highlighted by Coursey and DiPaola's 8-1 doubles win. The Eagles dropped 3 other matches, but won five singles, giving them the overall advantage.

Juniata took on undefeated Messiah October 6th, a match that, according to Coach Gala Baker, was difficult.

The Monday afternoon loss left the Eagles with a 4-9 season record.

As the season draws to a close, DiPaola and Coursey have a legitimate chance at the doubles title in the Middle Atlantic Conference Championship.

Coach Baker remains hopeful and expressed her admiration for her team this year. "All the ladies have played well together, and have had really great bonding this year."

The Eagles are officially finished with their season. While they won't compete in the Middle Atlantic Conference Championships as a team, some individual members may still compete in the singles and doubles championships.

When questioned, sophomore Larissa Hine summed up the end of the season with this: "I'm glad that I have more time to study, but I'm going to miss tennis. We had our ups and downs...as a team we get along really well."

Congratulations to the Eagles on a season well played and good luck to the athletes heading to the MACs.

The Random Eleven

Matt Russell, layout editor

Wood and Duct Tape: Planks of wood have been duct taped to the sidewalk around campus lately. I can only think of two reasons: A) Fissures are forming and they're trying to keep the ground from splitting or B) They're speed bumps for the crazy golf cart drivers.

Wasted Nerds: The editors were sitting around talking after the weekly newspaper meeting, when one of us knocked over a small box of Nerds candy. "Oh no, wasted Nerds!" I joked. Theresa, our tech columnist and a PC Tech for the college, walked by and quipped, "That's how I feel some days."

Kill Bill: Wow. Just wow. This was probably the bloodiest movie ever, but that isn't the point. It's artistic genius. In it I witnessed possibly the most beautiful cinematic moments ever created. Wow.

Basketball courts: Do they not have anywhere else to store all that construction equipment, like behind Ellis? The basketball courts have essentially been closed all fall. First they dug a trench through them, then they had asbestos all over, and now there's a giant crane and stacks of wood on it. Couldn't they at least give us a half court?

Air Horn Anecdote: Mountain Day came, and so did those crazy people who use air horns outside our doors for half an hour. The first couple times I let it go, but by the sixth time I'd had enough. I climbed out of bed and found my own air horn (yes, I keep one just for stuff like this). By this time, the crazies had moved down the other hallway on my floor, still blasting away. I mirrored their blasts three times. They stopped (I got much glee from this, picturing their puzzled faces) and then I heard someone say "What the hell?" and footsteps coming back down the hallway. I darted back inside my room, leaving them scratching their heads about

Sodexo on its feet: I went to return my tray... behind 24 other people. One window was **closed** and the conveyor belt stopped in the middle of the lunch rush. Just when I was figuring out how to lampoon them in this column, they quickly opened the other window. Staff members appeared and started collecting trays and moving them into the back. The line dispersed in less than 2 minutes – well handled.

Baker's Surveys: Well, I said something nice about them in the last item. That was before I went to lunch on their advertised "Give us your two cents" day. They **ran out** of surveys. How am I supposed to give them 2 cents when they don't have comment cards any more and can't even use a photocopier?

Just to set the mood now: Baker served pierogies the other day. I like pierogies. I like them with cheese. But they had no cheese. They served them with mashed potatoes instead. That's right: mashed potatoes with potato-filled pierogies. Yum.

Lunch conversation: "We should have condom dispensers in the guys' bathrooms," said a guy. "Then we should have feminine product dispensers in the ladies' rooms," said a woman. Another guy replied, "Well, *actually*, there's a feminine product dispenser in the men's room in South." The best part is, it's true.

Construction: The workers start their clanging and hammering at **6 a.m.** in the morning, when everyone's trying to sleep. Then, they break for 3 hours in the afternoon while everyone's in class. Perfect.

Ideas for the R11: I asked my roommate for a funny idea for this column. He said "how about the bookstore ripping everyone off?" I asked, "How's that funny?" He said, "I dunno, just type 'haha' at the

Commuting editorial

continued from page 7

me sense the irony in that?

The most popular reasons given for why I was ruining my life were that I would grow up to be maladjusted and anti-social as a result of never separating from my parents properly, and that I'd never become a part of the Juniata community because of my choice to live away from that community. The former is moderately silly (you do not have to live in a dorm on a college campus to achieve a healthy, independent adult life), but the latter is completely ludicrous. Because I lived forty minutes away from the campus, I would never be a part of the community? What about all those upperclassmen who live in an apartment three minutes away? Are *they* a part of the community though they don't live on campus? Where exactly is the line drawn to establish who can be a part of the community and who cannot?

But of course, this is simply not true. I don't feel less a part of the community just because I don't live here during the night hours. (I don't think commuting critics would say that our professors aren't part of the Juniata community, yet none of the faculty live on campus.) Nor do I think my independence has been hindered because I get to eat dinner with my family most nights. There are plenty of ways to begin the break towards independence from a college dorm.

Not everyone on the Juniata campus holds a grudge against the commuting lifestyle. But many people sure as heck do, and it's an interesting issue – especially now, when overcrowded living spaces has become another issue of ours. I find it fascinating that Juniata encouraged off-campus living this year, because they simply haven't the dorm space to accommodate all the new students. The cynical part of me can't help but wonder if the college might be willing to sacrifice the loss in room and board money in exchange for extra tuition money from having more students enrolled. Maybe I'm wrong about their motive in wanting kids to live on campus. Maybe I am not.

A good friend of mine, in her freshman year, had a dorm room in South. One of her neighbors, who routinely complained about the financial expenses of living at Juniata College, could actually *see her house* from her dorm room. Her house was literally a street away. Lucky for us, overcrowding wasn't an issue back then – but the irony is still there. Do you really go that ludicrously far to be a part of the Juniata campus, the Juniata community, the Juniata family?

And should anybody have to? Because I thought diversity meant that everybody belongs.

OCTOBER 30, 2003 | JUNIATA COLLEGE | VOLUME 85, ISSUE 4

Von Liebig Science Center

Is it all it's cracked up to be?

Pamela Bodziock
co-editor in chief

"It's bigger than my dorm room," commented senior Jennie Fretts, peering into a space in the von Liebig Center for Science with "Ice Machine" written on the door. And, true to its name, the only thing in the room is a large, hotel-style ice machine, filled with crushed ice ready for anyone who needs a few ice cubes – or a lot of them.

The ice machine itself is not superfluous equipment; it's handy, even necessary, for experiments performed by biology students and chemistry students alike. But when one comes to realize that the room reserved for the machine itself may very well be larger than most dorm rooms on campus, it's hard not to look at von Liebig in a different light.

The sheer size and state-of-the-art facilities in the William J. von Liebig Center for Science has become both a source of pride for the college and a point of contention among the students and faculty of the school. Von Liebig celebrates its one-year anniversary this month, but many people around campus are debating whether or not the science center turned out to be worth all the fuss. Has it? The answer to that seems to depend on who you talk to.

The 88,000 square feet of space is divided up into lecture halls, seminar rooms, laboratories, and student lounge areas. Perhaps most famous is the Jitters coffee corner, where students, faculty, and staff can dash over for a quick cup of coffee or a pastry snack. There are plenty of plug-in ports for laptop access, and some of the technological equipment in the biology and chemistry labs is the latest in the market. Said Jay Hosler, assistant professor of biology at Juniata, "For the most part, the labs have been equipped really well. They were designed with good foresight for the types of classes that will develop, and can grow into the lab."

The building itself is quite aes-

continued on page 3

Photo: Cara Yancey

After the one-year anniversary of von Liebig's completion, updates are still being made. The pillars in front of the building have already been repaired at least twice.

Recycling on campus

Caitlan Zlatos
staff writer

Recycling is an issue of importance on a campus with a significant number of "green" students and faculty. Rumors concerning the fate of our recyclables arose last semester and continue to circulate. Do they go to the dump along with our trash?

The answer is *sometimes*. However, unlike what many may believe, this is not an issue of deception. Rather, it is an issue that revolves around one word: contamination.

Contamination occurs when people deposit non-recyclable materials in recycling bins or neglect to rinse out containers. These mistakes can cause everything in a contaminated batch to be thrown out. J. J.'s Recycling, the place where Juniata takes its recyclables, is picky about the amount of contamination they will handle. They readily discard batches of recycling they consider to be too contaminated.

"Last year, contamination was pretty bad. I'd say that more got thrown out than recycled because of it."
–Rusty Reese

Facilities Services' Grounds Supervisor Jeff Meadows and staff member Rusty Reese do what they can to maximize the amount that gets recycled, but a lot depends on the process at J. J.'s. Reese collects the entire campus's recyclables at the same time he picks up campus trash (he keeps them separated), takes them to be stored at the building on Penn Street, then sorts them twice a week. He removes as many contaminating materials as possible, then takes them to J. J.'s, where they get sorted again. J. J.'s may consider a load too contaminated that Facilities Services had considered acceptable.

So how much of our recycling is contaminated? Reese stated, "Last year, contamination was pretty bad. I'd say that more got thrown out than recycled because of it." However, not all areas of campus have problems

continued on page 2

Off-Campus housing

the dorm alternative

Rachelle Luther
staff writer

To upperclassmen who qualify, Juniata offers three alternatives to dorm life which can be labeled as off-campus housing. Currently there are 88 upperclassmen living in college owned off-campus dwellings. An additional 127 non-residential students live in apartments in surrounding communities. The non-residential number doesn't include the 124 commuter students who opt to live within a 50 mile radius from the college.

Tim Launtz, Director of Residential Life, stated that, "Juniata is advertised and is based on the premise that it is a residential campus." To put it simply, students are expected to live on campus. With its seven dorms, Juniata can accommodate 1023 students. The Res. Life staff reserves the right to restrict the number of people living in off-campus housing not owned by Juniata.

Each year Res. Life develops a housing options plan to accommodate students. This plan calls for a certain number of students to live off-campus, both in housing owned and not owned by the college. All off-campus numbers are considered "go beds," or "gender optional," according to Launtz. Off-campus housing, both school owned and not, can go to male or female students.

There are currently six college-owned off-campus residences. Three are apartment buildings:

Fossil Fest 2003: A new tradition

Ryan Genova
staff writer

On Sunday, October 19th, the Geology Club and Juniata geology students hosted "Fossil Fest 2003." At 2:00pm, roughly 150 children from all over the area were escorted by their parents to the Brumbaugh Science Center parking lot. From there, Professors David Lehmann and Ryan Mathur and members of the Juniata Geology Club led the tour to two different local sites: the Peace Chapel and the Fairgrounds.

On arrival, group discussions were led by the Juniata student group leaders and every child received a collecting guide, a newspaper, and a bag. The participants were then free to carefully search for and collect authentic fossils, and nearly every kid left with something to be proud of. "Kids went home with bagfuls of fossils," said Lehmann, who helped organize the event. "We[the Geology Club] wanted to do something with the community. Kids like to collect things, so kids like to collect fossils."

For such a large production to run smoothly, as much supervision as possible was needed. The mass of grade-schoolers was broken down into groups of 10 for easier supervision.

Juniata alum Liz Blaine, who helped oversee the planning, organization, and direction of this event said "It was a great day. The kids had so much fun, and no one got hurt which was a plus. The Juniata students did well teaching the kids about the fossil formation process. The mini-lessons really helped out."

The success of the first-time event will lead to future Fossil Fests. "We'll do it on an annual basis," said Lehmann. Though it was geared for younger children from ages 6 to 12, anyone in the Juniata community was invited to participate. 200 cookies and Rice Krispies treats were provided by Sodexho, and McDonald's donated orange drink. All involved made a great effort to make it a fun and educational day for both the parents and especially the children.

Recycling on campus

continued from page 1

with this. Reese said, "The residents of off-campus housing are usually pretty good about sorting and rinsing their recyclables."

On a positive note, he has observed that the amount of contamination has greatly decreased this semester. There has been a big improvement in sorting and rinsing, resulting in a large increase in what gets recycled. This can be attributed in part to the attractive new recycling receptacles that have been appearing recently. These compartmentalized receptacles make it easier to keep different recyclables separated. Most importantly, they seem to do a good job at keeping trash separate.

In fact, the new units are more effective than the outdoor receptacles stationed around campus. Most contamination occurs at the outdoor units. When people are on their way to or from class, they often drop objects in the wrong slots because they don't pay much attention. The outdoor bins also collect rainwater, making pickup of the recyclables difficult. Not much actually gets recycled from these units.

The new bins cannot take all the credit for the recycling increase. People are becoming more conscientious about recycling. Recycling Committee president Mark Barnsley said, "Recycling bins are really just the start of a recycling program. The critical part is getting people into the habit of recycling. Once it becomes a part of the daily routine, something people don't need to think about, then the program is a success."

In regards to the remaining recycling rumors, the issue of contamination alone cannot satisfy them. Last year, a few campus residents noticed quantities of recyclable items being deposited at the trash containers near the Pottery Shop. These observations were valid, but the reason for the trashed recyclables was the result of a mix-up. Facilities Services staff used to take the campus's glass, plastic, and newspaper directly to the Huntingdon County recycling center on Route 26 in the fall semester. This site closed down in the spring, causing the recyclables to go instead to J. J.'s. Misinformation within Facilities Services led to the belief that J. J.'s did not accept glass, so nearly all glass bottles during the spring semester ended up in the garbage. Facilities Services corrected this mix-up, because J. J.'s does in actuality collect glass bottles.

The outlook for recycling is good this year, but there are still improvements to be made. In order to increase the percentage of recyclables that actually get recycled, follow these tips.

1. Rinse out plastic, aluminum, and glass containers. Make sure your bottles from Muddy are empty before you put them in the bins. Ideally, they should be rinsed as well, but if the liquid was clear, it's acceptable not to.
2. Always remove caps and throw them away.
3. Only #1 and #2 type plastic can be recycled (check the number inside the triangle on the bottom).
4. Facilities is checking into whether tin cans can be recycled this year. Stick to aluminum cans for now.

CORRECTIONS

October 17 Juniatian

The article "**Issues Concerning Muddy Run Café**" incorrectly reported current attendance at Muddy Run. Average attendance this year is down by 75 students from last year's attendance.

Two items from **The Random 11** were cut off by an ad on the back page. The **Air Horn Anecdote** was too long to reprint here, but this was the second:

Ideas for the R11: I asked my roommate for a funny idea for this column. He said "how about the bookstore ripping everyone off?" I asked, "How's that funny?" He said, "I dunno, just type 'haha' at the end of it." Well then… haha.

A celebration of female writers

Alison Finley
contributor

"Phenomenal Woman" by Maya Angelou will be one of the many presentations at this year's 11th annual "Unlock Your Voice: A Celebration of Women Writers" to be held in the Ballroom of Ellis College Center at Juniata College, Huntingdon, at 8 p.m., Thursday, November 6.

Juniata College students will read works by women writers in this annual event celebrating women's literature.

According to Dr. Judy Katz, associate professor of English at Juniata, "Unlock Your Voice" began in March 1994, when her Women and Literature class developed this program to celebrate Women's History Month, to give students a chance to share the works they loved as well as show how much great literature women have written.

The event calls on students to collaborate to create a powerful cultural event. According to Katz, "This program gives students an opportunity to use their own creativity and resourcefulness." An added benefit, she notes, is that the program "helps to get the performers over their anxiety about speaking. Students get to see that their words and their voices have power. It gives them a sense of confidence. They may think that they can't do it; but they can. Readers experience a feeling of empowerment."

Katz shared a story of one student who had never talked in the class, but volunteered to read in the program, and fell in love with performing. She went on to earn a degree in English and Theatre, as well as a master's degree in theater. "Unlock Your Voice helped to liberate her," said Katz.

One student, Juniata senior Johanna Holtan, is excited about the new experience "Unlock Your Voice" will provide. Her selection, "Phenomenal Woman" by Maya Angelou, has special significance because she discovered the piece in high school. "Maya Angelou is one of my favorite writers," Holtan explained. "I knew when this chance came around that I would read this piece. The reading makes me feel proud to be a woman, and I hope it gives the audience that same impact."

Juniata sophomore Steven Knepper will be reading "The Prologue" by Anne Bradstreet. He loves Bradstreet's poetry, "because it is heartfelt and sincere. She was a very progressive thinker in the area of women's rights, especially considering the fact that she was Puritan."

Juniata junior, Denique Conner, will be reading poetry by Lucille Clifton, including "Homage to My Hips." She chose these poems, she explains, "because they encourage women to respect and love themselves for the beautiful women they are. Women's beauty does not depend on their dress size."

Other readers include Janine Dudash, Nicole Fernandez, Alcione Frederick, BJ Greenberger, Gen John, Meredith Killian, Katie Laucks, Christy Stubler, and Dawn Vitko.

Men and women are encouraged to attend the presentation on November 6, though some of the material may not be suitable for young children. Free refreshments will be available.

Halloween fun

On October 31, Halloween night, the following activities will take place on campus:

Road Rally – 6 p.m. on the Tussey-Terrace Lounge. Teams of up to five people can participate. Cost is five dollars per team. Will be followed by Halloween movies and refreshments. To sign up, e-mail littlmp0@juniata.edu. Sponsored by the Catholic Council.
"Night of Terror" Haunted Hike at the Peace Chapel – 8 p.m. at the Peace Chapel. Sponsored by the Alternatives to Alcohol House.
Sinners & Saints Halloween Party – 8 p.m. to midnight at the Braxton residence. Dress up as your favorite sinner or saint, and perhaps win a prize. Sponsored by the Religion Department.

Von Liebig Science Center: cracked up?

continued from page 1

thetically pleasing – the large open space when you step inside, the display cases that line either side of the main floor entrance, and the modern look to the architecture itself gives everything a polished, professional, and even innovative look.

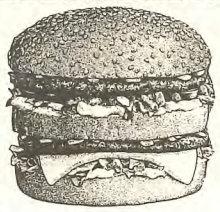
A few things have gone wrong with von Liebig, and not all of it is immediately apparent. Most students have already noticed the cracks in the pillars outside that have been repaired several times in the last few months. But there are other concerns. Carrie Rhodes, the Scheduling Assistant in the Registrar's office, says she had been hoping for more classrooms in von Liebig than what actually turned out. Most of the rooms in von Liebig are labs.

Rhodes said, "There are only two classrooms, two computer labs, and one small seminar room available for scheduling classes in."

Von Liebig is impressive, and it's done a lot of things right. But despite all of the careful planning that went into the new science center, it may need a few repairs before its next anniversary. With a growing number of students enrolled each year at Juniata, classroom scheduling is getting harder and harder each semester.

Luckily, despite cracking pillars and badly-designed windows - said Hosler, "I'd like to have an office window that *opens*." - the benefits in technology and lab equipment of von Liebig seem to outweigh any negatives.

Alumni helpful to interns



Kate Leib
staff writer

Business POE's here at Juniata enjoy many internship opportunities, and many of these are due to helpful alumni. While some alumni don't directly offer internships, others do. If a student or professor expresses interest, alumni help out as much as possible. Sometimes there are so many internships that are available, that great opportunities go unfilled.

Another helpful aspect concerning internships are organizations that have longstanding internship relationships with the college. One such organization is the Mutual Benefit Group here in Huntingdon. Juniata provides interns for the organization and many Juniata alumni work there after graduation. "There's a symbiotic relationship," explains Professor Donaldson, chair of the Accounting, Business, and Economics department. JC Blair hospital and MeadWestvaco are other organizations with a long history of providing internship possibilities.

A fairly new organization providing internships to Juniata is Kish Bank whose Vice President is alumni John Cook. Some other alumni-associated organizations that are helping Juniata business students gain the experience they need include QVC, Presbyterian Homes, Ward Trucking, and the Huntingdon Chamber of Commerce.

There's not nothing to do

Nate Drenner
co-editor in chief

The Juniatian is typically published on Thursdays. By then, students are no doubt thinking of their weekend plans. Some may say, "There's nothing to do." It's an attitude that seems to pervade our campus but one that is not supported by reality.

Last fall, as a lonely and frightened freshman, I might have agreed with them. But since then, I increasingly have not had a weekend with "nothing to do." (Forgive the double negative.) What's the difference?

Friends.

Not the TV show. Dear God, *not* the TV show.

My point is this: when you have a network of buddies, even something like a trip to Subway for dinner can be fun.

Huntingdon is not an active, metropolitan area. I don't think anyone will dispute that fact, and I don't think it is a fact the college tries to hide. Nor can we expect a mall, theater, or arcade to spring up overnight. Note, however, that many Juniata students do not come from active, metropolitan hometowns, yet they will go home for something to do. The difference is that, at home, the person is very familiar with the people and places around him or her.

The college does all it can to bring both entertainment and intellectual stimulation to campus. The Juniata Activities Board organizes comedians, movies, and bus trips. The artist and lecture series bring quality entertainment and speakers to the college.

Student organizations hold events for both members and the campus community. Student clubs are always looking for more participants. For its size, Juniata has a plethora of clubs, with more popping up every year. To be fair, many students are active in Juniata clubs. However, if you're one of those whose extracurricular involvements are limited, a club or sport can be a great opportunity to both meet people and find something to do.

Heck, write for the Juniatian. I wouldn't mind seeing a 20-page paper next spring.

(Nate sees layout editor Matt Russell collapse from exhaustion come January.)

Your idea of a fun-filled time might not include club meetings, lectures, or even writing a Juniatian article. However, by participating in different activities and events, you will know more about what *is* going on at Juniata. You will meet people who know more about what is going on at Juniata.

If you're not pleased with the college's offerings, then be creative. Take a trip to Altoona or State College. Enjoy our natural surroundings with a hike or camping trip. Have an old-fashioned movie night.

But, most importantly, find a group of people you like to be around, and the rest will fall into place.

What are your plans for this weekend?

The Juniatian accepts letters to the editor in response to articles and editorials.
E-mail **juniatian@juniata.edu**
or write to:
Juniatian
Juniata College Box 667
Huntingdon, PA 16652

Submissions may be edited due to length or content.

Letter to the Editor: Artists' plight

I appreciated Brittany Barbera's "The artists' plight" in the last Juniatian. However, if art POE's are "ignored" on campus, then communication, history, social work, psychology, English and criminal justice (just to name a few) are "ignored" as well.

I realize that it was not the intent of the writer to insinuate that art POE's have it harder than everyone else, but one must realize that most POE's have many classes in the same "dilapidated buildings" as those studying art.

As a person who has taken several art classes, I too have felt the emptiness in my pocket after the tuition bill comes with additions made for trips to museums and supplies. But art POEs and any student who signs up for an art class should be well aware of the extra cash needed to take these classes. The extra fee is in the class schedules. If you can't afford it, or don't feel like you should have to pay extra, then simply do not take the class.

Chances are, if you love art, you will go to museums anyway; and the cost to go alone will most likely be HIGHER because going for a class usually equals a group rate which usually equals a lower ticket price. Just because art classes are one of the few classes which automatically adds the additional fee to the tuition bill doesn't mean that art POE's are the only people paying extra for classes. Intercultural Communication, for example, requires three field trips, two of which students have to pay for out of their pockets. The same thing happens in other classes. Whether added to tuition or paid for at a later time, extra fees aren't fun (or cheap), but they are sometimes necessary to get the most out of a class.

Art POE's should be more than happy that they have their own art museum, darkroom and ceramics studio (with Professor Jack Troy, a world-renowned artist). I don't think a POE that was "ignored" would have those things.

I completely agree that Juniata seems to give "first priority" to biology and chemistry, but before complaining about extra class fees, any art POE who feels they "don't exist" should realize that it could be a lot worse.

Erin Strine, Class of 2004

Ask President Kepple

"In a past Juniatian, it was stated that, 'You park for free. However, you have to pay a fee to have your vehicle registered.' If we're not paying for parking, what does the registration fee go towards?"

I think that is a bit of an overstatement - the fee really is for parking. The sticker also helps us help you when there is a problem with your vehicle. By the way, it costs approximately $1,000 to create a parking space.

"Do we use recycled paper in the computer labs, photocopiers, and campus publications? If not, why don't we? It's not that expensive."

From Ray Chambers, VP and Chief Information Officer:

We are looking at moving to recycled paper in the labs and copiers. Previous attempts to use recycled paper were not successful, primarily because of the storage environment. Paper in general, and recycled paper in particular, is easily affected by temperature and moisture in the environment. The college does not have storage space that provides adequate control over these variables, so our attempts to use recycled paper have been problematic. We are talking with a new copier vendor about providing paper as part of the contract. If they agree, we can start moving to recycled paper in copiers and laser printers on campus.

Publications produced in Print Publications here on campus use recycled paper when the stock is available in pre-cut sizes. Most publications are purchased from commercial printers. In those cases, recycled paper is used when the client requests it; however the cost is generally higher.

The Juniatian accepts questions for "Ask President Kepple." Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Reasonable comments are appreciated, and questions will be considered based on relevance to the campus community.

The Rookery Brock Eastman

Silence is golden

Nick Reger
staff writer

On Saturday, October 25th at the year's second Artist Series production in Rosenberger Auditorium, an audience of all ages was delighted to see an eccentric old man being harassed by the forces of nature. In the beginning he was just a harmless janitor with the almost mystic ability to drop everything he touched, including his comical bowler hat. In the course of the show, disparate elements of the physical world appeared to scheme together to wreak havoc on this hapless eccentric. Things went surprisingly wrong: a box of matches, when opened, was upside down, scattering its contents everywhere. A broom was recruited to clean up the mess which promptly falls apart. His sweater entered the fray, tangling itself with the broom handle and dislodging his hat. Surely, this was a deliberate plot. Matches insolently burned out, mere seconds too soon to be usable. Objects disdainfully dropped, remaining ever slightly out of reach. However, somewhere in-between his balancing of a feather on his nose and his dancing with a four-foot stack of paper cups the audience realized that this old man was not on the

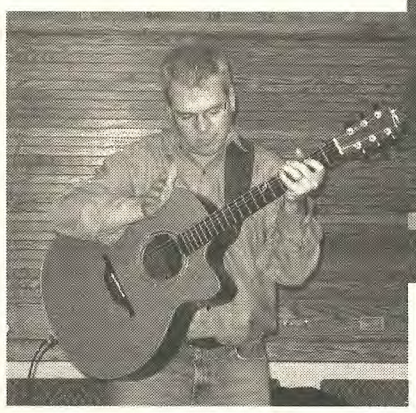
Avner the Eccentric gave all a night filled with laughter.

The past and present unite

Brittany Barbera
staff writer

Juniata College is a place like no other— we all know that. But, for approximately 215 students and their families, Juniata is a family tradition. On Saturday, October 25, several of these families ventured back to their Alma Mater, to visit relatives, catch up with former classmates, and take a stroll down memory lane.

In the late 1990's, President Kepple created the Alumni Legacy Reception in order to honor families who have had multiple generations that attended Juniata. On Homecoming/Family Weekend, Juniata hosted its sixth annual Alumni Legacy Reception. The reception provided an opportunity for the families to mingle with other legacies and tell share stories with each other.



Among the attendees, were junior Alexis Donkin and her father. The Donkins shared their JC family story and then entertained the group by singing and playing the guitar. Alexis' parents met here when they were students and now live in Santa Barbara, California. Alexis was determined not to attend Juniata and spent two years studying Art at Bard College. After two years, she realized she was not happy and wanted to change her major to Peace and Conflict Studies. Her parents suggested that she apply to Juniata.

When asked how he felt about his daughter's decision, Donkin said, "I felt like it would be a good choice for her, and it turned out

Juniata hits roadblock

Tommy McConnell
staff writer

Wilkes University scored on five of its first six possessions and put up 31 points in the first half against Juniata en route to a 44-7 victory. The loss dropped Juniata to 2-5 overall, and 2-4 in the MAC conference.

The Eagles' homecoming game, was billed as a match up between Wilkes' first-ranked run defense and Juniata's stand out senior tailback Craig Moshier. Moshier was looking to build on last week's JC record-setting MAC honor roll performance (285 rushing yards / 3 TD's vs. Albright). But Wilkes' rush defense lived up to its ranking. Moshier was held to just 25 yards on only 11 carries.

Wilkes' offense had just as much to do with Moshier's limited carries as their defense. Using solid field position and big runs by Brett Tricholo, Wilkes jumped out to an early lead it would not relinquish. Juniata had to play catch up, and was forced to go to the passing game. Junior quarterback Greg Troutman played well, completing 12 of 24 passes for 134 yards against consistent pressure. One three yard completion to Anthony Lipple (WR) in the first half moved Troutman's career passing yard total to 5,976 – a new Juniata Football record. Unfortunately, though, the offense could not convert some promising drives into points.

Juniata had some chances early in the game. On its first drive, the team moved into Wilkes' territory, but the drive stalled, forcing a punt. After allowing 14 points, the defense

Juniata continues dominance, wins tourney

Tommy McConnell
staff writer

Juniata's Women's Volleyball team remained perfect over the Homecoming Weekend, winning the Wid Guisler Invitational without losing a set. The Eagles are now 32-0 on the year.

In the championship match, Juniata defeated New York University 3-0. The only time the match was in any real doubt was in the second set. Juniata trailed through most of it, but somehow fought back to win, 32-30. The comeback killed any chance NYU had of a win, and Juniata went on to handle the rest of the match.

"Any game we play, we try to think we are always ahead," said junior middle hitter Katie Charles, "We play well when our backs are against the wall."

NYU was last on the list of teams Juniata defeated this weekend. California (PA), Muskingum, and Eastern all fell victim to the Eagles, who continue to trample opponents. The team has lost only seven sets all season, and all of those have been at invitational tournaments.

Conference play has not even been competitive. The lack of a challenge in the conference forces Juniata to national tournaments, which they have won as well. Says Charles, "We travel to play the best opponents," but they treat every game, conference or not, "with a business like attitude."

Juniata's business like attitude helped them place three members on the Wid Guisler All-Tournament team. Johanna Holtan (Sr. – libero), Katie Laucks (Soph. – MH), and Carli Dale (Jr. – setter) were all honored.

The Eagles now look forward to the remainder of the season, and then the playoffs. They will, in all likelihood, enter the post season as the number one ranked team in the nation. The ultimate goal is a national championship, but they are too smart and determined to look that far ahead. They will continue to take their opponents one game at a time, with that same business like attitude. Says Charles, "We can't look past opponents, because that is when you start to lose games." But if the Eagles continue to play with their usual intensity, hustle, and power, losses don't look likely.

A time-honored tradition

Nick Reger
staff writer

In keeping with Homecoming tradition, Juniata's Men's Rugby Team faced off against the Juniata Men's Alumni Rugby Team Saturday afternoon. Also in keeping with tradition, the alumni won.

This marks the umpteenth year that the River Rats have been trounced by the Alumni Team. Not to say that the Men's Rugby squad is either unskilled or poorly trained, for they are neither. Indeed they have quite a talented team this year. However, despite that, the Alumni won once again.

Toward the beginning of the game it seemed like this losing streak might be broken, with River Rats dominating the Alumni team. However, later in the game, following some player substitutions by the Rats the Alumni came back to win the game.

The score was 34 to 22 with Juniata tries from Randy Ogle, Trey Nicolette, John-Peter Melle, and Rob Tirserio. A try is similar to a touchdown in football, but worth five points rather than football's six. For more information as to the rules of rugby either ask one of the players or visit their web page under athletic clubs.

The next Men's game is against California on November 1st. The games are played on East Field and spectators are always welcome, as indeed are new players. So go out and watch the River Rats play, and if it looks like fun, the Rugby Squad always welcomes new players, both men and women.

Avner the Eccentric

continued from page 5

receiving end of some cosmic joke, but indeed he was one in control of all the elements.

Avner the Eccentric – famed magician, juggler, and mime – amazed his audience with casual oddities, from conducting the viewers as an orchestra of screams and whistles to throwing popcorn at bemused watchers. The popcorn by the way, he had pulled from his voluminous pants earlier in the show.

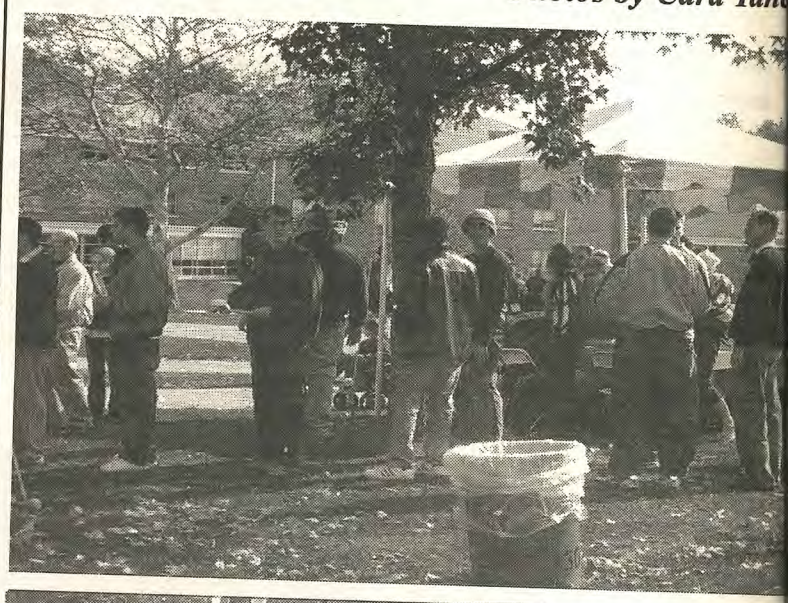
Perhaps the oddest characteristic of the one-man show, however, is that it is done in almost complete silence on Avner's part. The only noise came from the uproarious laughter in the theatre.

Having delighted audiences with his perfected act, Avner the Eccentric should continue to startle and amaze future generations for many years to come. Hats off to this talented clown, just as long as it's not *his* hat.

Legacy reception

continued from page 5

to be an excellent one. It is better than we could've expected it to be."



Alexis said she was "looking for a sense of community and [she] didn't find that at Bard. But, when [she] visited Juniata, [she] did immediately."

Some legacies run even longer on campus. Bob and Eileen Sill came to Juniata in 1956. Soon after, they married and had a daughter, Cindy. Along with her sisters, Joy and Karen, Cindy followed in her parents' footsteps and graduated from JC in the 1980's. Now Kyle Allen, Cindy's son, is a first year student, thus making him a third generation legacy. The Sill family practically has Juniata blood running through their veins. And In the words of Eileen, "We sell Juniata to everyone."

The Donkin and the Sill families are just a few of the many people who share a history with Juniata. The Legacy Reception is where the past and the present unite. Alumni and current students gather together to celebrate their love of a place they will never forget: Juniata College. We, as current students, will never forget JC either. Who knows, one day we might even start family legacies of our own.

Juniata Cross Country: **Home run**

Katey Glunt
staff writer

Homecoming found the Men's and Women's Cross Country teams at home for the only time this season, at the first ever Juniata Invitational. The race wound over the rolling hills of the Huntingdon Country Club, located along Route 26. Among the eight teams present were conference opponents Albright, Messiah, and Susquehanna. With runners at the top in both races, Juniata earned first place for the women's side and third place for the men.

The women's 5K started at 10:30 a.m. Juniata packed it up at the fast downhill start, the team's top five finishing within 53 seconds of each other. Sophomores Katey Glunt and Nancy Hayes kicked it home in 20:45 and 20:27 minutes respectively, the duo getting their second 1-2 finish in as many weeks. Senior Stefanie Rynkewitz, crossed the line in fifth, earning top-ten distinction. Lauren Gates and Lia Bella, both freshmen, rounded out the scorers in 14th and 15th place respectively.

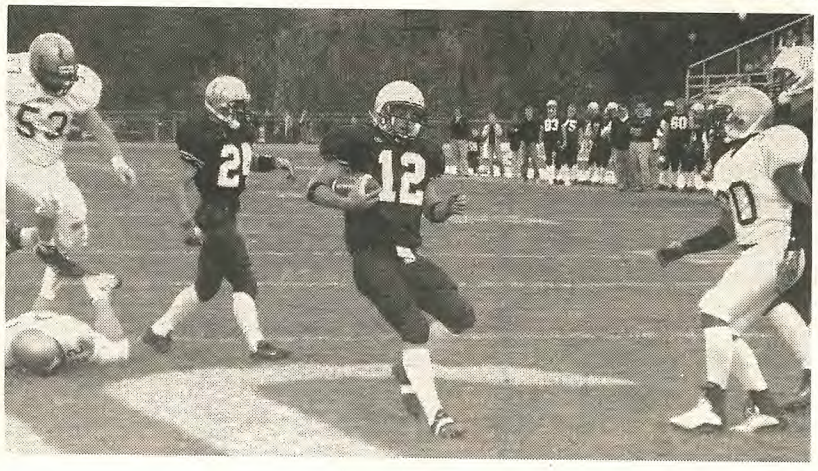
The men's race, an 8K, was the only hitch in the the proceedings. Nearly halfway into the race, the four runners at the front - three of which were from Susquehanna - accidentally took a wrong turn. Juniata sophomore Chris Sheaffer, in fifth, led the 61 other men in the right direction. "I yelled, but you can only yell so much when you are running as fast as you can," he said.

Before the race, runners have the opportunity to go over the course with a map. The course itself was marked with painted lines and arrows and a multitude of orange flags. Course marshals stood at many of the turns.

> **"Having the support of friends, roommates, professors was helpful."**
> ***–Senior Carol Longenecker***

Sheaffer added, "I felt bad, but knowing the course is an important part of racing. You can't just zone out and run, you need to be aware of everything around you."

Though the four ran an extra 2-300 meters, they still managed to make it into the top ten.



Juniata's men ran strongly, Sheaffer breaking his own course record with his winning time of 28:14. Michael Vella, a sophomore, came in second for Juniata, finishing 11th overall. Junior Will Cantara, Freshman Josh Leasure, and Sophomore Jeremy Lampert ran solidly to the end, earning places at 16th, 24th, and 30th.

The experience was a good one for the home team. Coach Jon Cutright was happy with the day overall, both as a coach and as executor of the event. "Minus the first four guys going the wrong way, I was pleased with how well it went. I have already had coaches call me to say they'll be back next year. People said they like the course. Even Susquehanna's coach said to keep running the race," said Cutright.

In addition to scenery, the course is extremely spectator-friendly. Senior Carol Longenecker voiced a common opinion about the presence of the numerous fans, "Having the support of friends, roommates, professors was helpful...especially because this was our only opportunity to run at home."

This was the last collegiate 5K for the six senior women. It made for an emotional day. Stefanie Rynkewitz said of the race, "When I got on the line I knew it was the last 5K I was ever going to run with the Juniata uniform on. Afterward, [the seniors] got together and it was a little emotionally overwhelming to know that soon we'll be saying goodbye to such a huge part of our lives."

Football Homecoming game

continued from page 5

made a nice stand inside their own 10-yard line. Kiel Knisely then blocked Wilkes' field goal try. It looked as if Juniata had gained some momentum, but a tipped pass resulted in a Wilkes interception deep in Juniata territory. The fluke, yet costly, turnover killed Juniata's momentum and resulted in another Wilkes touchdown. Juniata would not be able to catch up.

On the defensive side of the ball, sophomore safety Steve Parsons registered 20 tackles to lead the Eagles. Sophomore linebacker Peter Thomas and junior safety Matt Garner also had double digit tackles, with 13 and 10, respectively. Although they played well, the fact that the secondary had to make so many tackles demonstrates how well Wilkes was able to move the ball, especially Tricholo. Tricholo finished the game with 266 yards and three touchdowns.

Next week, the Eagles look to bounce back against conference opponent Lycoming. It is the last home game of the season. A win would put them one game below .500 and build some confidence as they close out the season with back-to-back road games.

Juniata honors 1973 Track and Field championship team

Michael Vella
staff writer

In a day when tracks were made of cinder and half a lap around the oval (or square in some cases) was 220 yards not 200 meters, the 1973 Juniata College men's track and field team established itself as the only squad in school history to win the MAC conference championship. The team was honored during halftime of the Homecoming football game.

I had the opportunity to speak with a coach and some athletes from this legendary team. Mike Slough, Jack McCullaugh, Doug "D-Man" Crosby, Larry Hoover and distance coach Dr. Don Mitchell (current Juniata Professor of Chemistry) shared fond memories of their glory days in track and field and cross country.

The base of this Juniata track and field team was built by the late Chick Bunton. Coach Bunton recruited basketball and football athletes who also excelled on the track. In 1972, when Dean Rossi took over as head coach, there was already a strong group of jumpers, sprinters, and hurdlers. The distance runners were young and inexperienced but would later develop into one of the finest cross country teams in school history.

Slough, a sprinter, shared a favorite memory of the '73 team. While preparing to depart for a meet (dressed in suit and tie), the team realized that two of its athletes were missing. The panicked coaches were ready to leave when they spotted the duo walking toward the bus. Sporting cutoff shorts, fishing rods, and tackle boxes, they thought they could get some fishing in before the meet. After all, it was the first day of trout season. McCullaugh, Crosby, and Slough were quick to point out that Larry Hoover was one of the fishermen. When I turned to him all he could do was laugh.

Many of the distance runners on the track team, including McCullaugh, Crosby, and Hoover, also ran cross country. The conversation quickly turned to this sport, where I learned that they finished a school-best third place in the MAC conference in '73. Head coach Don Mitchell was known for his tough coaching style and his enjoyment in riding his bike with the team as he watched them suffer. "I couldn't keep up with them, so I had to ride my bike," said Mitchell.

> **"There is a special bonding that occurs when people suffer toghether."**
> **–Jack McCullaugh**

"Mitchell was a great motivator," said McCullaugh, adding that the runners had many near-death experiences as their coach put them through killer workouts. The team also recalled the summer when Mitchell decided to design them a new course. Without informing the team, he set out one day to map a very challenging course incorporating a few steep hills and rough terrain. "I wanted to simulate the MAC championship course at the Belmont Plateau," said Mitchell. "And I wanted to make it so our course was more difficult." Today's cross country team trains on the old course regularly, although it is no longer used for races.

There are many differences between our current track program and those of the past. The '73 team ran mostly dual meets, and the large invitationals of today were a rarity. There was no women's team at the time, and the men's team hosted multiple home meets (we currently host one a season). Favorite memories of all the athletes were the home cross country races. They started each race during halftime of the football games and finished on the track during the third quarter. When the runners entered the stadium the football game temporarily stopped. "Everyone would stop watching the [football] game," said Hoover. "They would totally ignore it. This was our day in the sun."

Thirty years later the '73 track and field team is still very close. "There is a special bonding that occurs when you suffer together," said McCullaugh. They get together once a year to reminisce, and, after all these years, run together. I asked Dr. Mitchell if he still rides his bike with them. He replied, "No, not anymore. I can run with these old guys now."

The track and field teams of the 70's re-wrote the record books, but the track records no longer stand. They were set on tracks before the conversion to the metric system, and these athletes no longer get the recognition they deserve. When asked when this switched occurred, the guys jokingly replied, "oh, about the same time the Indians became the Eagles."

The annual parade marches down old 18th street.

Wet Paint

Holly Brown
staff writer

On Sunday I found myself aimlessly wandering the forests of Sherwood. This dorm is a conundrum, with rooms of all different shapes and sizes. "Packed" is a common adjective used to describe most living arrangements here. However, in the midst of the wilderness, I came upon a stunningly cool room: 307, home to staff writer Meredith Pink and Angela Davidson.

The space they have to work with is very small, despite the lofts they're given. To open up the area, lofts are placed against the first wall and the window wall to give them maximum space in between. A futon with a Moulin Rouge-esque red fauve velvet cover is using this space, complete with cream fauve velvet throw pillows. I relaxed on this great piece of furniture while Meredith related to me handfuls of insane stories about the different items of the room. Her dad had shipped the futon mattress from Kansas City. It arrived in a box the shape of a coffin, inspiring many awkward questions. "I told everyone I missed my brother, so I had him sent over to me," Meredith said.

The futon, as well as the fabulous décor, is Angela's favorite part of the room. "Since I am artsy and Meredith is messy, we don't like to hang things straight and there is no color scheme. Anything goes as long as it makes us comfortable," she said.

A spiral sun catcher, tropical wind chime, and a paper lantern are suspended from the ceiling. On the wall is a unique piece of fabric Angela received from a cousin in Africa. Meredith's side has several tropical pieces of cloth to brighten up the place. The whole room has out-of-the-ordinary inspirations that make you want to hop on a plane.

A 27" TV screen is a recent addition and makes up the entertainment part of the room. Meredith says that they've already been able to fit many people in there at once, so they're hoping to have some great movie nights. The three guys who moved the television in for them already have a pass for a free football game.

Meredith lived in Sunderland last year, and said she appreciates the lack of bulky furniture (i.e., dressers) and the presence of closets in Sherwood. The room has some great finishing touches – the lofts are kept bright and comfortable by cloth wall hangings, there are beaded lamps (the two have a pact not to use the overhead light, which Angela says makes things look "institutional"), and there's some major bubble wrap to protect those who have trouble clearing the bed. With lofts, a futon, and a massive television set, you would imagine that this smaller Sherwood room would be stuffed full. But with resourcefulness and imagination, Meredith and Angela have managed to make their room an amazing, colorful space.

Photo: Cara Yancey

Sophomores Angela Davidson and Meredith Pink rearranged their Sherwood room to provide the most home-away-from-home feeling.

Contrivances Amok

A tech column

Theresa Tschetter
staff writer

I've never understood why Macintoshes and their users get such a bad rap. Almost every time my coworkers at the Solutions Center see me doing work on a Macintosh, their response is invariably, "Macs? Ew!"

True, Macs are different. Windows users find the interface counterintuitive and backward. After all, Macs have a "Trash" instead of a "Recycle Bin," and "Finder" instead of "Explorer." Staunch PC users find the gumdrop-esque, smoothly sculptured Apple computers loathsome. Usually, people dislike Macs because they simply don't know how to use them—or have had bad experiences with older versions of MacOS.

Yet I, the brave Macintosh aficionado in a sea of PC Technicians, have weathered the storms of abuse from the unfortunate souls who have dared to insult my favorite computers. I have installed the beautiful Mac OS X (that's pronounced "ten," not "ex") on several machines. I have lobbied, ad nauseum, for equal rights for Macintosh users (ask any PC tech).

Maybe I'm just biased. Macs, after all, have gotten me pretty far in the world. Most of my employment opportunities in campus technology have happened solely because someone saw my proclivity towards Apple products. For instance, the Solutions Center employed me and the illustrious editor extraordinaire Nate Drenner this summer partially because of our knowledge of Macintoshes.

OS X is old news. It's been out since 2000. But for the uninitiated, it's the latest major version of Apple's operating system for their computers. It's been completely restructured from previous versions (anyone who's been frustrated in the FL/ED lab knows some of the horrors of the previous release, OS 9). And it's based on a type of Unix operating system, which means it's geeky enough even for the likes of me. Those who have been burned by Macintoshes before may be quite pleased with what they see, should they give the fruity little computers another try.

Best of all, Juniata College's Macs are moving slowly but surely to OS X. The Carnegie Art Lab in the basement of Carnegie Museum is home to 15 Macs running OS X, and the FL/ED lab in Good 200 is converting sometime in the not-so-distant future. As a PC tech, I can attest to the fact that more students, faculty, and staff are being attracted by the shiny goodness of Macs than ever before. Even Ray Chambers, head of Campus Technology Services, is an avid Mac user.

The Solutions Center held a Mac training session on October 16. PC tech Steve Scheib attended the training. Like many of Apple's detractors, he had little idea how to use Macs and thus had a dim view of them. "I haven't touched an Apple since third grade," said Scheib, "and then all we did was play Oregon Trail." Though the session didn't entirely change his mind, he did feel more comfortable and appreciate the interface more. "After the hour-long training, I am far from an expert, but I would feel confident enough to use one if I had to."

More information about Macintoshes on the Eaglenet can be found at http://services.juniata.edu/cts/facilities.html?mac-content.html.

A date with Sevilla

Carolyn Keller
staff writer abroad

Hola amigos, and welcome to another stirring rendition of Juniata Relocated (insert theme music here). Although at the moment it's probably more relevant for me to be talking about culture shock and money troubles, we're going to worry about that later and instead stick to the fun stuff. Allow me to introduce you to my city.

Ah, Sevilla. My favorite of all cities (except of course for New York). To say this city is "charming" doesn't quite cut it. Better to say "enchanting," or "magical." It is, as my friend Jen would say, "real chill," and at the same time, it has an energy that is undeniable. It's earthy, yet cosmopolitan, and its allure seems to result from it being a wonderfully romantic city, without feeling like you're in Parisian couples-only terrain. Sevilla is not the romance itself, it is the romancer. It's who you fall in love with.

And you will fall in love. All you have to do is wind your way through the twisted streets of the Barrio Santa Cruz, past the lovely landmarks. Be engulfed by white birds in the Parque de Maria Luisa, and let yourself be carried to the river, where you can walk for hours past scenery that is breathtaking in its laid-back allure. Blue water, sandy stone pathways, and lush green foliage peppered with magenta blossoms. Maybe you'll hear some street musicians while you're there, or else watch the paddleboats or kayakers mosey on by. On the weekends, come back at night for botellón, where hundreds (literally) gather with their beverage of choice to pass the evening together before they head to the discos (which don't empty until very late – or is it early? Nightlife in Spain doesn't kid around . . . it lasts *all* night.)

Then there are the traditions. The southern region of Andalucía is an embarrassment of riches, and Sevilla is at its heart. Sevilla is famous for amazing Flamenco dancing and controversial bullfights, and the time-honored ritual of *tapas*, the oh-so-good appetizers that are ordered and shared in rounds among friends – get the croquetas or the stuffed mushrooms, watch out for the itty-bitty fried fish with the heads and tails still on. (Yes, they're eaten that way. No, I passed. I just can't eat something that can still look me in the eye.)

The ever-important *siestas* are also big here – everything closes down for a good three hours in the afternoons, and all day on Sundays. Picture that in New York. But I desist for the week. Still, this isn't even the tip of the iceberg. Opportunities to keep the love flowing here are endless. In short, Sevilla is calling your name. Stay tuned for next time, and make some travel plans…you know you want to.

Absolute SOB

Meredith Pink
staff writer

The Students of Business club (SOB) is a group for anyone interested in business-related disciplines. The general mission of this club, as stated on the website, "is to provide a sense of community within the Accounting Business and Economics department (ABE) involving students and professors in activities, both fun and academic."

SOB has a very busy semester planned. On November 1st there is a trip to Hershey Park. Students will be working at the park, and the money they earn will be donated to the club. There will also be the annual Madrigal carnation sale in December. So make sure you buy some carnations and let that special someone know you care!

Club president Kate Scanlan said, "We want to develop some new and exciting ideas that will bring more interest to the club." With this motive in mind, the club is trying to arrange more speakers and workshops that will benefit current ABE students. To help be more involved with the campus and community, the club hopes to organize a trip to the Pittsburgh Plate Glass building (PPG). PPG is a very successful company in western Pennsylvania. An alumni contact who works at PPG is willing to give them a tour, which will be a great learning experience.

This year's club officers are President Kate Scanlan '05, and Vice Presidents Kelsey Eichlin '05, Joanne Koch '05, and Matt Newman '06. Angela Gottshall '05 serves as secretary, and Janine Smeltz '05 is the treasurer. Professor James Donaldson is the current club advisor while Randy Rosenberger is on sabbatical.

The SOB club offers a great forum for getting to know professors. It is also a good way to meet other students with similar interests. Meetings are usually held when needed. If you are interested in becoming involved contact Kate Scanlan.

"We are looking and always open to new and motivated club members!" Scanlan added.

Social people, social work

Katey Glunt
staff writer

Do you like to party or to hang out with interesting people? The social-work club Phi Alpha provides many such opportunities.

Phi Alpha is a service club for people who like people. It is a subgroup of the national Sigma Phi Alpha Honor Society for Social Work, but in fact, few of the members fall under that POE designation. Most of those who join just want to help.

The club has reached out and become involved in many local community institutions and programs. Phi Alpha works with the retirement homes Huntingdon Manor and Westminster Woods and with the Big Brothers/Big Sisters program to organize celebrations of Halloween, Christmas, Valentine's Day, and Easter. The parties are not typical Saturday Night extravaganzas but provide a wonderful opportunity to make some people happy. Organization is underway for half a dozen festive gatherings to take place before the end of the semester.

Additionally, club members help out at food kitchens and with PRIDE. PRIDE is a group that sets up monthly activities for physically or mentally handicapped adults in the Huntingdon area. Phi Alpha volunteers are invited to go along to the bowling alley or out to the movies and spend time with some remarkable individuals.

One of the most popular activities is the weekly outing to the Huntingdon Humane Society, a program set up by President Suzie Gardner. Volunteers, most missing their furry friends at home, drive out and spend a few hours on Saturday afternoons entertaining and being entertained by the unfortunately numerous dogs and cats at the shelter.

On the agenda for Spring 2004 is "Take Back the Night," a collaboration with Womens' Group and AWOL for Abuse Awareness Week. The spring might also bring another Three-legged Easter Egg Hunt in the Dark, a fundraiser packed with excitement.

The club, boasting a distribution list of 40 members, meets every other Thursday night at 9 pm in the Cloister lounge. The academic advisor is Dr. Bob Reilly, professor of sociology. More information about the club is available if you e-mail the club account, PhiAlpha@juniata.edu.

Juniata working towards playoff berth

Robb Patty
staff writer

The Juniata Women's soccer team traveled to Albright on Saturday October 18 and battled to 1-1 tie. The Eagles entered the half tied at 1-1 on junior Erin Harter's third goal of the season. Albright's lone goal came on a penalty kick in the 15th minute of the game. Junior goal keeper Lindsey Treon finished with seven saves in a game and was the Eagles' second double overtime game of the season. This was the fifth straight match where the Eagles held their opponents to one goal or less.

Sophomore forward Nikki McLellan commented, "We played well, but [this game] didn't hold true to our teams' true potential."

Against Penn State-Altoona the Eagles proved that they can play some defense as they allowed just six shots on goal keeper Treon. She registered her second shutout of the season and preserved Juniata's 1-0 victory. Sophomore Amy Tyler was credited with the only goal of the afternoon for the Eagles, when she beat Penn State-Altoona keeper Martie Magill.

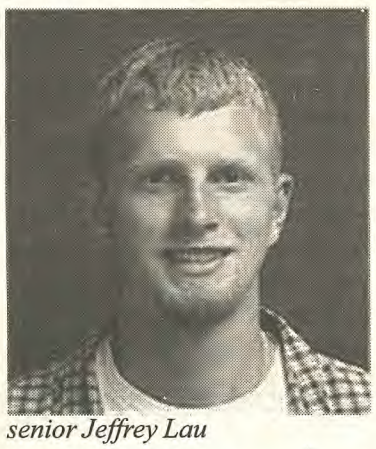
The Eagles now sit at 5-8-1 on the season and 1-2-1 in conference play. With three of their remaining four games coming against conference opponents, the Eagles have a great chance of making the postseason.

Sophomore defender Lauren Welsh stated, "We have a good chance at reaching the playoffs because we work so well together as a team."

With the defense playing solid in front of goal keeper Treon, the Eagles should be very competitive as the season comes to a close.

Photo: Cara Yancey

Sophomore Lauren Welsh throws the ball in with a valiant attempt to optimize every chance of winning against Penn State Altoona.



Athletes off the court

Bill Bishop
staff writer

The Juniata College Men's Basketball team has spent an entire off-season preparing for the Middle Atlantic Conference playoffs. They have exhausted most of the off season trying to improve last seasons' 13 -12 record. However, not all of their activities were geared towards bettering themselves athletically. They also worked arduously to become more productive members of society. Senior Jeff Lau said, "Community service is big part of being a member of the basketball team. This is the first time I've ever been involved where my whole team has gone out together to do community service and that makes it a lot more fun."

The men's team is participating in three different community-driven projects. First, they participate in the Dream to Read program. The players go out to various elementary schools in the area and read books to students from first to fifth grade. They are also looking at turning this into a mathematics program.

The second community service activity that the team participates in is the Make a Difference Day. This is a day that is dedicated to making a difference in the community, and it took place three weeks ago here in Huntingdon. The team went to the police station in order to meet

senior Jeffrey Lau

the mayor of Huntingdon, and then spent the day cleaning up trash with the mayor. Said Lau, "The mayor of Huntingdon actually requested to work with us this year, which was a nice compliment. It was interesting working with him because he was so energetic and enthusiastic."

The third service that the team does for the community is not performed simply for Huntingdon County, but for an organization that operates worldwide. This is the Jimmy V Foundation that works to find cures for cancer. This year the basketball team will participate in the Hoops for Cancer Shoot-A-Thon. Each player will find sponsors to donate for each shot they make out of 100 free throws. Part of the money raised will be donated to the Jimmy V Foundation. Lau commented on the opportunity to shoot and benefit others, "I'm really excited to raise money for cancer research. I have had several close relatives lose their lives to cancer and it means a lot to me to be able to help prevent that from happening to someone else." So if any of you see the Juniata Eagles Men's Basketball team, be sure to thank them for all they have done and offer to sponsor them for the Shoot-A-Thon. Once again, we see Juniata College athletes working to make an impact off the court and in the community.

On their way to the playoffs

Meredith Pink
staff writer

Last week, the Juniata women's field hockey team captured wins against Washington & Lee, Bridgewater, Moravian, and then fell to Elizabethtown.

The 1-2 loss to Elizabethtown came as a punch in the stomach for the Eagles. Elizabethtown made two goals with less then four minutes left on the clock. This was Juniata's fifth loss of the season. Sophomore Elise Zimmerman commented, "The game against Elizabethtown was a hard team loss. We [have] to put is behind us, but at the same time, learn from our mistakes."

This loss did not deter the Eagles from picking up a 2-1 win against Washington & Lee. The excitement built as the game remained tied at 1-1, and went into two overtimes. The Eagles eventually won the game in the third overtime during the first round of the penalty stroke shootout. Sophomore Bekah Hauser said, "The game was really intense the whole way through. We wanted the win really bad, and we went out there and made it happen!"

The Eagles went on to claim wins over Bridgewater and Moravian, 4-2 and 2-0 respectively. These wins improved the team's standing to 11-5 and 3-2 in the Commonwealth Conference.

The team stats this year are impressive. One of the goals of the team is to break every record they possibly can. Coach Gillich explained that the next two conference games are crucial in order to make the playoffs. Gillich said, "We must beat Susquehanna!"

Sophomore Andrea Way remarked, "Making the playoffs has been one of our goals since our spring season. We definitely have a good shot for a spot in the playoffs, as long as we remain focused and continue to play our game. We are a strong, determined team."

Juniata's next conference match up will be a home match on the 21st against Lebanon Valley. The following three matches will also be home games against Seton Hill, Susquehanna and Montclair State. So go to support your team. Go Eagles!

Eagles lose shot at postseason

Robb Patty
staff writer

The men's soccer team was set to notch their second conference win this season, but was spoiled on an overtime goal by Albright. This moved the Eagles to 2-11-1 overall and 1-4 in the conference.

After Albright scored to take an early 1-0 lead the Eagles stormed back in the second half to tie the game at 1-1. Senior Takashi Suzuki registered his first goal of the season just three minutes after the break. Scoring would not continue until the second sudden death overtime period when Albright got a shot past freshman goalie Tim Penrod.

Head Coach Scott McKenzie said, "We went into the game with a lot of energy and played better then we had in a couple of weeks. Unfortunately, in games, sometimes things go your way and sometimes they don't."

Juniata hosted another conference opponent on October 15, but was shutout by Messiah. The Falcons scored four times in the first half to take a 4-0 lead at the half. Juniata was unable to get back into the game, as Messiah's defense seemed to stifle the Eagles the entire game.

The top four teams will make the Commonwealth Conference playoff. The Eagles currently sit in fifth place, so they have been eliminated from the postseason.

Coach McKenzie stated, "This team can respond well to adversity and play with a lot of pride. I expect 2004 to show what a skilled group of players are here."

THE RANDOM ELEVEN

Matt Russell, layout editor

Color coded world: Thanks to facilities for painting the curbs of the cul-de-sac outside von Liebig bright yellow and blue. This will surely help us remember that we aren't allowed to park there. Or maybe it will just look gaudy and stupid.

Strange forces: There is an invisible force on campus - the one that causes everyone's car to gravitate over the front line on parallel parking spaces. Probably a fourth of the cars around campus do this persistantly. Weird, isn't it?

Best question from a professor ever: "How many of you went to high school? Oh, wait a minute…"

Botched print job: The printer murdered my beautiful paper in the last issue (I also do the layout in addition to this column). Particularly distressing was that they cut off the last line of this column all across the bottom. One of the two items has been reprinted on page two of this issue (the other was too long to reprint) so that you don't miss too much of my wit. Heh.

Potâto Potäto: It happened again! They served both scalloped AND baked potatoes in Baker the other day… in the same line. Conspiracy, I tell you, *conspiracy*!

Secret poster: I was walking around Altoona Mall with a friend, when we passed by the Victoria's Secret store. He proudly informed me that he had once gone in there to ask if they sold posters. Of course, they said no. He paused for a moment of contemplation, then solemnly stated "That was the best idea I ever had."

Buggy walls: Bugs don't bother me. What bothers me is this: there has been a giant, dead mosquito plastered on the wall; a **giant** spider and web above a sink in the bathroom; and a brown, crusty substance on the stall walls in South Hall since I moved in this summer. Now, don't get me wrong, the floors stay (relatively) clean and the showers do get hosed down periodically. Maybe they could just point the hose at the walls at least *once* a year… bleh.

Excuse me? I was working in the TLT computer lab, sitting behind the desk next to the printer. A student was waiting for a document to print, and the printer had a message on the display that said "Collating." After a few confused glances back and forth between me and the printer, the student asked "Are you the one **collaborating** with the printer?" Yes, it's a conspiracy!

Overheard from a prospective student who drove here from Indiana: "I'm not sure I even want to go to college… I'm kinda thinking about living on the streets for a few years. They're mean to the bums in Indiana, though. I'd probably go to New York." He was serious!

Speaking of prospective students: You know that people are touring campus when the colorful flags are rolled out and strapped to every railing on campus. It's like the Juniata bat signal: "There are prospective students on campus! Quick, look diverse!"

Cow Patty Bingo: This is just too easy. For crying out loud, we had money riding on a cow's defecation! Oops… did I say 'we'? I meant… **them**. Yes, that's it.

Off campus housing

continued from page 1

Hess, Pink, and Mission. The others are houses: 2111 Cold Springs Rd. and 1631 and 1731 Mifflin Street. Although these buildings are listed as off-campus, the majority of them are close enough to be considered on-campus, with the exception of Hess Apartments. These establishments are under the same regulations as the dorms.

In order to obtain homes in these college-owned non-dormitory dwellings, potential groups of roommates must enter the Multiple Room Draw at the end of the academic year. This Room Draw involves more than two people in one living area. Houses have room for eight students, while apartments can accommodate anywhere from two to five.

Room draw is based on a points system and GPA. Seniors receive four points, juniors three, sophomores two, and freshmen one. These points are added to determine which group has first dibs. GPA's are then averaged between the potential roommates. The highest-ranking group gets first choice.

In addition to campus-owned housing, upperclassmen can choose to live independently from the college. 95% of seniors live off-campus, many in rented apartments. The college has nothing to do with these abodes, and students tend to enjoy their freedom and increased responsibility. The catch is that students must request to live off-campus. If quotas are filled, students must remain on-campus.

Although all first-year students are required to live on campus, with the exception of PAR students, not all of them do. Students who fit Res. Life's definition of commuters are not required to live on campus. This definition can be found in the Pathfinder online. It states that if a student lives with their parent or guardian within 50 miles from campus, he or she can commute. The Pathfinder also states that students with families (spouses and children) or situations which the college doesn't accommodate can live off campus. Before this permission is granted, however, appropriate records must be provided.

As for the increased enrollment, it is simply to achieve the maximum number of enrolled students. The graduating class of 2004 is a large class according to Dean of Students Kris Clarkson. Some of this year's seniors have remained on campus and will leave a number of rooms for Res. Life to fill. While housing is always an issue, it is a manageable one. Said Clarkson, "Our occupancy rate is 97%. Most colleges would kill for 97%."

See part 2 in the next Juniatian: How off-campus housing affects the campus community.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

NOVEMBER 13, 2003 | JUNIATA COLLEGE | VOLUME 85, ISSUE 5

The hidden cost of the Raystown Field Station

Michael Vella
staff writer

How would you like to receive a phone call from an anxious military recruiter during finals week, pressuring you to consider joining the armed forces, when all you want to think about is the endless amount of material you will need to know for the upcoming exams? This was a common occurrence last year, when recruiters took advantage of students' vulnerabilities during this stressful time period. How did these recruiters get your school phone numbers? The staff in the Registrar's office gave it to them, along with your address, program of emphasis, and other personal information. The recently-enacted Solomon Amendment requires institutions of higher education to release this information in exchange for federal aid and grants. In fact, Juniata College is bound to this agreement after signing a contract with the Army Corp of Engineers- the group that leases us land for the building and maintenance of the Raystown Field Station.

The Registrar's office gave recruiters your phone number, address, POE, and other personal information.

The Solomon Amendment, which went into effect in January of 2000, was proposed by New York State Representative Gerald Solomon. It is an effort to support the military by informing students of the opportunities offered by the armed forces. The Amendment explicitly states, "No funds…may be provided by contract or by grant…to an institution of higher education…if the Secretary of Defense determines that the institution…has a policy or practice…that either prohibits, or in effect prevents the Secretary of a military department… from gaining… access to students (who are 17 years of age or older) on campuses… for purposes of military recruiting to the following information… name, address, telephone listings, date and place of birth, levels of education, academic majors, [and] degrees received…"

According to Dean of Students Kris Clarkson, the college began investigating this recruiting issue after his office received numerous e-mails from students complaining about the annoying telephone calls. At the time, the Registrar's office was releasing this information without closely examining the Amendment. "The Registrar was aware of the Solomon Amendment, but I do not think the Registrar was aware

"Whose Line" stars improv at Juniata

Nate Drenner and
Pamela Bodziock
co-editors in chief

We don't need Drew Carey. Or even Clive Anderson.

Colin Mochrie and Chip Esten - stars of the American and British versions of "Whose Line is it, Anyway?" - more than held their own in a night of improvisational comedy. The Juniata Activities Board (JAB) hosted the event last Friday, November 7, in Rosenberger Auditorium to a sold-out audience.

JAB normally holds a major concert event each year, but comedians were chosen this fall due to a lack of available bands.

Mochrie and Esten presented many familiar types of skits from "Whose Line," such as "Moving People," "Film & Theatre Styles," and "Sit, Stand, Bend," all with audience participation. Esten also improvised two songs while strumming his guitar.

"I found the live show to be much more amusing than the television version because they established some common ground with the audience," said junior Nathan Thompson. "My jaw still hurts from laughing."

Indeed, the crowd was crazy about the pair. The two entered to such applause that Mochrie immediately proclaimed, "That's our show!" and walked offstage.

Said Esten, "That audience, it's unbelievable. [...] That makes it fun for us."

Memorable sketches included a Bruce Springsteen-styled song about old socks, "Sound Effects" featuring Mochrie and Esten as llama farmers, and a Shakespearean scene set in a McDonald's.

"McBeth!" quipped Esten.

The night ended with an interrogation skit. With Esten momentarily outside, Mochrie used audience suggestions to come up with a few wild details about a "crime" Esten had committed. Once Esten returned, he had to guess his crime through the clues Mochrie gave him. After a hilarious fifteen minutes, Esten ascertained that "while wearing a leopard Speedo he lost a pencil after picking his nose with Barbara Streisand in the bathroom of a

Does JC need more diversity? You decide

Jeff Anderson
staff writer

There is no denying that Juniata is a homogenous campus compared to others. 90 percent or more of our college is white, which some believe can be damaging to one's perspective. Says student Kris Brown, "It's not such a good thing, because people will go into the world without tolerance."

Juniata claims that about 10 percent of our population comes from a diverse background. Some will say that these numbers are misleading. Most of our diversity comes from international students, accounting for six to eight percent of these numbers. Domestic diversity only accounts for about two or three percent.

Student Quinn Daly says there is nothing wrong with the numbers. "These figures are correct for this region. The backwoods of Pennsylvania are not diverse." It's true that many students feel that, "to force diversity would be fake." Despite what we all want to believe about the greatness of diversity, some students like the homogenous setting.

There are many theories on how a college like ours tends to lack diversity. Many believe it is because of our small campus and location. About 70 percent of our population is from suburban and rural Pennsylvania. And of all the applications accepted, four out of 10 Pennsylvania applicants decide to go here. Only about two of 10 out-of-state applicants who are accepted decide to attend Juniata.

So how does admissions handle the applications of minorities? Brett Basom, Senior Associate Director of Admissions and a JC alumni, says admissions is not based on race or ethnicity, but it can play some factor. "Bottom line, any student here has to have the academic background, but we look at anything they have to offer as far as musical talent, athletic talent, and cultural diversity, among other things." No type of affirmative action is taken during the admissions process. "It is something to take into consideration, but it's not the driving force."

Changes are being made to include more diversity on campus. Location and ethnicity is becoming a stronger consideration in what a student has to offer to the community. Administrators are seeking to hire more minority faculty and administrators. Rosalie Rodriguez, the Special Assistant to the President for Diversity, is on a campaign right now to find more prospective students from the New York area.

Having a diverse campus is not just about who goes here, but also what events are happening on campus. The Department of Diversity and Inclusion just wrapped up its Hispanic heritage month with Fiesta de Latino. Their next project is to recognize November as Native American heritage month. Look out for "Smoke Signals" and "Dance Me Outside," two movies about Native American heritage that will be shown on campus. New clubs are added every year that celebrates diversity on campus.

Religion, Sex, and Marriage

Forum examines same-sex unions

Nate Drenner
co-editor in chief

Juniata's Religious Studies Department held a forum on same-sex unions within the Christian church. The event took place at Neff Lecture Hall in the von Liebig Science Center on November 1. The forum was open to the community.

Lectures and discussion touched on attitudes toward homosexuality, current events, and the context of Biblical doctrine. Attendance was sparse. Actual figures are not available, but this reporter would estimate 30 attendees.

Dr. Donald Braxton, chair of the Religious Studies Department, coordinated the event. He invited both gay and lesbian couples in committed relationships to speak at the forum. However, he was unable to find a male couple willing to attend.

Braxton invited attendees to consider the absence of a male couple. He said, "In our culture today, I think there is nothing more vulnerable than for a man to stand up and say, 'I'm gay.'"

Senior Devin Hunt is the treasurer of AWOL, Juniata's Gay/Straight alliance. Though he did not attend the forum, he did offer his perspective: "I feel it is much harder for gay men to be openly gay than lesbian women because most [homophobic] straight men feel that gay men are a threat to their own masculinity."

Kat Gullberg, Delia Guzman, and Amanda Silliker, all lesbian women in committed relationships, did attend the forum and spoke about their experiences.

Silliker is currently the music director at a Unitarian church, though she has worked at and attended numerous Christian churches. She recalled types of exorcisms performed on her by a fundamentalist minister when she first discovered her lesbianism.

Said Silliker, "I'm probably not as angry [at the church] as I should be." Her partner, who was not present, experiences panic attacks when visiting a church.

Photo: Hannah Rauterkus

Dr. Donald Braxton, Delia Guzman, Kat Gullberg, and Amanda Silliker (left to right) presented at the same-sex union forum.

Guzman expressed an interest in legal as well as spiritual recognition for her partnership with Gullberg.

Father Tom Warne of St. John the Evangelist Episcopal church in Huntingdon spoke on the recent election of Bishop Gene Robinson. Robinson is the first openly gay bishop in the Episcopal church. Several of Warne's parishioners left the church after Robinson's election.

Braxton also noted that the Evangelical Lutheran Church in America is discussing the homosexual issue. The current Lutheran position is to accept homosexuals as fellow sinners because all people are sinners. However, homosexuals may not be ordained as Lutheran clergy.

Braxton suggested that many Biblical laws are no longer valid in the modern day. Noting a high divorce rate among heterosexuals, he proposed a new type of covenantal relationship in the church. This covenant would recognize sexual relationships for both hetero- and homosexuals. This relationship may not necessarily be permanent due to a lack

Hear ye, hear ye

Brittany Barbera
staff writer

If you happened to walk across Oller Lawn around 4 pm on October 28, you probably saw a swarm of people drinking apple cider and listening to stories. What you saw were the Soapbox Speeches sponsored by Juniata's Communication club, SPEAK. Every semester, students and faculty anticipate this event, which provides a unique opportunity to embrace artistic expression on campus.

The theme this year was "Narratives, Nightmares, and Nonsense". Since it took place so close to Halloween, it was only appropriate to tell scary stories and poems. The audience devoted their full attention to the presenters, because each speaker had a distinctive style and no one knew what was going to happen next.

> **The speeches "were inspiring and imaginative and a great way to break into the Halloween season."**
> *- senior Danielle Stiffler*

Senior Sean Waddle used his improvisational talents to make up a story on the spot. His enchanting tale of the fifth grade DARE (Drug Abuse Resistance Education) essayist and the DARE officer, who taught at his school every Tuesday, made quite an impression on the audience. Based on the amount of laughter, Waddle's story was a favorite among the crowd.

While Waddle made up a story as he went along, sophomore Damien Valentine shared a piece he wrote about crazy teenagers and their Halloween escapades. Valentine's story was also amusing and left the audience on the edge of their seats.

Although several students shared stories, there were a number who participated in the event in other ways. Julie Tollerton, a senior Communication POE, "thought [the speeches] were delightful. I come every year to listen and support all the presenters."

According to Danielle Stiffler, also a senior, the speeches "were inspiring and imaginative and a great way to break into the Halloween season."

All in all, the Soapbox Speeches were a success. In the words of senior Erin Brunner, they were, as always, "a ton of fun." If you missed the speeches this time around, don't worry. SPEAK will organize the event again in the spring semester. Everyone will have the opportunity to participate next time—don't miss out.

Off-campus housing: a community apart

Part 2 of an article in the last issue of the Juniatian

Rachelle Luther
staff writer

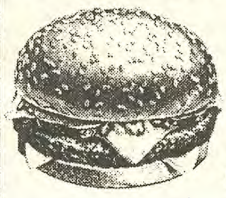
When discussing housing, especially at a residential college such as Juniata, it is almost imperative to discuss community. With its small size, Juniata is expected to be very tight-knit, where every individual student is a part of the community and has an impact on it, whether he or she lives on or off-campus.

Merriam-Webster Online defines "community" as, "people with common interests living in a particular area." Juniata College is a community and no one can deny that its heart is in the campus itself. Every student learns here, and most live here. Dean of Students Kris Clarkson stated that, for him, on-campus is the only place to be. Even in retirement, he hopes to live in a college town near a college campus.

Not everyone feels that on-campus is the right fit. Commuters, PAR students, and off-campus residents don't necessarily live in the community, but they are a part of it. Commuters and off-campus students are basically those students who don't live in dormitories. PAR students are slightly different. PARSO (Program for Area Residents Support Organization) president Deborah Hetrick defined a PAR student as, "a student who has been out of high school for at least five years, and lives in Huntingdon County or one of the contiguous counties." PAR students carry the same workload as traditional students, but have different financial considerations.

While they form distinct groups, non-residential students come together to form a vital part of our campus community. Some people feel that non-residential students aren't as much a part of Juniata College. Hetrick's response to this idea was that living off-campus doesn't make a student less of a part of the JC community. It merely makes her or him "a different part of it." Hetrick believes that even an increase in commuting and off-campus housing won't deplete the campus community, although it may change some of its personality.

Some worry that off-campus living is breaking down the campus community. Tim Launtz, Director of Residential Life, is certain that this isn't happening. Thanks to special interest housing options, some students, like those on the IT floor in South Hall and The House, are living and working together like never before. Joel Pheasant, former student and now Director of Web Technology here at JC, reiterated this, calling special interest housing "an asset," and adding that it is building the community.



Does commuting and off-campus housing deplete the campus community? Professor of Geology Larry Mutti doesn't think so. He expressed that as long as the majority of students are living and socializing on-campus, then living elsewhere isn't a problem. Professor Mutti said that he lived off-campus in his college years and learned some things he couldn't learn living in a dorm.

Many still feel that dorm life is the only way to live. Some students enamored of dorm life believe those off-campus are missing out on a big part of college life. Many disagree. Jen Bowen, a junior commuter student, doesn't feel she has missed out. She comes on campus whenever she wants to, and is certain that she gets more work done off-campus than she could here.

Hetrick suggested that occasionally you do miss out when living off campus. Referring to her fellow PAR students and herself, Hetrick said, "We have never been excluded from anything. The difference is that family and/or travel constraints make it difficult for us to take part in all activities, or attend lectures and meetings and classes that may meet later in the evening."

"Whose Line" improv

continued from page 1

convent in Intercourse, PA with a penguin on a pogo stick."

After the show, Mochrie and Esten emphasized that it was entirely spontaneous.

Mochrie said, "['Whose Line'] is pretty much like what you saw tonight. There's no time [to think]. That's the fun for us."

"There was some funny stuff tonight... the interrogation scene, I mean, there were a lot of good suggestions," said Esten.

"Stuff like 'llama farmer' ... we've never done that," added Mochrie.

However, the two acknowledged that they will get similar suggestions from one show to another.

Esten said, "Tonight we got 'lumberjack' [as a suggestion], and in the last show we did a lumberjack. If we wanted to, we could have repeated the scene that we had done before, but it would be really hard because we'd be boring ourselves, and we want to do something completely brand-new."

The infamous "Hoedown" is one "Whose Line" skit the pair would never perform live.

"'Hoedown' is hated. I don't know any [performer] who likes it," admitted Mochrie.

Esten added, "If we do a live show with Ryan [Stiles], and someone yells 'hoedown,' he might show you a finger."

The performers thoroughly enjoyed their time at Juniata and wished they could have seen more of the college.

"Unfortunately [...] we don't really get to spend time in the places we go," said Mochrie.

Esten added, "When they took me out for the final sketch, I said, 'I wish I could see more of your campus,' and the girl with me said, 'This is it!'"

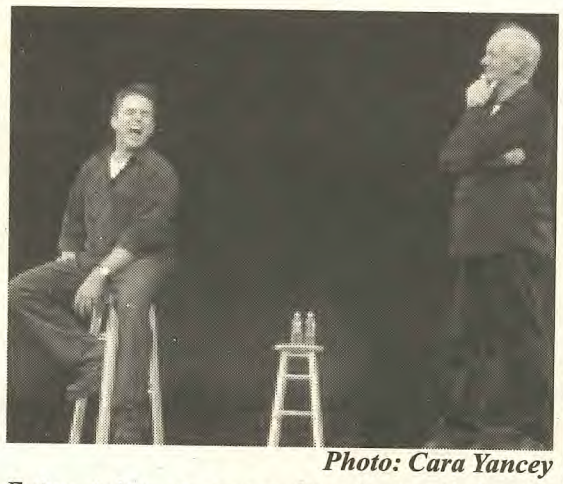

Photo: Cara Yancey

Esten tries to guess his "crime" in the interrogation skit.

The two comedians, who have both had more traditional acting roles, enjoy both improv and scripted acting for the different challenges and rewards each provides.

Said Esten, "Improv started out as theatre games, with people who were trying to research their roles."

Esten still receives pictures of his Klingon character from an episode of "Star Trek: The Next Generation" with requests for autographs.

When Mochrie was asked which he preferred, kissing wrestler Chyna or kissing Drew Carey (one in an episode of "Whose Line," the other while guest-starring on "The Drew Carey Show"), Mochrie answered, "I have to say that Drew has very soft lips. That was actually my first love scene ever." With a smile, he added, "It's so rare we actually get to kiss women on the show. For me, it was a thrill that it wasn't Ryan, or Wayne, or Drew."

The duo split after the Juniata show - Mochrie to Rochester and Esten to Los Angeles - but before leaving they shared some advice for students considering a career in the performing arts.

Mochrie said, "Don't ever go into it as a way to become famous or make money. Do it because you love it. The fact that 'Whose Line' happened [for us] was a happy accident."

Esten added, "If that's what you feel like your calling is, do it. Get your education here - you're going to need it - then chase your dream."

Hidden cost: Raystown

continued from page 1

of the Army Corps agreement," said Clarkson. Inspection of the Amendment revealed an important exception. An exemption can be granted for schools with a long-standing tradition of peace and religious affiliation. According to the Amendment, "The limitation established... shall not apply to an institution of higher education... if the Secretary of Defense determines that...the institution...involved has a long-standing policy of pacifism based on historical religious affiliation." Dave Witkovsky, Juniata College Chaplain, said Juniata does maintain strong "official" ties with the Church of the Brethren. Although the School has never been owned or controlled by the Church, the Church trustees (whose positions exist as a result of the school's Charter) passed a statement reaffirming this historical commitment.

Efforts to exempt Juniata from complying with the Amendment were aborted when a clause was discovered in the contract between the Army Corp of Engineers and the Raystown project developers. The agreement ensures that Juniata abides by the Solomon Amendment. This contract, signed on October 20th of this year, states, "As a condition for receipt of funds available to the Department of Defense under this award, the Recipient agrees that it is not an institution...that has a policy of denying...[or] effectively prevent[ing] the Secretary of Defense from obtaining for military recruiting purposes...access to directory information pertaining to students. If the Recipient is determined...to be in breach of this clause, the Government...may suspend or terminate such grants and agreements." According to Charles Yohn, Director of the Field Station, "The Army Corps is our 'landlord.' Juniata gets a private field station on Raystown, and the Army Corps gets education programming and a research consultant." He also added, "If it weren't for the active support of the local Army Corps office, I don't think that we would be building the new station."

Regardless of the signed agreement, the school would have difficulty being granted exemption from the Amendment. We continue to allow military recruiters on campus, and we have complied with the Solomon Amendment in the past. "The School would put itself in an awkward position to suddenly change its mind," said Clarkson.

Sophomore Steve Beck, who is employed at the Field Station, said, "The invaluable resources that the Field Station provides us with are well worth the hassle."

Sophomore Emily Eller disagrees. "The school should think about where it gets its funds and whether or not that's appropriate, given its history and ideals," she said.

The Solomon Amendment is impacting colleges across the country. CNN recently reported that the Government has threatened to withhold 300 million dollars for research at Yale University if the school fails to comply with the Amendment. The American Association of Collegiate Registrars and Admissions Officers (AACRAO) is fighting the Amendment. They argue that the information provided to recruiters exceeds that provided to employers. The Registrar's office at Juniata is now disclosing home addresses and phone numbers (not those of dorms and campus housing) to prevent unwanted soliciting on campus.

Fiesta Latina!

Caitlan Zlatos
staff writer

Fiesta Latina, a celebration of Latin cuisine, history, and culture, took place November 1st. The event, which occurred in the Ellis Ballroom, sold out at the door. Over 200 people attended, including professors, students, and other members of the campus community and their families.

Though the main focus of the festivity was the cuisine, guests got a taste of Latin culture through more than the food. Through the combined efforts of Club International, Spanish Club, UCJC, and Green Party, Fiesta Latina brought Latin perspectives to all who attended. Sophomore Amber Ziegler, secretary of the Spanish Club said, "Fiesta Latina was a huge success. It seemed like everyone had a really good time, between the meal, the piñatas, and the salsa dancing."

After welcoming messages from Ziegler and senior Rafa Tourinho, president of Club International, Fernando Martinez spoke a little about Latin history and practices. Martinez, Visiting Spanish Language Instructor, told the guests about the Day of the Dead, the Mexican holiday that takes place on November 1st and 2nd each year. He clearly wanted to speak more about different aspects of the culture, but as he said, there is "too much to say about Latin cultures."

Photo: Cara Yancey

Most couples made their way to the dance floor on Saturday at the Fiesta Latina, to ensure they had in fact learned something from their salsa teachers.

Following Martinez's words, a short video titled "Corazon Latino" ("Latin Heart") was played. It highlighted the culture of the countries the menu represented: Colombia, Mexico, Spain, Brazil, and Guatemala. Attendees then chose their meals and desserts from the buffet. Among the 12 dishes were Mexican Beef Flautas, Ecuadorian Ensalada, and Colombian Empanadas. Some of the ingredients needed for the variety of dishes were sent from Latin countries so that the International students could prepare the meal. While everyone ate, junior Ryan Richards sang and played guitar to songs that included "La Bamba."

Later, young children lined up to be blindfolded and take their chances at knocking two piñatas open. Afterwards, Latin music played for people to salsa dance, no matter how much experience they had.

Money Matters

An article from abroad

Carolyn Keller
staff writer abroad

So I was watching "Sense and Sensibility" the other day – dubbed into Spanish, 'cause that's how things are done here. Being about love and money, it reminded me of a very important thing that I need to talk to you about. Since I just gushed about how romantic Sevilla is in my last column, now is the perfect time to bring this subject up. It does, after all, make the world go round. And it ain't love.

When it comes to talking about money matters while abroad, the key thing to remember is that it does. Money *matters*. I know you know this already, but when it comes to living in another country, don't underestimate the power of the dollar to fly out of your hand. It's disappears faster than Houdini, and you're going to need it.

When a former Sevillana returned from her stay abroad, she told me she spent about $100 a week. Another friend told me she spent between $6000 and $7000 over a year in France. They

Juniata Concert Choir presents "St. Francis and the Gypsies"

Kate Leib
staff writer

On November 2nd, the Juniata College Concert Choir performed their fall concert titled "St. Francis and the Gypsies." The first work they performed was "Zigeunerlieder" by Johannes Brahms, which was a series of 11 Hungarian gypsy songs. The second, "St. Francis in the Americas: A Caribbean Mass" by Glenn McClure, included 13 songs incorporating different Caribbean languages and styles.

Dr. Russell Shelley, choir director, explained, "I wanted to challenge the Concert Choir with the slippery intricacies of Brahms and wanted to feature the percussionists (Kelie Cummins and Chris Kochel) in choir and on campus with the McClure piece."

The performance attracted faculty, family and students. People of all ages were tapping to the beats and moving to the music. "It was divinely inspirational," said freshman Amanda Krebs.

The Concert Choir has about 50 students who were required to audition before the fall semester. The students are tested in the areas of musicianship, sight-reading, diction skills and tonal memory. They meet Monday, Wednesday and Friday from noon to 1:00 and have sectionals every week. "You also have to work a lot on your own," said sophomore choir member Haley Goodwin. "The people in choir become your family."

The choir has annual spring tours and tours abroad. Their more recent concerts have included the Heinz Chapel in Pittsburgh, the National Cathedral in Washington, D.C., Salzburg Cathedral in Austria and St. Patrick's Cathedral and St. John the Divine, both located in New York, NY. The choir will be traveling to New England, France and Germany in spring of 2003. The spring concert is March 27 at 7:30 in Oller Hall.

The Matrix: Revolutions

Holly Brown and Rachelle Luther, staff writers

"Everything that has a beginning has an end." Thanks Oracle, we couldn't have said it better ourselves.

Rachelle: I'm in love. And this is true love, no sappy cheesy family movie love, this is real. "Matrix: Revolutions" had me on the edge of my seat, my heart swelled and sank, the blood raced through my veins, and tears of every emotion came to my eyes. This has to be one of the greatest finales in trilogy history.

Okay, enough with the gushing. First of all, the acting. We have a new Oracle. To the original Oracle Ms. Gloria Foster (may she rest in peace): No one can replace you. Seriously. Gladly, most of the beloved characters have been brought back by the original actors. As usual, Jada Pickett Smith shines as Niobe. Lawrence Fishburne returns as the one and only Morpheus. Keanu Reeves (Neo) and Carrie-Anne Moss (Trinity) both bring their characters up a notch. As for Hugo Weaving, or should I say "Agent Smith," I love you.

This film felt like the original "Matrix" on some kind of high. The exciting story was moving from the beginning. The characters have become more developed over the past two movies. One extreme improvement on "Reloaded" was that "Revolutions" had no senseless sex scenes. In fact, I dare say there isn't a single scene which doesn't move the plot line along. The movie found its story.

Revolution's fight sequences were terrific, even topping the fight with all the Agent Smiths in "Reloaded." The Wachowski brothers have brought us some real hand to hand combat. There are also some incredible epic battle sequences between about a million sentinels and Zion as well as a certain hero and villain.

I could go on about this movie forever, but I'd give a lot away. Don't wait for the rental, go see it in theatres. A word of advice, though: you should definitely see the other two films before experiencing the end of all ends.

Grade: A

Holly: There are no words.

Well, okay, maybe there are *some* words. And here they are:

"Matrix Revolutions" was *amazing*. I went into this movie with a heavy heart, because you see, I absolutely hated "Reloaded." I am not interested in wasting two hours of my time watching a story without any real plot, boring fight scenes, and immensely cheesy romance. But where "Reloaded" failed, "Revolutions" gave back tenfold.

The way I see it, there are two principles that make this movie rock. The first is that "Revolutions" remembers its roots. The Wachowski Brothers purposefully rehash familiar lines, fighting moves, and scenery in a wonderful attempt to bring the trilogy full circle. The first "Matrix" was about the discovery of the Matrix and Neo's purpose. By "Revolutions" we have been given more information about the machine and human world, and with that knowledge, the characters retrace their steps and fight their battles over again, this time for keeps.

The second principle is that of extremes. "Reloaded" tried to be a movie of epic proportions but couldn't live up to the title. This time, everything is at stake and the Wachowski Brothers can afford to be almost insanely dramatic and artistic. Millions of sentinels swarm like clouds of smoke, Neo and Agent Smith fight in the clouds amidst a violent lightning storm, foes walk on the ceiling to fight Trinity and Morpheus. It's more than just eye candy; it's emotionally charged symbolism.

I had small qualms about the quality of acting by some of the lesser characters, including the new Oracle. If you ask me, they should have gone all out and given her an entirely new "shell". Also, I don't believe the ending fully solves all the problems we were promised would be resolved, but I suppose I'll just have to take what I'm given.

Grade: A-

Wrap up: The Matrix has returned to its roots. Aside from some poor acting from some characters (*cough*the Oracle*cough*) and minor discord with the end, the film is a huge success and a big improvement from "Reloaded." Also, Hugo Weaving is the coolest man to ever walk the earth.

Best part: Trinity's sunset. You'll know it when you see it. Also, we got to see not only the trailer for "Return of the King," but "The Last Samurai" and "Troy."

Same-Sex Union Forum

continued from page 2

of procreation.

Silliker said, "I consider [my relationship with my partner] to be a marriage, whether or not there will be children."

Dr. Robert Miller, also of Juniata's Religious Studies Department, presented a lecture titled, "Homosexuality and the Bible: Beyond the Slogans."

Miller acknowledged, "Not everyone with a moral objection [to same-sex unions] is a hater." However, he argued that the Bible does not single out homosexuality as a unique sin.

Leviticus 20:13 calls male homosexuality an "abomination" that is punishable by death. But, according to Miller, other "abominable" sins in the Bible include charging interest on loans, causing family discord, and sacrificing defective animals. Blasphemy, kidnapping, and working on the Sabbath are all acts punishable by death in the Old Testament.

In the New Testament, 1 Timothy 1:9-11 and Romans 1:18-32 are similar lists that do not single out homosexuality as a unique sin. Miller also pointed out that Jesus never addressed homosexuality in the Gospels.

Off campus: community apart

continued from page 3

Chad Herzog, Director of Alumni Relations and a '99 graduate, lived both on and off-campus during his four years here. Along with Pheasant, a '00 graduate, he hopes that non-residents form as close a bond with fellow students as on-campus residents. Herzog feels that the community has changed, but not because of non-residents. He and many alumni he speaks with miss the, "Good morning, how are you?" Juniata. Herzog misses the eye contact and genuine smiles that used to be the atmosphere here. He begs that everyone takes advantage of the, "out-of-the-classroom experience. You aren't going to get another four years like this, and they go by way too fast to pass them with your head in a book." Herzog believes that on-campus residents should be inviting off-campus residents to hang out on campus.

Juniatian Advisor and former student Amy Mathur recalls more integrated dorms where freshman drew on the experience of the upperclassmen, and the upperclassmen found humor in the bewilderment of freshmen. She said, "It's odd for me to hear that we have dorms that are primarily freshman or sophomores." Mathur suggests that this is what has created the change in the campus community from days gone by.

As far as building community, Herzog gets the final word. "We need to make it work together."

Wet Paint: Tussey and Terrace

Holly Brown
staff writer

White is an acceptable decorating motif for some. However, I personally believe in a colored overload of the senses, which is one of the many reasons I love Terrace 203, home of sophomores Brittany Barbera and Caitlan "McChert" Zlatos. Perhaps it is the fact that any white space is covered with a plethora of photographs, or maybe it's the colorful Jack Vetriano and Incubus posters. At any rate, this room is one that takes decorating to the extreme.

As in Sherwood, there isn't a lot of space to work with. The beds have been bunked on the long wall opposite the dresser, with one desk against the beds and the other beside the door. This creates a small corner area for storage and for a refrigerator in the corner of the room. Dressers double as a television table. Brittany brings her own desk chair from home, so the school desk chair and a bright green dish chair make up the rest of the furniture. Surprisingly, many people can fit comfortably in this room for movies and hanging out.

The best thing about this room is its personality. Caitlan says, "My space in the room is me. I don't often express myself well to people I don't know well, but if they could see my room, they'd definitely know a lot about me."

Literally hundreds of photos are tacked up on the walls and desks, many of them Juniata memories. Brittany says, "We love pictures, so our goal was to try and cover as much as possible with pictures (of friends or paintings) and posters."

Several decorative examples include a stained glass hummingbird, a mobile made from recycled CDs, and her overgrown aloe plant. Brittany's experience in pottery last year has left her with many original pieces to adorn the room. Even the ceiling is covered with Caitlan's Incubus and art posters and some lovingly made hung cloth to give the room a softer feel. An unused purple lamp stands beside the beds, covered with scarves and headbands and necklaces, looking every bit like an abstract statute.

Terrace 203 ("the place to be") has such a friendly, welcoming atmosphere that it has attracted pseudo-roommates, namely Lauren "Larzaxx" Forster, Charlie "B Tuna" Foster, yours truly, and a regular group of visitors.

Photo: Cara Yancey

Caitlan and Brittany opted for a bunked approach, milking this room in Terrace for the little space it has to offer.

As for white, it can take a hike when it hits Terrace.

Contrivances Amok - *A tech column*

Theresa Tschetter
staff writer

It's undeniable: we are awash in a sea of information. Cell phones and PDA's grace the pockets of hundreds of Juniata students. Walk into a dorm room, and chances are you'll find a computer on both desks. We are surrounded by air and heat and earth and water, but the fifth element is information. (Not a mid-nineties movie with Bruce Willis.)

Sounds profound, doesn't it?

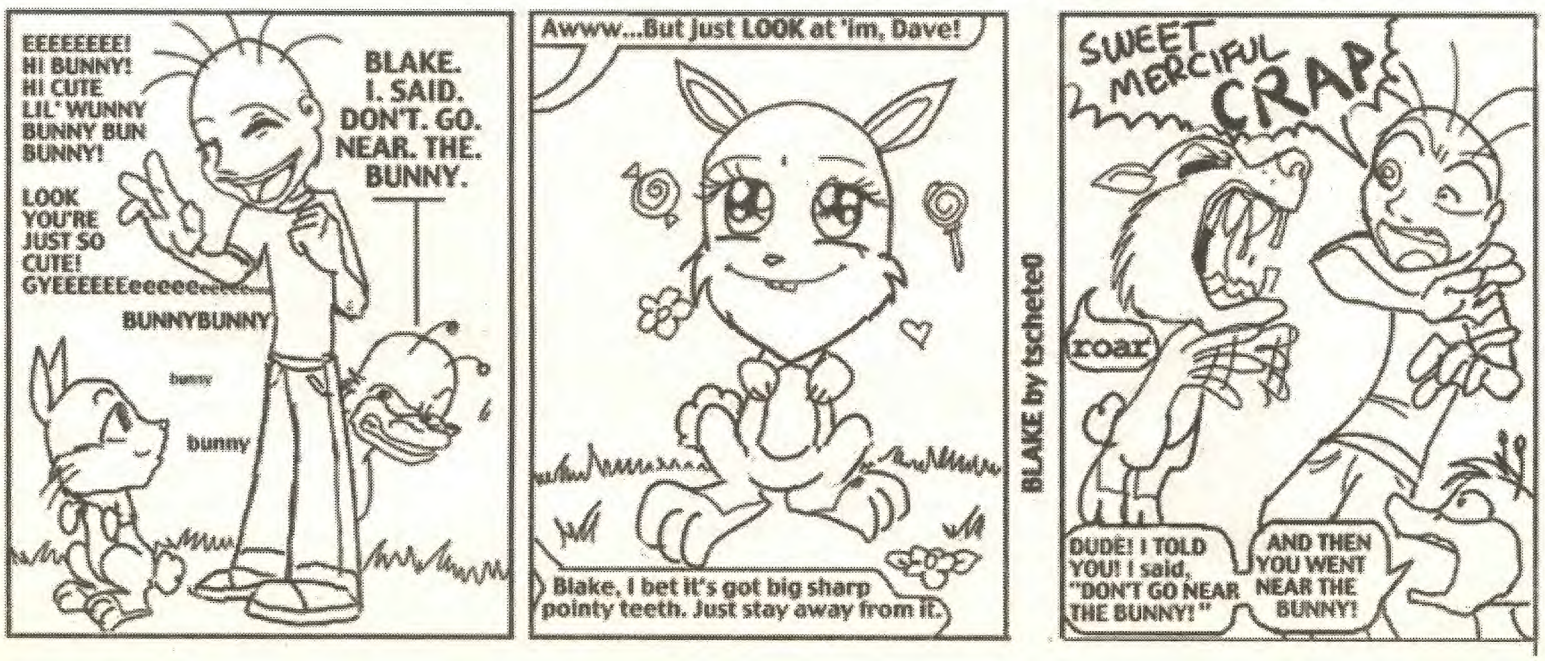
It seems fitting, then, that a technical column should address the all-encompassing nature of the technology that surrounds us, and how it got here.

Technology for information is nothing new. After all, we humans have been literate for thousands of years, and have devised countless ways to get numbers and letters from one person's brain to another. For example, Charles Babbage dreamed of creating a mechanical digital computer of brass valves as early as 1827. ENIAC, a U.S. military computer, was a room-sized monster constructed in 1945. It weighed 30 tons, yet today's handheld calculators could outperform it.

1969 marked the advent of the Advanced Research Projects Agency Network. ARPANET was a transcontinental computer network designed by the Defense Department as an experiment. It quickly grew and attracted countless universities and research labs, which found a new sense of community by linking together their computer networks. ARPANET, the Internet's precursor, became a valuable collaboration tool.

Microcomputer kits were popular among hobbyists in the mid-70's. Steve "Woz" Wozniak, a young computer enthusiast, tried to use inexpensive parts to mimic these kits and produce full-fledged, user-friendly computers. After Woz became famous among local computer hobbyists in Palo Alto, California, he and his friend Steve Jobs decided to start a company. In April 1976, Apple Computer was born.

Apple released the popular Apple II model in 1977. Unlike other computers of the time, it was designed to be sleek, easy to use, and expandable. Suddenly, computers were for everyone, not just hobbyists or number-crunchers or students. The revolution had begun.



In 1981, computing giant IBM introduced its own offering: the wildly popular IBM PC. Hardware became faster, cheaper, and easier to use. By the 90's, many computer users had discovered dial-up services that could connect their computers to others. But The World Wide Web, which went public in 1994, was even more significant: Users could view, create, and link webpages together. A new dimension of information was born.

According to Donna Weimer, chairperson of the English, Communication, and Theatre Arts department, the advent of wordprocessing has made life much less painful. Imagine writing a doctoral dissertation by hand: "Yes, it hurt," she said. "It was harder to produce good thinking because you were always worried about other things that shouldn't have been of concern."

Breathless technophiles (me) are easy to distract: Just wave a new MP3 player in front of our faces, and we'll be happily busy for hours. Computers are complex and fascinating, and the Internet lends itself to countless undreamed-of modes of communication. (Yes, I met my significant other online. Yes, in a Linux chat community. Yes, I'm a nerd.)

But Weimer advises caution. "The most heartwrenching thing," she said, "is that none of these technologies lend themselves to discursive arguments or deep thinking." A high-speed world wants high-speed reporting, not depth and substance which take time to brew. But to those worried about the direction of our fast-paced world: Take heart. There are technologists who recognize their responsibility in exercising the human mind.

Now, if you'll excuse me, I'm off to read the entire works of Shakespeare on my Palm Pilot.

"Too Much To Do"

Pamela Bodziock
co-editor in chief

I have come to the decision that fifteen credits are too many for a single semester.

Now, give me a chance to explain this – I'm not just whining, here. It's not the quantity of my schoolwork that bothers me so much these days, it's the quality.

See, I have fifteen credits at the moment. Most of us have fifteen credits at the moment. (Some souls, heaven help them, carry eighteen a semester, though few people carry more than that due to overload charges.) Now the theory runs that, for every hour you spend in the classroom, two hours will be spent on out-of-class work.

This works fine, in theory. The problems arise when you take other things into account – things like eating, and doing laundry, and sleeping (remember sleeping?), and numerous meetings and practices and events that must be attended, and all the other small tasks that will eat up five or six hours of your day, every day. Generally speaking, most of us spend the mornings and early afternoons in classes, the evening hours in meetings, and the only time we have left for schoolwork is from 9:00 p.m. on.

Maybe this is our fault. Maybe we're all involved in too many extracurricular activities. Of course, it bears mentioning that we are all encouraged, strongly encouraged, to get *involved* in said activities. We've all been told how important it is to join a club and learn about reasonability, teamwork, leadership, and all those sorts of things. I have had it suggested to me that, if a student doesn't get involved in some organization on campus, he or she will stand no real chance of being accepted to grad school or finding a job after graduating. Not that any of us feel pressured by such words of encouragement when we hear them, right? Right.

But I digress. Because even without joining the rugby team or Phi Alpha, most of us are going to have something that takes up most of our time. Everyone has to do laundry at some point. So the fact remains that, contrary to popular (non-student) belief, if we have three hours of classes, we do not have twenty-one hours left in the day for homework.

We do not have twenty-one hours left in our day, after classes, in which to do our schoolwork.

And this is what gets to the real problem of the situation. Most students simply do not have time to get all of their work done well. And notice what I'm saying– we usually have enough time to get our work done, but hardly ever enough time to get it done *well*. Any one of my classes, when handled all on its own, generally does not make unreasonable demands on me when it comes to the how many assignments are given, or how difficult each assignment is. A higher-level class means a higher level of difficulty in the course load – as it should be.

But when we are taking fifteen credits of mostly upper-level courses, well . . . the quality of work tends to go down. What frustrates me above all else in college life is the fact that I often find myself finishing assignments, but I know full well I'm not finishing them to the best of my ability. I have handed in many a term paper that I *know* I could have done a much better job of writing – but I simply didn't have the time to put any more effort into it. It is maddening to know that you can do a better job on the assignments that are given to you, and that the only thing holding you back from performing better on them is the lack of time to do them in.

I know students complain a lot about having too much to do. Furthermore, I know that *every*body has too much to do in today's society, whether they are a student of a college or an employee of a company. And I know, too, that we students procrastinate entirely too much – I'm quite the procrastinator myself.

Still, we are not employees, we're students. No one is paying us for our efforts; we are paying our college quite a large sum of money to receive the best education that they can give us. And it seems to me that if the quantity of our work load went down – not drastically, but enough to give us the occasional spot of breathing room – then the quality would go up. Not just of our assignments, but of our education itself. And that's what I think most students really want.

Ask President Kepple

"Why can't we remodel dorm bathrooms before we remodel the academic buildings? Some of the dorm bathrooms are in bad shape." Good questions. Actually Juniata has done extensive dorm bathroom remodeling over the last 10 years – Sherwood, Sunderland, Tussey, Terrace and Cloister. The next building on the list is Lesher and we expect to do that renovation next summer.

"Why aren't all the clocks on campus synchronized?" We do change the clocks for daylight savings time. There are however lots of clocks and it takes a week or so to get to them since it us usually not our highest priority.

Letter to the Editor

I picked up the most recent copy of The Juniatian [Oct. 30] and having barely started to read the second paragraph of the lead story on von Liebig, I discovered a glaring error that greatly detracts from the validity of the article. The second paragraph regards a room reserved for the ice machine on the second floor of von Liebig; the problem starts here: "…the room reserved for the machine itself may very well be larger than most dorm rooms on campus." This statement is positively absurd and I am shocked that it was printed as is.

The room in question does indeed contain an industrial ice machine as stated early in the article, but any trace of truth regarding the room ends there. It is evident that the author never actually observed the room; for those curious, the measurements of the ice machine room are approximately seven-and-a-half feet by five feet, but measuring is hardly necessary to see that this room is easily half the size of any dorm room on campus. Given the measurements, asserting that this room may "very well be larger than most dorm rooms on campus" is absolutely ridiculous.

Catherine J. Sheely
Class of 2004

In the referenced article, the size of the ice room is first mentioned in a student quote. It was a humorous exaggeration to show that, while dorms are overcrowded and faculty lack office space, a room exists merely to house an ice machine. We hoped students would read this in its appropriate context.

We appreciate the lengths Juniata students will traverse to investigate the smallest question.

The Editors

Questions may be submitted for the "Ask President Kepple" column to juniatian@juniata.edu. Editors will submit them anonymously to President Kepple. Reasonable and relevant questions are appreciated.

The Juniatian accepts letters to the editor in response to articles and editorials. E-mail juniatian@juniata.edu or write to Juniatian, Juniata College Box 667, Huntingdon, PA 16652. Submissions may be edited due to length or content.

The Rookery

by Brock Eastman

Juniata breezes through season, finishes undefeated

Tommy McConnell
staff writer

Closing out its MAC Conference season, the nation's number one women's volleyball team ran its record to 36-0. Of those wins, 28 did not require more than the minimum three games. Coach Larry Bock, already the NCAA's winningest coach, is seven wins shy of 1,000.

In the MAC playoffs began on November 5th. If the regular season was any indicator, Juniata was expected to breeze through them. The team though still took them seriously.

Senior libero Johanna Holtan said, "We need to get intense and focused, and not take anyone for granted."

Her teammates followed her advice and swept the MAC semifinals and finals against Susquehanna (30-13, 30-21, 30-24) and Moravian (30-26, 30-12, 30-15). On Saturday, November 8th the Eagles claimed yet another MAC championship, running its unbelievable conference winning streak to 264.

Still, the real challenge waits in the national tournament. The team will enter the playoffs as the heavy favorite to win the National Championship. Juniata has been to the National Semifinals each of the last three years but has never been able to win it all. This year seems to be different. Said Holtan "We are confident, but we've learned that doesn't mean anything."

Confidence might not—but strong defensive play and a potent offensive attack may prove too much for national competitors this year. The Eagles have already beaten the four teams ranked two through five nationally. A buzz around campus seems to show a real belief in this year's team's ability to win it all.

Before Juniata's national title run began, the team honored its seniors before a game it which it easily dispatched of conference foe Susquehanna, 30-19, 30-20, 30-15. The group of Lauren Beasley (Valencia/Valencia, Ca.), Melissa Berdine (Pine-Richland/Gibsonia), Jenn Habel (Glen Oak/Canton, Ohio), Danielle Hart (Central/Roaring Spring) and Johanna Holtan (Fargo North/Fargo, ND) have certainly upheld the program's level of excellence, if not raised it. The seniors have a career .838 winning percentage, have never lost a conference match, and have been to the NCAA Semifinals every year.

Holtan, now in fourteenth place all-time in career digs in NCAA Division III history, with over 2,200 said, "It has been great after three years of playing together, and to have a night to honor that."

The only honor left for this talented group of players is the national title. As Juniata hosts future playoff rounds, come out and help inspire this team to the ultimate victory.

Athletes off the field

Bill Bishop
staff writer

As the Women's Soccer team here at Juniata College finishes up one of their most successful seasons in recent history, players and coaches alike can attribute the victories to hard work on and off the field. This work ethic can be epitomized with senior Kimberly Campanaro. Kim is an emotional leader for the Lady Eagles on the field and an inspirational leader off it. She is involved in many different activities throughout the college community that can be used to teach the young women on the team how to manage their time in order to be successful on the field of life. Campanaro is a member of the steering committee for the Environmental Science Society, serves as a student ambassador for the college, and is a tour guide on campus. "I like being a tour guide because it allows me to share all the things that I have grown to love about Juniata with the incoming students," says Kim.

Photo: Cara Yancey

Kimberly Campanaro
Class of 2004

Kim spent this past summer hiking through Alaska, collecting samples for the ESS department's study of mosquito populations in live and dead spruce forest. This study will address the question of how mosquito communities change with boreal forest change. Campanaro, Dr. Paula Martin, and fellow student Tyler Shenk spent three and a half weeks living in south central Alaska. They had no modern-day commodities and even had to purify their own water. When she returned to Juniata, she began working laboriously in order to finish her entomology project with the information she gathered while "roughing" it in Alaska. This year Kim has applied to represent Juniata and present her research project on a trip to Alaska at the National Convention of Undergraduate Research in Indianapolis, Indiana. This would be a great honor, and hopefully the acceptance committee will see the same great attributes in Kim that her coaches and teammates see in her every day as an integral part of the Juniata Community.

Rugby Formal

Cara Yancey
photo editor

From 11:00 A.M. until 2:30 P.M. on November 1, Juniata women's rugby club sponsored the sixth annual formal held on East field. The rugby women asked two teams, Allegheny College and University of Pittsburgh at Johnstown, to join in their 80's prom-gown-wearing invitational. The formal is held to benefit the Huntingdon House, a place that cares for abused women.

Allegheny and UPJ also dressed up gowns from the 1980's and wore excessive amounts of makeup. Sophomore Sarah Zentmeyer exclaimed, "It was a lot of fun. I liked wearing my dress." By the end of the first game, many of the dresses were only held together by tape.

Sophomore Anne Baynes said, "It's always nice to see the field covered with dress scraps afterwards, and it is always a challenge to try to find things to grab onto when you're in the scrum – but the sequins hurt." (The scrum is where you put both teams together low to the ground, and they toss in the ball.) The first game resulted in a win for Juniata against Allegheny, with a score of 22-0. Allegheny and UPJ played the second game, with Allegheny winning. In the third game, Juniata won against UPJ with a much closer score of 25-19. Either way, Juniata came out on top, which proves, dresses or no dresses, these women know how to rock their own house.

Photo: Cara Yancey

Juniata women ruggers used their gowns and excess makeup to intimidate Allegheny and the University of Pittsburgh at Johnstown.

By the end of the first half, many of the dresses were only held together by tape.

The Rugby Club received donations for the women of the Huntingdon House in one of three ways: selling T-shirts, having a raffle, and collecting monetary donations from local businesses. After out-of-pocket expenses, the women's rugby club gave approximately $400 to the Huntingdon House. Zentmeyer said, "Our club does this so that we are not the only ones benefiting from our organization. The community is a big and important part of this campus."

Men's Soccer loses finale

High expectations for 2004

Robb Patty
staff writer

The Juniata men's soccer team lost its season ending match by a score of 3-1 against conference opponent Moravian. The defeat ended the Eagles 2003 season with a record of 2-14-1 overall and 1-6 in the Commonwealth Conference.

After trailing early in the first half 1-0 the Eagles tied the score at 1-1 when sophomore Rob Bowser scored an unassisted goal. The goal marked Bowser's third of the season, and placed him second on the team in points with nine. Juniata would get no closer as Moravian scored twice in the last 10 minutes of the game to hand the Eagles their sixth straight conference loss of the season. Top scorer, sophomore Jeff Gehring did not play due to a red card in Juniata's previous game against Elizabethtown. Gehring had seven goals and one assist for the Eagles on the season.

Next season looks promising for the Juniata men's soccer team as they lose just two seniors. With a solid core of young players returning off-season training, and playing more with each other should have them competing at the top of the MAC Conference in 2004.

Freshman goalie Mark Guthridge stated, "We had a lot of youth on the team this year. Next year we should be a lot stronger. We will have a lot more experience and should have more confidence."

Photo: Cara Yancey

The men's soccer team provided a fast paced game against Moravian, but it just wasn't enough ending with a score of 1-3.

Women's Soccer misses playoff berth

Robb Patty
staff writer

Going into their last conference game of the season, the Juniata women's soccer team needed a victory to have a shot at their first playoff berth in the programs' 10 year history. Moravian College stood in the way and shut-out the Eagles by a score of 2-0.

Moravian seemed to control possession throughout the game as they out-shot Juniata 13-3. Krisin Adams gave the Greyhounds an early first half lead. Moravian then added an insurance goal in the second half to seal the victory.

With the loss, the Eagles finished the season at 7-10-2 overall and 1-4-2 in conference play. This is the second consecutive season the Eagles have registered seven wins. Losing only two seniors after this season should have them right in the postseason hunt again next year.

Freshman forward Alicia Walsh commented, "We [aren't losing] any starters, which should give us an even stronger team for next season."

Coming into the game against Elizabethtown, the Eagles had not been beaten in their previous four matches, going 2-0-2 during that span. Elizabethtown put an end to that, however, as they shut-out Juniata 5-0. Juniata had several chances to get into the game in the first half, but was unable find the back of the net.

The shining moment for the team had to come on October 22, when the Eagles battled to a 0-0 tie with Messiah, ranked 11th in NCAA Division III women's soccer. Junior goalie Lindsey Treon made nine saves in the contest and recorded her third shut-out of the season.

Walsh said, "Tying Messiah made coaches, for the first time, give our team the respect we deserve."

First quarter too much to overcome for Eagles

Tommy McConnell
staff writer

Coming back from 21 points is not an easy task. Unfortunately, Juniata found that out the hard way. The Eagles outscored Lycoming College 14-7 in the final three periods of its November 1st contest, but couldn't overcome a 21 point first quarter from the visitors.

Juniata played Lycoming virtually even after the first quarter. However, Lycoming owned the first period, scoring on their first three possessions. Three different players found the end zone for Lycoming to start the game. Quarterback Sean Hennigar threw for two touchdowns in the first quarter, but the catalyst was running back Robert Miller. Miller rushed for 79 yards and a touchdown in the opening stanza. He would finish with 125 yards on the ground.

After the first three scores, Juniata's defense began to stiffen. An infusion of younger players, along with an already solid secondary, started to change momentum. Back to back interceptions by D.J. Dunmire and Mike Brown highlighted the defensive effort. Dunmire's interception also helped Juniata get on the scoreboard. He returned the pick 32 yards for Juniata's first score. Defensive standouts Matt Garner and Peter Thomas were in double digits tackles with 11 and 10, respectively. Ryan Hileman joined them in double figures with 10 tackles. Said Brown, "When we started playing the new young guys, it gave us a boost and enthusiasm."

Hileman echoed Brown, saying, "When the younger players came in…we were fired up. We played with more emotion."

The offense played well in the loss, but had trouble finding the end zone. Two Greg Troutman passes were picked off in the red zone, killing potential scoring opportunities. Troutman finished with 141 yards through the air. Jared Lucas caught three balls for 58 yards. Senior running back Craig Moshier finished with 81 yards rushing. He is now only 47 yards from 1,000 for the season.

Juniata has some definite positives to carry into its next match up. They out gained Lycoming 258 – 219 after the first quarter. The defense also played well, intercepting two passes and holding Lycoming to only 121 yards of total offense after halftime. "We proved we can play with one of the top teams in the nation," Hileman said of the team's performance after the first quarter.

Brown said, "We learned a lot about how to play to beat a good opponent, especially in our conference." Unfortunately Juniata could not put those lessons into play against King's (7-2) on November 8th.

The Eagles led at half following outstanding performances by

Ice Hockey season smooth as ice

Ryan Genova
staff writer

The Juniata Club Ice Hockey team's 2003 season is well underway and, so far, a success by the members' standards. Eight games in, the Altoona Galactice Arena has seen plenty of hot action when the blue and gold have taken the ice. They might not have the size and skill of NHL players, but rest assured these dedicated students give it their all when the pads go on.

Junior Kyle Mish said, "Our style of play is very aggressive. We take our academic pressures and convert it into hostility on the ice." With a wide variety of league competition, having fun and improving are the main goals, but winning is always a bonus.

Junior Zach Zettle said of the season thus far, "We're in struggling times right now, record-wise. But it doesn't matter, because we're automatically in the playoffs, and that's where we show our true capabilities."

An interesting facet to the club is its two female members. Junior Sara Lombardi, admitted that while she is new to the team, she is not at all new to the sport. "I've been playing ice hockey since ninth grade, and I love it because it's a pure adrenaline rush. You're only on the ice for a minute or so at a time, and you just give it all up while you're out there."

Intimidation might be a big factor for many female athletes thinking about playing a full-contact, male-dominated sport like ice hockey. But Lombardi seems to benefit from her male counterparts. "It's a new perspective playing with guys because they've known the game longer, and there's a lot more experience in them."

The members would like to remind the Juniata community that all the remaining games are held on Sundays, and they extend their appreciation toward those fans that have made previous games. In addition to watching a well-played game of hockey, fans may take home free giveaways such as authentic pucks, cheesesteaks, T-shirts, and the chance to see a JC player hurt an older man. If you would like more information on the Juniata Ice Hockey Club, contact team captains Kyle Mish or Zach Zettle, or log onto the club's website for a Mission Statement at clubs.juniata.edu/icehockey.

Juniata Cross Country - improvements all around

Katey Glunt
staff writer

Compared to last year, the 2003 Middle Atlantic Conference Mens' and Womens' Cross Country Championships was a meet of inverse proportions.

Last year at Elizabethtown, the weather was cold, the ground firm. During the race on November 1, 2003, runners were surprised by balmy temperatures and thick slicks of mud. At the end, the runners and coaches from Juniata College were more happily surprised by the outcome of the race.

Improving on last year's eighth place finish, the 2003 women ran hard to earn a fourth place finish behind Messiah, DeSales, and Elizabethtown. All five of Juniata's scorers crossed the line in the top 35 of the 123 runner field. Sophomores Nancy Hayes and Katey Glunt finished 16th and 17th, receiving Second Team All-Conference honors. Senior Stefanie Rynkewitz, followed by Lauren Gates, and Lia Bella, both freshmen, helped with 22nd, 24th and 33rd places.

Juliana Hillegass, a senior and the team's sixth finisher, was thrilled by the outcome of the race. "This team and its coaches [were] overwhelming in their support [for each other…] and I really think we pushed each other to be the best we could be as a collective unit."

The men also improved their overall performance, moving up from ninth to eighth place. Sophomore Chris Sheaffer finished 25th in the 8K race of 125 men. Classmates Justin Fritzius and Michael Vella ran strong to 33rd and 39th place finishes, respectively. Junior Will Cantara, in 49th, and freshman Josh Leasure, in 61st, rounded out the Eagle's top five. With no seniors to leave their team, prospects for the men next season are good.

Coach Jon Cutright was pleased with both of his teams. "I'm happy with our improvement from last year. I thought we ran really hard; at the end of the race, we had nothing left to give. I'm excited about the future. Almost everyone who ran again this year improved […] Our goals for next year have certainly changed."

The top seven runners from both teams head back this week to Carlisle High School for the Regional Meet, hosted by Dickinson College.

A record-breaking season for the Eagles

Meredith Pink
staff writer

During the week of Oct. 21st the Juniata Women's Field Hockey team captured wins over Lebanon Valley, Seton Hill Montclair State, and lost to Susquehanna.

Juniata dominated the match against Seton Hill with a final score of 2-0. The Eagles fired sixteen shots on the opponents. The Eagle's superior defense held Seton Hill back from firing any shots. Rickenbaugh scored both goals in the game.

The much anticipated match against Susquehanna unfortunately ended with a 0-1 loss. The team fought hard until the bitter end but came up short. Sophomore Sara Roux said, "Every team has off games and the Susquehanna loss just proves that any team can win on any given day. It's the team with the most heart and drive that goes all the way."

The 1-0 win against Montclair State was a huge victory for the Eagles. Montclair was ranked eighth in the STX/NFHCA Division III National Coaches Poll. It was the third time this season that the game came down to a penalty stroke shootout. Betsey Kusniez made the wining shot for the team, improving to a 14-6 season.

Senior Dana Groff said, "I was very proud of our whole team and I know that by the second overtime we were exhausted, but we were determined. And thanks to the commitment to each other, the support of our loyal fans and parents, we sent Montclair home crying."

Perhaps the team's most impressive showing came though in its 1-0 win over Lebanon Valley. This triumph marked the JC's first ever defeat of the conference foe. It also handed Lebanon Valley's first conference loss of the season.

Junior Billie Rickenbaugh scored the single goal of the game with an assist from junior Grace McCluskey. Rickenbaugh commented, "It is so great to know that you are the first team to beat Lebanon Valley. It was such an intense game, and everyone played so well together. We put in a lot of practice time, and it finally paid off."

These victories brought the team to a record breaking 14 wins for the season. Their stellar play also put them in their first postseason game since 1990.

Before the rematch with Lebanon Valley, Senior Joanna Acri said, "We are a close team who really works well on and off the field. We make sacrifices and continue to push each other to be our best. With this mindset I think we will be able to defeat Lebanon Valley for the second time ever in field hockey history."

She was right. Fueled by McCluskey's determined play, the Eagles defeated the Flying Dutchmen 2-1 in the Commonwealth Conference's semi-final match. McCluskey's goal in the second half sealed the win and notched her ninth goal of the season. This tally tied her with Silvey and Rickenbaugh for the team lead.

The second straight defeat of Lebanon Valley put the Eagles in the conference championship match against Messiah on November 8th. The team fell 5-0 to capture a second place finish in the MAC conference.

Photo: Cara Yancey

On October 30th, senior Joanna Acri gave Susquehanna a mean challenge, trying to gain home field advantage against Lebanon Valley.

THE RANDOM ELEVEN

Matt Russell, layout editor

Advance notice: We received our Thanksgiving Break Closing Procedures e-mail from Mr. Launtz on November 3rd. I guess that was just in case any of us had to make advance plans to unplug our alarm clock.

Public mail folders: We recently got a mass mail reminding us to use public folders rather than mass mail. That bit of irony aside, have you actually ever looked through them? There are messages from 2001 in a couple of those folders. Something tells me the system isn't quite working how they hoped it would.

Mr. Von Liebig: The portrait in the lobby of Von Liebig scares me. There, I said it publicly. I know you were thinking it too. I'm sure the guy looks much better than that, but that thing is creepy, it's too big, and the eyes follow you while you're trying to enjoy your latte. It just isn't right.

Trick or Treat, part one: I went through three bags of candy quickly, so my roommate threw in what was left of stash of Godiva (a more expensive brand of chocolate). Upon seeing the contents of our candy bowl, a mother counseled her child, "Ooo, get that one honey! No, not the Snickers, pick that one." The child obediently chose the Godiva. I wonder who ended up with that morsel of chocolate goodness.

Heard at the Murder Mystery: ***Cop:*** Why do you think it was her... him... uh... "Angela"? ***Don T:*** Because 'she' has a penis! ***Angela*****:** No, I don't have one anymore... they wouldn't let me keep it! ***Cop*****:** ...I don't know what to say to that!

Naming conventions: Rosenberg Auditorium in Oller Hall? Is there some other part to Oller Hall I'm missing? That's like giving a name to the empty space under the Eiffel Tower.

A good hurt: Field fee: $10. Rental equipment: $10. A thousand paintballs: $27.50. The squeal of surprise from your opponent when you ambush him from behind: Priceless. Paintball rules.

Trick or Treat, part two: First, there was the guy who commented to one of my friends, "You guys are great, letting all these townies in your hall," he himself being a "townie." Slightly more interesting was the forty-something year old man who (upon noticing the predominant gender in Lesher Hall) yelled in the hallway, "Lesher rocks!!" By the way, did anyone else notice the disproportionately large number of cow costumes? Just an observation.

Seek help: People throw rolls of toilet paper into toilets and showers. It's happened in my dorm this year, and it happened last year. Honestly, that should be an expellable offense. If you're dumb enough to do that, you should go ask the doctor to finish the lobotomy and let the rest of us alone.

Matrix Revolutions: This was probably the most satisfying movie I ever saw. Five years of wondering what would become of Neo and the Matrix has come to an end. For more, see the review of it on page 6.

Water works: A water fountain was leaking in Good Hall. As I passed by, two custodians set to work plunging the drain on the fountain. I hope they were using the "Special Only For Water Fountains and Never Submerged in Dirty Toilets" plunger. Sure…

Money matters

continued from page 5

weren't kidding. While you can study abroad on a budget, I do want to caution you about how easily you can spend amounts such as the aforementioned. I did in my first few weeks here, and as a result (though there were a few other factors), I will be rejoining the ranks in Huntingdon next semester. Since then, I have budgeted my money pretty well, and I will be able to have a great rest-of-the-semester, but if you come to Sevilla on a budget, prepare to make some sacrifices.

If you want to travel, my best advice would be to get a good job the summer before you leave, or else consider a brief career as a gold digger. If that doesn't work out, don't worry; you *can* experience Sevilla on a budget, just be prepared to stretch. Stay in town, limit the big budget spending, and don't buy mixed drinks or frequent the bullfights. Remember: you're abroad to experience Europe, not to buy a new wardrobe. That sounds stupid, but, sadly, there are mallrats even in beautiful España. If you're pinching your pennies, steer clear.

And, more than anything, watch your dimes when travelling. Make spending the exception and not the rule. This probably seems like obvious advice, and it is, so you have no excuse not to remember it. Save up, don't be scared to make the step to get here, and just watch your wallet. You might not get to live quite as high as you would like, but you'll still have experiences worth millions more than you'd ever be able to spend. Money may make the world go round, but a lack thereof can make you be awfully creative.

As for love well, that's your problem. I'll watch that game from the sidelines.

Correction

There was an error on the back page of the October 30 Juniatian. The article "Off Campus Housing" incorrectly reported the percentage of seniors living off campus. The correct statistic is that 55% of the senior class lives off campus.

Football

continued from page 10

back-up quarterback Mike Meadows and Moshier. The Eagles out-gained the Monarchs 287-146 in the first half, and saw Meadows gain 175 yards on the ground during the first 30 minutes. Moshier also topped the 100-yard plateau in the first half, which put him over the 1000 yard mark for the season. The team gave up 27 unanswered points in the second stanza to fall 41-16. The loss drops JC's season record to 2-7.

Juniata will close the season next Saturday, November 15th on the road against FDU-Florham.

Madrigal madness

Caitlan Zlatos
staff writer

It is the middle of November, and Juniata students are sleeping outside in the cold and rain, while subjecting themselves to annoying middle-of-the-night wakeup calls. Why do they voluntarily put up with such things—are they *mad*?

Not necessarily. It is one of Juniata's unusual annual traditions for students to round up a group of friends and camp out for good seats at Madrigal, Juniata's annual formal dinner and dance.

Even though students who camp out for Madrigal tickets often lose sleep, energy, and time for class assignments, the experience is one that they don't regret.

The Madrigal line is not just about trying to get good seats, it's about Juniatians bonding and having a good time together. Sophomore Karen Stringer said, "I enjoyed the overall experience, but I just wish the weather would have been better. Still, I can't wait to do it again next year."

At 1:34 p.m. on Sunday, November 16, students received the awaited "Madrigal Line May Now Begin!" e-mail. Less than five minutes later, there were already about ten tents set up. The group that became head tent was ready to go when the e-mail came: they simply had to grab their tent out of a car parked in front of Ellis.

This is only the second year that JAB has sent out an e-mail

These three were bundled up in all their winter gear, ready to withstand the cold night.

Pressure & Plagiarism

Nick Reger
staff writer

As it becomes increasingly tempting to turn to electronic outlets for ready-made papers, students need to know what plagiarism is and how it affects not just them, but their community as well. According to Sarah May Clarkson, Director of Academic Support Services, there are between 12 and 15 formal allegations of academic integrity per academic year. However there are many more that go on behind the scenes, where professors take it into their own hands to resolve the situations. These offenses span from collaborating with your friends on the IA library modules to copying someone else's work on a research paper.

If a student is caught cheating, and the professor decides to take it before the Juniata Judicial Board (J-Board), the procedure is as follows:

The student can admit guilt and accept the penalty requested by the professor, admit guilt but request an appeal, or deny guilt.

If any but the first is selected then the student goes before the Judicial Board. This is comprised of three faculty members and two students. Both the defense and the prosecution may call witnesses, but no lawyers are allowed. The J-Board listens to all the accusations then convenes to reach a verdict. The sentence is passed, but the student still has one option left. He or she can appeal to the Provost. However, history shows that the Provost rarely changes the verdict, only doing so in extreme cases where new evidence has been unearthed.

Senior Matthew Wilson served on the Judicial Board at one time, and he explained what it was like. He said, "It is hard because it makes [you] wonder

Should liberal arts mean liberal politics?

Pam Bodziock
co-editor in chief

We've all heard it time and again. Juniata College is a liberal arts college. For some students, all this means is that they're forced to take Cultural Analysis *and* fulfill all their FISHN requirements. For other students, a well-rounded and balanced education is why they came to Juniata in the first place.

But regardless of how we each may view FISHN requirements, there is a larger issue for all Juniata students, one that almost everyone has an opinion on, and one almost no one can agree on. Should a school known for its liberal arts program also be immersed in liberal politics?

The majority of the Juniata college campus, at first glance, appears to be more left-winged than right. With clubs such as All Ways of Loving (AWOL), United Cultures of Juniata College (UCJC), and the Green Party, the clear majority seems to be in favor of the liberal side. The only real conservative balance to these organizations is The Other Side, a new club for conservatives and moderates on campus. So, are the majority of students at Juniata liberals?

"I know a lot of conservatives on campus. They're just afraid to speak up."
– senior Jodi Kerstetter.

"That's hard to say," said senior Jodi Kerstetter. "I know a lot of conservatives on campus. They're just afraid to speak up."

If you can get people to relax enough to express their political views without feeling afraid of being rebuked for them, many Juniata students actually turn out to have much more conservative or moderate views than one might initially imagine. But it's not just the pressure from fellow students that has some conservative students on edge; it's the professors' influence as well.

Said Kerstetter, "If I'm not in a politics class, I find it frustrating and irritating when the professor gets on a soapbox about an issue. Professors' opinions on controversial issues should be kept to themselves unless it's a class discussion."

Kerstetter is not the only

Kepple to stay through 2011

Jeff Anderson
staff writer

Thomas Kepple, Juniata College president since 1998, signed a contract that extends his stay here through 2011. He has been a valuable asset in the improvement of our college since he has been with us. Said Kepple, "When I came here five years ago, this school had a lot going for it. But it lacked momentum."

Kepple did have offers from other colleges, but he decided to stay here. He said, "Your life is the people you work with. And if you don't like the people you work with, you are miserable."

For the next eight years, Kepple's plan is based around these four goals:

• Make the campus beautiful

Juniata College was never as attractive as it is now. Not many students may remember, but the brick path that runs perpendicular to Ellis used to be a road. The $20 million von Liebig Center for Science is considered an architectural beauty by many. Looking toward the future, Oller Hall is about to receive a facelift in the spring, with an addition to the building that will be known as the Halbritter Performing Arts Center. Renovations in Brumbaugh Science Center are to be completed in 2004. Founders Hall will be restored in the future as well.

Increased national recognition

In the past few years, JC has been steadily increasing its ranking in college review guides such as "The Princeton Review: The Best 351 Colleges," "Barron's Best Buys in College Education," and "Colleges that Change Lives" by Loren Pope. Kepple wants to keep this momentum.

• Improve our competitiveness

The completion of Shuster Hall is the first step in what will be an environmental learning setting at the Raystown Field Station. New IT classes are helping students prepare for the digital world. Business students now have the Juniata Center for Entrepreneurial Leadership. All of these additions are just the beginning of what will make us more competitive in all fields of academics.

• Improve finances

Higher education is in a hard place right now. States across the nation are cutting back higher education funding about five to 20 percent. Even private colleges are losing funding due to the declining stock market. Juniata, however, is still making financial progress. We get much of our funding from alumni and friends of the college through the Uncommon Outcomes campaign. Started in 1998 when Thomas Kepple first came here, the program had an initial goal of 70 million dollars. To date, it has raised more than 89.1 million dollars. The Endowment for the Future campaign is still underway, reaching about half of its goal (18.4 million) already.

Despite the popular rumor, reaching enrollment of 1,600 students is not one of President Kepple's goals. There is, however, a goal to reach 1,400 full-time students. Kepple says there are no plans to try and reach an enrollment of 1,600, due to facilities and staff limitations. "It would be difficult enough to get 1,400, with the huge senior class that is leaving."

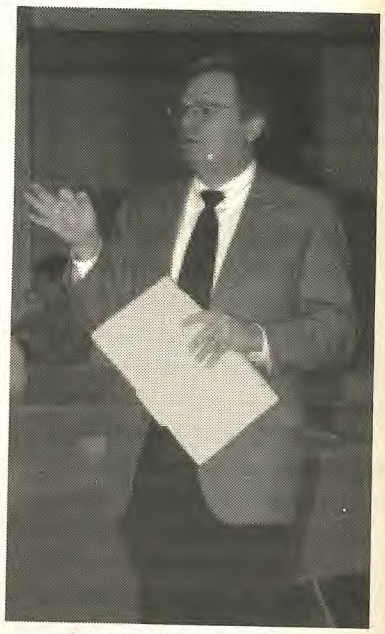

Photo: Hannah Rauterkus
President Kepple at a recent campus open forum.

One of the biggest things that attracted Kepple to Juniata College was the faculty and staff. Five years later, it is still his reason to stay.

Quiet hour controversy

Kate Leib
staff writer

With final exams right around the corner, it's no wonder that people are becoming increasingly concerned about the enforcement of quiet hours. Most dorms have quiet hours beginning between 10:30 p.m. and 11:00 p.m. on weekdays and 2:00 a.m. on weekends; however, courtesy hours are always in effect. But who is responsible for keeping the music and noise down when 11:00 rolls around?

Some people think students should be responsible enough to know when they are being too noisy. Many times, though, people get caught up in having a good time with their friends, and they forget that there are other people living on their floor. "We're all adults and we should be able to respect each other," says freshman Jessica Mann.

Other students think that the RA's should patrol the hall and keep disrespectful students in line. Freshman Sara Tamski explains, "It sounds mean when a student asks a neighbor to turn down their music. Everyone respects the RA, or at least they should. You have to live with these people for the rest of the year, and you don't want to get on anyone's bad side just because you have a big test the next day."

In the absence of quiet hours, we have courtesy hours. This means that students are not supposed to be loud enough to disturb anyone else, and if someone asks a student to be quiet, he or she really doesn't have a choice. With walls that don't shut out slamming doors, high pitched laughs, and the bass from the system downstairs, many people find midday studying and napping impossible. With constant courtesy hours, is there really any time that's safe for people to play their music at an enjoyable level? Some think there should be more of a balance, allowing louder noise during parts of the day.

On the other hand, should people really be forced to listen to your music just because you don't own a set of headphones? Many people argue that they shouldn't have to leave their room to find a place to study but unfortunately, many students do.

Some people think the system works fine the way it is and with the cooperation of everyone on the floor, both RA's and students, it will continue to do so. "Everyone does a good job in North of not being loud past the times we agreed on at our hall meeting. It's a group effort," explains freshman Tim Penrod. Other students aren't so optimistic. "Quiet hours are useless; no one listens to them," says freshman Andrea Walkowiak, a resident of Sherwood.

There isn't a quiet hour policy that would please everyone, but maybe one day there will be a happy balance of studying time and party hours. Until then, keep the bass down and try to have patience with the people next door. We still have half a year to go.

JCEL: hands-on learning

Meredith Pink
staff writer

What does a Juniata College student with an entrepreneurial spirit, a business plan, $5,000, and office space equal? JCEL.

The Juniata College Center for Entrepreneurial Leadership (JCEL) is Juniata's newest addition to hands-on learning. This program gives students from all disciplines of study – not just a POE in business – the opportunity to start their own businesses.

JCEL is composed of four interrelated programs: Sill Incubator, Seed Capital, Academic Services, and Economic Development. The Bob and Eileen Sill Business Incubator is a two floor, 5,000 square-foot facility located three blocks from the center of campus. JCEL received $650,000 in grant money to renovate this building. The incubator is not up and running as of yet, but it should be ready by May.

As its name implies, the Sill Incubator is intended to nurture new businesses to success. This building provides 24/7 office space at a reasonable price, and resources for the business. In addition, there are hotel spaces available for rent. These spaces are different from standard offices because they are rented on a flexible need basis. For example, a student may rent a hotel space every Tuesday while another student may rent that same space every Wednesday and Thursday. It depends on the needs of the business. These spaces are also available for community members to rent.

Another important aspect of the Sill Incubator is that it provides a permanent address for the student's business. A permanent address is necessary because there are legal ramifications for running a business from a dorm room. Dr. Michael Lehman, Executive Director of JCEL, stated, "Dorms cannot supply the physical address of the business nor provide the resources and network needed to run a successful business."

The Student Seed Capital Fund committee is the authority on what business ventures are chosen. The student must present a written business plan to the committee. If chosen, the student will receive a stipend of $5,000 dollars from the committee over a period of time.

This $5,000 is characterized as a loan, but it can be forgiven in extenuating circumstances. Each case is treated individually. If the business goes under but stuck to the business plan and used the money for the approved measures, the $5,000 may be forgiven. If the business succeeds, the loan may be converted to Juniata owning part of the business. This ownership follows the same idea as holding stock in the business.

Academic Services is another branch of JCEL dedicated to helping non-business students start their businesses. Accounting, Business and Economics (ABE) students work together to find ways of aiding non-business students in their ventures. Currently, non-business POE's are not required to take any business classes in order to be eligible for Seed Capital, but that may change in the future.

Economic development is the final division of JCEL. It is the network of local organizations that support business startups. This includes Huntingdon County Business and Industry and the Chamber of Commerce. Lehman said, "This provides a way for the student to tap into local and state loans, space available in the community, and most importantly a network with other businesses."

The idea of JCEL evolved over the past few years. It is built on the notion that many Juniata graduates are going to start their own businesses someday. Unfortunately, many entrepreneurs experience obstacles and failures along the way to success. Entrepreneurs sometimes have several failed attempts before the idea reaches success. JCEL is designed, with this in mind, to provide a priceless learning experience. Lehman added, "Students can learn from their mistakes now, while they are still in college, and have a safety net in place for their business venture."

If you are interested in any aspect of this program contact the JCEL office at 641-3734 or jcel@juniata.edu.

Photo: JCEL
Juniata College Center for Entrepreneurial Leadership will soon be moving into the building on the corner of Moore and 14th Streets.

Shack-a-thon

Rachelle Luther
staff writer

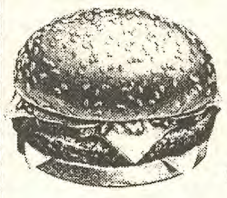
Who sleeps in cardboard boxes in sub-zero temperatures in the middle of Pennsylvania? Juniata College Habitat for Humanity members.

On December 5, 2003, from 5 p.m. until the morning of the 6th, Habitat will host Shak-a-Thon 2003 on the lawn of Founders Hall to raise money to build homes for those in need.

Members of Habitat will be sleeping outside in cardboard boxes for pledge money. Senior Chris Belinda stated, "[The goal is to] raise campus awareness about homelessness, have a great time, and hopefully raise money for future builds."

Students can get involved by simply coming out and giving the campers some support. They can also make monetary donations to a freezing member in one of the boxes. Every penny counts.

Freshman Habitat member Brittany Krotzer also feels that it is important that the campus community is aware that many people do not have adequate housing, even in Huntingdon County.



Another freshman member, Reid Smith, feels organizations like Habitat are vital to the community. "It's important to help others and make the place you're living in better for everyone." If that isn't worthy of a little support, this reporter has no idea what is. Clean out your pockets readers, this is a worthy cause.

For more information on Habitat for Humanity, visit these websites:

Liberal arts, liberal politics?

continued from page 1

student to feel that professors have a tendency to weave their political opinion into lectures, regardless of topic. Said senior Courtney McIndoe, "I actually had a professor, in the middle of class, condemn my religion as 'stupid.' Then the professor went around to the rest of the class and had them condemn it as well."

But not everyone agrees that the campus is overly liberal. Said sophomore Kevin "PAR" Fasick, "There's so much of a conservative slant on campus, and so much of it is implicit. So the reaction against it – liberalism – is for the conservatives to say that the 'other side's opinion' is being pushed down their throat. There's a lot of close-mindedness here."

Much of the conservative viewpoints on campus are covert. And it's certainly arguable that, because the liberal view is often the more shocking of the two (since it's generally not as conventional), few are shaken up by the conservative view. Said Fasick, "When people say something's 'liberal' – which just means 'open-minded' – the conservatives claim it's being forced at them. And it's nothing of the kind."

Students, however, are always free to debate with one another. But what about when professors seem to offer one political view over another? Are they careful to show both sides?

Henry Thurston-Griswold, Professor of Spanish, said, "I'm not trying to be an activist, but I don't want to hide my political views, either. But my students are always free to exchange political views in class."

When told that many students feel that a professor shouldn't put a left or right spin on any issues, Thurston-Griswold answered, "It is an illusion to think we can step out of ideology, political or otherwise, and be objective. The challenge is to examine the values and assumptions that shape the beliefs that we and others hold, and thus enrich our knowledge and understanding of ourselves and the world around us."

Thurston-Griswold does not label himself either liberal or conservative, explaining, "Labeling yourself one way or the other doesn't say much."

Regardless, he still has strong political views, and does not hold them back in class – when the direction of the class happens to call for a discussion of politics. "It's *not* my job to proselytize or convert; but for intellectual discussion, ideas need to be thrown out there. My students and I don't have to agree. But I believe is important is to create an open classroom forum in which students feel free to express a variety of perspectives and ideas."

This echoes the sentiments of Emil Nagengast, Associate Professor of Politics, who said he enjoys a good debate with his students and wishes his conservative students would speak out more. "Liberal students here express themselves. But then there are the silent, paranoid, conservative students. They convince themselves that if they dare to stand up for their political views, they are going to be flunked by the professor. Really, they're afraid that they don't have a solid enough grasp on the issues to argue their point. They all come into the classroom, sit quietly in the back, fold their arms, glare, and don't say anything." He adds, "A lot of them seem to wear baseball caps."

Continued Nagengast, "I look at [students] as adults. There's free exchange for everyone. But students see it as professors having 'power' over them. Students need to grow up a little bit and exchange. The conservatives need to argue with their professors!"

In our college administration, another trend can be observed. It is, of course, impossible to say what the political slant of the majority of the administration may be. However, there are some other factors to consider.

Consider, for instance, the speakers that have been brought into Juniata over the past two years – with guest speakers such as Ralph Nader, Dr. Chris Hansen, and Terrell Jones, few, if any, conservatives have been invited to balance out the lot.

This year's convocation speech, delivered by Professor Thurston-Griswold, begins by talking about the benefits of the liberal arts education in the world today. Then later he makes a reference to President Bush. "Imagine, if you will, a politician who understands nothing about basic economic principles and who is totally ignorant of history. For many of you, George W. Bush probably comes to mind. I know, cheap shot. In any case, I'm sure we all agree that we need politicians who are well-versed in economics, history, and many other fields, and who are capable of communicating effectively their vision and programs to the American people. Grammatically correct and complete sentences would also be nice."

It's hard to say if political view should be taken this far in the academic setting. Certainly, professors should be allowed to offer their political views if they are relevant to class discussion. Certainly, students should be allowed to disagree. A liberal arts education, after all, is quite a different thing from liberal politics. A liberal arts education merely means that the education received will be a well-rounded, all-inclusive one – not that the education must promote liberal politics as well. That aside, students have the right to defend their political views in and out of the classroom – and so all of us should take the opportunity to do so. Particularly, perhaps, if the views are right-winged. Said Fasick, tongue in cheek, "Conservatives should feel free to speak. There is no law that says when people's views are utterly in error, they can't speak."

Added freshman Jon Hoey, a conservative, "I feel I have to speak my mind. No one else here is talking about it."

Outdoors Activities Forum forms

Are you a member or officer of an outdoors-related club or would you like a say in the outdoors recreation activities on this campus? If so, perhaps you should check out the newly formed Outdoors Activities Forum. This forum had its first structural meeting on Wednesday the 12th.

The forum has officially adopted the following mission statement: "To increase collaboration and communication among outdoors related organizations at Juniata, and to promote campus participation in outdoors activities." By strengthening club relationships, this forum will have a plethora of positive impacts. If enough interest follows, there will even be a push for a central website providing information on all upcoming outdoors activities at Juniata.

If your club has not yet gotten involved, please consider contacting Laughing Bush or Nathan Thompson (thompns1) to get more information. The next meeting is currently planned for Wed., December 8th, at 9 p.m. in the Faculty Dining Room. We look forward to seeing you there!

Madrigal madness

continued from page 1

to kick off the event. It's purely coincidental that the e-mails from both years were sent out on the Sunday before tickets go on sale. Dawn Scialabba, Director of Campus Activities, stated that JAB was considering sending it out several days before Sunday, but they had to wait for the high winds to pass.

Since the first head tent established itself in 1995, Madrigal tenting has gotten more creative and even more sophisticated. Campers can now be found playing Playstation in their tents or sleeping on airbeds and even their dorm mattresses. Sophomore Susan Trainor brought out a small grill and she and her friends cooked hot dogs, salmon, and even steak while hanging out at tent city. The term "camping" should apparently be taken quite loosely for the Madrigal line.

Memorable parts of camping out this year included a chicken dance competition on the steps of Ellis (for redemption of a missed roll call), the antics of the "'04 Tent," funny roll call names including "Pimp Daddy and Associates," and the local reporters who showed up thinking they were arriving at the scene of some sort of protest.

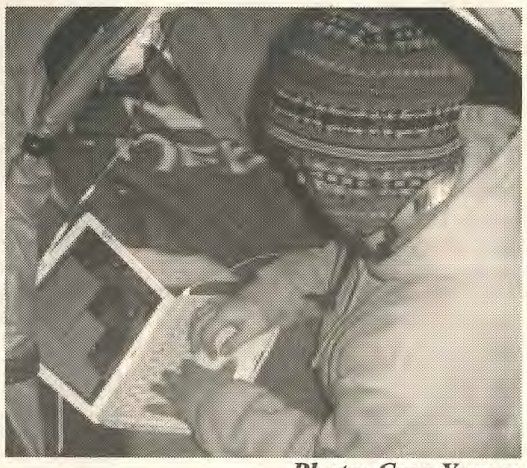

Photo: Cara Yancey

Sophomore Anne Baynes tries to keep up by using a wireless network connection from her tent.

If you missed out on the great memories this year, get your friends together next fall and camp out - you won't regret it.

The pressure is on

continued from page 1

how you have the right to judge this person. However, you cannot allow emotions to affect you in the prosecutions."

Wilson also stated that students need to read the "Pathfinder" so that they can understand what academic integrity means and what the consequences can be if it is breached. The "Pathfinder," a guide to Juniata's student rules and policies, can be found under the Student Life section of Juniata's website.

Dean of Students Kris Clarkson said, "[Plagiarism] is a pretty big issue with enormous potential to get worse. It has a ripple effect. One problem causes more problems, and it spreads like a cancer through our community."

Dean Clarkson also mentioned that, in a recent study done of 60,000 students, over 87% admitted to having cut and pasted. "Perhaps the main reason students do it," he said, "are because for one, it's easy, or they feel trapped due to time restrictions."

Assistant Dean of Students Dan Cook-Huffman stated that he believes the system here to be firm but fair. He said, "We spend a good deal of time helping people understand the policy, but, more importantly, helping them understand what plagiarism is."

Assistant Professor of Communications Lynn Cockett agrees. "Students need to know the consequences and be able to accept them, but more importantly they should understand philosophically why [plagiarism] is wrong," she said.

Extended Orientation (EO) instructors have been, for the past two or three years, incorporating this issue into freshmen EO classes. The instructors are schooled by Sarah May Clarkson as to what needs to be covered. They talk about the risk factors, how easy it is now with the help of the Internet for professors to track even a copied sentence or phrase, and how time management can help avoid situations where a student might be inclined to take such desperate measures.

Cook-Huffman also wants to remind students that, "Their professors are not stupid, and they can tell when a student goes from being mediocre in one paragraph to having been struck by a miraculous brilliance in the next."

One example he gave of this was of a term paper titled "The Travels of Donkey Hotey." Beyond the title, however, the paper was almost flawless. Not all examples are this blatant, but a professor can still detect inconsistencies.

How do professors feel when faced with a student who has apparently cheated? Cockett said, "It's hard as a professor to believe that one of your students has been academically dishonest because you want to believe [...] that all your students are perfect."

She also mentioned how it is hard when the J-Board overrides a teacher's suggested penalty because it reflects on the teacher's judgment and on his or her course.

Wilson said, "I believe a joint effort is needed between administration, faculty, and students. Administration to make changes, faculty to report wrong doings, and students to make renewed efforts towards academic integrity."

So a warning to all students here at Juniata: while you may not be expelled or suspended on your first offense, it is far better to not have a first offense at all. Copying someone else's paper may come back to haunt you in later years. Whether it be in your career, or in your graduate school application where it asks if you have ever been charged with behavioral or academic insurrections, your permanent record will show it.

Research opportunities announced

Undergraduates may apply to participate in multi-disciplinary global change research sponsored by the U.S. Department of Energy (DOE), Office of Biological and Environmental Research (BER), Climate Change Research Division. U.S. citizenship is required and appointments are competitive. Research areas include atmospheric sciences, ecology, global carbon cycling, climatology and paleoclimatology, terrestrial processes, integrated assessment and prediction, computer modeling, and earth systems processes.

The Global Change Education Program (GCEP) includes the Summer Undergraduate Research Experience (SURE) and the Significant Opportunities in Atmospheric Research and Science (SOARS) programs.

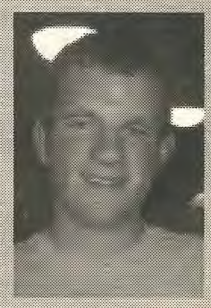
Summer Undergraduate Research Experience

The program targets sophomores and juniors; however, outstanding freshman applicants will also be considered. The 10-week SURE program sponsors an orientation, research with mentors at DOE facilities, and an end-of-summer workshop. Participants pay their lodging costs.

Significant Opportunities in Atmospheric Research and Science

SOARS is a four-year undergraduate program for students pursuing careers in atmospheric and related sciences. This program, administered by the University Corporation for Atmospheric Research in Boulder, CO, is dedicated to increasing the number of African-American, American Indian/Alaska Native, and Hispanic/Latino students enrolled in atmospheric and related sciences. To reach this goal, SOARS offers educational and research opportunities, mentoring, career counseling and guidance, and financial support to participants.

An interactive electronic application for SURE is available at http://www.atmos.anl.gov/GCEP through the deadline for submittal, February 2, 2004. For complete information about SOARS, visit the program's home page at http://www.fin.ucar.edu/soars.



The GCEP-SURE program is administered by Oak Ridge Institute for Science and Education (ORISE). ORISE is a U.S. Department of Energy facility.

Student voices

What is your opinion of those who plagiarize and are given a second chance?

Jennifer Marshalek, SO: "I believe plagiarism is a serious offense. If one plagiarizes a very long portion of his paper, the punishment of being kicked out of school is reasonable. However, it is possible for a student to plagiarize without realizing it. I think it is also reasonable for a student to plead his case before a committee before being kicked out of school."

Joe Wills, SO: "I believe that students should get a second chance. However, if it happens again, give them the boot."

Sarah Bay, SO: "I believe that you should not get a second chance. If the person you stole from took time to write their opinion themselves, then it is only right that you take the time and effort to come up with your own opinion/argument."

Sensational sensations

Katey Glunt
staff writer

True to its name, the Juniata College Dance Ensemble's annual show, "Cinema Sensations," was sensational. The performances, on November 20 and 21 in Oller Hall, showcased thirty-two dedicated dancers in two acts totaling more than a dozen different dances.

The show was a medley of various genres of movement. Styles included ballet, hip-hop, lyrical, modern, tap, and stomp. All were done impressively, accented by colored lights and smoke.

Jillian Merriwether-De Vries, daughter of Assistant Sociology Professor Cynthia Merriwether-De Vries, performed a ballet piece to a song from "The Lord of the Rings." The dim lighting and mistiness lent an ethereal quality to the dance. During another number, the lights cut out, and the group appeared on the other side of the stage.

Cheers were drawn from the audience most often during the faster, more intense dances. The Senior Mix, a feature choreographed and performed by most of the seniors, was fun and provocative. The stomp performance was loud and bold, a competition of attitude.

The large amount of time and emotion put into the production was evident. Dances were all choreographed by members of the ensemble. The ensemble's president, junior Nicole Fernandez, developed the theme and had a hand in choreographing the majority of the numbers with the help of senior Danielle Smith. Fernandez, for example, spent 12-15 hours a week dancing. Sophomore Christine Talleda, secretary of the ensemble, helped to choreograph two numbers. She estimated that, "In a faster hip-hop number, one minute [of the dance] might take two hours, depending on your mood." Not counting choreography, dancers in each segment met for at least an hour a week, and most appeared in multiple segments.

Everyone was allowed to choose the extent of involvement, selecting their dances based on style and experience.

Experience levels range from zero to fifteen years. Fernandez, herself a dancer since age three, assures, "Some people are just natural dancers. While most of these girls did have training, there were some who had none and did just as well."

The greatest part was that, no matter the dance, all looked like they were genuinely having fun.

Drew Novelli, a visiting spectator, expressed his satisfaction, "The night was magically delicious for dancers and non-dancers alike."

Photo: Cara Yancey

November 20th, Juniata's dance ensemble put on a spectacular show that overflowed with their talents and hard work.

Alison Denyer exhibit opens

Holly Brown
staff writer

On November 21st Juniata hosted artist Alison Denyer for the opening reception of her latest museum exhibit, Organic Forms, at Juniata's Carnegie Hall. The exhibit involved studies on gourds, vegetables, roots, and various plants.

Alison Denyer is a native of England. Currently, she teaches Fine Arts and Foundations studies at the Savannah College of Art and Design in Georgia.

Before the reception, Denyer gave a lecture in Neff Hall about her history and inspiration. Denyer spoke of her inspiration from photographer Carl Blossfeld and botanical illustrations. She explored several different themes, such as suspension and tension, visual dialogue between sets of works, and the feeling of otherworldliness.

The reception, which ran from 5:00 to 6:30 p.m., involved students, professors, and the Huntingdon community. Everyone enjoyed refreshments as they were able to view the completed exhibit and talk with the artist and curator. Denyer was fully occupied answering questions and discussing technique the entire night. Obviously, her works garnered much attention from the Juniata community.

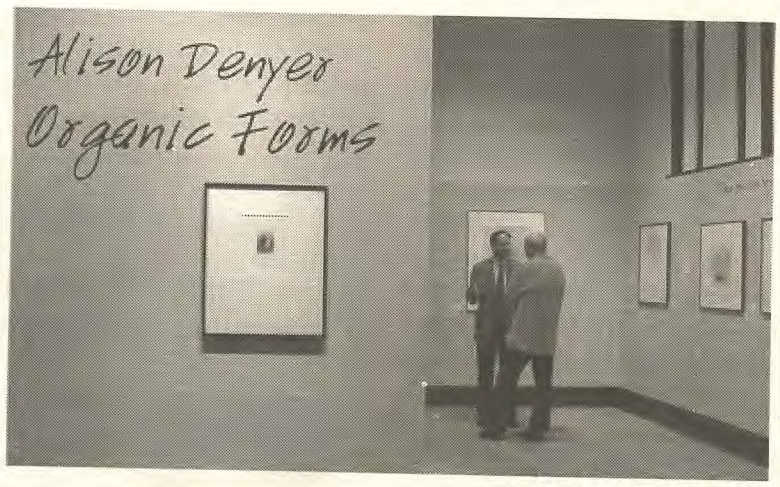

Photo: Cara Yancey

Museum Curator Dr. Nancy Siegel said she is always looking for artists who will fit with a wide audience at Juniata. "The appeal is not only for the art students, but also biology, ecology, and environmental science students," she said. This organic study seems to have done the trick.

Siegel worked with museum practicum students several weeks before opening night to ready the exhibit. The Shoemaker Gallery is painted to complement the works, which are then selected and arranged to guide the viewer through the room.

Denyer claimed that college shows are quite different from gallery exhibits. "In a commercial gallery, the selection of pieces would be different, such as the aesthetic choice of how this was selected and hung. People [here] aren't necessarily coming in to purchase; they're coming in to look. That's what we artists like."

A variety of techniques and mediums were used in all of Denyer's works. The majority were done in charcoal, but several were done as prints, in acrylics, or with colored pencil. In her lecture, the artist spoke of her interest in depicting simplistic

Spanish club

Katey Glunt
staff writer

Even if your Spanish vocabulary is limited to "adios" and "hola," the Spanish Club has many activities in which you may participate.

Leah Yingling, one of the club presidents, assures, "It's not just an academic club. We do a lot of service-based activities, a lot of fun things that also reach out to the community."

The Spanish Club reaches out and operates at multiple levels of service. Within the Juniata community, it can be linked to campus events like "Fiesta Latina." The club also plans to conduct an educational Spanish day camp for third, fourth, and fifth graders in the area.

Globally, the Spanish Club has organized fundraisers for Colegio Miguel Angel Asturias. This Guatemalan school, a partner of the Stone Church of the Brethren, needs money to buy the land for its new, permanent building.

A few activities are more exclusively for Spanish-speaking members. For example, the club has an Immersion Day, during which only Spanish may be spoken. Participants spend their Saturday at Patrick's Lodge, from lunchtime until evening. This year, they played "getting-to-know-you" games and soccer, watched "Harry Potter and the Chamber of Secrets" dubbed in Spanish, and had plenty of good food.

Every spring, the group plans an adventure. Last year, they went to Pittsburgh to watch a play and eat a nice Spanish dinner.

The Spanish Club is advised by Dr. Henry Thurston-Griswold, Professor of Spanish and Chair of the Foreign Language Department, as well as Dr. Tammy Hertel, Assistant Professor of Spanish. The club is led by Co-Presidents Leah Yingling and Kristen Robinson, Treasurer Candice Hibberd, and Secretary Amber Ziegler, all sophomores.

Full membership meetings are held in the Humanities Lounge on Thursdays at 8:30 when there is an upcoming event to discuss.

If you are interested in joining the Spanish Club, or just in finding more information, contact an officer or visit http://clubs.juniata.edu/spanish/.

"Rennie Harris Puremovement" is a success

Brittany Barbera
staff writer

On Saturday, November 22, Rennie Harris Puremovement (RHPM) danced the night away thanks to the Juniata College Artist Series. Harris is a choreographer and has been teaching workshops since he was fifteen years old. In 1992, he started RHPM in order to convey the true spirit of hip-hop, instead of the way it is depicted in the media.

On Saturday afternoon, Harris conducted a workshop to teach his technique to the campus community. His styles of dance include locking, popping, stepping, break, and house dancing, among others.

During the show, Harris's company performed four dances ("Continuum," "P-Funk," "March of the Antmen," and "Students of the Asphalt Jungle") which also incorporated gymnastic elements.

Puremovement is filled with African heritage, particularly movement patterns in traditional African dance. The show was not only stimulating to watch; it advocates a strong anti-racism message. The performers depicted scenes from the ghetto and the violence that occurs there so frequently. Their powerful message, brought to life through music and dance, moved the audience greatly.

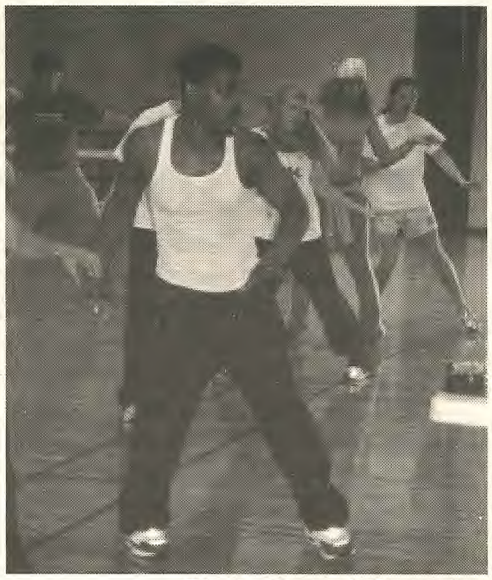

Photo: Hannah Rauterkus

Rennie Harris, the latest artist series performer, also led a workshop in the Kennedy Sports and Recreation Center.

The highly energetic performance earned the dancers, Brandon Albright, Brady Hill, Duane Holland, Rodney Mason, and Les Rivera, a standing ovation. The ensemble's performance was astonishing. Between head and back spinning and other break dancing skills, the dancers wowed the audience over and over again. Obviously, the men are extremely talented dancers, but, they are also amazing storytellers.

Overall, the night was action-packed, and, at the same time, an influential force promoting peace. Based on the crowd's reaction to the performance, Rennie Harris Puremovement was a huge hit. Thus, another artist series—another success.

Wind Symphony, Sinfonia make musical history

Caitlan Zlatos
staff writer

On the evening of Friday, November 14, a historical moment occurred at Juniata. Perhaps for the first time since 1928 or 1929, Juniata students played a musical piece that combined winds, strings, and percussion groups.

The JC Wind Symphony and Sinfonia (Juniata's string ensemble) paired up for this significant event as part of the "Instrumental Ensembles Concert," which also included the Percussion and Jazz Ensembles.

Under the direction of Dr. James Latten, Assistant Professor of Music, and Dr. Rosalyn Troiano, Lecturer in Music, the combined group performed J. C. Bach's "Overture in B Flat." Dr. Troiano came up with the idea of getting the ensembles together for this piece.

Such an attempt to put together a full orchestra has not occurred for so long partly because of a limited number of musicians. Said Dr. Latten, "In the years since the music major was dropped here at Juniata, it has become more challenging to field a string ensemble of the size and quality required in order to pull off pieces of this nature. Our recruiting and retention rates are encouraging these days, and we're heading in that direction now."

Student members of the two groups reacted enthusiastically to the event. "I felt that performing 'Overture in B Flat' with the Wind Ensemble was a great experience. I really missed how wonderful it was to play in a full orchestra, and I'm glad I got the opportunity to do it again," said junior Beth Diesel, a member of Sinfonia.

If you missed this noteworthy musical moment, not to worry. The two ensembles will make music together again this spring when they perform Aaron Copland's "Outdoor Overture."

Wet Paint

Holly Brown
staff writer

Cloister was my last dorm stop this year. I climbed the spiraling stairway and thankfully found myself in room 304, home of sophomore Sarah Wharton and junior Emily Miller.

Cloister is, of course, different from any other dorm building on campus. Sarah enjoys the slanted roof and the recessed window, which give the room some character that other rooms can only achieve with decoration.

This room is done up in quiet hues with subtle bursts of color from a random postcard or blanket. "Relaxing" is the best word to describe 304.

The organic elements simply overflow in this room. Both Sarah and Emily have several well-loved plants, as well as aquatic pets. Large bamboo stocks bring green into the room and create an exotic mood. Fish tanks, when done well, bring an earthy, living element and providing soft lighting. "The running water is nice when you're falling asleep," says Sarah. The tank-doubling-as-fountain only adds to the relaxed mood of the room.

A simple carpet boosts the comfort factor, along with some colorful blankets and a light purple disc chair for visitors (myself included). Beds are lofted over desks and placed at opposite ends of the room, leaving the center open. While Sarah, who came from Lesher, had trouble adjusting to the small space, the well-lit lofts and tight squeeze do have a cozy appeal. Any space not used for plants or fish has a knit blanket or soft surface.

Emily and Sarah have chosen not to have a television in their room, which is a great idea. It makes the space ideal for studying and free of at least that one form of distraction. The distraction of people, also isn't as present as it is in other dorms. "It's a little sad [that] nobody walks past," Sarah says, but she and Emily often draw people in to visit. The next time you sweep past the arch, be sure to lose your way in Cloister and check out this unique building.

Photo: Cara Yancey

Juniors Sarah Wharton and Emily Miller adjust their furniture to make sure every inch of their Cloister room is being used to its fullest.

Art exhibit

continued from page 6

forms that "hold the viewer by detail of surface structure." Gourds were a major theme of the show and are suspended by string to avoid hiding any of the form. Large root studies give the impression of being underwater. Many of the drawings have brightly painted sections to create, in Denyer's words, "the illusion of another world." These techniques were used to evoke "an overall feeling of serenity," according to the artist.

When asked what advice she would give hopeful artists, Denyer replied, "You've got to persevere [...] You always have to be true to yourself and do artwork you're interested in making. You have to do it for you."

Denyer's works will be exhibited through February 28. Carnegie Hall is open Monday through Friday at 10:00 to 4:00 p.m. and Saturdays 12:00 to 4:00 p.m. Alison Denyer's artistic talent and familiar, imaginative images will interest students from all fields.

Trips, trips, trips

Carolyn Keller
staff writer abroad

Can you believe it? It's November already, and this will be my last column for the semester. And since it's the grand finale, so to speak, I figured it's about time I get to the subject you've no doubt been waiting for: travel! This is also timely because I am trying to best my persistent friend Bronchitis, who came to visit me for the week and kept me from heading to Granada with my friends….in short, I thought we could all live vicariously together.

Cádiz and Madrid are two cities I absolutely loved. We'll start with Cádiz. It's a beautiful little beach town that looks like something you'd see in a magazine or a guidebook, advertising the European experience. It's on a peninsula on the Atlantic, and that, of course, means wraparound beaches. The water wasn't so great, but the beaches were beautiful, and let's face it, a beach is a beach is a beach. It was great.

Listen to your mom about sunscreen though, the sun there is awfully strong – I unfortunately speak from experience.

We stayed at this great hostel called the Casa Caracol, run by lots of laid-back, obscenely well-traveled British folk who love to have a good time – though not at the real-live brothel located right next door (yes, I'm serious). They'll not only tell where to go, they'll go out with you. Go to Cádiz; it's a great way to have a fun, relaxing weekend at the beach.

And then there's Madrid, which, is a column in itself. It has a palace, a cathedral, gorgeous botanical gardens, the famous Plaza Mayor, and two incredible art museums that you will never be able to see in their entirety. The Prado is home to tons of art from the 14th through 17th centuries, like Rafael, Goya, Rivera, and El Greco. It's overwhelming. The Museo de Reina Sofia is all contemporary art, Picasso, Dalí, Miró, and more. Picasso's formidable masterpiece "Guernica" is here. Go to these museums and fry your brain, you won't regret it.

So can you tell I like art? It's okay if you don't; Madrid is a must-go place anyway. Walk around the city, see the sites, go to the movies or shopping if you must, but just *go*. And if you need more temptation than art, then let's just say the world-famous nightlife isn't world famous for nothing. You'll find something to do and something to amaze you. Trust me.

So have you sensed a theme in my column yet? Well, as my parting shot, let me make it more along the lines of a shameless plug: STUDY ABROAD. Just go. Don't think, just GO.

I'm going now, because I only have a month left and that's going to go too fast. Any questions or anything, catch me next semester, I'll be back!

Master and Commander

The Far Side of the World

Rachelle Luther & Holly Brown
staff writers

Director Peter Weir's adaptation of Patrick O'Brian's novel *The Far Side of the World* follows "Lucky" Captain Jack Aubrey and his crew as they chase a Napoleonic War "Phantom" aboard the H.M.S. *Surprise* for Queen and Country.

Rachelle: I had some doubts going into this, and even while watching it, but this film has the makings of greatness. Once again, I wept like a wee child.

The opening credits alone will leave your head spinning, literally and not in a good way, but it gets better. Within the first few minutes you see an all-out battle and some harsh realities of life on the high sea. This is one of the things that I'll rave about this movie for. It is real. There is nothing that glorifies this ship or her crew. The men are dirty; even the captain is slightly disheveled, showing the difficulty of good grooming in the middle of the ocean. Also, the food looks insanely gross (I'll take Baker any day). At no point will you wish you were there. On the other hand, this film has some incredible scenery. We get to see the Brazilian coastline and the Galapagos Islands. It's almost like what you'd expect to see in a movie based on an old British novel about maritime adventures. Oh wait, it is.

Overall, the movie is intense and the acting is outstanding. I can't imagine anyone playing Captain Jack Aubrey like Russell Crowe. Paul Bettany shines as Dr. Stephen Maturin, "Lucky" Jack Aubrey's friend and ship surgeon. Surprisingly, there are quite a few younger boys in the film. Max Pirkis and Max Benitz put on two of the most notable performances of the movie. You will fall in love with these two boys.

The script is very authentic. This occasionally makes it tough to understand, but then that may be due to the grumbled speech of some of the actors and the distracting speaker at the back of the theatre. The battle scenes are very realistic and add the essential blood, gore, and action. We even get a taste of the hectic life of a ship surgeon and the crude practices of old time medicine. Another authenticity in the script is that it gets slow, and I dare say boring, every now and then, just as I imagine living in a floating crate would be. But there is retribution in the end. The movie started with a bang, has a few minor bobbles in the middle, and ends with a sonic boom.

Grade: B

Best Part: Allusions to the poem "The Rime of the Ancyent Marinere" by Samuel Taylor Coleridge and the painting "The Gross Clinic" by Thomas Eakins. As a lover of literature and art, I have to say I was excited and gratified to see such homage paid to old greats by new Hollywood.

Holly: "Master and Commander" was wonderfully acted, beautifully filmed, and very adventurous. I enjoyed every moment of this movie (except for a few of the surgery scenes). But there was still something odd about it.

This movie runs more like an exciting captain's log than a usual movie with a distinct course. Indeed, the movie is based off of a long series of books written by Patrick O'Brian. The story loosely follows the plotline of the H.M.S. *Surprise* (Crowe's ship) on a voyage to destroy or capture the Napoleonic Acheron. Between the few encounters these ships have, director Peter Weir ("The Truman Show," "Dead Poets Society") works his magic developing the characters. While the story and dialogue are very powerful, I don't believe this movie could have been half as wonderful if it wasn't for Russell Crowe and Paul Bettany's characters. Weir manages to create two characters who stand for several things (Bettany is science and reason, Crowe is pride and, at times, revenge) but aren't limited by their overused stereotypes. We get to see the stories of the captain, surgeon, the commanders, the shipmates, and the midshipman. It is Weir's ability to blend character development with exciting and exotic adventure scenes that makes this movie work so wonderfully.

"Master and Commander" hits its stride a few minutes into the movie and manages to maintain interest and suspense throughout. Everyone down to the lowliest shipmate gets his say. Even the child actors are amazing. I may not be camping out to buy the DVD, but 'Master and Commander' is an exciting, powerful movie that should not be missed.

Subject: POOP!!!

I CAN SEND A DISGUSTNG MESAEG2 TEH3NTIER COL3GE BY PREYNG ON UNSUSP3CTNG COMPTUER USERS11!1 OMG IMM SO COL11!1! OMGZ LOL

The poopfinger is a generally harmless yet annoying mass e-mail sent by an anonymous student from the e-mail account of someone who forgot to log off of his or her computer.

I said "generally harmless," but it seems like, once or twice per semester, there is a poopfinger that makes me wonder about the levels of immaturity and idiocy that the admissions office is willing to accept.

Messages that attack people, organizations, or cultural groups are things I would expect from middle school – not college – students. These poopfingers, though rare, create an unnecessarily hostile environment on campus.

Case in point: early in November, one poopfinger was sent in the guise of an announcement from the men's rugby team. This poopfinger insulted other sports teams and contained some offensive language.

The rugby team is not at fault. Daniel Healy, president of the Men's Rugby Club, followed up with a letter of apology, stating that the poopfinger does not reflect the views of the team.

This poopfinger is hardly the only example. I'm sure any student could remember offensive mass e-mails sent in the past few years.

To be fair, I know several instances where poopfingers are sent only to and from friends or groups of co-workers. These poopfingers are inconsequential, and are often inside jokes between the said groups of friends.

Another interesting phenomenon is the "nice" poopfinger. Usually in the form of a list, this type of mass e-mail denotes the more pleasant aspects of Juniata. However, it is still an unauthorized use of another person's e-mail account. And any time a person or group is singled out in an e-mail – despite possible good intentions – there is a risk of unintentionally sending private information.

Mass e-mails are a type of public forum. This newspaper is a type of public forum. If the Juniatian were to single out individuals unfairly or without permission, we would be committing libel.

Of course, unidentified submissions – other than questions for the Ask President Kepple column – are not permitted in the Juniatian. Poopfinger offenders hide behind anonymity, afraid to craft a public argument based on fact rather than immaturity.

Juniatian tech columnist Theresa Tschetter reported on the poopfinger several weeks ago. "A mixture of amusement, annoyance, and consternation mark this impeccably-named aspect of campus computing," she said, and she noted that poopfinger-like attacks are not unique to Juniata.

Poopfingers have the potential to become even more commonplace. In any part of cyberspace, ways exist to poopfinger – or "spoof," the more widely known term – any individual with only the knowledge of his or her e-mail address. No passwords or locked accounts can protect us from spoofing. Though it is not hard to do, spoofing is not a widely-known skill.

Several e-mails spoofed on campus so far were among the aforementioned harmless jokes between friends. However, Campus Network Services (CNS) is aware of the problem. While CNS cannot currently prevent spoofing, they can track spoofed messages back to the actual sender.

For now, the "old-fashioned" poopfinger is most common, the type sent from an unlocked public computer. Poopfinger purveyors are still lurking around campus, preparing to spot their next victims.

Students can make a preemptive strike. Simply don't forget to log off or lock any public computer you use. Logging off is imperative in *any* case: with a logged-in workstation, anyone could view your potentially sensitive files and network drives.

But, most importantly, stop the poopfingers. The running gag became tired a long time ago.

After an absence of nearly two years, the Juniatian has completed six print issues in one semester. This rejuvenation is due to several factors. It could not have been completed without the work and enthusiasm of students in Professor Amy Mathur's Writing Practicum course. The administration and faculty of Juniata College were also instrumental in the Juniatian's return, creating the Writing Practicum to recognize the amount of works students put into the creation of a newspaper.

However, the ultimate measure of the Juniatian's success comes from the student body. Thanks to all those who pick up and read our college's newspaper every two weeks and to those who write letters and offer comments. With this level of involvement from the student body, we truly have a *student* newspaper.

Anyone interested in writing for the Juniatian next semester can sign up for the Writing Practicum course during drop/add. Please contact the Juniatian with any questions or comments.

- The Editors

Ask President Kepple

"The 'Juniatian' recently ran an opinion article titled 'The Artist's Plight.' What is the administrative response to this article? Is there a plan to improve art facilities?"

Juniata's art facilities are in need of improvement, and we are considering several options. At some point, we would like to move the paint studio out of Carnegie in order to provide additional space for the gallery, and to enhance and enlarge the studio. We would also like to develop a new pottery studio. The locations have not yet been identified, but we do expect to begin fund raising for them after the capital campaign is completed in June 2005. Since our current students arrived after a substantial renovation of Carnegie in 1998, you would not know that we have recently funded work on art facilities. As an art minor in college, I'm looking forward to the improvements also.

"Why do we raise flags on campus when enrollment open houses are held? Are we only to be diverse when prospective students arrive? Are the flags meant to represent the nationalities of Juniata's abroad students, or something else entirely?"

The flags improve the look of the campus for our visitors and highlight our outstanding international programs. We also put them up for other events – like graduation, for example. They are flags of countries in which we either have programs or have had students from over the last 10 years or so. It does take a lot of work to put them up and take them down, so it is not practical to have them up all the time.

The Juniatian accepts questions for the "Ask President Kepple" column. Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Reasonable comments are appreciated, and questions will be considered based on relevance to the campus community.

The Juniatian accepts letters to the editor in response to articles and editorials. E-mail juniatian@juniata.edu or write to Juniatian, Juniata College Box 667, Huntingdon, PA 16652. Submissions may be edited due to length or content.

LETTERS TO THE EDITOR

Larger issues of VLCS

In the November 13 issue of the Juniatian, you made a remark regarding Catherine Sheely's letter. You said, "We appreciate the lengths Juniata students will traverse to investigate the smallest question." Since you seem to think that the issue of the ice machine is a small question, I hope you will allow me to address one of the largest issues surrounding your article on the von Liebig Center for Sciences.

I think that the most glaring error is the statement at the very end of the article, which claims that all the positives outweigh the negatives. I would argue it is just the opposite. The building does not have sufficient classroom and laboratory space to fulfill the mission for which it was originally intended (undergraduate research) and fulfill the department's teaching obligations. This is especially true for the chemistry department, whose faculty will be expanding with the addition of an inorganic professor and computational post-doc. These two people will need to have research space. However, there is none available. In fact, tenured professors are being pushed out of their current research space as other groups acquire more equipment. This is all in an effort to ensure that the department stays in the forefront of certain fields.

Shoddy construction and cheap labor have taken their toll on this building. Even as I am writing this letter, I can look up at the wall and see the crack that has been there since we moved in. The table in this room is even so unbalanced and flimsy that one can barely write on it. Combined with other building faux pas — painters not moving trash cans to paint behind them, cleaners not moving a box to wipe down the countertops, etc. — the administration's decision to be as thrifty as possible is taking its toll on the department and the students.

The building itself is not aesthetically pleasing. The halls resemble a hospital rather than an inviting place for students. Cracked tile in the lobby and the crisis over the external pillars only add to the frustration. No offense to Pat Kepple, but the furniture for the student lounges prevents students from using them as they did in BSC — sleeping.

Overall, while the idea of a new science center was a good one, it certainly has not lived up to its promises. It lacks sufficient space and lacks the "hominess" of BSC. Perhaps had you taken the time to ask those students more closely involved with the departments, you might have found some of this out, rather than being an administration shill.

The state of studio arts at Juniata

Brittany Barbera's and Erin Strine's recent letters to "The Juniatian" are timely and well thought-out. I appreciate their concern about the issues relating to arts classes at Juniata. The more those issues are brought forth and discussed, the more likely it is that changes for the better may occur, however unlikely.

My personal and professional interest in the issues concerns the status of the studio arts on campus, which, as someone recently observed to me, "... must rank somewhere between light-bulb replacement and golf-cart maintenance."

At the beginning of each semester, I apologize to my students for the ceramics studio facilities. A couple of years ago, I realized that, of the 60 or so college or university ceramics studios I've been invited to teach in, Juniata's is the most embarrassing in terms of capital neglect. Many high schools, in fact, have better facilities. In one year, five high school students inquired about attending Juniata specifically because of their interest in ceramics; when I met with them and their parents, no amount of attention I tried to direct to the quality of student work could distract them from the condition of the studio, and I could read "disappointment" written across the backs of their shoulders as they walked across the street on their way to the rest of their lives. None applied, and, for a time, I couldn't bring myself to show prospective students around the shop.

When it appeared there might be a chance to relocate the studio, I did what amounted to one-and-a-half gainer with a full twist into a dry pool in a futile attempt to make that happen. Then I took some time off to think about the consequences. Here's what I concluded:

1. That Juniata offers ceramics at all is probably a fluke, promulgated by one generous man, Dr. Donald Rockwell, who, as Academic Dean in 1968, okayed the first ceramics courses and secretly personally funded the equipment to make it possible. (Prayers to the spirit of Dr. Rockwell seem to be directed to an improper *eternity.com* e-mail address.)

2. Juniata will never be in the situation I discovered when I taught at Skidmore and found the chemistry department kvetching about its funding compared to that of the dance program, still, students such as Brittany, Erin, and others have every right to question why there is no overt movement beyond yearning; no tangible planning beyond vague "hopes," ***no mention of need for the studio arts in any fund-raising campaign***. (Painting in Juniata's studio, and developing and printing film in its darkroom, are like doing yoga in a phone-booth, both of which are possible,

Registrar responds to Raystown article

In response to the article "The hidden cost of the Raystown Field Station" posted in the November 13, 2003 newspaper, a couple of items were stated that I would like to correct for the record. As Registrar of Juniata, I am required to be the custodian of the educational records for students who come to Juniata and the responsibility is not taken lightly. My staff is the most educated on the FERPA and privacy laws that protect your educational records and they NEVER give any information to anyone unless there is a reasonable right to know.

As for the Solomon Amendment, it is a requirement for all schools receiving federal monies, passed by Congress in a series of laws in **1996** (not in 2000 as stated in the article) that addressed the Military Recruiting and Reserve Officers' Training Corps (ROTC) Program Access to Students of Higher Education to help the military recruiters meet congressionally-mandated recruitment numbers. Please note that your High School was required to give this information as soon as you turned 17 years of age.

Each semester, I receive several requests from the Army, Navy, Air Force, and Marines asking for 'Student recruiting information" which includes: "student's name, address, telephone number, age (birthdate), level of education, academic major, place of birth, degrees received, and most recent educational institution attended." Each letter is quoted " If an institution or its supplement does not comply, the entire institution risks losing certain Federal funds." As a rule, I never give it in an electronic disc format as requested but in hardcopy. This is my form of protest that they must work the list and enter the data just like everyone else. My last letter to the offending branch received this reply sent September 29th:

"*In response to your letter of September 16, ...we investigated numerous complaints of a recruiter who called students directly to their dorm room and proceeded to demean and shame students for allowing their parents to pay for their education; and then proceeded to tell them how they should look to the Armed Forces as a way of paying for school.*

"Before I send this information, I want assurances in writing specifically addressed to Juniata College on how our information will be treated and used, and will be destroyed once the data has been received.

"If we are not satisfied with your response, we will proceed in listing ourselves as a conscientious objector due to our historical history of non-violence and peaceful resolutions.

"Until I receive your response, this information will not be forwarded."

As a follow-up, Dean Clarkson did consult the college's lawyers about our historical background and the law of Solomon. As stated in the article, we are required to provide this access to recruiters. We will send the information as required, and of those students, who have stated in writing to our office to not share this information, will be honored.

Now before lines start outside our office, let me state that students who take this option also suppresses information to other third parties. For instance, the National Clearinghouse where we routinely supply information to verify your enrollment for bank lenders for fulltime status, if you suppress it for the military, you have to suppress it for them too. This is problematic. This requires you to remember to verify your own enrollment EVERY term. Think about the health insurance letters and car insurance letters that must go out by our office every semester.

So, the best option for you, the student, is to tell them, the recruiter, to not contact you in the future. Tell them to take you off their list. Tell them to not contact you again. This is what I do when I get those pesky telemarketer calls. It works. It's simple and to the point.

Any further questions, by all means, our door is open, contact us any time. We are in even during lunch.

Athena Frederick
and the Registrar's Office

Responses to "diversity" article

I'm writing in response to the article in the November 13 issue of the Juniatian entitled, "Does JC Need More Diversity? You Decide." The first thing I feel the need to take issue with is the title in and of itself. If anyone, that's returning students, freshman, and faculty and staff alike, takes the time to read some of the brochures and publications this institution puts forth, they'd find that, as an institution, we've already decided that we DO need diversity. A person's unawareness of the commitments Juniata has and is making in supporting a more diverse student body is certainly not your fault, but it is something to think about when you're printing things that suggest, even subtlety, that there's nothing inherently contradictory about students deciding that they don't support the same educational values as the institution to which they've chosen to associate themselves.

It has been assumed that in all this talk of diversity, all we're really talking about is ethnic/racial diversity. That's not necessarily true. Nonetheless, it's interesting that you neglected to print any statements from any ethnically diverse students in the article, sending the unintentional message that the inclusion and recruitment of ethnically diverse students is an issue dealt with completely in their absence. How do you begin to write an article about a body of students, whatever you perceive that body to be, and not print some statement from those students? It seems a little one sided to me.

But perhaps the most telling thing about the way these issues are handled is in the sentence "The Department of Diversity and Inclusion just wrapped up its Hispanic heritage month with **Fiesta De Latino**." First and foremost, if Juniata had a Department of Diversity and Inclusion, we'd be in much better shape in terms of recruitment of diverse students. However, what we actually have is an **Office of Diversity and Inclusion**, and that office is Rosalie Rodriguez herself. Secondly, the celebration is correctly termed Fiesta Latina. We should all do our best to respect other languages and cultures by calling things by their proper names.

But all of these were honest mistakes, and hopefully the Juniatian staff will do their best to avoid them in the name of accurate reporting in the future.

Thank you for your time.

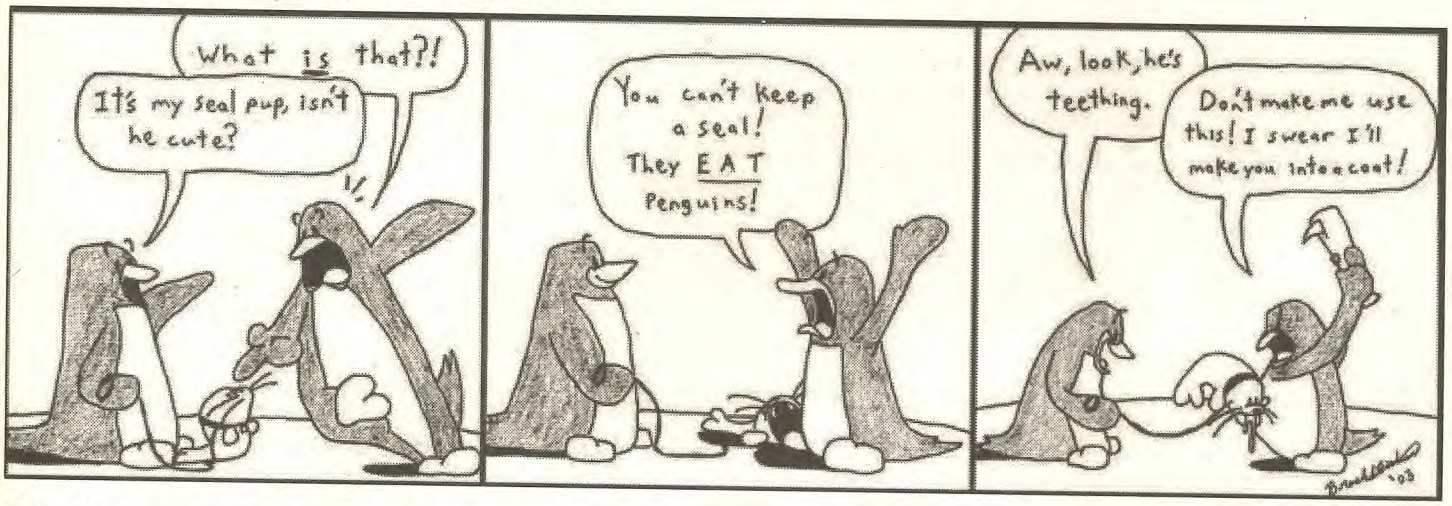
Marissa Gunn
Class of 2005

I am writing in response to the inadequacy of the article *[Nov. 13 Juniatian]* questioning the state of diversity at Juniata. While there are many things I could pick out in the article, I would like to focus my attention on one sentence, "Despite what we all want to believe about the greatness of diversity, some students like the homogeneous setting". In particular I have the most trouble with one word: "some".

Now *some* of the students at Juniata like the sciences, in fact a vast majority of the students at Juniata study the sciences. Does this mean that we should not offer classes in communication, education or business? After all, the science students would be happy so what does it matter if our future business people can manage effectively? Perhaps we should even stop recruiting anyone who is not a science student. Why should we spend time and money to recruit the non-science students?

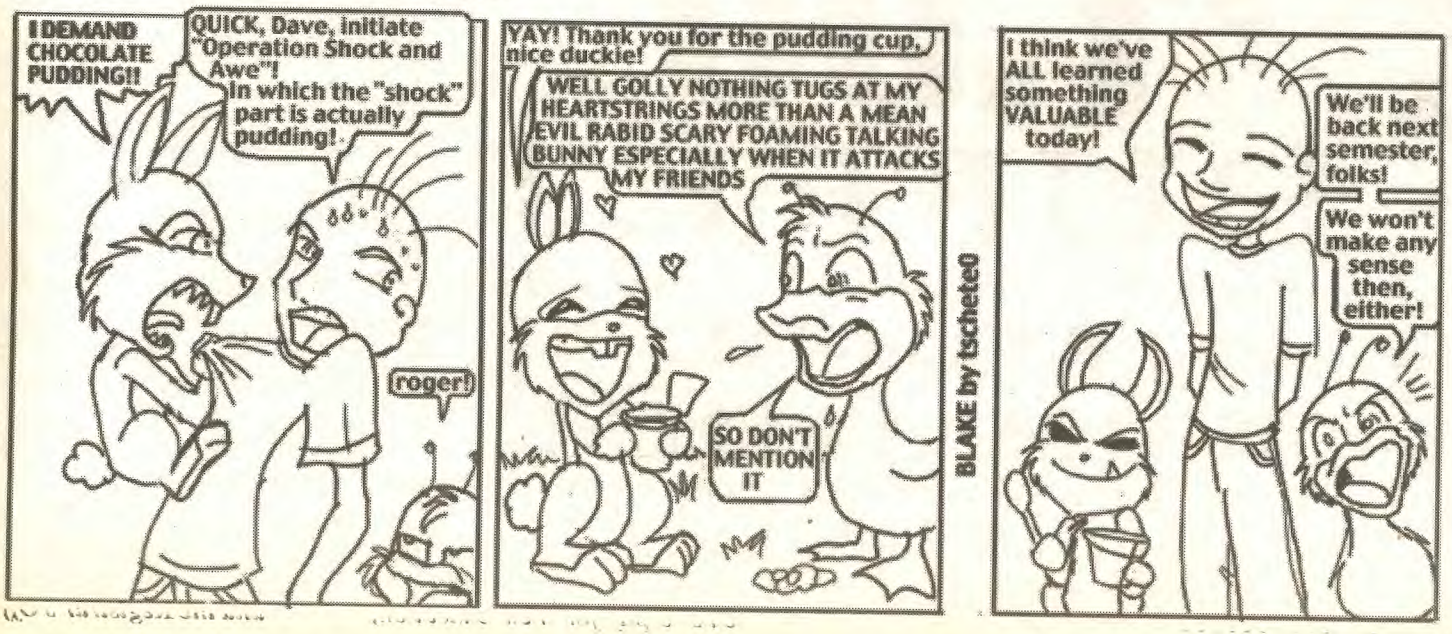
Being a liberal arts institution we should all be aware of the fact that we are here to get a broad spectrum of education and that even the science students can learn something from the humanities and vice versa. Just because a student comes from a purely science background should they not be introduced to communication or business? Is this not the philosophy behind the POE?

Any student who takes the time to read our mission statement would realize that this college has a firm commitment to preparing its students for a multicultural world – the not-so-white- world that lies outside those central Pennsylvania borders. By not diversifying we are committing a gross disservice to our students (both white and non-white). If students are happy being monocultural, content to remain blissful in their ignorance of world issues, happy to never think about the exploitation of others that helps them get through everything from the socks and sneakers on their feet to the bananas in their bellies then surely, they chose the wrong school.



In my estimation, a more appropriate title for this article should have been "Should we remain complacent in our ignorance?"

Rosalie M. Rodriguez
Special Assistant to the President
for Diversity and Inclusion



The intention of the article mentioned in these letters was not to demean or ignore any minority – ethnic or otherwise – but rather to examine how diversity is handled at Juniata. However, we recognize deficient wisdom in this article including, but not limited to, the lack of minority input on the article.

Is it time for Joe Pa to call it quits?

Robb Patty
staff writer

Joe Paterno has roamed the sidelines in Happy Valley for the past 54 years, 38 of those as head football coach. In 2001, at the age of 74, he became the winningest coach in NCAA football history as he surpassed legendary coach Paul "Bear" Bryant for first place on the all-time list. He held that spot until earlier this year when Florida State's Bobby Bowden took over the lead.

Last year, Paterno finished the season with a 9-3 record and Penn State had four players selected in the first round of the 2003 NFL Draft. Few questioned whether or not Joe Pa was too old to continue coaching. Now that the Lions are sitting at 2-7 most people say it's time that Paterno retires.

This is ridiculous; Paterno is idolized by college coaches across the country. He

Contrivances Amok

A tech column

Theresa Tschetter
staff writer

I enjoy drawing things that are baffling (see the Blake comic), and I enjoy putting my art online so others may be baffled. The Internet crosses international borders and allows millions of people to interact every day, so I was not surprised when I received an e-mail from a young individual in the Netherlands.

But this e-mail was unusual. The sender, Ilse, was an active poster on an online art community also based in the Netherlands. She knew the webmaster of the site, and acted as an unofficial "watchdog" for stolen artwork. Ilse had an urgent message for me—so urgent that she actually e-mailed the information desk at Juniata to get my e-mail address.

The info desk kindly forwarded me her e-mail. Apparently, the tenacious Ilse was a fan of my artwork. She told me about a person by the online handle "Luna Y.," who had essentially grabbed an entire directory of artwork from my own personal site, http://dontknoweither.org, and posted the drawings as her own on the art site. Worse, Luna was receiving compliments via comments posted to the page. Ilse was fairly distressed about this, and gave me an e-mail address for the webmaster of the site.

I wasn't angry; I was flattered. In fact, I felt like a rock star. But I e-mailed the webmaster immediately. Then I consulted a few trusted individuals online from a Linux chat community I mentioned in a previous article.

The first person I notified was Juergen from Germany. He is one of the administrators of the servers that my site is hosted on. He sprang into action and began making phone calls to the site's server administrator (who was not the same person as the webmaster.) I also told a few friends from Juniata about the entire affair. But before I knew it, the word had spread throughout the community.

And the community was mad.

Within hours, comments began to appear on the site of a less-than-charitable nature, decrying the foulness of an individual who even imagined stealing someone else's art. I was actually a little more shocked at the vehemence of the comments than the theft of the art itself. Though the comments didn't seem very professional, I was flattered by the 40-odd people who came to my defense.

But the debacle was shortlived; within 24 hours, the stolen art had been taken down.

In a worst-case scenario, Luna could have used the art in a portfolio whilst applying for a job, or I could have been hit with a lawsuit. My story, fortunately, had a happy ending. But not all intellectual property cases are so easy.

Physical goods aren't quite like bytes. If you steal my coffeemaker (God forbid), I lose the use of it. But it's easy to make an exact bit-for-bit copy of a file. If you steal my files, I don't directly lose the use of them. "Intellectual property is messy," said Dr. Donna Weimer, chair of the English, Communication and Theater Arts department. "We are in the midst of a transition," said Weimer, "a very difficult transition."

One partial solution may be pay-per-download technology such as Apple's music store, recently voted 2003 "Coolest Invention of the Year" by Time Magazine. Unlimited MP3 downloads at 99 cents a pop may encourage users to purchase more music legally instead of stealing it. Another answer is digital watermarking, which invisibly embeds special identification information into a file.

The rise of new technologies—from literacy to print to broadcasting—is messy. Yet innovation is the nature of technology, so problems get their answers quickly.

My solution? Lots of quick-thinking server administrators. They make the world much more friendly.

State of studio arts at Juniata

continued from page 10

but unnecessarily limiting.) When it comes to facilities, expecting the unexceptional has become standard practice in the studio arts.

3. I am very nearly convinced that nothing significant will advance the studio arts at Juniata in my lifetime, since they do not, to my knowledge, occupy any significant position on a list of academic priorities.

4. While I'm convinced that I could be a better teacher if, for example, I didn't have to arrange a mini field-trip to a vacant room on campus just to show slides, or truck examples of good teapots back and forth from home to the studio because we have no display cases, or arrange adult-ed classes – for which there is keen interest – only sporadically because we're short of storage space, or we had a modest library of ceramics-related books and periodicals, I continue to find a good ratio between challenge and fulfillment in teaching Juniata students.

I enjoy watching people amaze themselves about how wrong they were when they thought they had no originality; no confidence in personal self-expression. That's the bottom line. That's my job.

But it doesn't keep me from wishing it will be better for students I'll never meet or teach.

Jack Troy
Associate Professor of Art (part-time)

Time for Joe Pa quit?

continued from page 11

has been around longer than every single Big Ten coach combined and college coaches wish they could have the opportunity to coach half as long as Paterno has.

In his tenure Paterno has been named national coach of the year four times. He has registered seven undefeated regular seasons, along with two national championships in 1982 and 1986. He is the only coach to win all four major bowl games: the Rose, the Sugar, the Cotton, and the Orange bowls. He is a perfect 6-0 in the Fiesta Bowl.

Yes, Joe Paterno is having his worst season ever, but the Lions are young and inexperienced. "Joe Pa" should retire when he is good and ready. He has a few years left on his contract at Penn State and I wouldn't expect him to retire anytime soon. With a résumé like Paterno's I would say it's up to him to decide when he has had enough. I could not imagine someone besides Paterno walking the sidelines in Happy Valley. The day that Paterno calls it quits is the day that college football loses one of the greatest coaches of all time.

Surprise season ending

Tommy McConnell
staff writer

Juniata Women's Volleyball finished the regular season undefeated. After easily winning the MAC Championship – no surprises there – Juniata moved onto the NCAA tournament. It was much of the same for the Eagles, who dispatched of their first two opponents.

In round one of the NCAA Mid-Atlantic Regional, Juniata faced a Frostburg State team with only four losses on the year. The game wasn't even close. In front of a home crowd, Juniata dominated, winning in three sets.

In round two, Juniata would actually be challenged. Eastern University gave Juniata all it could handle in the first two sets. The two schools would split the first two sets, with Juniata winning the first, 30-27, and Eastern taking the second, 30-28. Tied 1-1 heading into the third set, Juniata picked up its play. The team jumped out to an early lead and would never allow Eastern to get closer than five points. JC finally won it 30-23. The fourth and deciding set was similar to the third. Juniata again got off to a fast start and held off the would-be spoiler's late push. Juniata ended Eastern's season in the fourth set, 30-20.

Juniata then played NYU in the NCAA Quarterfinal in Manhattan on Nov. 22. The game was a rematch of this season's "Wid" Guisler Tournament at Juniata. In that last meeting Juniata defeated NYU in straight sets. This contest though could not have gone differently.

New York University took the first set 30-28. NYU also built a lead in the second set, but Juniata rallied to take it 31-29. The Eagles needed to dig out of a hole in the third set as well, pulling out a second straight 31-29 win. But in the fourth JC fell too far behind. Although Senior Danielle Hart served a string of tough serves to pull Juniata back to within 2 points at 28-26, NYU held off the surge. The Violets took the fourth set, 30-27, to knot the score at 2-2.

Juniata had not been pushed to a fifth set all season. However, the team seemed poised for the victory in the unfamiliar territory. At one point Juniata led 12-8 with the serve. NYU clawed its way back to a 12-12 score. The two teams battled evenly to a 15-15 standstill. At that point the Violets took the lead for good, scoring the final two points of the match to win 17-15.

After the game, Coach Larry Bock said, "New York really outplayed us in every phase of the game."

The surprising and devastating loss ended Juniata's undefeated season and its hopes for the ever-elusive national championship. Bock, named MAC Coach of the Year for guiding Juniata to an undefeated regular season, ended the 2003 campaign just 5 wins away from 1,000 career victories.

Yet once again the winningest coach in Division III Women's Volleyball history will need to spend the off-season looking for a way to replace key players. Juniata will lose 2 starters and 3 regular contributors from this year's 38-1 squad. He'll also continue to search for the key to making "next year" Juniata's year.

Men's Basketball preview

Ryan Genova
staff writer

As the buzzer sounded, a packed Memorial Gymnasium watched the ball spin from marksman Craig Biller's fingertips toward the basket. The intensely up-beat game ended with roughly 300 sighs from the crowd as the ball bounced off the back rim, ending the Eagles' hopes for a conference postseason spot last February. The heartbreaking moment is not one any of the 2002-2003 men's basketball team has forgotten, and is likely a big part of what's been driving them in the off-season.

Things are looking to go much differently this year for the team that returns nearly its entire roster. Greg Curley's demanding coaching style has the Eagles playing their best basketball in nearly 15 years. Despite not earning a playoff bid, Juniata's 13 wins in 2002-2003 were the most the program has had since the 1988-89 season.

The entire starting five from last year will run the floor again this winter, including its top scorers, seniors Craig Biller and Jeff Lau. But the talent doesn't end there. Coach Curley expects a rotation of at least 10 players to get the job done. "We have a lot more depth than we did before. We always played 10 deep, but those 10 are just better this year," said Curley.

Photo: Cara Yancey

On Nov. 21-22 the team began the season with two solid efforts. In its first outing the Eagles posted a convincing 20-point win over host Dickinson at the Dickinson Tip-Off Tournament. "We pretty much dominated the game. It was a balanced game with a good mix inside and outside. We played real well," said Curley.

The tone of domination began at the tip with Juniata hitting its first 8 shots without a miss. Taking an early 22-5 lead, the Eagles held off a few Dickinson spurts to sail to its first victory.

In the contest Tommy McConnell (SO) led the Eagles with 18 points. Neil Holloway (SO) and Craig Biller (SR) added 13 each. Biller also added a team high 5 assists in the game.

In Saturday's championship contest the Eagles fell to the

continued on page 14

A clean slate

Tommy McConnell
staff writer

The 2003-2004 Women's Basketball team has a new head coach, new faces, and a new attitude. "Everything is new this year," says first year coach Danny Young. "Nothing is carried over from last year. It is definitely a clean slate."

That clean state starts on the sideline. Coach Young, a 2000 graduate of Juniata College, brings with her a fellow graduate, assistant coach Brandy Preslovich ('02). Both had superb playing days at Juniata. Each was named to an all-conference team, and both have their names all over the Juniata record book. This type of leadership should smooth the Eagles in their transition year.

Juniata is coming off a season in which they were just 5-9 in the conference, so not much is expected right away. This doesn't mean the team doesn't have goals. The Eagles want to have fun winning. "We definitely want to be .500 this year," Coach Young said. "Nobody is expecting a lot, but you can't go through a season not expecting anything. We want to win and have fun, especially for the seniors."

Gretchen Hall and Jen Uhrich are the seniors Coach Young will be looking to for leadership. Hall will run the show for the Eagles from the point guard position. Uhrich, who averaged 10.5 points per game last season, will give Juniata a solid offensive threat inside, while sophomore Kristen Kirk will be the team's outside threat. Juniata also has potential coming off the bench, with a plethora of talented, but inexperienced, underclassmen.

Juniata will have at least 9 players in the rotation. This will allow them to play the up-tempo game Young favors. The team will feed off its strong rebounding core and look to push the ball in transition as much as possible. Another plus is the ability of the post

Congratulations to the following student athletes who made MAC All-Conference Honors Teams this fall:

Women's Volleyball
Carli Dale (JR) - 1st team
Katie Laucks (SO) - 1st team
Katie Charles (JR) - 2nd team
Johanna Holtan (SR) - 2nd team
Stephanie Kines (FR) - 2nd team – *Conference Rookie of the Year*

Football
Craig Moshier (SR) - 1st team
Jesse Leonard (SO) - 2nd team

Cross Country
Katey Glunt (SO) - 2nd team
Nancy Hayes (SO) - 2nd team

Men's Soccer
Rob Bowser (SO) - 1st team
Jeff Gehring (SO) - 1st team

Field Hockey
Grace McCluskey (JR) - 1st team
Billie Rickenbaugh (JR) - 1st team
Jean Silvey (SR) - 1st team
Dana Groff (SR) - 2nd team

Women's Soccer
Emily Endres (JR) - 2nd team
Kelly Howard (FR) - 2nd team
Nikki McLellan (SO) - 2nd team
Amy Tyler (SO) - 2nd team
Desiree Wagner (SO) - 2nd team

Swim Team looks for conference title

Robb Patty
staff writer

At its second tri-meet of the season, the Juniata College women's swim team defeated conference opponents Drew and Lebanon Valley 65-23 and 72-23, respectively. The team is unbeaten so far, posting a record of 4-0.

This season the Eagles are led by first year head coach Brian McGrath. Coach McGrath commented, "As a team we need to continue to make a name for ourselves in the conference and not be taken lightly."

The Eagles are off to a good start as they placed first in six individual events at the tri-meet. Sophomore Andre Nulton took home a pair of first place finishes as she won both the 400 and 200 meter freestyle. Kim Allen (SR) won the 200 meter individual medley, while Laura Rawson (FR) captured the 100 meter individual butterfly. Amy Sutherland (FR) was victorious in the 100 meter backstroke. Allison Engle (FR) won the 800 meter freestyle.

Along with the victories Juniata also set three new pool records. The 400 meter medley relay team of Amy Hanson (SO), Sutherland, Allen, and Rawson, swam to a time of 4:49.66. Allen would break another pool record on the day as she claimed the win in the 100 meter breaststroke. The team of Hanson, Nulton, Dana Gais (JR), and Kathy Trainor (FR) also took first place and broke the record in the 400 meter free relay.

Coach McGrath stated that it takes dedication. "The [swimmers] we have are committed and need that over a long six month season."

The Eagles will be in action again on December 12 at Bryn Mawr. The home crowd's next chance to see pool action will be on January 31st.

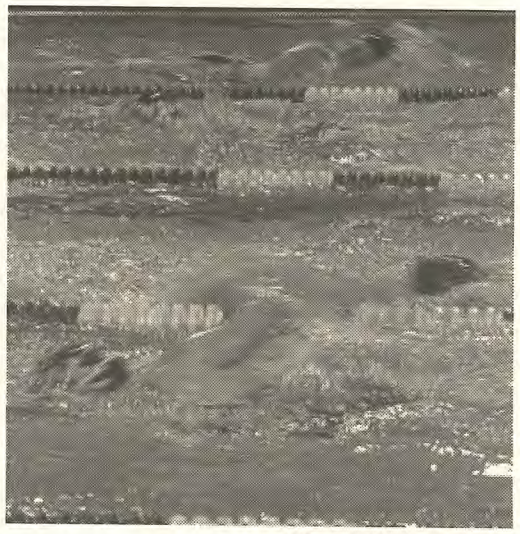

Photo: Cara Yancey

The women's swimming team kicks off the season with four consistent wins, resulting from their rigorous practices.

Athletes off the field

Bill Bishop
staff writer

As we have seen throughout this year, Juniata College Athletics consists of more than just athletes competing in their respective sports. They are also contributing members of society who work as hard off the field as they do on it. This dedication to the community is not a coincidence, but a direct reflection of the attitude of the athletic department at Juniata. As we will see this week, the women's basketball team is also devoted to creating successful athletes as well as citizens.

Colleen McShane, a senior on the Lady Eagles, understands the importance of setting a strong example for young women on and off the court. Colleen said, "When I was a freshman, I looked up to the older girls and learned a lot from them. I want the freshmen this year to be able to use me as a good example." She realizes the importance of her position as a senior leader and the influence she can have over the young women, and takes pride in that position.

This year the women's basketball team will be going through a lot of changes with the addition of first-year coach Danny Young. One of the changes is getting the team to be more involved in the community. This year the team is participating in a program of adopting grandparents. They will make regular trips to Westminster Woods to spend time with elderly people in the community.

Along with the Adopt-a-Grandparent program, Colleen also volunteers with Head Start. This is a program for children in the community. Colleen spends time there regularly, playing with the kids or helping with meals.

So, as McShane is working diligently on the court to bring the winning tradition back to the hardwood for the Lady Eagles, she is also striving to bring happiness into the lives of the people around her.

Colleen and the Lady Eagles are true class acts. With a strong coach and a great core of seniors, these women are poised not only for greatness this year but throughout life.

Football season ends strong

Bill Bishop, staff writer

As the 2003 season came to a close here on College Hill, the Juniata Eagles finished with an impressive 20-7 victory against Farleigh-Dickinson University.

It was a statement day for the Juniata defense who held the FDU offense to a total of just 193 yards in the game, the lowest total since the second game of the 1999 campaign.

Not only did the stout Eagle D hold FDU throughout the game, but also helped its own cause when Pete Thomas (Mechanicsburg) picked off the FDU pass and scampered 87 yards for the go ahead touchdown.

From that point on there was no looking back as the Eagles continued to shut down the offense while kicker Dan Heinlein (Bishop Carroll) added two more field goals for a final tally of 20- 7.

Behind the strong Juniata defense, Travis Lee (Williamsburg)

continued on back page

continued from page 13

fourth-ranked team in the nation, Randolph Macon 65-53. It was a loss the team feels it can live with though. Coach Curley commented, "It was between a three and eight point game most of the way through. We didn't shoot the ball well and we still hung in there which is a nice sign."

Freshman Chris Jasiota led the Eagles scoring with 11 points. Holloway added 9 points and 5 rebounds. Point guard Tommy McConnell played a solid all-around game, tallying 4 points, 5 assists, 6 rebounds, and 2 steals. Holloway and McConnell landed spots on the all-tournament team.

Curley commented, "I think we all expect to be a better team, and after this weekend we know we're a better team. There isn't anyone better than Randolph-Macon in our conference."

For the fans that enjoyed that up-tempo style of basketball last year, don't expect to see a big change there. This is a team that plays all 94 feet of the court, which will make it entertaining and exciting to watch all season.

Juniata Cross Country season builds strong foundation for future

Michael Vella
staff writer

The Juniata men's and women's cross county teams finished the 2003 season with the NCAA Division III Mid-East Regional Championships at Dickinson College. The women bettered last year's 22nd place finish, capturing the 15th spot in a field of 38 teams. The men placed 21st out of 35 teams, improving on a 23rd place finish in 2002.

In the women's 6K race, sophomores Katey Glunt (24:21) and Nancy Hayes (24:31) finished first and second for the Eagles with overall placements of 41st and 47th, respectively. Senior Stephanie Rynkewitz (25:14) was 71st, followed by Sophomore Sarah Bay (26:27) in 137th place. Freshmen Lia Bella (26:31) and Lauren Gates (27:08) and Senior Carol Longenecker (27:19) rounded out Juniata's top seven, crossing the line in 139th, 159th, and 163rd. "The course was dry, for once, and the weather was beautiful. Overall, the day was a satisfying end to a wonderful season," said Glunt.

On the men's side, Sophomore Chris Sheaffer ran an 8K season best 27:37, good enough for an overall 43rd place finish. Sophomore Justin Fritzius (29:08) and Junior Will Cantara (29:09) crossed the line together in 119th and 120th place, respectively. Sophomore Mike Vella (30:26) finished in 181st place followed by Junior Jason Freeman (30:38) in 184th place, Sophomore Jeremy Lampert (30:54), and freshman Matt Chabot (31:08) finished 194th and 200th. "We did better than last year," adds Sheaffer, "but there is still a lot of hope for improvement in the future. We have some high aims for the future years, and now we are one step closer."

Head coach Jon Cutright is pleased with the team's overall performance this season. "We made nice improvements over last year, but we did not achieve all the goals we set at the beginning of the season. This leaves [us] very motivated for next season."

The women's team says goodbye to Seniors Juliana "Bob" Hillegass, Stephanie Rynkewitz, Karla Kifer, Linda Maus, Suzy Gardner, Carol Longenecker, and Erin Bachmann. "Cross country has probably been one of the best highlights of my career at Juniata," adds Longenecker. "I think this group of runners has the most amount of dedication I've seen in a group of athletes." Although they will be sadly missed as people and as athletes, the strong group of underclassmen should fill the void.

The men lose one runner in Jason Freeman, who will be graduating next fall. The rest of the team will return for the 2004 season and should prove to be a more dominate force in the MAC conference.

Serious fun

Club highlight: Street Hockey

Nick Reger
staff writer

The Street Hockey Club at Juniata is relatively new; it has only been around for four years. Though the group describes itself as low key and easygoing, they are fiercely competitive in their games. They play amongst themselves, as there are no other teams nearby to compete against. "It's like after-school basketball," says sophomore Zach Ausherman. "We line up and people are picked for teams."

The club meets behind Weis Markets on Friday afternoons at 3:00 and Sunday afternoons at 2:00. Newcomers are always welcome, and the sport is co-ed. The only rules are that the players must provide their own hockey sticks and sign a waiver. Vice President sophomore Adam Moffa jokingly said, "We make everyone sign a waiver in case of any serious injury. I mean, everyone gets a little bruised and hazed, but no one's been maimed yet this year."

The games are fun and the club is a good way to make new friends. According to secretary sophomore Craig Dickey, "[The club is] a good stress relief. Whenever you feel like the world hates you, just go vent your aggression by walloping a ball with a stick and wantonly checking other people."

So whether you're just bored and looking for something to do on a weekend afternoon, or you need to forget about that test on Monday for an hour or two, the members of the Street Hockey club cordially invite you to join them for some serious fun. And remember, it's BYOS – Bring Your Own Stick.

JCFH stepped it up

Cara Yancey
photo editor

Although the Juniata Field Hockey team had an empowering win against Lebanon Valley on November 5, the women could not build on the victory. On November 8, 2003, the women's field hockey team lost to Messiah 5-0 in the MAC Championship game. Despite the loss, the team still had a chance in the ECAC Mid-Atlantic region tournament qualifier against William Patterson. Unfortunately on November 12, the Eagles fell in the contest 2-1.

The game against William Patterson was played in Juniata territory the majority of the first half.

In the second half, freshman Brandi Kavaliauskas of William Patterson knocked it past Juniata goalie Melonie Sappe ('05). Three minutes later, Juniata senior Joanna Acri answered with an expert stroke into the goal on an assist from junior Gracie McCluskey. William Patterson prevailed, though, when Kavaliauskas deflected another shot into the goal with eight minutes left.

Juniata closed the season with a school record for victories with a 15-8 record, higher than last year at 13-8.

Field hockey women had some other big moments this season; two victories over perennial conference power Lebanon Valley and a win against Montclair State, a team ranked eighth in the nation in the Division III field hockey coaches' poll.

Sophomore Sara Roux said, "I was amazed at how we played in the Lebanon Valley game. Our passing was dead on and they just gave up."

Sophomore Andrea Way commented, "This season was everything we wanted. We set a goal to make the conference tournament and went all the way."

All the players have this optimistic outlook for next year. Even coach Carolina Gillich sees next season as an opportunity. "This year is just like every year. We plan on attaining the same outstanding goals we achieved this year and win the MACs completely," said Gillich.

Coach Gillich, proud of the Eagles' accomplishments this year, is looking onto her next challenge. She said, "Messiah's offense has a strong punch. Next season, we will concentrate on making our offense more lethal." Simply reflecting on the season, Gillich plainly said, "It rocked. It's amazing what winning can do."

THE RANDOM ELEVEN

Matt Russell, layout editor

Bad taste: Subway has terrific chocolate chip cookies and yet they don't serve milk. The disconnect between these two things makes my head hurt.

Speaking of milk: Last year at Madrigal, my table was horrified that they served us a chocolate dessert and refused to provide anything but hot coffee or tea to drink. Sacrilege! You'll be able to easily identify my table this year. It'll be the one with the two gallons of milk sitting on it.

Prospective students: Hosting them during Madrigal line is so much fun because we can tell them the tents are where some freshmen must live because of the housing shortage. I was disappointed that the pretty flags weren't put up for them this time. I knew a group that wanted to capture one and raise it over their tent. The Swedish one.

Danger zone: A friend in Terrace Hall was sitting in her room and heard a loud crash from the women's bathroom. She raced down the hall to see what it was; a shower stall door had fallen off its hinges when some poor person attempted to use it. Didn't the TNT bathrooms just get renovated?

DNX-3043: Yeah, **you:** the green Wrangler with the super-sensitive alarm that went off no less than three times per day while it sat outside of South all week. Much love.

Come get your s'mores: There was a mass e-mail the other week declaring there would be s'mores roasting in Madrigal line. When I got there, I saw a single butane burner with a single flaming marshmallow being held over it. Mmmm… burnt, gas-flavored, marshmallowy goodness.

Quick action: Thanks to Tim Launtz. He had facilities properly clean the men's bathroom on the third floor of South for the first time this year. If you have issues that aren't getting addressed in the dorms, he's your go-to guy.

Late night action: You know what's really fun? Fire alarms going off in South Hall at two o'clock in the morning and having to stand outside for 15 minutes in the bitter cold while wearing only shorts, a jacket, and slippers. What, was somebody burning something in our non-existent kitchen?

5-year-old fun: I went to the Midnight Movies before Thanksgiving break (which is the best fundraiser of the year, in my opinion). The first night I saw "The Cat in the Hat," and the second night I saw "Elf". I'd recommend either because they were both funny, but I think Elf won by a clear margin in the laughs category.

Showing off our pretty Gray Totes: There is a sign above the line to return trays in the cafeteria that says "Please put all silverware in the Gray Tote." Aside from the mystery of the proper noun "Gray Tote," I'd like to know why it only appeared while the prospective students were here and then promptly disappeared again. Are we not good enough for the Gray Tote?

Massive wastes of time: Hooray for hyper-sensitive people who can't let anything controversial get by their political-correctness sensors. A poke was taken at the sciences to stimulate discussion, and then our inboxes got filled with a departmental battle of egos. I guess the stimulus worked a little too well.

Thanks to everyone who has been actively supporting the Random Eleven.
Look for it again (right here on the back page) next semester.

Women's Basketball

continued from page 13

players to run the floor. Says Coach Young, "Our post players can beat any other posts in the conference (down the floor)."

Juniata's post game dominated the team's production in its first outing of the season. On Nov. 21 the Lady Eagles took the floor against Chowan College at the Emory and Henry Tournament. Jen Uhrich (SR) and Dana Reist (FR) anchored the offense scoring 11 and 10 respectively. The duo shot a combined 9-15 from the floor. Kirsten Kirk (SO) added 11 from the perimeter, but shot only 1-6 from three point range.

Gretchen Hall (SR) dished out 6 assists for the Eagles, but committed 10 turnovers in the game. Turnovers remained a problem for Juniata, who committed 35 total. The mistakes proved costly as JC fell to Chowan 56-74.

In the tournament's consolation game on Nov. 22 the team bounced back from its disappointing opener. The Eagles exploded for 82 points while holding Wesleyan to a mere 50 in the contest to notch Young's first head coaching victory. She'll continue to build the team's confidence and skills while hoping to translate some of the fun of playing into more wins for the program.

Football

continued from page 14

made his first career start for the Eagles at quarterback and had a great day. Lee completed 14 of 19 passes for 102 yards and a touchdown. The touchdown was thrown to Jason Koch (Kutztown), his first career touchdown reception as an Eagle.

Also coming up big for the offense was Juniata Senior Craig Mosier (Coudersport). Mosier finished the game with 163 yards rushing, pushing his season total to 1,250, which breaks the previous record of 1,117.

Mosier's success cannot only be attributed to his great effort, but also to his two senior offensive linemen who he has played behind for four years. Brian White (Indian Hills N.J.) and Dewey Weddle (Walkersville M.D.) have anchored the offensive line that paved the way for Mosier to have another tremendous year.

Also ending their careers on high notes Saturday were Bill Bishop (Punxsutawney) who ended with 8 tackles (two tackles for losses) and Mike Brown (South Williamsport) who ended the game with an interception on his final play as a Juniata Eagle.

When asked about his thoughts on the season, Senior Brian White stated, "We played some of our best football at the end of the year, with our backs against the walls. This team never gave up and fought hard until the very end. That is a very strong compliment to the character of the team and program and is something that the team can build on for next year."

Coach Burke summed up his thoughts by saying "We are a young team. We are predominantly a freshman and sophomore team. We will lose nine great seniors this year, but the opportunities that our young guys had to grow this year will help the future a lot. We are only losing three starters from our defense that over the last three weeks of the season played better than any defense in the conference."

So as the Eagles look ahead to next year, they can be sure that the adversity faced this year will help them to mature as players over the next few years and lead to many successful years to come.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

JANUARY 29, 2004 | JUNIATA COLLEGE | VOLUME 85, ISSUE 7

Record-breaking read-in comes to JC

Holly Brown
staff writer

On Monday, February 2, hundreds of Juniata students will participate in a nationwide read-in to promote awareness and appreciation for African American literature during Black History Month. "Catch the Fire," as the event is titled, will take place from 9 a.m. to 7 p.m. in Ellis Hall. The event is sponsored by the National Council of Teachers of English (NCTE), in an attempt to have 1 million recorded readers across the nation. When the event concludes, a celebration open to all will be held in the Cyber Café from 7 p.m. to 8 p.m.

Juniata has often supported the public sharing of literature in the annual "Lift Ev'ry Voice" and "Unlock Your Voice" coffeehouses. A reading of this scope and size has, however, not been attempted before on campus. Professor Judy Katz, who is an NCTE member and brought the idea to campus, plans to have 120-150 readers. Each half hour is sponsored by a different group or person, with participants such as SPEAK, UCJC, and the United Spiritual Council. Other sponsors include Dawn Scialabba, Professor Judy Maloney, Jeremy Santos, and a Huntingdon High School class. With the combined numbers of readers, sponsors, and participants, it seems unlikely that many on campus or in the community will remain untouched by the event.

Almost everyone on campus and in the community will be touched by this event.

"Catch the Fire" is meant to further appreciation for African American literature, as well as promote literacy and a sense of community.

"There are so many aspects of campus life represented," says Katz, "and not just in the humanities but in the sciences, social sciences, student services, and campus ministry."

The read-in not only promotes our own history and literature as a nation, but it also affects the readers. The experience of publicly reading a chosen piece of work often gives readers a chance to express their personalities.

Freshman Morgan Riebel is planning to read "Homage to my Hips" by Lucille Clifton. One thing that struck her about the selection is its humor.

Riebel said, "I find it kind of funny so it gives a lighter side to the whole topic. One of the lines is 'these hips have never been enslaved'. It's about how she's free, her body's free, her soul's free."

Sophomore Max Stem has two selections in mind for the Monday reading.

"I'm not really nervous or anything right now. I don't know if I will be later. I just thought it might be a good experience, so I thought I'd give it a try" he says.

The NCTE is an organization of educators that works to "advance teaching, research, and student achievement in English language arts at all scholastic levels," according to its website. The organization started in 1911 and now has over 60,000 members. Their African American read-in program has reached 49 states, the West Indies, and many

The Chinese Club hosted its annual Chinese New Year celebration on Jan. 24. Here, the Juniata College community enjoyed catered food for $3.00. Beautiful table settings and decorations helped set the scene for the sold out event and brought a little bit of Chinese culture to Juniata students. See more on page 10.

"Lift Ev'ry Voice" and sing

Carolyn Keller
staff writer

"Amazing. Beautiful. Haunting. Passionate. Alive."

This is how English professor Dr. Judy Katz describes African American literature. And this February – Black History Month – Juniata's 10-year tradition that showcases this literature will get a makeover. "Lift Ev'ry Voice" was once a lecture-style presentation in Ellis Hall's cramped faculty lounge. Now it has evolved into a powerful, coffeehouse-style celebration of African American writers and poets in Ellis Hall's ballroom on February 1 at 4:00 p.m.

"Lift Ev'ry Voice" brings exposure to literature that is often overlooked. "Most people are not familiar with African-American lit-

Belser recognized as PA Professor of the Year

Meredith Pink
staff writer

On November 12, at a ceremony held in Washington D.C., Juniata theatre Professor Andrew Belser was named Pennsylvania's 2003 Professor of the Year. He was selected from more than 100 other applicants. Belser said, "I was shocked when I found out that I won this award. It is a wonderful feeling to be honored for something you love to do."

PA Professor of the Year is a division of the United States Professor of the Year program. Established in 1981, it is the only program of its kind to distinguish college and university professors for their remarkable skills and teaching styles.

Belser is the second professor at Juniata to win this prestigious award. In 2000, David Hsiung, Charles A. Dana Professor of History, was named Professor of the Year. Dr. James Lakso, Provost, is in charge of nominating professors for this award. Once the professor has been nominated, the responsibility befalls him to finish the rest of the process. He is responsible for gathering letters of recommendation from theirs students and colleagues. In addition, he must write three different documents explaining their philosophy of teaching. Belser

World Religion Day

Matt Soniak
staff writer

On Sunday evening, January 18, Juniata College campus ministries played host to an event that is rare in an increasingly diverse society: an open and casual dialogue between the leaders of several world religions on issues of universal importance. This panel of five leaders, Father Christos Patitsas (Greek Orthodox), Rabbi Burt Schumann (Judaism), Joan Breckinridge (Lutheran), Makhtar Sar (Islam), and Angie Peacetree (Baha'i), as well as students, faculty, staff, and visitors to Neff Lecture Hall were at this summit in celebration of World Religion Day.

World Religion Day, now in its eighth year of celebration at Juniata, was originally created as recognition that all religions are part of one unfolding revelation. That theme of unity and the taking down of cultural barriers was consistent for much of the dialogue on war, gender issues, and economic disparity.

Though the representatives of each faith addressed each topic with their own belief system as a guide, the core of everyone's message was similar. All the leaders agreed that the notion of war is archaic, and unnecessary. Some even saw it as our failure to live up to whatever spiritual ideal we believe in. Giving the conversation some perspective from a religion that was not represented at the conference, Father Patitsas talked about the Buddhist belief that earthly passions and ego are the source of strife and war. Rabbi Schumann also saw the human ego at the root of gender inequality, saying that control of women is fear and the product of men's shortcomings, and that only the shrinking of the ego will lead to equality.

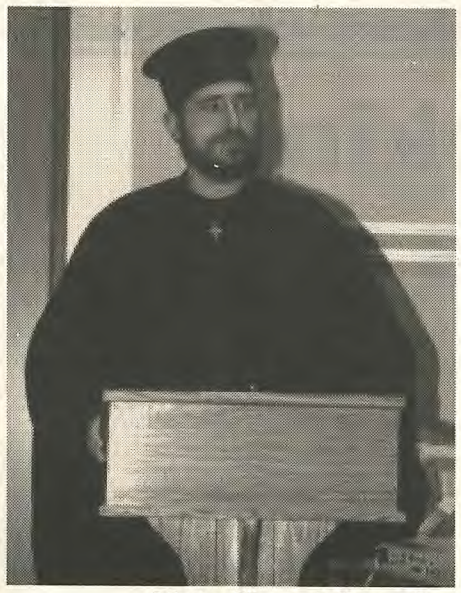

Photo: Hannah Rauterkus

Father Christos Patitsas talks to students about the Greek Orthodox Church on World Religion Day.

The final topic, economic disparity, also received similar responses from everyone on the panel, each religion believing that it is in the hands of the people to help the less fortunate. Both Rabbi Schumann and Mr. Sar used their faiths' holy books in addressing this issue. Rabbi Schumann quoted from the Book of Leviticus, "You will not stand by while your neighbor bleeds." Mr. Sar explained that one of Islam's Five Pillars, its guiding principles, is Zakah, the mandatory charity to the needy.

After each panelist's allotted speaking time, a question and answer session revealed some of the differences inherent in the various faiths as a heated debate on the topic of homosexuality began. Even after this, the spirit of World Religion Day remained. The conference ended in handshakes and friendly words across the panel.

One nation under God?

Mary Gardiner
staff writer

In 1954, George Docherty, a pastor in Washington, D.C., appealed to President Eisenhower that our national Pledge of Allegiance should be amended to include the phrase "under God."

"The Pledge of Allegiance seems to me," urged Reverend Docherty, "to commit this theological implication that is fundamental to the American way of life. It should be 'One nation, under God, indivisible.' Once 'under God,' then we can define what we mean by 'liberty and justice for all.'"

Just four months later, the 83rd Congress passed H. J. Res. 243. The Pledge of Allegiance was now two words longer, two words that now cause great controversy.

But in the summer of 2002, California's 9th U.S. Circuit Court of Appeals ruled in favor of Dr. Michael Newdow that the inclusion of the clause "under God" was unconstitutional. Newdow said, "it was wrong to require [my daughter] to listen to it when she doesn't believe in it."

The question presents itself. Where does God fit in our government? As Newdow's case approaches review in the U.S. Supreme Court, many students are reevaluating their sentiments about the religious allusions.

In the first weeks of February, we will see the case go to Washington, and the debate will start up again. The Juniata Philosophy Club will offer a debate on February 3rd, discussing the matter with some of our top Politics professors.

Last semester at Juniata, religion and politics professors sponsored a forum on Moore's case and on religious freedoms in general. Classes discussed the issues, students authored detailed reports defending both sides, and, outside of class, everyone was talking about the pledge and the motto.

Said Marissa Gunn, a junior, "If your teacher in fifth grade quizzes you on what the pledge says, and you omit the words, 'under God,' you'll be marked down. That's not right."

Just as many who talk about it

JC Bookstore: Love it or leave it

Rachelle Luther
staff writer

Students' pockets groan each semester as they empty their bank accounts at the college bookstore. Many students wonder why prices are so, well, pricey, and why the bookstore can't have Wal-Mart-like deals. Jeremy Santos, the Juniata College Bookstore Manager and Follett Higher Education Group employee was happy to answer questions about bookstore prices.

> "Well, the magnets are cheap."
> **-freshman Kathleen Candando**

According to Santos, publishers and the textbook industry set prices for books. The publisher decides on a "list price" for a text and gives the store a discount. The store sells the book at "list price" in order to make a profit. If the bookstore receives a text at what is called "net price" the cost has not been set by the publisher. In this case, the store decides the cost based on industry standards.

While this is all very interesting, the real question is why books are so expensive in the first place. Textbooks are generally printed on high-quality paper and contain a vast amount of graphics and pictures. Also, authors are experts and use extensive research in writing the text. In short, producing textbooks is expensive, and publishers have to make a profit.

At the end of the semester, many students sell books back but walk away with only a slightly plumper wallet. Santos said, "The used book market is completely driven by supply and demand." All used books needed for following semesters are bought back at half the price of the new text. Books in full stock are bought back at only 10-35% of the cover price by a national wholesaler.

What about the books that the store won't buy back at all? Well, some books simply have no value on the used book market, such as older editions. Santos also said that the Juniata College Bookstore policy on buying used texts back "is nearly universal in the college bookstore industry."

With the ease of online shopping, more and more students are buying and selling their texts online. Comparison between Amazon.com, Barnesandnoble.com, and the Juniata College Bookstore, showed that costs differ only slightly. In an Internet search, out of five texts chosen at random, one book was exactly the same price at both websites and the bookstore. Two texts were cheaper by a dollar or two. The

Life after Juniata: the "Real" Real World

Michelle Calka
staff writer

Once you enter college, your friends and family might expect you to have an answer to the important question: "What do you want to do after graduation?" Maybe now is the time to seriously consider your answer. If you are a senior, time is running out if you have not made a decision. If you are an underclass student, this is the perfect time to think about your options.

Perhaps you have a profession in mind and know the steps to get there. But if you are like most students, you are not quite sure what to do after graduation. Most Juniata students choose to enter graduate school or look for a job.

Graduate school is not the best option for everyone. After four years of school, you might have had enough. Then there are the standardized GREs, the lengthy application process, and finding a way to cover tuition.

On the other hand, the job market is a sluggish and unfriendly place to be right now. According to the National Association of Colleges and Employers, nearly 28% of employers surveyed in 2003 plan to cut back on their hiring of new college graduates in 2004. Many recent graduates are stuck in mundane jobs unrelated to their field; or worse, they are still living at home. However, some seniors are unconcerned. Senior Kerry Figurelle said, "I've talked to many very successful people who did not know what they wanted to do right after college and ended up in a job entirely unrelated to their college degree."

Graduate school should not be used as an escape route if it does not fit your professional goals. The option of continuing your education always exists. Some employers will even help fund your graduate tuition if it increases your value to the company. Those with graduate degrees do make more money over the course of a lifetime than their bachelor-holding peers – about two million dollars more, according to CNN.

If you are unclear about whether graduate school or entering the job market is right for you, talk to your advisors, or stop and visit the Career Services office. It is never too early to start planning ahead.

Hall hygiene

Colleen Hughes
staff writer

Walking into the residence halls after break, you cannot help but notice the clean floors and bathrooms. However, the halls are already muddy from students coming in from the winter weather. Many of us hardly stop to wipe our feet for the sheer fact of getting inside and warm. But, is that mud still there the next day? Do you feel cleaner or somehow dirtier when you get out of the shower?

These two questions may depend on what dorm you are living in. Sophomore East resident Liz Koval said, "It depends on what halls you are talking about. Living in Sunderland freshman year, Facilities workers were there every morning, but over here in East you're lucky if you see them once a week."

Another East resident, Emily Steelman added, "It gets pretty disgusting and Facilities is not responsible for cleaning our bathrooms, but why are the stairways and lounges neglected?"

"East smells!" shouted another East resident.

Aside from the comments by bitter East residents, what does everyone else think? "Thinking back to last semester they weren't too clean," responded an anonymous South resident along with nodding heads from the rest of the room.

One former South resident, Leah Hammond, said, "They scrubbed the showers and the floors pretty well when I lived in South freshman year."

> **"One thing we will not compromise is the sanitary needs of our students."**
> **– Director of Res. Life, Tim Launtz**

Tussey and Terrace R.A. Essie Pfau agreed, "For the most part maybe not as often as they need to be, but the cleaning ladies are understaffed and I think they do a good job given that fact."

Exactly how often do our dorms get cleaned? An on duty Facilities worker – who wished to remain anonymous – said, "In one way, shape, or form the dorms get cleaned every day."

Director of Residential Life Tim Launtz said, "We are constantly reviewing and checking the dorms to meet the needs of the students. One thing we will not compromise is the sanitary needs of our students."

With that in mind, who noticed the new soap dispensers in the bathrooms? One south resident said, "Yeah, that's cool we don't have to buy our own soap anymore. Now all they have to do is give us paper towels."

Launtz responded, "[Soap dispensers have] been a long time coming. We were finally able to get the funding for the new soap dispensers."

As for the paper towels, Launtz said that he is actually looking into getting hand dryers. They are more economical, but again it will require more funding.

The cleanliness of our dorms is up to us as residents as well as Facilities services. Launtz made it a point to say how much Facilities workers do care about their job. Their job is a customer-based organization and we, the residents, are their customers.

Hall issues can be addressed at C-Board meetings or to the Office of Residential Life.

One nation under God

continued from page 2

are getting tired of the same debate. Said Kevin Warner, a freshman, "This is an issue that distracts people from things that really matter, like taking care of unemployment, or fixing our sluggish economy. You could have people that could talk for hours about [the pledge], but who could talk about the Medicare bill that was just passed?"

The current case was passed amidst a growing movement to remove religious references from government institutions.

For instance, Justice Roy Moore's recent Ten Commandments debacle got him knee-deep in controversy and a suspension from office last August. Justice Moore defended himself, explaining: "If this state can't acknowledge God, then other states can't. And eventually, the United States of America…will not be able to acknowledge the very source of our rights and liberties and the very source of our law."

Hopefully, both in and out of the classroom, members of the Juniata student body will have something to say about our nation's "God."

Do Huntingdon businesses need our patronage?

Mary Gardiner
staff writer

As I walk into the shop door on the corner, I am greeted by a woman, smiling ear to ear, hair tied loosely in a big purple scrunchie. She is Leah Davis, the sole owner of Vintage Art Glass, and she has been in business for seven years. She couldn't be happier. Her small gift store is thriving, and she has just been named one of Pennsylvania's top 50 businesswomen.

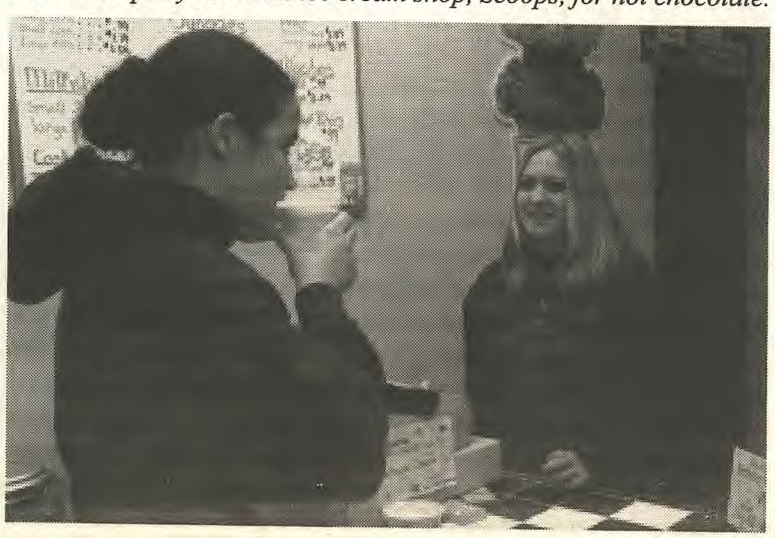
Davis is an exception. Many businesses in Huntingdon have experienced struggle with keeping up shop. Ames, BiLo, and several smaller retail shops have shut down within the last few years, and others feel a decline. Now businesses are reevaluating how the Juniata community's patronage plays a part.

To some "townies," Juniata students are part of a separate community—and, to some extent, they're right. We eat, sleep, learn, play sports, work, study, and socialize all in the same place. Economically, however, we are not a separate community. The 14th street Sheetz would not be in business without us here. Domino's, All American Pizza, and OIP are certainly all doing well. Moreover, the College is second only to the prison as an employer in Huntingdon.

> "I didn't even know that there were thrift shops in Huntingdon."
> – freshman Lindsay Garvey

The College brings the Huntingdon community a fair amount of opportunities, too. Baker is open to the community, the gym is open for membership, and the library offers cards to area residents. Although there are many who would appreciate the idea of our community being a separate one, that is not the case.

It is surprising how many students have no idea what downtown Huntingdon actually offers. When several Juniata students need food, rarely do they go for a run to Billi's Bric-a-Brac, a bagel shop on Fourth and Penn. No one considers Foxfire Gifts for gift giving. Some don't even know about the Clifton 5, our movie theaters on Washington Street—or, more importantly, that on Tuesdays, JC students only pay $4.



Lindsay Garvey told me she "didn't even know that there were thrift shops in Huntingdon." Well, I bring good news. There are four. Little Hearts, for instance, at Washington and Sixth, is a hidden treasure full of Express Jeans for only $5.

Does anyone know there's a Radio Shack in town? Or Gardner's Candies (a great place for all JC male students to order flowers and candies for their upcoming valentines)?

And did anyone know about Leah Davis' store on Fourth and Washington? Luckily, a few students *had* ventured in and chatted with Davis, and some even exchanged numbers and addresses and now send Christmas letters back and forth. This is what Huntingdon offers. But a very small percentage of Juniata students ever find the store. Davis wondered why, and perhaps a consensus that community members don't like Juniata students is to blame. Perhaps the idea that we aren't a part of Huntingdon is to blame, as well. But we all are spending four years of our life here—a significant amount of our young lives—and really do need to embrace everything Huntingdon offers.

Students often overlook the shops they see as they pass through downtown to get to the important things: McDonalds, Giant, Fashion Bug, the Family Dollar, and the highway. But there is so much to be missed when they speed through that jumble of one-way streets.

Roving Reporter

Reporting and photos by Rachelle Luther

What Huntingdon area businesses do you frequent and why?

"The Clifton 5 because I love movies and it is a small, cozy, intimate space. It provides a much needed connection to the outside world." *-Elliot Stillwater (Jr., left)*

"I don't really go anywhere because I don't need anything and I don't have a car." *-Justin Kanter (So., right)*

"Boxer's because it's the first restaurant I found when I came here and everyone raved about it. It has really great food and a nice atmosphere. Little Sheetz because I get the munchies when I study, so I like to take a break and get some people together and walk down for hot and steamy MTO's. And Jay's because it is the number one place for the older college students. It has a great atmosphere, relaxing, and everyone is there. I think it is a great part of the Huntingdon and Juniata culture." *-John Damin, aka Cha-Cha (Sr., left)*

"Weis's because I live off-campus. It has more selection and a better atmosphere than Giant. But for late night doughnut cravings, it's Giant." *-Beth Reiter (Sr., right)*

"Giant because it's open 24 hours and sometimes two a.m. runs to Giant on Saturday nights are the greatest." -Susan Trainor, *(So., left)*

Belser receives PA Professor of the Year

continued from page 1

said, "There was a fair amount of work involved in the process of getting this award. The hardest part was letting people know who I really was through the documents I had to submit. It is easy to tell people what you do, but it is hard to let people know who you really are and what you really know."

Lakso nominated Belser because he revived and created a remarkable theatre program at Juniata. In 1995, the theater program was in ruins. In fact, there were plans to eliminate it. There was very little student involvement and practically no community interest. Professor Belser came to Juniata in 1997 and rebuilt the theater program, and made it interesting for everyone. In fact, many of his plays have been nominated by the Kennedy Center of American College Theater Festival. Lakso went on to say, "In a short time, Andy took a program that was on its deathbed and gave it a lot of energy and new life." As a result of this renewed interest in the theater program, there are plans to renovate Oller Hall.

According to Belser, "Education isn't about pouring knowledge into your students and hoping that they learn a few things. It is about being present to the student. This presence opens up a place where knowledge and learning are everywhere so connections can be easily made." Professor Belser combines his spontaneous personality with a laid-back supportive atmosphere. In addition he is a very hands-on instructor.

Sophomore Brittany Barbera said, "He is always guiding you and really makes you feel like you can do it. If you don't understand something he tries to teach it a different way." She went on to say the two qualities that struck her most about Belser, which are his sense of humor and sincerity. Barbera added, "He doesn't censor what he says and he says what he feels. He is also one of the most sincere people I have ever met. He is passionate about what he is teaching, and takes a personal interest in his students." Belser related that the best professors he ever had made him feel like they were having an intimate conversation, regardless of how many people were present. To be truly present with students is his goal and one of the most important aspects of his teaching style.

Photo: Hannah Rauterkus

PA Professor of the Year Andrew Belser demonstrates forms of movment and improv with a member of the class.

This award is a reflection of Professor Andrew Belser's outstanding achievements as a professor, his indelible dedication to the Juniata theater program, and his unwavering enthusiasm for his students. He is more than deserving of this award, and an asset to the Juniata community.

"Lift Ev'ry Voice" and sing

continued from page 1

erature. They don't think of it as American literature," says Katz, who has coordinated the program with her classes since 1995, when she took the reins from Dr. Deborah Kirchoff-Glazier.

Her students share her enthusiasm. "This program really has a magical feel to it," says sophomore and two-year participant Steve Knepper, "All of the pieces come together to create this awesome atmosphere."

To understand what makes Lift Ev'ry Voice special, look no further than one key factor: inspiration. This inspiration comes from powerful African American writers such as Langston Hughes and Maya Angelou, the students who commit themselves to make "Lift Ev'ry Voice" a success, and of those who attend. Junior Marissa Gunn says, "In years past, the 'Lift Ev'ry Voice' programs have been excellent, and that excellence makes you want to be involved in its creation."

"Lift Ev'ry Voice" is also about being challenged and challenging others see things in a new way. The idea of challenge for change is one that Gunn and Knepper remember from their first times reading at the event last year. "I was so incredibly nervous," says Gunn. "It was an incredible learning experience. At the time, I was working at Mimi's in town, and the day after the performances, a customer who'd been there actually stopped me at work to tell me how much he enjoyed it. That was really amazing to me."

Knepper agrees. "Any time you read a work in front of an audience, it changes how you look at that work forever," he says. "It puts it under a new light."

A new light is exactly what the team behind Lift Ev'ry Voice is trying to shine on American history. Gunn explains that black history should be celebrated for more than just a month. "It gives the impression that it's a break from the norm, like it's a time out for something that doesn't really belong at any other time of the year. It's sad," she says. "In reality it's the norm. It should be integrated into the things we read and study at any other time of the year. It's America's culture. It's America's literature. It's America's history."

Katz agrees, and says of her students and the Juniata community, "[This literature] belongs to them and is about their lives, no matter what color they are. It helps us to understand experiences of African-Americans, but also to understand our own experiences."

Come February, "Lift Ev'ry Voice" will have another purpose. It will serve as Juniata's kickoff to the nationwide Read-In (see related article).

"Life Ev'ry Voice" will take place over one hour on Sunday afternoon. Do not miss this inspirational event.

The Real World

Pamela R. Bodziock
co-editor in chief

Here's a little secret about the cool, suave, haven't-a-care-in-the-world senior class (of which I am currently a member) We don't *really* want to graduate.

Well, let me rephrase that. We *want* to graduate. We all do *like* Juniata College; we chose to come here, after all. We've enjoyed the four years here, all the experiences and the opportunities – and even the ones we haven't enjoyed, well, they've mostly proven to be "learning" experiences, if nothing else. We've had a good time, for the most part – but it's our senior year, we've had a good run, and we're about ready to graduate and move on. It's time.

This is all very well and good. The problem is that, all of a sudden, we will be pitched out into "the Real World" when we do leave (and here I thought that the "Real World" was just a myth). And I suppose I don't *really* know, for certain, that the majority of the senior class shares my opinion about how scary this is, but I imagine how I'm feeling at the moment isn't that unusual.

Yes, the Real World! We've heard about this place at least since high school, and maybe even earlier. Remember how it went? Of course you do – "You better shape up!" our teachers would say to us, when we'd be doing something particularly vile, such as not handing in homework, or chewing gum in class, or both. "You might get away with this slacking off and goofing *now*, but in the *Real World*, they don't put up with this sort of thing!"

Most of the time, the Real World that they were referring to was college. Now that I'm getting ready to graduate, however, I'm hearing about a new type of "Real World" – the world of employment. I'm getting a lot of pep talks these days, mostly from well-meaning relatives.

"Oh, you wait!" they chuckle, often clapping me on the back in an apparent attempt to hammer their point home. "You think *college* was hard? You haven't seen *anything* yet! You just wait until you get a *job!* Ooh, it'll be *some* time for you then! After you graduate from college, life is all downhill from there! Ha ha!"

Sometimes I get the feeling that they're trying to scare me.

My personal favorite, however, is the other message that is hammered into us since high school (and even before that), though it's given with much more subtlety. I would be referring to that message of: "If you don't know exactly what you want to do with the rest of your life, professionally-speaking, *right now*, than you are *doomed*."

> After you graduate from college, life is all downhill from there! Ha ha!

Yes, since high school, we have been told that we need to decide exactly what we want to do *right now*. And if we *don't*, well . . . they never do say what will happen to us, but I always figured a refrigerator carton on the streets of New York City figured somewhere into the equation.

I understand that I am not alone in receiving these sort of motivational speeches from well-meaning adults. A lot of my friends and acquaintances, particularly in the senior class, tell me that they hear the same kind of thing. The problem with all of this, aside from the fact that the folks of our parents' generation (if not our parents themselves) are apparently sadistic, is that they're terrifying all of us.

Recently, I've figured out that these statements are not exactly true. We are not doomed to failure – or success – for the rest of our entire lives based on what grad school we choose or where we get our first job. The decisions we are making now, about these things, are very important and deserve a heck of a lot of our consideration and thought. But if things don't work out perfectly with the decisions we make – and they won't, because life doesn't work that way – it won't be the end of the world, contrary to popular belief.

This is a scary time for seniors. Some of us are applying to grad school, some of us are looking into the job market, and some of us are taking a semester off while we figure things out (and for more on the decision on grad school versus the job market, read Michelle Calka's article on page 3). But still, I think it's important for us – all of us, because the only thing separating freshmen from seniors is three years, which, believe me, is not a long time – to remember that this is an exciting time of life, too. The possibilities are endless. That's terrifying, I know, but it doesn't have to be terrifying in a bad way.

So, to my fellow seniors, and the rest of the Juniata classes – enjoy the 2004 spring semester, do your best, and try not to worry too much about the future. *Plan* what you want to do next, think about it, consider your options, and decide what your next move is going to be – but try not to panic. Try to enjoy the experience. After all, contrary to popular belief, we've been living in the Real World our whole lives. Now it's simply time to get out there in it.

Ask President Kepple

"In the Dec. 1 column, you described the flags raised for enrollment open houses as representing JC's 'outstanding international programs.' As a current 'Eagle Abroad', I'm a little concerned after having heard rumor of Juniata cutting back on its initiative for study abroad programs, even bringing some programs—such as semester- or year-study in Munster, Germany—to a complete end. What is the official stance on this? Is JC really considering these type of cutbacks and, if so, why?"

Thanks for this question. We have NO intention of cutting back on international programs. In fact, our 2001 Strategic Plan specifically states our intention to, "Expand international and multi-cultural experiences for Juniata students." In general, our goal is to increase both the number of international students on campus and to increase the number of opportunities for Juniata students to study abroad. Juniata is nearly unique in higher education in allowing financial aid to follow our students, to accept grades from international programs, and for international study to count toward graduation requirements. I personally would like to see 100% of our graduates participate in an international or significant out-of-culture experience. Currently approximately 30% do this.

"Why is there no seating or lounge space in Good Hall? The hallways become very crowded between classes."

Another good question. The major issue is finding the space in space in Good. In fact, the class of '03 has contributed over $10,000 toward developing a lounge in Good. As we move Accounting, Business and Economics to the former Chemistry wing of Brumbaugh (expected to be done in the summer of '04) we will open up enough space for a lounge.

The Juniatian accepts questions for the "Ask President Kepple" column. Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Questions will be considered based on relevance to the campus community.

LETTERS TO THE EDITOR

Ecuador is little-known study abroad destination

As I write this, I'm in the midst of my flight out of Quito reflecting on my 5 month stay in Ecuador. Thinking back on my amazing experience in this country I have to ask, "Why was I the only JC student to study abroad in Ecuador this fall"? Let me tell you about what is so great about Ecuador.

The BCA trips – There are three trips included in the Ecuador BCA program: the Galapagos, the Amazon, and Otavalo. The Galapagos trip is a four day trip swimming, snorkeling, and hiking in and around the Galapagos Islands. I had an absolute blast snorkeling with giant tortoises, sea lions, sharks, sting rays, and a ton of tropical fish.

It takes you all day in plane, canoe, bus, and then another canoe to arrive at the USFQ Tiputini Biodiversity station. If you've ever dreamed of what an ideal jungle trip would be – Tiputini is it. My favorite activity was when we floated the Tiputini river at night to spotlight for wildlife that prowls the river banks. We had incredible luck seeing an Ocelot (Jaguar-like cat) and a rare, extremely venomous snake, the Bushmaster. Other highlights include fishing for Piranhas, hikes through the jungle, and swimming in the Tiputini River.

Otavalo is a weekend trip to a huge indigenous market and to the surrounding countryside.

Non BCA trips – Ecuador abounds in opportunities for trips. Papallacta – this resort is simply a group of huge natural hot springs. For $5 you can enjoy a gigantic natural acuzzi all day long. Banos – a quaint town where you can rent bikes or four-wheelers and travel along a 20 mile stretch of dirt road that has 10 of the most beautiful waterfalls you will ever see. Banos is right in front of the very active volcano, Tunguragua. At night we even saw some lava spurt out of the top! Mindo – we rented inner tubes and floated through the rapids of the Mindo river. There is also a series of pristine waterfalls with great swimming, but it's cold water! Cotopaxi – this is the largest active volcano in the world at almost 20,000 feet in elevation. I climbed it with the andianismo group from the university. We started at 12:30 a.m. and arrived at the summit shortly after sunrise. The hike is grueling and if you are not in good shape you will not make it, period. For each two steps forward you slide backwards one step because the powder-like snow. And of course there is basically no oxygen in the air at that altitude.

A New You –If you can find your way across rural Ecuador using four different busses, three of which break down, if you can take real classes in another language and succeed, if you can adapt to a different family, different food and different customs, you can do just about anything.

Do you see what I mean? So… study abroad in Ecuador!

Jeremy Weber
Class of 2005

From a pre-med Eagle studying in France

Few before me have purposefully complicated their lives in the manner I have: simultaneously switching to a pre-health professions major and studying abroad. I have been told countless times by all sorts of people that I am crazy for even trying it. I am not about to lie and say that it is or has been easy so far, but I will tell you that it is already an invaluable experience.

I would encourage most anyone to study abroad (except for the faint of heart!). It is an incredible learning and growing experience thanks to the daily conflicts and challenges faced. However, being pre-med students, you are not faint of heart, and are absolutely capable of undertaking a semester or more of studies abroad.

Why should you give this opportunity serious thought? Why shouldn't you stay at Juniata and make sure you keep your competitive GPA and list of extracurricular activities so that you can distinguish yourself from all the other medical school applicants? Because that's precisely what a vast majority or pre-med majors like yourself are doing. If you really want to distinguish yourself from the highly competitive applicant pool, you need to have a uniqueness or rarity that makes you special. Show that you are a risk-taker. Show that you are more than a GPA. Show that you have the resilience to survive through hardships. Show that you know something about the world. You can do all these things by choosing to study abroad.

As a science or pre-med major, it is important for you to understand that you are not limited in your options. In fact, you have so many options, it may be a little overwhelming! Therefore, it is important that you do some research and explore your options to find the right program for you.

Don't limit yourself to English-speaking programs, either! Show you have the confidence and courage to study in a foreign language, if you've ever studied one!

There's a whole world out there waiting for you…get out there and live it! Talk to Jarmila Polte or Dr. Kirchhof-Glazier today!

Shawn Amos leads a Martin Luther King Day celebration

Matt Soniak
staff writer

Friday night's performance from acclaimed singer/songwriter and poet Shawn Amos began with a welcome from Provost James Lakso, praising the life of Dr. Martin Luther King. Event organizer Rosalie Rodriquez went on to claim Amos to be a bearer of King's torch, and a "true humanitarian."

The show itself began with a tongue-in-cheek rendition of the theme from *The Jeffersons*, introduced by Shawn as an "old Negro spiritual." Amos then went on to play a handful of his original compositions and a haunting cover of Neil Young's "Southern Man."

Amos then arrived at the heart of the show, his exploration of the changing identity of blacks in America through the terms, "Negro to Nigga to African American." He began with a performance of his song "Independence Day," from his album "Harlem," which he refers to as a "hillbilly soul opera" in a nod to the Who's "Tommy." This song, about "feeling comfortable in your own skin," was set to a backdrop of slides depicting the cultural contributions of blacks in America throughout the ages.

The visual aspect of the show continued as slides of life in Harlem were set against the music of jazz great Duke Ellington. During the slide show, Amos said, "I was a black kid living in Los Angeles who wanted to be a rock n' roll star. Then I discovered Harlem, and, ever since, I've wanted to be a Negro."

"I was a black kid living in Los Angeles who wanted to be a rock n' roll star. Then I discovered Harlem, and, ever since, I've wanted to be a Negro."
– Shawn Amos

Amos introduced the audience to the larger-than-life figures of the Harlem Renaissance, the "Mecca of the new Negro." Artists, writers, and musicians – like Claude McKay, Gladys Bentley, and Cab Calloway – were seen and heard, giving a context that today's generation could relate to.

Amos went on to talk a little about his own life and experiences. The son of pop culture icon and cookie king "Famous Amos," Amos's celebrity caused him to spend his childhood in a primarily white world. He said that black culture, as fed to him by the mass media in the 80's, made very little sense to him; he felt outside of it because of his white-influenced upbringing. He was finally able to admit to himself, "I don't know how to be black," as he watched Compton burn from the Hollywood Hills during the L.A. riots. This began his life of service to the black community and black culture in America and abroad.

The west coast rap of the early 90's gave him something to relate to in the intensity and power that it shared with the 70's punk rock he loved, and brought him in tune with the shifting cultural identity of blacks at the time.

Now as identity shifts again to African Americans, Amos closed the show and left us with the philosophy that tags and titles don't matter anymore, as long as we are comfortable in our own skin, no matter what color, and as long as we stand together.

After the show, a small group of lucky individuals met with Amos and took part in the Harlem tradition of the speakeasy, sharing poems from Harlem Renaissance writers, their own writings, or whatever they felt appropriate for the moment.

After poems were read, the students were asked to summarize the experience in one word for a video of the event. The students used words like "enlightening," "inspiring," and "living history." Words like this are usually not associated with a concert or group of friends sharing poems, but here they definitely made sense. Freshman Dana Nelson said after the speakeasy that, "It was a wonderful experience, and I'm glad that people are still honoring Martin Luther King Jr., because he was a great man."

Singer-songwriter Shawn Amos delivered a powerful, uplifting performance to celebrate Martin Luther King Day.

RARfest Battle of the Bands a huge success

Jeffrey Anderson
staff writer

Ten bands, and just under 200 people, turned out for Radioactive Radio's RARfest on Saturday the 17th. The battle of the bands was a "huge success," according to Radioactive Radio's Pat Hughes.

The RARfest Battle of the Bands was the vision of Wes Langenbacher (SO), Ryan Wetzel (SO), and Pat Hughes (SO). If these names sound familiar, they should – they are the three hosts on Monday nights WKVR's Radioactive Radio program. The three explained that the idea originally came about in April last year and was planned for early May. They quickly learned that two weeks was not enough time to prepare and had to put the idea on hold. They took in inspiration from other music festivals such as X-Fest in Pittsburgh, and in September 2003, they started making plans for their very own RARfest.

Photo: Hannah Rauterkus

Third place winners, the Daddario Quartet play a soulful original.

Putting together a show such as this takes months of planning. Although one might expect to see many familiar Juniata students on stage, the number of JC'ers performing could have been counted on one hand. Ads were posted in newspapers all over the state, bringing in bands from Broomfield, Altoona, and many small towns in the area.

Says Wetzel, "All the bands were impressive. When you have these types of shows, you expect some bands to suck, but they all had talent."

"All the bands were impressive. [...] They all had talent."
– Ryan Wetzel, sophmore

Indeed, each band had talent, and lots of it. Not only that, but no two bands sounded the same. From funk to metal to punk to the blues, a wide vary of genres were represented in the festival.

It was a hard-fought battle, and only one band could go home with the title of RARfest champion. In the end, it was heavy metal band Flord who took first place and over 200 dollars in cash. In second place was the Altoona punk band Looking For June, and in a close third was Juniata's own Daddario Quartet.

No official plans have been made for the next RARfest. Says Langenbacher, "I think it's time for a little R & R." However, there have been talks of another one in the fall, or perhaps a RARfest '05. In addition, other ideas are immerging, such as an outdoor festival or adding another stage. Whenever and wherever it is, the spirit of RARfest will remain the same: "Come for the music, stay for the cockfights!"

Radioactive Radio wishes to thank Dawn Scialabba of JAB, all the bands, Force Pro Sound, and the guys from 3rd floor North.

FNL puts Juniatians in a trance

Caitlan Zlatos
staff writer

Stage hypnotist Michael C. Anthony, the latest Friday Night Live performer, was a big hit with the campus community. On January 23, his show brought amazement and roaring laughter to the hundreds of Juniatians that squeezed into Baker. Students arriving late stood on chairs around the edge of the room for a better glimpse of the hilarity.

> "It seemed like the right thing to do. My name was Cha-Cha, and that girl was hot!"
> -John Damin, senior

After warming up the crowd with a crazy card trick and facts about hypnotism, Anthony invited volunteers to the stage. He told the crowd that being hypnotized for one hour feels like sleeping for eight. In an instant, there was a mad dash and Anthony had thirty-three willing students on stage.

Anthony's show was based on the wacky situations he put his hypnotized participants in. At one point Anthony was a despised fifth grade teacher whose students (the participants) made faces at him every time he turned his back. Later he convinced his subjects they were competing for $100,000 in an MTV dance competition.

Anthony also singled out several participants. He made junior Lindsey Habel believe the number six didn't exist. This caused her utter confusion when trying to count her fingers. By saying the phrase "full moon," he got junior Jeremy Weber to howl like a werewolf. He even got senior John Damin to believe his name was "Cha-cha" and slow dance with a broom, which Damin thought was a gorgeous girl.

After the show Damin said of his strange behavior, "I really didn't think anything of it; it seemed like the right thing to do. My name was Cha-cha, and that girl was hot!"

Another hit with the crowd included Anthony convincing his subjects that freshman Steve Rensi's belt was a snake. Most of the hypnotized students jumped back from it every time Anthony made an "s" sound. After the show, Rensi said of being hypnotized, "It was great. I just need to get a new belt."

When asked what made this show unique compared to past shows, Anthony said, "I loved when that one girl just dove for the 'snake' and held it down like it was no big deal, and how the girl who couldn't remember the number six seemed sad about the 'snake.'"

Anthony is known throughout the world for his act, and has reportedly hypnotized over 15,000 people. He is also well-known as a hypnotherapist, having allegedly cured people of phobias. On the Ananda Lewis Show in January 2002, Anthony made six women confront and overcome their biggest fears through his power of hypnosis. The women left the show having defeated such fears as doraphobia (the fear of fur). Amazingly, Anthony was able to cure each of these women in only ten minutes.

Above, the volunteers "sleep" before they're given suggestions. Below, the "5th graders" make gestures and faces as their "teacher" turns his back to them.

Photos: Hannah Rauterkus

For more information on Anthony's hilarious hypnotism, visit the official Michael C. Anthony website at http://www.michaelcanthony.com/home.html.

Movie review: "Cold Mountain"

Rachelle Luther
Holly Brown
staff writers

As the Civil War draws to a close, a wounded Confederate soldier (Jude Law) fights his way back to his waiting sweetheart (Nicole Kidman).

Rachelle: "Cold Mountain" has an explosive beginning yet ends on a tender note. The film moves the emotions and tugs at the heartstrings as it spins the story of two women struggling in a harsh, war-torn society and a man who is trying to get back to the woman he loves. Once again, weak-hearts' club members, this one is for you.

This is truly a movie made by the cast. Nicole Kidman and Jude Law are breathtaking in their roles as Ada Monroe, a reverend's daughter, and Inman, a soldier fighting for the Confederacy. Renee Zellweger turns in a remarkable performance as Ruby, an outspoken woman who plays farm hand for Kidman's character. Natalie Portman also shines in an extremely minor yet incredibly touching role. There are so many wonderful actors gracing the screen that kudos must be passed on to the casting directors.

> This is truly a movie made by the cast.

Director Anthony Minghella has put together a masterpiece. The scenery is perfect, from the frozen mountain upon which the quiet country town is situated, to the battlefields where the Union and Confederate forces clash. The dialogue is honest and even quirky at times (particularly Zellweger's lines). Costuming, props, special effects, and music all contribute to the film's believability.

"Cold Mountain" is a stunning novel adaptation that promises to bring tears to your eyes. On a downside, with a run time of two hours and thirty-five minutes, the flick borders on being too long, but it was well worth the sit. **Grade:** A-

Holly: I was rather reluctant to go see this movie, because I generally dislike war movies and it seemed to me that "Cold Mountain" was the sort of movie where everyone dies. It *is* a bloody war movie, and lots of people die (although not everyone), but it is definitely worth seeing.

"Cold Mountain" is, among other things, a meditation on the senselessness of war. Jude Law appropriately acts as a silent yet good-natured Odysseus, who wanders throughout the wilds of North Carolina uncovering a whole range of characters. Nicole Kidman's character represents at least part of the good that comes out of war. Her character, aided by real star Renee Zellweger, transforms from a helpless society woman to an emotionally and physically strong person. Through the tyrannical acts of the newly-appointed lawmen at home, and the depravity and desperation Law's character discovers on his journeys, we are shown the many depressing sides of war. But in the end, love and family triumphs and manages to form a small haven from the insanity outside of it.

Renee Zellweger definitely steals the show with the character of Ruby, the uncouth and admirable handywoman who teaches Kidman to fend for herself. She's the heart and soul of the story, breaking the tension and giving those characters who are overly idealizing or romanticizing a wake-up call. Zellweger seems, to me, to be most successful when she's playing an extreme or unlikely character, instead of the typical female lead.

What really struck me about the movie was how visually appealing it was (no, not just because of Law…). The wide landscapes of the South are explored through all the seasons, and the colorful fields and flowers of "Cold Mountain" turn it into a veritable paradise, contrasted to the dark, smoky visions of war. Intense color and beautiful scenery accent the movie.

While you should really be prepared to have your sensibilities and emotions confronted in this tale of love, death, and war, director Anthony Minghella makes sure to reveal the good things in life along with the bad. **Grade:** B+

Story in photos: The Chinese New Year celebration

Above left, sophomores Ran Tu and Winnie Wong, president and vice president of the Chinese Club, posed happily after their successful event. Above right, Professor Xinli Wang helps a little friend pick out dessert. Below left, freshman Masahiro Miura shows sophomore Ran Tu (President of the Chinese Club) how his father taught him to make dumplings. Below right, sophomore Sara Smith tries out her souvenir chopsticks on steamed rice and Sichuan chicken. Bottom left, Resident Director Vivian Yamoah helps dish out desserts to a hungry crowd. Bottom right, Freddy Yip and Professor Xinli Wang chat before the celebration begins. The event, held in the Ballroom last Saturday, January 24, was sold out within a week.

Beyond the name tag

Rachel Donahue
staff writer

Norman Linn, the line chef known simply as "Norm," has created a rich life for himself in spite of a lack of encouragement from aptitude tests and teachers. February will mark the beginning of his 12th year at Juniata. Before starting at Baker, he held a number of diverse jobs, including keeping the peace at a rough bar for seven years. Yes, our kind and fun-loving Norm was a bouncer! To add to this tough guy image, Norm was also a volunteer firefighter for ten years. He recently used those skills to help put out some flames in the cafeteria.

Norm has wanted to be a cook since he graduated high school, so in a sense, working in Baker is fulfilling his dream. His favorite part is "socializing with the kids." He enjoys meeting all the people from diverse backgrounds.

Norm says, "It's interesting… to get to know them over four years."

He enjoys most of his co-workers as well, calling them a "family." Norm can most often be seen making yummy stir fries in the Exhibition Line, but what he loves to make the most is alfredo sauce. If you have a tasty cream sauce at a function (Madrigal, Senior Dinner, etc) you can thank Norm for the cheesy goodness.

Outside of cooking, Norm enjoys cabinetry, fishing, and heavy metal. The first is what really occupies his time, as it is his way to relax, and is what he plans to do full-time when he retires. Everyone can admire his skill with wood in the entrance to Baker. He designed and crafted the new scanning station and display table. He claims the table is full of imperfections, but it looks wonderful. The new display is definitely an improvement over the old, crowded table.

Norm's friendly service has made Baker a much more pleasant experience for many during their years at JC. Student Government's choice of him for

Musical minutes

Danielle Hart
staff writer

Sixty seconds of music is all that you will hear if you choose to attend Juniata's latest artist series. At 8:15 p.m. tonight, Guy Livingston's piano music will fill the Rosenberger Auditorium in Oller Hall with his concert performance, "60 Seconds for Piano."

After years of playing the piano, Livingston questioned why compositions needed to be long in length. With this question in mind, Livingston formed the idea of "60 Seconds for Piano." Livingston asked more than 60 composers to create a composition that lasts 60 seconds or less. Even with only a bottle of Jack Daniels being offered as the reward for the composers' work, Livingston received over 150 responses. The musical compositions came from composers in 18 countries in Europe, Asia, and North and South America.

Livingston's concert focuses on a core of 20 works, but he rearranges the pieces throughout the concert. Some of these compositions include "Two Chord Warp," "Conflict of Interest," "Ballet for Chickens," "Watermelon Revisited," "Step Out of the Car," and "Losing it Again." Livingston then went a step further and combined 60 compositions to create a unique album entitled, "Don't Panic! 60 Seconds for Piano."

Says Chad Herzog, Director of Alumni Relations and Volunteer Development, "Livingston is showing all of us that we don't always need to conform to the way society believes we should," "A lot can be said in 60 seconds, whether it be told by the piano, speech, or even action."

Livingston began his musical career in the United States with a Bachelor's degree from Yale University and a Master's from the New England Conservatory of Music. He then moved to Paris to study piano under Professor Claude Heffler. When he is not traveling for concerts, Livingston still resides in Paris and continues to work on new projects.

Culture shock, and then some

Carolyn Keller
staff writer

"Well, I'm back." Many of you may recognize these words as the ending to that epic trilogy that's been dominating movie theatres the past few years, the one with all the whoop-de-do over some ring, with lots of hobbits and elves running amok and lots of death and evil to be had and done with. And of course, if you don't recognize it as such, you must run out immediately and see these movies, see them ALL, with not a minute to lose, because really, your lack of Tolkien exposure is just blasphemy to my little literary world, and we can't have that.

However, should you choose to disregard my love of pretty hobbits and prettier elves, for reasons that somehow escape me, you can also apply those words to…myself. I'm back, back from that lovely land of *tapas* and flamenco and abundant culture, also known as Spain. And since I can no longer comment first-hand about the country closest to my heart, it's about time I comment first-hand about the campus closest to my heart, which, believe it or not, is this one!

Admittedly, being back from abroad changes some things, my perspective on life not being the least of them. But have no fear (or fear, if you must), my humor remains intact, if not grossly amplified by the whole foreign-land experience. And as a result I'm here to bring you a few healthy doses of the comedy that hails from Carolynland. So sit back, relax, and enjoy the semester. You've no idea what you're getting into, and that, my friends, is the best part.

For example, just in the past week I have watched some fabulous movies (highly recommended are the powerful "American History X" and Tim Burton's

Contrivances Amok

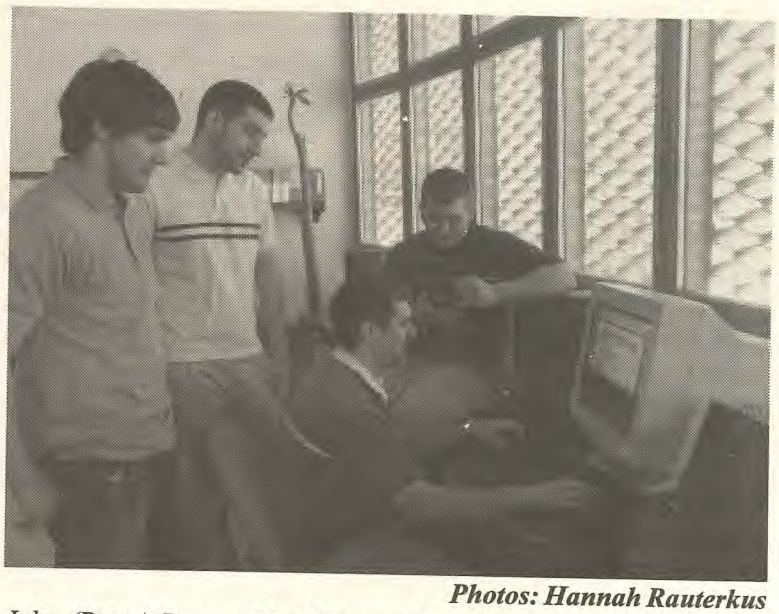
Under new management

Nate Drenner
co-editor in chief

Alas, our soon-to-be-graduated tech columnist Theresa Tschetter is unable to fit the Juniatian into her schedule this semester. I, Nate Drenner, the humble co-editor in chief, shall attempt to continue the Contrivances Amok tradition and fulfill the Juniatian's quota of geekiness.

Survey says…

Speaking of geeks (and in the world of Contrivances Amok, that is a good word), four such people are John "Petey" Peters, Matt Henry, Brad Rush, and Matt Acker. They are, in fact, some of the alpha geeks among the Technology Solutions Center's student staff.



But, other than its inherent talent, why does this group of seniors deserve the honor that is an appearance in Contrivances Amok?

Frankly, they are doing you a service. They created a student survey to receive input on campus technology. That survey will ultimately become part of a five-year technology plan in development by the Technology Solutions Center.

The survey is dealing with instructional technologies. It is examining how technologies like wireless networking, PowerPoint lecturing, and online testing are used by faculty members, and if those technologies are reaching students. The survey is available at http://students.juniata.edu/henrymc0/survey through the middle of February.

Peters said, "The survey will close the gap between what technologies the faculty uses and what [the students] expect of them."

So, here is a chance for students to directly influence the future of technology on campus. This data especially has an impact on the Class of 2007; the five-year plan will be in effect during their stay at Juniata. But why should the seniors care? Peters views it as an obligation that comes with senior status. He said, "Seniors have more experience and know more faculty members. They should care enough to give something back to the college community."

Photos: Hannah Rauterkus

John (Petey) Peters, Matt Henry, Matt Acker and Brad Rush take time to finish writing a survey - part of their independent study.

The very motivation to create this survey shows that these seniors care. However, unlike illegal MP3's, their labor is not free. Peters, Henry, Rush, and Acker will receive credit – and an honors POE distinction – for an independent study, of which the survey is a part. The independent study is sponsored by Dr. Donna Weimer, professor of communications.

The survey is anonymous, so students need not fear vengeful faculty members accused of being technologically deficient. And, to touch the humanitarian in all of us, Habitat for Humanity will receive a 25 cent donation for every response. Peters is hoping for 900 survey responses, so $225 could make its way to the service organization.

Peters said, "This survey is not as long as the IA survey freshmen took during orientation." The multiple-choice questions are estimated to take 15 minutes.

More curious Contrivances Amok readers would be interested to know how the survey is managed. It was created using a software package called Remark. According to Henry, "Remark is a software product used to create customized surveys tied to limited backend databases." For the less technically-inclined, that means that students will be able to take the survey from the relative comfort of their dorm rooms, at the web address mentioned earlier.

The survey will be open for a limited time. Take it now. You will see the results in a future edition of Contrivances Amok.

Fill my inbox – I dare you.

So, with all of this buzz about campus technology, what is a student to do? E-mail juniatian@juniata.edu! I'll take your questions, comments, and suggestions as possible topics for this column. Unless you would like to read diatribes on the advantages of Mac OS 10.3 "Panther" over Mac OS 10.2 "Jaguar," send a question or two. You will be doing a service for the entire campus.

Now I must go dye my hair, draw purple bunnies with fangs, or find some other way to emulate Theresa.

Nate Drenner is the Juniatian's tech columnist and a TLT lab assistant. Yes, that is a conflict of interest. No, he does not care.

Beyond the name tag

their first ever "Employee of the Month" proves it. Next time you're getting the exhibition dinner and there's no line behind you, don't be afraid to strike up a conversation. He tells a great story!

The Bookmarkables

Nate Thompson
staff writer

Welcome to the premier edition of The Bookmarkables. This column is devoted to finding the finest, most useful, and/or most humorous college-oriented websites. In this issue, I would like to spotlight pointsincase.com. Points in Case is perhaps the best college-related humor website. Court Sullivan began Points in Case as a weekly column in his local dorm bathroom stall. Today, Points in Case is a massive website with about a million page views per month. The Website is a conglomerate of six weekly columns and an ongoing collection of college quotes. You can even submit your own quotes to be posted on the site. It also contains various forms of AIM humor, such as funny IM conversations, away messages, and a section making fun of people's screen names. You can even find wacky multimedia parodies, games, and useful programs.

pointsincase.com

The ratings (5 is highest)

Addictive :	5, One hit and you're hooked for life.
Humor :	5, Fine Quality *and* Massive Quantity.
Navigation :	5, My Grandmother could handle it.
P.C. :	2, Borderline Acceptable.
Usefulness :	1, Not so much.

My top suggestions are the college quotes and the article "Life as a Single Guy." As part of a shameless self-promotion, I would also like to suggest checking out the picture parodies. There you can find my "AOL for Dialup" parody along with the works of several other people.

When I asked why he created the site, Court replied, "College is... lovable, but worthy of endless casual observation and sarcastic intrigue." Court graduated from Emory University this past August with a BA in Economics and History. During his college career, Court wrote numerous other humor articles in addition to Points in Case. Currently, he now works almost exclusively on pointsincase.com. Court has also co-authored a book due out in May entitled "Student Body Shots: Another Round." Based on his success with the website, this should be a book worth checking out this summer.

Mastodon- "Remission" Digipack

Record review

MattSoniak
staff writer

Mastodon's re-release of their 2002 album, "Remission," is timed quite nicely with their February 9th show at State College's Crowbar. The album features two bonus tracks and a DVD featuring a live performance from Atlanta, Georgia.

The sound of the band is not for everyone, but most listeners will find something on this album that appeals to them. Metalheads and rockers will love the bulk of the album, defined by harsh vocals, crashing guitars, and the impossibly technical drumming.

Songs like "Mother Puncher" and "March of the Fire Ants" are the soundtrack to an adrenaline rush. "Ole' Nessie," "Elephant Man," and "Emerald," however, are all of a softer nature, with a southern rock appeal. (Think of the Allman Brothers Band hopped up on steroids.)

Musicians and progressive rock fans will be amazed at the musician-ship and technicality displayed throughout the whole record. If you can't catch the show next month, the DVD is especially cool.

The Bookstore: Love it or leave it

continued from page 2

remaining two books were cheaper online by four to five dollars. However, the main difference between online buying and buying from the bookstore is used texts. At the bookstore, only twenty dollars is taken off the original price. Online, Amazon.com users sell their books for half the price, or less.

Junior Carrie Elizabeth Youtzy and freshman Kathleen Candando buy texts online to avoid shopping at the bookstore. When asked for their opinion on bookstore prices for texts and other merchandise both replied that costs are too high.

Youtzy was surprised to hear that online and bookstore text prices were roughly the same. But, she cited that the store usually offers only new hard cover editions. "I bought a book on Half.com for $90, with shipping. That would have cost me $137.50 in the bookstore. It was the same edition, but paperback." Youtzy does shop at the bookstore occasionally for greeting cards and school supplies, but only because it's convenient.

Candando understands that the college bookstore can't offer books at lower prices. That is why she only shops there for Juniata College merchandise. When asked what she thought of Juniata apparel she replied, "Well, the magnets are cheap." Candando uses online sites like Half.com and Amazon.com because she doesn't buy new texts. Nevertheless, she said that, "[Online buying] is less convenient than the bookstore, but it's worth the sacrifice [to save money]."

As far as prices on general school supplies go, they are determined by Follett. Santos assures shoppers that the bookstore strives to get the best wholesale prices. He also reminds everyone that the bookstore isn't Wal-Mart. It can't compete with the retail giant because of the "extremely high volume" of merchandise it offers.

While the clothing may seem overpriced, it is within reason. Santos said that Juniata's prices are highly competitive with other college bookstores. The clothing at the store comes from "established vendors" who make quality items. If prices for clothing are steep it may simply be because an item is in limited supply.

Men's Volleyball preview

Danielle Hart
staff writer

With the graduation of six key players, the men's volleyball team would seemingly have much work ahead this year. But with a core of nine upperclassmen, the coaches and players are optimistic and have their sights set on higher goals.

"I feel that we have a strong team for the 2004 season," said Head Coach Ken Shibuya. "Not only do we have a solid group of veterans led by senior Ryan Genova, senior Kenny Eiser, and junior Ricky Ziegler, but we also have a strong class of sophomores that are ready to step up."

With last year's loss in the Division III Molten Volleyball Championship match, the Eagles are back with a vengeance. The team has goals of not only winning the Molten Championship, but also being the first Division III team to compete in the Division I Final Four.

> "I feel that we have a strong team for the 2004 season."
> – Ken Shibuya
> Men's Volleyball Head Coach

Says Ziegler, "The idea is that by preparing for beating the absolute best teams, wins against our Division III opponents will come easier."

With the Eagles ending last season with a 17-9 record and only one of their losses being to a Division III opponent, their high goals appear to be within reach. The Men's Volleyball team began season play at rival Ohio State with a tough five game loss. But Juniata bounced back in their first home game with a three game win over Eastern Mennonite University. The Eagles defeated the Royals with scores of 30-28, 30-13, and 30-25.

Back in action on Jan. 30, Juniata takes on rival New York University at 7:00 p.m. in Kennedy Sports and Recreation Center.

Athlete in and out of the pool

Robb Patty
staff writer

This season the Juniata College swim team is off to a 4-2 start while posting a mark of 2-2 in the MAC. A big reason for the team's success is due to senior Kim Allen. Allen recently swam at the Franklin and Marshall Invitational where she recorded a victory in the 200- yard breaststroke. With a time of 2:26.03 she broke her previous record she set back in the 2001 season. This also qualified Allen for the NCAA National Championships.

Kim Allen (SR)

During her freshman year she received All-American honors in the 200 breaststroke. Allen commented, "I qualified for Nationals as a freshman and can't describe how good it feels to get back there again."

Along with being an accomplished swimmer Allen also excels out of the pool where she is a student teacher at Standing Stone Elementary. She has been on the Deans List four times and is involved in many clubs, including Circle K, JIF, and JAB. Allen is also a member of Big Brothers/ Big Sisters where she is a mentor for young children. Allen even devotes her time at the Brethren Church teaching Sunday school.

Head Coach Brian McGrath said of Allen, "Kim is a huge asset and very integral part of this team. With her leadership, hard work mentality, and the love of the sport, she defines one of the best athletes in the conference and in my opinion one of the best in the country."

Allen exemplifies the all-around athlete. Not only is she a leader in the pool, but she also is a leader in the community. Whether it be teaching, swimming, or just being there for someone she is always willing to take time to help others and go beyond the normal expectations of an athlete.

Photo: Hannah Rauterkus

Men's Basketball

Robb Patty
staff writer

The Kennedy Center was filled last Saturday night when the Juniata Men's Basketball team hosted Albright in a conference thriller. In a packed student section, fans heckled former JC men's head coach, Rick Ferry, and hounded Albright players who sacrificed concentration to return barbs with the crowd.

The crowd's enthusiasm was matched by the team's intensity. Diving for loose balls, battling on the boards, and passing with precision, the Eagles put forth great effort on both ends of the floor. In this highly-charged, emotional environment, the Eagles were able to pull out the 86-82 win and improve to 2-4 in the Commonwealth Conference. Juniata evened its overall record to 8-8 on the season.

Photo: Hannah Rauterkus

Freshman Chris Jasiota (50) goes to the hoop strong over an Etown defender as senior Jeff Lau (#33) goes in for a rebound

In a game that went back and forth all night, the Eagles got 21 points from both sophomore Tommy McConnell and Senior Jeff Lau. Freshman Chris Jasiota grabbed seven rebounds to go along with his three assists.

Juniata led by 13 inside a minute to play when Albright hit three clutch three pointers to cut the Eagles' lead to three. McConnell however sealed the victory as he made one of two from the line in the final seconds on the game.

After the contest, current (and noticeably more popular) head coach, Greg Curley, joined his players in crossing the court to celebrate the victory with the student section. Clearly the coach and players wished to show their appreciation for the energy the home crowd brought to the Kennedy Sports and Rec Center.

Earlier, on January 21, the Eagles took conference opponent Susquehanna down to the last possession. The Eagles were

Eagles use indoor season to prepare for Outdoor Track

Michael Vella
staff writer

Runners on your mark! Get set! Bang! The Juniata men's and women's track and field teams competed at the Dickinson College DuCharme Relays on January 24. In the first scored meet of the season, the women placed sixth out of seven schools, and the men took home a third place finish in a field of eight teams. Neither team competed with a full roster.

Both teams had strong showings in the sprints and field events at Dickinson. On the men's side, junior Jeremy Weber and sophomore Gary Ondecko dominated the long-jump competition, with first and second place finishes, respectively. Sophomore Shawn Miller tied for second in the pole vault, and sophomore Adam Loser took home second place in the high jump. In his first collegiate competition, freshman Dusty Sier ran to a sixth place finish in the 55 meter hurdles.

Senior Stefanie Rynkewitz was the top finisher on the women's

continued on page 15

Men's Basketball

continued from page 13

unable however to tie the game as it lost a heart breaker, 71-68.

Down by two points with the ball in the final seconds of the game the Eagles turned the ball right back to Susquehanna and lost a shot to tie the game. Lau led the Eagles with 16 points while McConnell finished the game with 14 and three assists.

Freshman Travis Sissler commented, "It's frustrating to lose such a close game but we learned a lot about ourselves as a team."

The Eagles are back in action on Tuesday, January 27, when they travel to Lebanon Valley in another conference match-up.

Juniata Women capture first Conference win

Tommy McConnell
sports editor

The Juniata women's basketball team posted its first MAC victory of the season Wednesday night with a 66-56 victory over host Susquehanna. Sophomore Kristen Kirk's career-high 25 points led the Eagles. The win improved Juniata's record to 4-11 overall and 1-4 in MAC competition.

Said Kirk of the initial conference win, "It felt great. We played good defense. When we lose, its because our defense wasn't that great."

Prior to the win over Susquehanna, Juniata had had trouble winning close games. The Eagles would play well for one half, but then fail to match that intensity in the other half. Early in the season, against reigning conference champ Messiah and fellow conference foe Widener, poor first halves spelled defeat for Juniata. More recently, against Elizabethtown and Moravian, Juniata has played well in the first 20 minutes. They have just been unable to finish the game with the type of play they began with.

A Blue Jays defender fails to stop senior Gretchen Hall (12) from releasing a jump shot to score in JC's Memorial Gym.

Photo: Hannah Rauterkus

Danny Young, new coach of JC's women's basketball team, looks on as her team holds off the Blue Jays' defenders in the second half.

Still, the experience has made Juniata better. The close losses, says Kirk, made the team "want to win more, want to win the close games." Juniata took a step to reaching that goal this Saturday night against Albright. The Eagles played well in a close game, but were unable to pull out a victory. The 52-49 loss dropped Juniata to 1-5 in the conference.

To make the playoffs, which are still within reach, Juniata will need to have solid efforts from the entire squad. "Everyone will need to have a good game," Kirk emphasizes, "instead of just one or two people."

> "Everyone will need to have a good game, instead of just one or two people."
>
> **– Kristen Kirk**
> **sophomore**

The Eagles will also need to cut down on turnovers and play solid defense, which have been crucial factors in Juniata's close losses.

Juniata will look to get back on track Tuesday night, when they travel to Lebanon Valley for a MAC match up.

Swimming toward victory

Cara Yancey
staff writer

Juniata Women's swim team has come out with an overall winning season so far, with five wins and three losses. With 17 swimmers junior Kathleen Trainor said, "We have been consistently improving as a team for a number of years. We have made it to fourth place in the conference two times in the past three years with a team half the size of most rivals." This is just some proof that our women athletes are spectacular.

> "We encourage, push, and amuse one another."
> – Allison Engle '07

Recently at Susquehanna on January 21, there were a multitude of first place finishes that resulted in Juniata's victory. Senior Kim Allen (500-yard freestyle, 200-yard freestyle), junior Kathleen Trainor (100-yard and 50-yard freestyle), sophomores Andrea Nulton (1000-yard freestyle), Amy Hanson (200-yard freestyle), and Amanda Smith (400-yard individual medley) received these first place spots earning Juniata another MAC Conference win.

With these winnings underneath Juniata's belt, Coach Brian McGrath said, "I set very high goals for the team and I believe they have met and exceeded those standards." Within three weeks the Juniata women will begin their tournaments and know they are ready.

Photo: Hannah Rauterkus

The Juniata College women's swim team practices in groups for their upcoming meet.

Photo: Hannah Rauterkus

Backstroke record holder Amy Sutherland (FR) takes a short break before her next lap during team practice.

Said Hanson, "The challenge for me this season was to practice harder than I have ever practiced before. Our coach is tough, but practicing hard has shown results."

While sophomore Holly Gabries stated, "[This season] made me tougher. Everyone thinks swimming is a joke until you challenge him or her to get in the pool and swim even a few laps. We swim about 30,000-45,000 meters a week, so it really makes you proud of how much you can accomplish."

With the MAC, ECAC, and NCAA tournaments up ahead, the women will need plenty of encouragement whether it be from the college community or each other. Freshman Allison Engle said, "We encourage, push, and amuse one another."

Trainor followed that up by saying, "The people on this team are great and we really enjoy spending time with each other. Bus rides are like road trips with 15 of your good friends. The best part is someone else drives while you watch movies *and* you have a bathroom."

The next meet will be held tonight at 6:00PM at Bryn Mawr. Make sure to congratulate or give support to these swimmers. They have earned every ounce of it.

Eagles' indoor preparation for Outdoor Track

continued from page 13

team with a second place finish in the 55 meter dash. Senior Misty Hueston placed third in the 55 meter hurdles and fourth in the high jump competition. Junior Kira Troutman finished fourth in both the shot-put and the 55 meter hurdles.

Previously, in the first meet of the season, a non-scoring competition at Lebanon Valley College, Juniata had strong performances in the field events and throws. Sophomores Adam Loser and Shawn Miller and freshman Randy Anderson all took home first place finishes for the Eagles.

Head Coach Jon Cutright is pleased with the progress both teams have made early in the season. He also emphasizes the importance of the indoor season. "You cannot have a good outdoor season without running indoor unless you are playing another sport in the winter. Plus, it puts you on a schedule early on." Cutright's team goals for the indoor season include getting in shape, staying healthy, and improving technique.

Senior thrower Andrea Denkovich is looking forward to what will be her final season of college track and field competition. "I am excited about the season and having such a great turnout for the team. I think we will see good results indoor that will carry on to the outdoor season."

Sprinted/jumper Jeremy Weber, who studied in Ecuador last semester, offers an interesting perspective on training for the upcoming season. "I really chose to study abroad so that I could do some high altitude training to prepare me for our track season. For a couple of weeks I even got technical advice from some of the members of the Venezuelan National Team. The only difference was that they were training for the Olympics and I [am] training for MAC's."

The Eagles will compete this weekend at the Bucknell Bison Open, where they will face some division one teams. The meet offers a variety of events and will provide good experience for future competition.

THE RANDOM ELEVEN

Matt Russell, layout editor

Soap dispensers: So, they finally spent the money to put soap dispensers in the dorm bathrooms. I suppose we'll all have to use less toilet paper to make up for the budget shortfall that'll cause now. There are still no paper towels, though. Riddle me this: if we still have to dry our hands on the back of our pants after we wash them, are they actually getting any cleaner?

Baker Strikes Back: My first day back, I couldn't quite stomach whatever it was that Baker was serving. I decided to make myself a peanut butter and jelly sandwich instead. Much to my horror, I was informed the jelly hadn't been delivered on time. Maybe send someone to Weis? Oh wait, never mind. That might raise our standards.

The Apprentice: It's the first reality show that I've watched an entire episode of and enjoyed. Although I may not make the effort to tune in each week, it's at least worth a look.

Thank the Registrar: I arrived at my Forms of Literature class on the first day to find 53 students trying to squeeze into a 30-chair classroom. As a result, we only had "class" for about 10 minutes as the professor handed out the syllabus, took attendance, and dismissed us. I owe the Registrar's office a big thank you for making my first day back a little more tolerable.

High-tech binders: I went looking for a binder in the bookstore, but they didn't have any D-rings – you know, the ones with the rings that are flat on one side so they don't bend up your papers and have more space. I went looking in town and couldn't find any there either. My conclusion? D-ring binder technology has not yet reached Huntingdon.

Non-flushers: Nine out of every ten times I walk into the bathroom, the person before me didn't flush. That's just plain nasty. How much effort does it take to kick the lever?

Suspicious TV series: Two weeks ago I was watching '24' on Fox (a great show, by the way). It happens to be the last show before the news. On this particular night, as the show was nearing its end, the main character was in a gun battle with three other people. An instant after the character killed the third person, the Fox News logo appeared in the lower left corner to say "Suspicious Death – coming up next." Now that's some fast reporting.

Ye Olde College Diner: I think this place has the best grilled stickies I've ever eaten. What's even better is you don't have to drive to the diner in Penn State to pick up a box since they carry them at the local Weis. Pick up a box and I know you'll agree.

White board invitations: "I'm in the shower, don't lock the door." "Leave it unlocked, someone's coming over." I frequently see messages like this in my dorm. Aren't these the same people I see writing messages like "Whoever stole our dry erase pen, I hope you feel proud," and "Give us back our magnets"? People get stuff stolen, and then leave their door open. Would you mind stapling a few dollars to the board while you're at it?

The Mail Room: I think there's a running bet in the mailroom to see who can get the most mail crammed in a box. If true, the person who got a letter, two cards, two magazines, and a paycheck into my box before break deserves a bit of the pot. Maybe they could keep pliers on the counter to free your mail.

Elusive refund: A friend used the college vans for a trip with his club, and had to pay for gas out of pocket. He went to Facilities (who loaned them the van) with the receipt for a refund. They told him to go to Accounting. Accounting directed him to Campus Events. Campus Events sent him to get the signature of the club president. When he came back with the signature and the receipt, they took it and told him to go to Accounting in a couple days for the money. It was like a giant scavenger hunt for thirteen dollars. Bureaucracy rules.

Student laundry problems eased by new machines

Two automatic laundry machines for student use were put into operation by the College this week in the laundry that adjoins the kitchen. These additional machines will be for the use of both men and women students, while the third machine, installed several years ago in the basement of Faculty Club, will be just for faculty members and wives of married students.

Gerry Hartzel was on hand Monday afternoon with the first bundle of laundry and Paul Friend, business manager of the college, threw the switch that sent the Bendix spinning into action. No clothes lines have been strung yet because a partition must first be erected across the middle of the room. Mr. Friend said, however, that the College may purchase a dryer if he can find a suitable model.

In discussing the student-faculty laundry problem, Mr. Friend remarked that it is important to observe the nine-pound limit on all machines. "Nine pounds is the equivalent of four sheets. To give you an example of too heavy a load, about three weeks ago, someone put two shag rugs into the Faculty Club machine. It was so heavy that it burned out the motor, and we had to replace the gears as well at a cost of $40."

Culture Shock

continued from page 11

trippy – and trippily fantastic – "Big Fish"), which, let's face it, is all I really want to do in life. My 18-credit schedule may attempt to foil this plan, but, I tell you, the power of the movie geek should never be underestimated, especially when we have such a bumper Oscar crop as we do this year.

I was also momentarily confused to walk into my first class of the semester – Introduction to Geology – only to find the professor speaking English. Yeah, okay, so obviously I know that in a class such as Geology, the only foreign language that will inevitably be spoken is Scientifikese, but that didn't stop my Spanish-parched brain from rejecting this linguistic transplant. That is, by the way, one of the very cool side effects of being abroad – inescapable confusion. More on that at a later date.

But in conclusion, I'm here, I'm back. Some things have changed, and in keeping with the theme from *The Lord of Rings*, some irrevocably so. But what that movie fails to mention is the devilish fun that can ensue when you've got a brand-new comical chopping block to test out. Stay tuned. (And have I mentioned you should go abroad?)

Faculty meetings could change curriculum

Holly Brown
staff writer

If you have ever questioned the importance of CWS, wondered about the purpose of EO, or doubted the overall success of freshman integration on campus, know that you are in good company. Approximately 90 professors and staff members met in Neff Lecture Hall on February 5 to discuss the effectiveness of freshman integration at Juniata, recently evaluated by the Middle States Association of Colleges and Schools (MSA).

The MSA accredits colleges like Juniata to maintain academic standards. Juniata applied for a specified evaluation from the MSA, which is made up of elected volunteers. Evaluators for Juniata are chosen from colleges similar to our own.

This first of four closed faculty meetings focused on freshman programs. While Organic Chemistry and Biology I were met with enthusiasm by the MSA, the group had qualms with the College Writing Seminar and Extended Orientation.

Some of the main complaints were that it is difficult for freshmen to take courses familiarizing them with other cultures and languages, that the faculty as a whole is unfamiliar with CWS and its goals, and that CWS classes need common goals and strategies. Other complaints are that CWS and CW classes need to work together and have coordinated goals, and that the success of academic advising should be more closely monitored.

The meeting's open atmosphere was supportive of the abundant opinions. Professors and staff were genuinely concerned with how well students make the transition to college. Also discussed was what skills Juniata students should leave college with. The general consensus seemed to be that a passion for knowledge, culture, and competent writing and comprehension skills were essential.

Professor Cathy Stenson, who is on the Juniata committee evaluating the MSA report, stated, "We would like to discuss how CWS fits into the rest of the curriculum. For example, do we need stronger ties between CWS and the CW courses? Should there be a writing-intensive course in the second semester of the first year? How do CWS and EO work together, and should we separate them?"

One strong concern was that the CWS courses were made responsible for the majority of the "freshman experience."

In fact, Professor Pat Weaver stated that there were "unrealistic expectations of CWS," and its professors, adding that she "wouldn't wish [teaching] it on a dog."

Numerous suggestions were presented to alleviate the stress put on CWS and give freshman various options. Among those offered were freshman seminars, extended orientations conducted by professors, placement into different CWS levels, intro classes offered only to freshman, and general freshman studies offered across POEs.

Where's a doctor when you need one?

Michael Vella
staff writer

"Beep, beep, beep, beep!" The tones from the Huntingdon County dispatch center are set off over the radio in the middle of the night.

Scurrying to find clothes to wear, members of Juniata College's Quick Response Service (QRS) 8 respond to the scene. A patient is found seated in the corner of the room with labored respirations. His airway is secured, breathing and pulse are monitored, and oxygen is administered. The patient remains under the care of the QRS until Huntingdon Ambulance arrives.

Although that was a mock call, we members of the QRS do respond to such emergencies. Just last semester, the QRS responded to 24 emergency calls, including responses made during standbys at campus events. This number was high given that we received only 19 calls during the entire 2002-2003 academic year. Of these 19, nine occurred in the fall.

The most prevalent type of call is not alcohol related, although some may assume this to be the case on a college campus. We respond most frequently to "general" medical emergencies, including sickness, nausea, seizures, and allergic reactions.

However, we are certainly exposed to alcohol overdoses and trauma. Sometimes we find ourselves spending Friday or Saturday night treating an alcohol overdose patient.

Senior Matt Henry, captain of the QRS 8 and a certified emergency medical technician (EMT) of three years, is proud of the services the club has to offer. Its 25 or so active members (EMTs and First Responders) maintain 24 hour coverage, seven days a week, during the entire school year.

What should you do if you

CWS: The bane of English majors

Rachel Donahue
staff writer

Soon, the time will come for students to register for next year's classes. For many, it will be a time of browsing a vast array of classes, and deciding which they need to take. For English majors, it will be the pain of scrolling through 23 CWS blocks to see which of the five regular English courses offered next fall they have not taken.

To many, this imbalance may not seem like a big deal. Five courses provide enough credits for a full-time student, and, in any case, the schedule can be padded with FISHN courses. But, for an English major, it is not so simple.

Five classes may fill one semester, but they are almost the same courses each year. Add to this how quickly some courses close, such as Myth & Literature (a popular CA II choice), and fall scheduling becomes an ordeal. Lucky English majors who plan ahead can pad two fall semesters with their distribution requirements and spread the courses out. But how are they to face the two remaining falls? By this time their FISHNs are completed and filling up the fall semester – and completing their POE – is a frustrating experience.

When asked about the difficulties CWS caused, senior Gretchen Stull replied, "Fortunately, my professors are wonderful and have let me take CBEs and independent studies."

In addition to three credit by exam (CBE) courses, senior Derek Trimmer, an English/Secondary Education major, had to overload one of his spring semesters. At $570 per overload credit, that is a hefty price to graduate with an English POE.

Many other students share Stull's and Trimmer's experience. Should students with a designated POE have to resort to CBEs and independent studies just to fulfill graduation requirements?

When asked whether it might be better to have different required writing courses taught in different departments, responses varied.

> "Writing is different for every field, and I think it might be beneficial to break CWS up into sections"
> **- Stefanie Kauffman, senior**

Senior Karl Justice, who is majoring in Biology and French, "wouldn't want to do away with the humanities-based writing course."

Senior Stefanie Kauffman disagreed, saying that from the student perspective "writing is different for every field, and I think it might be beneficial to break CWS up into sections depending on what your major is going to be." Kauffman did point out though, that CWS instruction "can't be learned overnight."

Stull, who works in the Writing Center, asked, "If English majors were asked to take a mandatory course on lab-report writing, we would complain because it isn't applicable to our major. Shouldn't science majors, likewise, be able to take writing courses that would teach them [appropriate] writing techniques?"

So what are the solutions? One answer is to hire one or more new professors whose sole job is teaching CWS. Unfortunately, that would require a significant increase in the department's funding.

Trimmer suggested that CWS be taught by students in a similar manner to EO.

Although having a student teach CWS would take a lot of pressure off the department, English professor Mark Hochberg pointed out some problems with the idea. He said that "If it started modestly... with students acting more as tutors to teach more intensively," it could work. However, he also said that one of Juniata's selling points was that classes would be taught by full professors, and we need to be careful not to jeopardize that.

Kauffman researched this topic for her CBE Professional News & Feature Writing course last semester. She learned of one possible plan to allow the English professors to rotate, leaving one professor free to teach all non-CWS courses. To see what the professors are saying, see Holly Brown's article on the February 5th faculty forum (page 1).

Whether CWS is restructured to include other departments, more professors are hired, or students are allowed to teach, something has to be done. If people are unable to complete the courses they need to graduate with an English POE, where will they be?

End the frustration, administration. Save an English major today.

Juniata unveils new Religion/Philosophy POE

Michelle Calka
staff writer

This semester, Juniata offers a new designated Program of Emphasis option in Religion and Philosophy. Previously, these two departments were only available as a secondary emphases. The new POE is geared toward students without a particular devotion to a single field, but who instead have an interest in questions relevant to both intellectual fields. Students will also have the opportunity to declare Religion as a separate POE, not just a secondary emphasis.

Dr. Donald Braxton, associate professor of religion, said that the POE highlights the examination of questions that overlap both fields. The curriculum focuses on creating a broad understanding of many religions and philosophies.

Braxton emphasizes that religion is not studied as a "path to salvation or personal redemption." Instead, this POE investigates how philosophy functions as a religion and vice versa. According to Braxton, "This kind of POE is ideally designed for a pluralist society where we are constantly being asked to understand many different, diverse religions and life philosophies."

Faculty and students in the religion and philosophy departments feel that the opportunity for intensive study in this area is an appropriate addition to Juniata's liberal arts curriculum.

Sophomore Jude Harter, who plans to declare his POE as Religion/History, said, "I think it's important to have Religion/Philosophy as a POE at Juniata to keep it 'honest' as the liberal arts school we claim to be. There are questions that cannot be answered by science."

Harter continued, "These questions are what truly define a human, not merely elements and tissues."

While Braxton acknowledged that there is a heavy scientific interest at Juniata, he noted that the combination of religion and philosophy is "ideally suited to discussing how religion operates in a scientific world and science operates in a religious world."

However, not all students see the new POE as practical. A sophomore with an Information Technology POE, who asked to remain anonymous, said, "I think it would lead to unemployment. Honestly, what would you do with a degree in it? Nothing, unless you wanted to write books."

According to Braxton, the POE is useful for students planning to pursue careers in a diverse range of fields, including law, international politics, or as cultural analysts, journalists, or counselors. Primarily, it emphasizes systematic, critical thinking: a useful skill for any field. "We are primarily interested in [students] becoming thoughtful," Braxton stressed. Students learn to ask serious, probing questions about the role of religion in daily and current events.

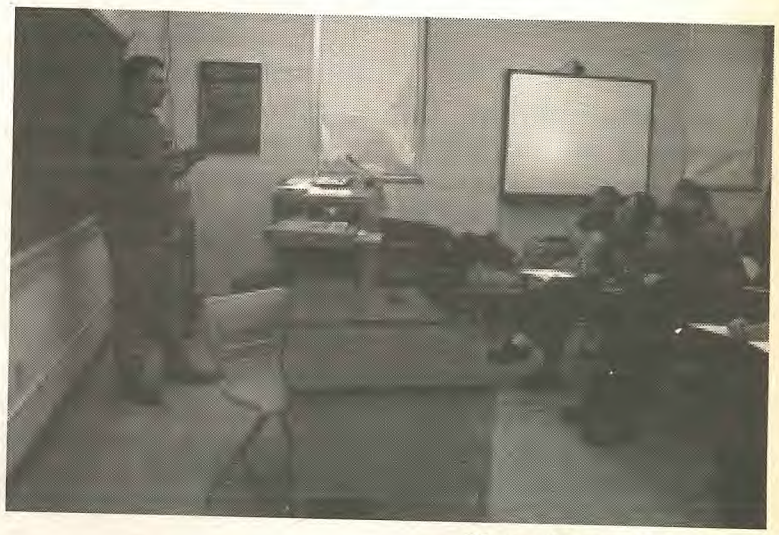

Photo: Hannah Rauterkus

Professor of Religion Donald Braxton teaches an enthusiastic class.

Currently, the POE uses existing courses from the two departments, but new courses are also being planned. At this time, no student has officially declared Religion/Philosophy as a POE. However, with the regularly heavy enrollment in religion courses, Braxton expects interest to be high as more students become aware of the new program.

Beeghly: Does anybody care?

Mary Gardiner
staff writer

Some students really like it. Some really don't. Most agree that the L.A. Beeghly Library is an invaluable resource, but students on campus are divided as to its circulation processes and the maintenance of the reserve system.

Freshman John Vargo said that he has not checked out a book yet in his college career. "But I go there almost everyday; that's where I do all of my reading," he added. Vargo commented on his impression of the reserve system: "I went to use the reserve once, and they were really cooperative."

However, an anonymous student exclaimed, "the reserve system stinks."

Several students also commented on the age of several of the books on the shelves. "There's books from like ... *1970* in there!" said sophomore Anthony Holly.

Freshman Jessica Eaken wanted renovations and newer books in Beeghly. She said, "We should spend as much on the library as we do on the other buildings. We spent so much on von Liebig, but a better library would be so beneficial to have."

Though many students either love or hate our library, countless more are absolutely indifferent. Sophomore Justin Kelly joked, "There's too many books." Other students nonchalantly explained they never went to the library, or that they never really used the books or the reserve system. Few had any real emotion about it.

Photo: Hannah Rauterkus

Sophomore Laura Hebert sits in the library studying for an upcoming history paper.

Perhaps that indifference is an indicator of what the real problem with Beeghly is. It's full of some of the best resources that Juniata, let alone Huntingdon, offers. There are millions of dollars invested in the "too many books" on those shelves. Countless periodicals, study areas, and references are everywhere.

So why do people not use the library's resources? There is no question that we have enough library training with library labs and IA. What's missing?

Andy Dudash, a reference librarian at Beeghly, has been searching for answers to this problem since he joined the library staff seven years ago. Unhappily, Dudash explains, "Juniata is just not a library-centered campus."

"It's probably accurate to say that Juniata is not a library-centered campus," agreed Jim Lakso, our provost.

In 1992, when the Middle States Association came to report on our college, to approve it as an accredited school, they gave us all around high marks—except for the library. "It wasn't a problem with the number of books or the investments in them," said Lakso, "But the library was not at the center of learning." Lakso claims that a library lab in IA and the library classes now offered some solutions but still have not fully solved the problem.

Both Dudash and Lakso hoped for a solution through more space in the library. Lakso says that a renovation—and possibly a new addition—will most likely be part of Juniata's next capital campaign.

Dudash dreams about a possible "listening room," where students can listen to the collection of 1,000 records, or the countless lectures on tape in the basement.

Dudash also seeks promotion for the library from professors and administration. He hopes professors will further encourage students to visit Beeghly instead of searching the net for resources. "We live in a fast food culture," he says. "As convenient as the drive-thru is, in the long run, it's still bad for you."

For now, the library will continue to be a source for information, open to students and the community, whether untapped or not. Maybe someday, Beeghly will be much more appreciated than it is now.

Curriculum change

continued from page 1

While some students may grumble about a required writing class, many of them realize its importance. Freshman Mike Chirdon stated that communication skills are vital in any field you pursue.

"Taking a class like CWS is important because you need to learn how to write and communicate in a general way. [...] No matter what job you end up with, more than likely communication is going to be an important part of it," Chirdon said.

EO, and its connection to CWS, was also explored. CWS professors argued that having an EO instructor to communicate with helped them to understand the student's needs better. Others said the social lives of students, which EO focuses on, shouldn't be evaluated or graded academically. While there were debates on the merits of separating EO from CWS, it was generally agreed that EO needs the credibility and authority of CWS professors to keep it going.

Students had more to say on EO and its effectiveness. Eve McConnell, also a freshman, felt that EO should cater more to specific class's needs. She said, "As far as EO, I didn't really see any point in it. We went over things that anyone could easily find in a guide book or just by asking an authoritative figure. We were able to ask questions and get answers - I just think there should have been more of that."

The IA program was also approved by professors, although many students complain about its simplicity. While basic computer skills are becoming more common, the faculty agreed that not all incoming freshman display competencies. The short assignments were considered simple enough to be done by computer competent students in several minutes.

Provost Lakso adjourned the meeting with the assurance that all ideas would be taken into account, summarized, and presented in more detail at the next meeting.

Over the semester selected professors and faculty will conduct three more meetings to discuss the impact of the evaluation and Juniata's response.

The transition from high school to college is hard, and professors understand that. Through the Middle State's evaluation and further discussion they are attempting to better the first semester.

The New York Times on campus

Caitlan Zlatos
staff writer

So what's the scoop with the New York Times service on campus? Do Juniatians take advantage of this free newspaper service? Is it a problem recycling such large quantities of paper? These are just a few of the questions that Juniatians wonder about.

Last spring, Juniata started the service in an eight-week pilot program. The program concluded with an online campus-wide survey, which generated such a positive response that the service was continued. Due to the initiation and organizational efforts of Assistant Dean of Students Dan Cook-Huffman, Provost James Lakso, and Assistant Provost James Tuten, the New York Times is a regular aspect of campus.

Besides the success of such programs at schools like Penn State, our administration had other reasons for adopting it. Cook-Huffman said, "This program offered us the chance to introduce students to the culture of Juniata, which includes the idea of becoming citizens in order to make the community a better place."

The New York Times was the newspaper of choice because, according to Tuten, "its breadth and depth is superior to other newspapers." He also stated that the Times caters to most points of Juniata's mission statement, part of which is for students "to realize their full potential as contributors to society, informed citizens, and caring and responsible adults."

Recently, the Provost's office e-mailed faculty for general feedback, asking them whether they used the Times in class or encouraged students to read it. Roughly half responded to this informal survey. According to Lakso, the responses generally fell into one of three categories: those who strongly supported the Times and/or required their students to read it, those who were positive toward it but not *strongly* supportive, and those who could do without it. The greatest amount of response was in the middle category.

The smallest response came from the third category. Those in the third category mostly cited philosophical or environmental reasons for not supporting the Times service. For instance, they asked,shouldn't students, as adults, be responsible for buying and reading the newspaper on their own? Shouldn't we save trees by reading the free online version of the Times?

Student response to the program has been fairly positive. Sophomore Karin Brown stated, "Newspapers give us a glimpse into the world around us; to the world beyond our campus. The more accessible they are to students and professors, the more likely students are to read about and engage in conversation about various issues, and the more likely that professors can successfully base classroom discussion off of current situations."

Senior Kari Calaway said, "I definitely think it's great that the papers are free because it really encourages people to read them. If I had to pay for the newspaper, I would probably not read it. I like how it's easy for me to just pick one up on my way to class."

> "I definitely think it's great that the papers are free, because it really encourages people to read them."
> **- Kari Calaway, senior**

The online survey conducted last spring found that for 83 percent of students who responded, cost was an issue affecting whether they read the newspaper.

What about the quantity and cost for Juniata? While 275 newspapers arrived daily by truck during the fall semester, the daily number was decreased to 200 for the spring. According to Cook-Huffman, the administration and Habitat for Humanity members (who organize distribution) constantly reassess pick-up rates, not only for the campus as a whole, but also for individual campus newsstands. This allows them to see not only how many newspapers they should order, but also where the most should be placed.

The amount of newspapers left over each day varies, which generally depends on how interesting a day's headlines are. According to Cook-Huffman, one day there may be as many as fifty newspapers left on the stand, and another day people might be calling him to ask if there are any left because they cannot find any.

Fortunately, the Times service requires Juniata to pay only for the newspapers that leave the newsstands. Habitat for Humanity counts the number of leftover newspapers each day, which get credited to Juniata's Times account. Currently many campus organizations share the expense of the service, including the Assistant Dean of Students Office, Assistant Provost's Office, Baker Institute, Dean of Students Office, International Programs Department, President's Office, Provost's Office, and Student Government. About a third of the cost is donated by the Times back to Habitat for Humanity for their hard work as distributors.

The main problem that results from leftover newspapers is paper waste. The current daily newspaper quantity was chosen in an effort to curb this waste. However, leftover newspapers get recycled, and the administration also encourages the recycling of

JCEL roundtables offer invaluable experience to entrepreneurs

Matt Soniak
staff writer

The Juniata College Center for Entrepreneurial Leadership (JCEL) will host bi-weekly roundtable discussions open to students featuring an open dialogue among local and regional entrepreneurs and business owners. The next roundtable will be Monday, Feb. 16 at 6:00 p.m. in the Ellis Gold Room.

These roundtables, part of JCEL's goal of incorporating entrepreneurialism into the curriculum and stimulating the local economy, will offer important information and opinions from a variety of people who have real world experience in owning businesses.

According to JCEL associate director Anna Harris, the roundtables will offer a unique experience where students can get information about starting a small business, learn in an informal environment through question and answer sessions, and meet and network with people already involved in small businesses.

Harris also makes it clear that these sessions are not just for business majors, but students of *all* disciplines who might be looking for ideas for careers.

Sanctity of Life Month: worthy of protection

Cara Yancey
staff writer

January 22 marked the 31st anniversary of the Roe vs. Wade Supreme Court decision to legalize abortion. People from all walks of life, ages, and ethnic backgrounds came together in Washington D.C.'s bitter cold to either mourn or celebrate. Pro-life advocates numbered over 150,000 in D.C., while many others met and rallied across the United States.

Diane Hochevar, president of Colorado Right to Life, said, "We come to commemorate children killed by abortion, now up to 50 million."

An estimated 100-150 pro-choice members of the Feminist Majority, the National Organization for Women (NOW), NARAL, and Planned Parenthood also gathered in D.C. at Planned Parenthood, the nation's largest abortion operation.

President Bush spoke to everyone gathered on the mall for Right for Life 2004. He said, "In our time, respect for the right to life calls us to defend the sick and the dying, persons with disabilities and birth defects, and all those who are weak and vulnerable. And this self-evident truth calls us to value and to protect the lives of innocent children waiting to be born."

Bush proceeded to declare January 18 as Sanctity of Human Life Sunday for 2004. However, Republicans are not the only pro-life politicians. Recent polls show that forty-three percent of Democrats share this same view.

Pro-choice leader Kate Michelman said, "Pro-choice Americans are on the move, ready to take to the streets to protect the health, lives, and rights of American women."

Susan Renne Mosley, director of Women's Outreach for Operation Outcry, said, "It's time to speak honestly about the pain we've lived with. Abortion hurts and it is a much harder choice to live with after the fact than adoption or child rearing. I know, because I have lived with all three." Mosley had an abortion at age fifteen.

The Pennsylvania Pro-life Federation stated its purpose for the March for Life, saying, "Over the years, the March for Life has united thousands of pro-lifers, young and old, in a valiant stand against the destruction caused by abortion – not only to the children who are killed, but to the mothers who are wounded in the process."

Ranging from one hundred to over one thousand, pro-life demonstrators gathered in separate groups throughout New York, Pennsylvania, California, Missouri, North Carolina, Louisiana, Maine, Indiana, Colorado, Michigan, Ohio, Kentucky, and many other states.

This march occurs in hopes to see a Human Life Amendment added to the U.S. Constitution. "Such an amendment would require that individuals and society provide protection for the right to life of each human being in existence *at fertilization*," according to the March for Life website. So far anti-abortionists have made great progress. Public opinion polls show that America is increasingly pro-life, and abortion rates have declined nationwide.

Demonstrator Joseph Sie, 68, was quoted saying, "I hope [the march] makes people realize that by our support here, there are people who believe in life for all human beings."

Where's a doctor when you need one?

continued from page 1

find yourself in a non-emergency situation that still requires medical care? The campus Health and Wellness Center is the place to go. Registered nurse Connie Peters runs the office weekdays from 8 a.m. – 4 p.m. In addition, a physician is on location to see patients on Wednesday mornings from 9-12, and a physician's assistant is on hand Wednesday nights from 6-8.

The Health Center treated 2,123 students last year, with sore throats and "colds" the most common complaints. More serious cases do arrive at the health center, however. "Meningitis consistently appears once every other year," says Peters, "usually with a favorable outcome."

Despite the quality of care offered at the health center, some students would like so see expanded services. According to Peters, the services at the center are comparable to others its size, but she adds, "I would like to see the doctor or PA around here more often, but their hours are specified in the contract they have with the college."

Students are billed $75 a semester to cover costs of the health center even if they do not require its services. With our current student population, this totals over $100,000. "For this expense, we should have more access to physician care," says sophomore Bryan Tokarchic.

The center offers no emergency procedures like suturing due to lack of physician accessibility. Also, the doctor must be present for the nurse to administer any injections. "We did have one instance where a student was unable to receive an allergy shot because the student couldn't make it in time to see the doctor," says Peters.

An anonymous student adds, "It's frustrating because I often have too much going on Wednesdays [when the doctor is available] to stop in and get my allergy shots."

Henry also emphasizes a need for more after-hours care.

What happens after the ambulance leaves the campus with a patient? J.C. Blair, Huntingdon County's only hospital, is just a few blocks away. "Last year, I sent about 30 students to the hospital for some type of testing that could not be done at the health center (MRI, X-rays, EKG), and I only sent four people to the ER," says Peters.

Despite some limitations, quality health services are available to Juniata students. All are confidential, and students should feel comfortable using them. In the meantime, we would rather not see you as a patient, so stay safe out there!

NY Times on campus

continued from page 4

used newspapers. Even so, the quantity and weight of newspaper recycling can be difficult for Facilities Services in terms of transportation and frequency of removal.

At any rate, the New York Times will be on campus for at least one more year. Meanwhile, the administration plans to conduct more thorough surveys to get a deeper sense of the program's value to the Juniata community. Pick up a free copy of the New York Times today and see what it's worth to you.

Celebrating Black History Month with literature

Rachelle Luther
staff writer

"Lift Ev'ry Voice" and "Catch the Fire" kicked off Black History Month at Juniata College on February 1 and 2. The two events gathered approximately 130 presenters in total to read African American literature and to raise consciousness about African American Culture.

"Lift Ev'ry Voice," a coffeehouse taking its name from the Negro National Anthem "Lift Ev'ry Voice and Sing" took place on February 1. Despite competition with the Super Bowl, approximately seventy people turned out for the inspiring event.

On February 2, Juniata College did its part to participate in "Catch the Fire." Around 120 people read pieces of literature from black authors. Audiences throughout the day ranged in number from four to 20. Professor Judy Katz, event sponsor and coordinator, said that the National Council of Teachers of English will tally the total numbers in March. Participants will have to wait until then to see if the event reached one million readers nationwide.

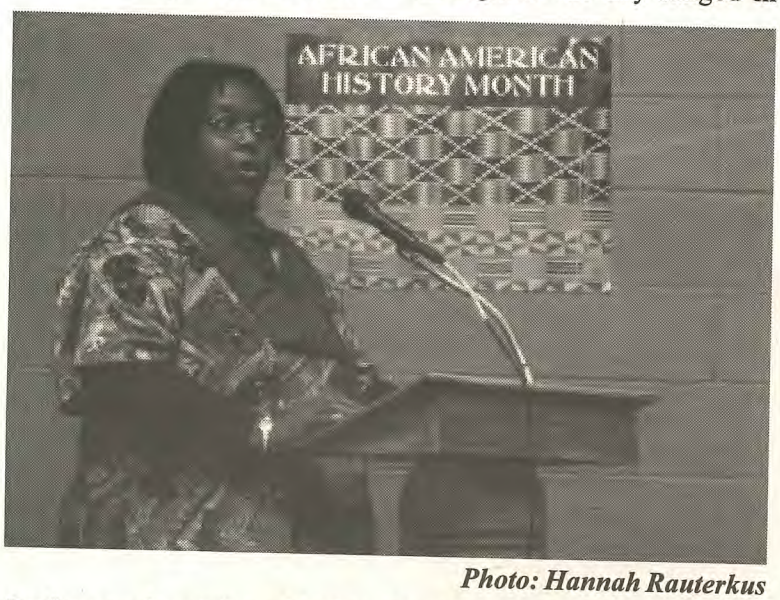

Photo: Hannah Rauterkus

Professor of sociology Cynthia Merriwether-DeVries reads "The Bridge Poem" during the coffeehouse celebration "Lift Ev'ry Voice."

The goal of the events was more than just numbers, however. Said Katz, "[The main goal was] to remind students that American Culture is as much African American Culture as it is European American Culture. It isn't just a white product, but a product of our multi racial legacy." She went on to say, "[People should realize that] black writers have as much to say to whites as they do to blacks."

Professor Cynthia Merriwether-deVries agreed with Katz. As the first and only black professor in the 128 years of the college, she hoped to raise consciousness by participating in "Lift Ev'ry Voice." DeVries read Donna Kate Rushin's "The Bridge Poem," a piece about a black woman who is tired of being everyone's "bridge" to political correctness.

Rosalie Rodriguez, Alumni and Special Assistant to the President for Diversity and Inclusion, was thrilled to wrap up both events with the Negro National Anthem. To her, the events symbolize Juniata's steps toward greater diversity. "When I was a student, there was barely any diversity on campus. It's just amazing that now there is an office and a national event on campus that is dedicated to it."

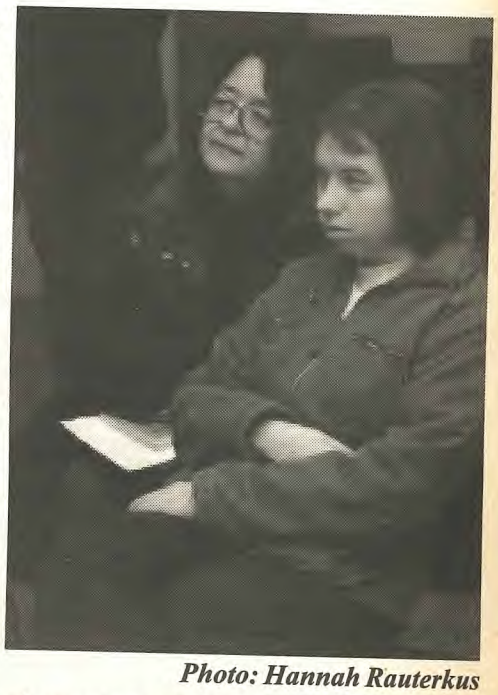

Photo: Hannah Rauterkus

Associate professor of English Judy Katz watches her students read during "Catch the Fire."

Junior Amanda Hetrick and Senior Christy Stubler were required to read at "Catch the Fire" for class. However, both women said they would have volunteered anyway. They felt "honored" to be a part of the national event.

At the after-party for the read-in, it was apparent that the presenters' words were effective. Said Senior John Terrizzi, "When I heard Christy Stubler read "Question and Answer" by Langston Hughes, it gave me chills. The poem made you think about the race struggle and civil rights and what it felt like to be one of the people struggling." Clearly, the message was received.

Conservatives take to the Bailey Prelims

Nate Thompson
staff writer

The Bailey Oratorical preliminaries were held this past Saturday with talented results. Reactions to the speeches were very positive. During a discussion between speeches, senior Sara Cain described her reaction. "I couldn't stop smiling," she said.

The topic this year was "Should liberal arts mean liberal politics?" Many conservatives took this chance to defend their often silent viewpoints, and to show themselves as the underappreciated majority on campus. Senior Erin Strine was an example of these conservatives. She said that many professors attack President Bush at every opportunity. However, she showed that 61% of college students are in favor of his job. This percentage is higher than the nationwide approval rating.

Senior Paul Vranesic concurred with this position. "This art of educating liberals leaves conservatives like myself feeling as though we have no voice," he explained. He then went on to joke that he must have missed the Juniata requirement that he must hate President Bush.

Almost all of the speakers came to an agreement on two claims. First, they are sick of close-minded, one sided professors. One speaker stated, "The only thing worse than a close-minded conservative is a close-minded liberal." Second, an emphasis was placed on empowering the students. Rather than attacking the students, professors should help them find all sides of an issue.

Although a large amount of money is disbursed to the top three finishers of the final round, most students do not participate for the money. Said senior Erin Strine, "Every year, it becomes less about the money and more about the opportunity to speak at the Bailey Oratorical."

Concerning the event, communications professor Jason Delo explained that it is very much the Greek sense of public speaking. "You have people who have particular facility with words and language, raising a question out of the masses and articulating it, to try to get everyone to see it their way," he explained.

The judges were impressed by the speakers for numerous reasons. David Shoenthal said he was impressed with the high turnout of those who signed up this year. Normally, only about sixty percent of the sign-ups will show up. This year, there were only three cancellations. Shoenthal, a Juniata alumni, is currently working on his Ph.D. in Math at Penn State. He participated in the Baileys when he attended Juniata.

Matt Peters, also a Ph.D. student at Penn State, said that he was impressed with the diversity of this year's speeches. Peters was a finalist in the 1999 and 2000 Bailey competitions.

The third judge, Dawn Hayes, agreed with Peters. "I was expecting a large number of 'yes, but…' speeches." Dawn, a Juniata alumna, works as a reading specialist.

During a brief interview, communications professor Dr. Donna Weimer explained that the Bailey Oratorical Contest is by far the oldest academic contest on campus. It was started in 1916, but slowly fizzled out over the decades. When Dr. Weimer was hired at Juniata, she was asked to bring the contest back to life. With the help of presidents Neff and Kepple, she revitalized the academic side of the Bailey.

Colonel Sedgeley Thornberry, son-in-law to the founder of the contest, provided a monetary prize when he saw that the contest had been revitalized. Dr. Weimer described the Bailey family by saying, "This family was eccentric and wonderful, and I adored all of them."

The preliminary round narrows competition down to the seven finalists. "If it were up to me, all the finalists would be winners," Dr. Weimer explained. She loves the period between the preliminaries and the finals because it provides her an opportunity to work with students on their speeches. She said, "[I love to] maximize the potential of top speeches without changing their meaning."

The final round will be held on February 19 at 8:15 p.m. in the Ellis Ballroom. Finalists include Erin Baney, Erin Brunner, Michelle Calka, John Damin, Christine Robbins, Gretchen Stull, and Paul Vranesic.

Eid Dinner brings new cultural experience

Meredith Pink
staff writer

On Friday, February 7, students, faculty, and the community came together to enjoy Juniata's ninth annual Eid dinner celebration. This campus event was more of a cultural occasion than a religious one. Complete with a belly dancer and traditional Lebanese Debka, participants in this celebration experienced new cultures and had a lot of fun.

The atmosphere of this event was festive and packed with energy. Every seat in the Ballroom was filled. The program started with an address given by Javaid Zeerak, president of the Muslim Student Association. Next was the Call to Prayer followed by a cultural presentation.

The dinner itself was nothing short of delicious. There was a variety of entrees, representing many different countries. Examples include Zaalouk, a Moroccan dish; Taboule, an Egyptian cuisine; Pirjan, a Bosnian dish.

Sophomore Laura Rath said, "The Eid dinner was a fascinating experience. The decorations and music made me feel like I was transported to a different country. This celebration really opened my eyes, and I learned a lot [from it]."

The Eid celebration marks the end of the holy month of Ramadan. During this month, Muslims fast from sunrise to sunset. This time serves as a reflection on one's relationship with Allah. Eid is a time of great coming together where people celebrate, feast, and give to charity.

Senior Muhammad El-Zahhar said, "Eid is a time of true celebration. Everyone that is far from you comes close together. The rich give to the poor, and everyone becomes equal."

Nine years ago, a group of Muslim students, led by Khaled El-Zahhar, wanted to celebrate and share this tradition with their peers. At this time in Juniata history, there was little celebration of other cultures. As a result, they started the United Cultures of Juniata College Club to celebrate this and other cultural holidays.

Rosalie Rodriguez, special assistant to the President for Diversity & Inclusion, said, "Our goal is to celebrate, as much as we can, from other cultures on campus. Offering the Eid dinner, and a variety of other cultural customs, to the community not only provides an invaluable learning experience, but it is also a way to recognize and value other cultures."

The Eid dinner celebration was a learning experience and a successful way to open people's eyes to other cultures. For more information about the history of Eid visit www.theeid.com .

Eight Juniatians sing to a different tune

Mary Gardiner
staff writer

Last September, freshman Brandon Long and sophomore Shane Fuhrman had a novel idea: to start a men's ensemble. Long had heard a great arrangement for the National Anthem, and hoped that he might find eight men willing to sing it with him. Before long, the two students found their octet.

"Shane asked me if I'd like to sing in a barbershop octet," said freshman Wes Carroll. "I just said, 'Sure.'"

Along with Long, Fuhrman, and Carroll, were sophomores JC Hayden, Zach Coble, and Graham Gant; junior Chris Kochel; and senior Paul Vranesic.

The original intention of the ensemble was to perform the National Anthem for volleyball and football games. Said Brandon, "We did have an intention to sing more than the National Anthem, but that was first."

The men prepared the National Anthem piece for an audition with Ken Shibuya, the volleyball coach. Mr. Shibuya was so impressed that instead of giving them a single date to perform, he gave them a list of dates he wanted them on the field and court.

After a few performances, the ensemble considered doing an entire concert of their own. JC Hayden found out about a possible opportunity at the local Presbyterian Church. The opening came through, and in the end of last semester, the eight singers had their first performance.

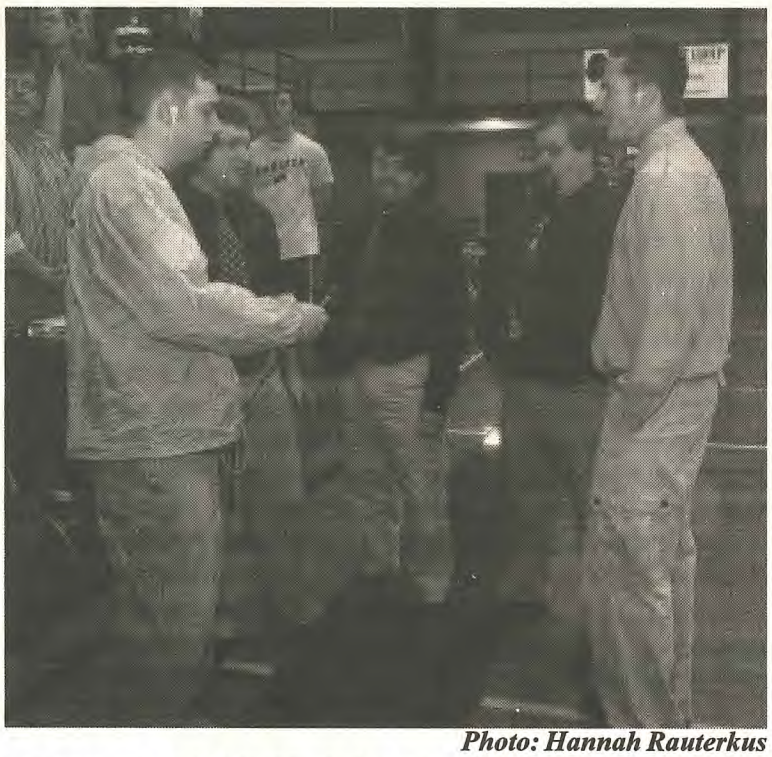

Photo: Hannah Rauterkus

Four members of the new student-run barbershop octet sing at a recent basketball game.

"They were amazing," said Rev. Richard Gardiner, pastor of the church.

All of the ensemble members were pleased with their performance. Said Carroll, "When you hit the perfect chord at the end, it's like a huge release. I guess it's like football or anything else in front of an audience. And then they all clap, and it just feels good."

They face one problem, however. The octet cannot figure out a name. They have considered names like "Apex," "Those Guys," and "White Socks," an allusion to the fact that they all wear dress clothes and white socks. Brandon asks, "Anyone with a decent idea for an ensemble name, call me."

Aside from names, however, these boys have a great time. Said Carroll, "It's a rewarding experience. It's tough to fit it in my schedule, but it's worth it."

Concluded Long, "Yeah. We sing really cool."

Keep an eye out for their performance in this year's talent show.

Heart Ache-rs and Circuit Breakers

Jeffrey Anderson
staff writer

Neither ice nor bad fuses could keep Jennifer Marie from performing. The singer/songwriter was the latest guest for JAB's Friday Night Live, on February 6. Unlike the classes – which were closed that day due to the weather – the show went on.

In three words, "up and coming" is the best way to describe Jennifer Marie. She definitely has the energy needed to succeed, as she is in the middle of an eastern college tour, working on a new record, and managing her own record company.

Jennifer Marie did not start the show with an amusing anecdote, or even a hello. She dove right into the music, instantly emerging the audience into her world. With the first song, entitled, "Someone Else's Life," you can figure out what Jennifer's music is all about. She experiments with a wide variety of genres, mixing pop ballad, folk, gospel blues, Broadway show-tunes, rock, classical, and many others. The beauty is that her songs are never too long, nor too short. Each of her original tunes progress throughout, pulling the listener into the natural flow of her composition.

Throughout the performance, the audience clapped and hummed along. Jennifer Marie talked to the crowd between songs, helping them understand where she was coming from when she wrote different pieces. Said freshman Joshua Leasure, "She's definitely got some skill. It was all pretty sweet, except for the power going out."

Ah yes, the power. Not all went well for Jennifer Marie's performance, but for reasons beyond her control. The crowd was growing restless after the circuit breakers brought the show to a halt three times. Showing her easygoing personality, Jennifer kept a sense of humor about the ongoing problem. "Umm… I'm going to try this one more time and give it my best shot, and if that doesn't work…I'll try it again!"

The show ended with one of her only covers of the night, Janis Joplin's "Me & Bobby McGee." Performed a cappella, this number showcased Jennifer Marie's raw vocal talent. Take the texture of Alanis Morissette, the classy tone of Norah Jones, and the energy of Amy Lee (Evanescence), and you have Jennifer Marie.

Her sound is timeless and her lyrics are easy to relate to. Jennifer Marie may just be the next big thing to break into the music industry. If you missed her this time around, you should definitely look for her in the future; we'll most likely see more of her.

Want to know more? Check out Jennifer Marie's website at www.jennifermarie.com.

Share the love and save a life

Colleen Hughes
staff writer

The Peace and Conflict Studies Student Organization (Pax-O) has come up with a fun and productive way to raise money for a great cause. Happening between February 5–14, Pax-O is sponsoring a fundraiser called "Share the Love" dinners.

The Juniata faculty and staff are hosting and cooking delicious dinners to raise money for charity. Students chose from a list of faculty members and favorite foods to share in this heartfelt event. The charity that this series of dinners will support is the removal of landmines in Afghanistan. The tickets cost $8 for one meal or $15 for two.

During a brainstorming meeting, the Pax-O students came up with an interesting take on fundraising. How about having a home-cooked dinner at some of our favorite professors' homes, and charge a little cash for it? All agreed that it sounded like a great idea.

Pax-O decided to sponsor this series of dinners after hearing of a campaign called "Night of 1000 Dinners." This global event includes 1,000 dinners to be held in private homes in order to raise awareness and money to alleviate the landmine crisis. Juniata's rendition of this event is obviously based on a much smaller scale, yet it does not make the cause any less crucial.

If you are not a part of Pax-O, you might be wondering, why landmines? An interview with Freshamn Mike Powers, a member of Pax-O, helped to unearth its significance. While in the U.S. Army Special Forces, he spent time in Bosnia, Kosovo, and the Congo. He spoke very sincerely about the landmine victims he met firsthand.

He said, "It affected me greatly when I met and interviewed survivors and victims, and especially when I visited mass grave sights." He explained that there are 110 million active landmines in 83 countries around the world. They exist on every continent. He offered a statistic that read, "Every 22 minutes someone, somewhere around the world, is killed or maimed by a landmine." Powers then added the shocking fact that building one landmine costs only three dollars, but demining that minefield costs $25,000.

All of this is very hard to comprehend, considering it is not a problem Americans deal with everyday. However, it is reality in Cambodia where one in 225 people have been killed or maimed by a landmine.

Pax-O, faculty and staff, and students are dedicating their time and energy to raise money to help the cause.

Paula Wagoner, professor of anthropology and faculty host, said, "I am very interested in [Peace and Conflict Studies] to begin with, and [the] way that students and professors can come together to solve world problems is wonderful; it was so interesting a request."

Andrew Murray, PACS professor and host, said, "I was so delighted that students had an interest in it and wanted to raise awareness on campus about the issue. Even if we raise enough money to raise [only] two mines out of the ground, it would be worth it."

Both professors were very enthusiastic about hosting their dinners and were eager to spend time with the students. Not only were the two of them going to be having delicious meals and great company, they were excited they could be a part of such a great cause.

Powers added, "Our [Pax-O] hope is this the first of many 'Share the Love' dinners to come. We hope to do this at least twice a semester, for this or any cause."

If this information has raised your awareness of this terrible situation and you would like to help, be sure to look for the next series of "Share the Love" dinners or contact Pax-O.

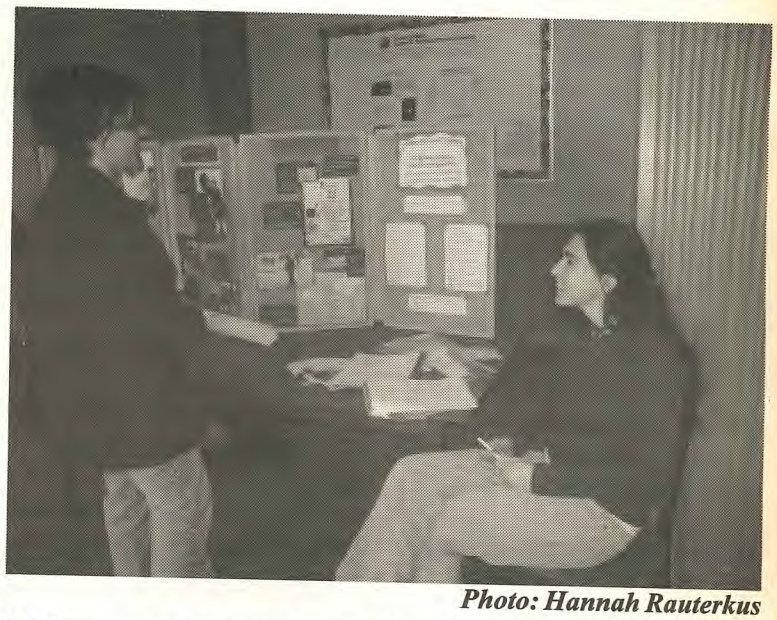

Photo: Hannah Rauterkus

Sophomore Sarah Pierce helps PAX-O sell tickets for "Share the Love" dinners.

Record review – "Probot"

Matt Soniak
staff writer

Dave Grohl has made amends for the sins he has committed against humanity. The man who played drums for Nirvana and released all those awful Foo Fighters videos has come seeking our forgiveness.

I will warn fans of Grohl's other music, this is the complete opposite of the syrupy sweet pop rock he's known for. You probably will not like it, but that doesn't mean you shouldn't go buy it. You *should* go buy it, as a lesson in a forgotten era of rock history. Grohl has gathered guest stars from all the eighties' hard rock and metal bands that actually *mattered*, and made an album filled with integrity, passion, denim, and leather.

Singers from Trouble, Celtic Frost, Venom, Corrosion of Conformity, Voivod, Motorhead, Sepultura, Cathedral, and Mercyful Fate each take lead vocals on a different song on the album (Grohl plays all other instruments).

Most of the songs mimic the style of the respective singers' bands, which brings out the best in their performances. Motorhead's Lemmy Killmeister sounds like more like himself than ever on "Shake Your Blood," while Mercyful Fate's King Diamond seems almost lost on the doomy-sounding "Sweet Dreams."

This mix of styles, plus a heavy Voivod influence throughout the whole album, makes for a very interesting and entertaining listen. The production of the album gives it a lo-fi vibe like an old Black Sabbath record, which speaks volumes about the feel Grohl is trying to create.

For underground rock and metal fans, "Probot" will drip with nostalgia, and may have you fighting back a sentimental tear. For everyone else, it is a great introduction to music that has been ignored by the masses way too long. You're forgiven, Dave, but no more music videos.

Roving Reporter

Reporting and photos by Rachelle Luther

What's your idea of romance, and what is your spouse's?

Deborah Roney (Lecturer in English) Her response: "Do you mean romance in the literary sense? I think 'what do you think is romantic' would be a better question…uninterrupted conversation." **She thinks his idea is:** "Eating a homemade, gourmet dinner together."

James Roney (Professor of Russian) His response: "I won't give you the professional answer (chuckle). Spending time together, not doing work, even with the kids. Maybe watching a film, hiking…" **He thinks her idea is:** "Sitting on the sofa together or holding hands or something like that."

Rocco Panosetti (Dir. of Safety and Security) His idea: "A quiet evening at home." **He thinks her idea is:** "I would say a nice, relaxing evening out. Perhaps dinner or something like that."

Carla Panosetti (Security Officer / Office Assistant) Her response: "Candlelight dinners and flowers." **She thinks his idea is:** "Sitting around doing nothing."

Movie Review: "Big Fish"

Rachelle Luther and Holly Brown, staff writers

Edward Bloom's true life remains a mystery, as he seems to only speak in tall tales. His estranged son, William, returns to reconcile their differences as Ed succumbs to cancer. As the fabled Ed Bloom tells his favorite tales for the last time, Will tries to find the truth behind the myth and comes to discover the joys of a tall tale.

Rachelle: Surprisingly, I don't remember crying this much at a film ever, with the exception of "Lord of the Rings: Return of the King." But this is a different movie, adapted from a different novel entirely. Clearly, Tim Burton has created a masterpiece; after all, even Holly cried like a wee child.

First of all, the acting is perfection. Jessica Lange and Albert Finney have amazing chemistry as the Blooms. They simply set the emotional appeal for the film. Billy Crudup is appetizing in his role as Will Bloom, the son of a storyteller. Ewan McGregor is convincing as he dawns a southern drawl in his role as the younger, flashback version of Mr. Bloom.

"Big Fish" has a realistic yet fantastical storyline. It winds its way through a father's past life as a son tries to figure his father out in the present. At times it felt like I was watching my Uncle Ken spin all his tall tales about walking to school up hill, in bare feet, in snow that came to his shoulders. The only difference is that I got to see these stories played out by attractive men, talented women, and a barrage of technical effects that make them all believable.

Burton gives us something different from recent films. He has done an incredible job alternating between present and past, thus redefining the use of flashbacks. Being that I'm used to the harsh reality of chronological order, this was pretty refreshing. Surprisingly, there wasn't any real confusion.

Hands down, this film has great visual appeal. From the fish to the witch's house, you can see the intense attention to detail paid to every aspect of the movie, which is distinctly Tim Burton. On the other hand, Burton has turned away for his usual cold, scary roots. I couldn't be more thankful.

Grade: B+

Holly: "Big Fish" is an excellent piece of storytelling, but one not all audiences might enjoy. If you go to this film expecting a typical movie, even a typical Tim Burton movie, you might be surprised. This isn't a movie about character development, a romance, or the meaning of anything. This is a movie about stories.

Tim Burton moves out of his traditionally dark and sometimes frightening films and on to the sunny, flower-filled realm of tall tales. In "Big Fish," it is reality that provides the harsh backdrop to Ed Bloom's fairy-tale life.

The movie is loosely woven around the reality of the reconciliation of the elder Edward with his son, Will. While the father-son interaction is the frame of the movie, the real meat of the film is the fantastic situations themselves.

In these tales – which take us through small cities, carnivals, and war – the stories are revealed to not be very moral or even instructional, but are simply stories.

When the film flashes back to reality, we are left to wonder if Bloom, patronized by his son and dying of cancer, really has succeeded. We, along with Will, ask the questions: Was Ed a good father? What's the difference between a storyteller and a liar? Is it better to live in a dream world, or the real? These questions are only answered with the film's conclusion: a story is a beautiful thing.

Because of the presence of fantasy for the sake of fantasy, audiences looking for a solid message or an insightful look into a character's psyche might be disappointed. You have to go into this film with a love of the incredible and the preparedness to form your own conclusions. If you let it, this movie will thrill and inspire you.

Grade: A

Best part: The field of daffodils Ed makes for his true love, Sandra. We defy you to see it and not melt into a puddle of romantic goo.

Worst part: Seeing more of Danny DeVito than anyone ever needs or wants to see.

Yoga for everyone

Danielle Hart
staff writer

Juniata offers a weightlifting club, an abdominal class, and a great weight room, so why not offer other healthy activities like yoga? This is exactly what senior Johanna Holtan was thinking when she met with her internship supervisor, Beth Williams, last year.

"I have experimented in yoga and had really wanted to bring it to the Juniata campus," Holtan says.

After conversations and planning, Holtan and Williams decided to organize weekly sessions. The yoga classes are run by Megan Belew, a certified Kripalu yoga instructor. These sessions are held in the TNT lounge on Tuesdays at 5:30 p.m. and Wednesdays at 3:15 p.m. The class lasts a little over an hour and includes a full-body warm-up, balance and strength skills, and a relaxing cool-down.

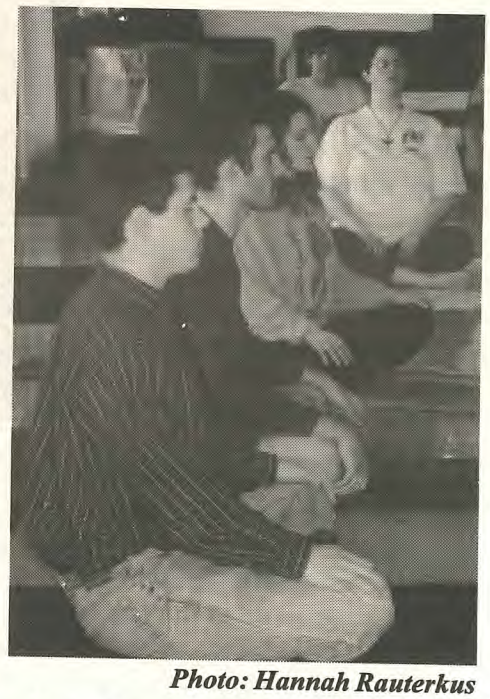

Photo: Hannah Rauterkus

Junior Ryan Richards tries out yoga with friend Senior Kent Black.

"Yoga is a great way to take care of your body that is different from any of the other athletic activities offered on campus," Holtan says. And Holtan is not the only one thinking that yoga is a nice change from the usual treadmill or bike. Approximately 80 people, including athletes and non-athletes, attended the first class on January 20.

But even with the popularity of the yoga classes, the price quickly jumped from $1 to $3 in order to cover costs. Holtan hopes that the price increase will help reduce class size to those who are more serious about yoga, especially after the complaints that the first class was too big. "I think that smaller class sizes will help promote a 'yoga-friendly' environment, but I think that it is important for everyone to get the opportunity to come and try yoga," Holtan says.

The periodic table needs a 12-step program

Carolyn Keller
staff writer

"Can you keep a secret? I'm trying to organize a prison break. We have to first get out of this bar, then the hotel, then the city, and then the country. Are you in or you out?"

"Can you keep a secret? I'm trying to organize a prison break. We have to first get out of this dorm room, then the dorm, then the campus, and then the town. Are you in or are you out?"

It's amazing how well Sofia Coppola's writing from "Lost in Translation," well, translates. Not that I'm implying Juniata is a prison. I'm merely stating that there comes a time in every semester—and okay, so it's hitting me a little early this semester, because obviously it just started—when things start to unravel, and you feel the need to break out. But hark! This isn't just any little gripe, oh no! I have evidence! Just like Bill Murray and Scarlett Johanssen in the aforementioned movie, I have undeniable evidence of the Fish-Out-Of-Water syndrome.

I'm sure you've felt it. I feel it all the time now. It's something study-abroaders go through both when they're in their country and when they're back, though you needn't study abroad to understand what I'm talking about. Fish-Out-Of-Water-Syndrome is that oddly fun, yet still slightly uncomfortable feeling of not quite fitting in with, or at least not sharing the same perspective of, the rest of your world. It doesn't matter whether you're in Mexico, Spain, or Huntingdon County; it can strike at any time. It knows neither borders nor bounds. And that includes Introduction to Geology. Yeah, I know I already mentioned this class in the last issue, but really, I can only get more fish-out-of-water if I take Calc II or Organic Chemistry, so you're stuck with the rocks.

Picture this: I'm sitting in one of the little desks (the ones that aren't attached to the lab tables) in the front-right of P116, Brumbaugh. Dr. Ryan Mathur, in an attempt to teach, uh…something having to do with the Earth and minerals and such, pulls up the periodic table on the overhead. I read (to myself): "Ca, K, Sc, Ti, V…" I think, "Oh hey, how nifty. I think I might remember these from high school, oh let's see….Calcium… Potassium… Scandium (wow, Scandium? I'm not the scientific dingaling I thought)… Titanium… Valium…… wait…."

As you can see, there's something wrong with that picture. I'm not sure if it was a Freudian slip of sorts or if I just had the mo-

Contrivances Amok

CS... IT... OMGZ!

Nate Drenner
co-editor in chief

Photo: Nate Drenner

Computer Science major Scott Gonzalez and Information Technology major Matt Acker must both use computers, but their POEs still differ.

Most technophiles at Juniata major in Computer Science (CS) or Information Technology (IT). But imagine the following exchange with a technology major's parent:

"So, you finally got Johnny out of the house. What is he majoring in, anyway?"

"Oh, something with computers."

Some people see the two POEs as the same. Yes, there is a good deal of overlap, but each major is a distinct program with different sets of skills.

Computer Science, as a recognized program, is about 40 years old, according to Juniata professor of information technology Dr. Loren Rhodes. "Computer Science is a more traditional, in-depth study in terms of software design, languages, and algorithms," he said.

IT, on the other hand, is more general. Said Rhodes, "IT is a recognition that technology is widely used. It has a human dimension and is augmented with skills in human communication and business management. As such, it includes courses from the communications and business departments."

While a student majoring in CS will likely move on to graduate school or work as a software developer, an IT major is better prepared for a career as a technology manager or trainer.

So, the next time your computer breaks, who should you ask to fix it – a computer scientist or an information technologist?

Said senior Scott Gonzalez, "People will call asking me to fix their computers. I don't do that! Come to me with *programming* questions!" Gonzalez is a CS major who hopes to start his own web development company after graduating.

Gonzalez and his classmate Matt Acker – an IT major – concurred with Rhodes' description of their POEs.

Said Acker, "IT is about researching new technologies, planning, and management. I needed to know basic coding skills, but I didn't want to get into heavy coding."

Acker prefers project management and design, while Gonzalez would rather be coding. "I've been coding since I was about 6, on a Commodore 64," said Gonzalez.

A CS major will typically learn five programming languages at Juniata, and about three are part of the IT POE, according to Gonzalez and Acker. Students in both majors can elect to take more programming courses.

Assistant professor of information technology Bill Thomas teaches both CS and IT courses.

The Bookmarkables

Nathan Thompson
staff writer

This week, I am spotlighting the website from which I purchased my latest music CD. The fact that a college student purchased a CD says something. The fact that I think the website is worth telling you about says even more about the website.

CDBaby.com is more than just another online music store. Derek Sivers, its creator, designed the website six years ago as an avenue for independent musicians. The website defines independent as "Not having sold one's life, career, and creative works over to a corporation."

You will never find any of the approximately 55,000 current bands on a major record label. Does that make them less-talented artists? No, they're just smarter artists. The stance of the website is one of musician-based fairness.

Major record labels destroy the original intent of the artist and pay them a mere one or two dollars on every CD sold. That might be OK if you are a no-talent sensation created by a record label (Backstreet Boys, Britney Spears, et cetera ad infinitum). However, for those who have their own ideas of music, CDBaby is the place.

CDBaby artist Alexi Murdoch recently turned down a record deal because she has seen what deals have done to other small name artists and their music. Of course, I'm sure the artists on the website also appreciate receiving six times as much money per record sale and a free credit card swiper to use to sell CDs at their concerts.

CDBaby.com seems to go out of the way to be the anti-corporation. Its focus is on both the artist and the consumer. If you call or e-mail Derek and his co-workers, you'll receive personal feedback. No personal information is stored by the website. In perhaps the best example of its anti-corporation status, the website states, "**No Microsoft Products were used in the creation of this site.**"

The Ratings

Addiction	3, I'll be going back.
Humor	2, The e-mails are creative.
Navigation	5, Four types of searches.
Political Correctness	4, Not for Microsoft.
Usefulness	4, A college necessity.

Because of its business strategies, CDBaby.com was recently called the "Record Store of the Future" by "Esquire" magazine.

When you visit the site, you can search by at least four different methods. The best option would be the "sounds like search." Because the music-minded folk at CDBaby.com listen to every CD individually, they can tell you what independent bands sound like famous musicians. After that, you can go to each band's webpage and hear samples of their music.

The music and shipping are cheap. On top of this, the next time I order from the webpage, I'll get a buy one get one free deal! As a happy and satisfied customer, I highly recommend that you browse CDBaby.com. I recommend that all the local bands check out **CDBaby.net** and see how they can join these talented musicians.

Freedom of curricular choice

Nate Drenner
co-editor in chief

When I first heard of the "secret" faculty meetings regarding curricular changes (see related stories, pages 1 and 2), I flexed my typing fingers, ready to lambaste Juniata's academic life. But then I discovered something truly horrendous.

I like it.

We are, after all, talking about a school to which I *voluntarily* applied and *voluntarily* accepted admission. Part of that acceptance was based on the large amount of choice and control students have in their own education.

The POE system itself is a prime example of student ownership. The traditional designated programs are available, or students can design interdisciplinary programs focused on their interests. Where else can a student literally create his or her own major by picking courses from disparate departments? One example from a departmental website is Biocommunication. The combination of strongly differing fields seems to me to be the very definition of a liberal arts education.

Communications seems to be a favorite element among interdisciplinary POEs. Many examples of student-designed programs from Juniata's website incorporate communication.

However, communications courses are another part of the core curriculum, an important part in a world that relies on communication skills. At least four communications courses are required, two of which must be writing-intensive, as opposed to speech-intensive. But still, there is student choice. The required writing and speech courses can be from any with the CW or CS label – any course from Molecular Techniques to Media Analysis. There is much leeway for diverse interests.

FISHN – other than sounding like an outdoor activity – gives a similar freedom within the POE. This distribution does not require any one course but allows the student to choose from a variety of courses in a variety of departments. Each course is labeled for the part of the distribution it can fulfill. For example, the "F" in FISHN – Fine Arts – could be anything from Drawing & Design to Poetry Writing to Hypermedia.

I discovered something truly horrendous. I like it.

So, there are only a handful of courses *everyone* must take at Juniata: CWS, CA, and IA.

CWS is, as we all know, the seminar writing course required of first-year students. Each section has a different topic, as set by each professor. Here is another area of student choice, one that is not widely publicized, if I recall my freshman orientation correctly from two years ago.

Cultural Analysis is the only general education component I cannot write about with authority. I have yet to experience this particular Juniata rite of passage. However, CAII is built on the same concept as the distribution; pick from any course given the appropriate designation. CAI is more puzzling. No one I talk to can seem to tell me what exactly it is *about*. I suppose I will find out for myself soon, when it comes time for me to take the course.

IA is one course that does draw my criticism. I found it particularly amusing because of my other classes and responsibilities. While I took IA, I also had Principles of IT, where I used professional quality programs like Dreamweaver and Photoshop. I also worked at the help desk, assisting users with Microsoft Office, among other things. At the same time, I was supposedly learning how to *use* Microsoft Office in IA.

Technology is undoubtedly important in today's world, but there has to be some way to account for the many students who already have basic skills and can move on. That precedent is already set for students with programming experience who can take Computer Science I without the prerequisite Intro. to Computer Science.

Beyond IA, the only change I would make in Juniata's POE system is expansion: more courses, more programs, more possibilities. However, that cannot happen until Juniata's student body – or its endowment – grows.

So, to the faculty and administration participating in curriculum review, I leave an important message. Review is good, but don't change too much. Freedom of choice is the best part of academic life at Juniata.

Ask President Kepple

"How is the decision made to cancel classes due to weather?"

As a predominantly residential campus, the college endeavors to remain open and operating unless a severe weather emergency arises. We have a fairly detailed protocol for determining whether an emergency closing will be required. It is initiated by Bill Alexander, our VP for Finance & Operations, who consults with Provost Lakso, and normally the decision is made by 5:45 a.m. If we are going to be closed, the decision is disseminated through various media, including an e-mail to all students and staff. Of course, decisions like this are judgment calls that take into account many factors, including the ability of a majority of our faculty and staff to safely travel to campus.

"Is there any truth to the rumor that the washers and dryers in the dorms are going to be reduced in cost or free?"

We have considered a program that would make use of the residence hall washers and dryers "free." However, a fee for this service would then be added to everyone's room charge. As a general principle, we have felt that those who use the washers and dryers should pay for that service rather than charge every student whether they use them or not. It is still an open question for the future and we would welcome any suggestions or comments.

The Juniatian accepts questions for "Ask President Kepple." Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Questions will be considered based on relevance to the campus community.

LETTER TO THE EDITOR

A view from abroad

I've been nagged to write a piece about study abroad, to brainwash you unsuspecting reader-souls into believing something cliché to the effect of "Take life by the horns…you won't regret it!" I don't care if you study abroad. Honestly, I don't.

As my second semester in Lille, France begins, I'm finding the new Americans, just beginning their time abroad, to be a tad annoying. They walk around glassy-eyed, shocked or frustrated at everything in sight and to those of us who've lived with this for five months, they are naïve and tiresome. Perhaps I'm insensitive or impatient, but screw it because it will help me get to my point… We veterans get to hear their various complaints until finally we can break in and say "Yeah, you're gonna have to get used to that." This wisdom falls on deaf ears, though, and they continue because (and I paraphrase): "*gasp* Things couldn't possibly be *DIFFERENT* than how I thought they ought to be… could they?"

Sorry to use the Partnership for a Drug-Free America's old metaphor of the egg and the brain but it works here, and besides, my metaphor is a bit different. The egg isn't your brain—that tangible organ that your life depends on. Rather, it's your mind—the combined sum of everything you've ever known, believed, imagined or simply considered. More specifically, your mind, your persona is the goop *inside* the egg that sloshes around if you shake it. That's all of You in there; Sloshiness = Your Abstract Mind.

The egg's shell is a bit less abstract. It provides the boundary to your mind. But, little known secret: Boundaries do not equal UNCHANGEABLE. You can mess with the boundaries in a number of ways. Make a little crack and let the goop trickle out, swirling around in the air; crack it wide open, let it slop out and whisk it all around; or, check the "OTHER" box and write in your own answer.

All I'm saying is give that mind some room to stretch its legs and expand. You don't have to jump from the frying pan into the fire. Just don't be naïve- don't leave the egg sitting there, doing nothing.

While I don't care if you choose to study abroad, I'll say that sleepless nights in London and Paris, snowball fights in Scandinavia, meeting people you know will be 300+ miles away in a matter of hours, seeing every textbook picture in person and deciding for yourself whether it's cool or not, partying in the streets with the entire city population, and the occasional fear of death is all pretty amazing. Learn that you are stronger and more durable than you ever believed.

LETTERS TO THE EDITOR

The Storm

On Tuesday, February 3, Penn State and most other schools in the area closed due to winter weather conditions. Juniata College did not. However, two days later, the college did close for weather conditions. These letters were received before the second storm, but, if some Juniatians had their way, perhaps we, too, would have closed both days. -The Editors

Another fine PA winter whine
We could not make it home in time
That nasty Grinchy Old Bill A
Insisted that we all must stay
In drifty drifts of sticky heavy snow
When PSU who's got to go
And avoid the fearful evening travel
But here the provost dropped his gavel
So Cindy stat who and Pat keppledee doo
Are stuck here in this nor-easterly goo

Neil Pelkey
asst. prof. of envi. science and IT

As a commuting student, I would like to voice my concern with the college's dangerous determination to hold classes during extreme snow storms. Such a decision forces commuting students to choose between risking their safety by attending classes to prevent the appearance of a lack of diligence and to prevent falling behind in their academics and staying home like any sensible individual who desires to avoid a tragedy would. Many commuting students have school-age children whose schools have been canceled due to the inclement weather. Who will supervise these at-home children, while we commuting students trapse through a blizzard in order to attend classes?

Although many professors are very understanding about students missing class due to poor traveling conditions and school cancellations, others are not. It places commuting students at a definite disadvantage. I have had to miss three days of classes already this semester due to dangerous road conditions. That means that I am three classes behind my peers.

Commuting students are not the only ones at risk when the campus relentlessly proclaims "The show must go on!" Professors also are pressured into risking their lives for the sake of their jobs. Many Juniata professors commute from such areas as Altoona and State College - a relatively lengthy and potentially dangerous drive. On-campus students are also at risk due to dangerously icy sidewalk conditions. Anyone with a physical disability (on or off campus) would definitely be at risk as well.

If the college is going to persist at obtaining the "Perfect Attendance" award, then they should at least be diligent enough to ensure adequate snow removal in order to avoid the dangerous parking situations that frequently exist on campus. Parking spaces are already limited. When there are mounds of snow piled up in parking spaces it makes the situation even worse. People are forced to park their cars dangerously close to the middle of the street. What is worse than the fact these problems exist? Our ticket-happy security officers take advantage of situations such as these in order to fatten wallets — or maybe it is the sheer enjoyment of the enforcement of their power. They are like buzzards that blatantly circle their prey, constantly watching and waiting for it to take its last breath. When our engines die, security feasts.

I hope that the college will consider these issues, and re-evaluate their delay/cancellation policy. The time has come for foolish ideals such as "perfect attendance" to be doused with a healthy dose of reality. Stop risking students' and professors' lives, as well the lives of other drivers, and the safety of our at-home children — deter dangerous determination!

Lucy Hammel
class of 2004

Even though I personally do not commute to the campus, I feel as though Juniata College has no respect for those who do travel to and from campus on days such as this. I have friends who commute to campus. It must be no sweat off of the administration's back if they can't make it to class on days like this. It is quite dangerous to attempt a trip to campus if you live outside of the borough when the road conditions are poor, but that doesn't matter when attendance is mandatory in some classes!? I guess its their (commuters) loss as far as academics and money goes right? I'm sure it is their tuition that goes toward all the overtime snow removal costs.

Adam Shaffer
class of 2005

I have to travel here for my classes, and it is very difficult to get here when the weather is so bad! I have to come back now tonight for an O-Chem exam because classes were not cancelled today. I don't appreciate that I must risk my life to come and take a test!

Alison Shope

You've got to be impressed with the work ethic of facilities, though. They've been at it all day now, and even if the sidewalks weren't perfect this morning, they were still passable. Whereas it seems like Huntingdon only plows their roads after it's done snowing.

Shannon Callahan
class of 2005

I'm not as angry with the fact that we did not to get to miss class as I am with what having class today means for the faculty and staff of Juniata. It is very unfair for the employees of Juniata College, Facilities and Sodexho workers who have to drive over dangerous roadways because Juniata has some dire need to stay open. It's unfortunate that our college that stresses the importance of compassion, and understanding will not extend these ideas to the needs of their employees. When talking to a woman who works in Muddy she said that they had to get up and get here before the roads even had a chance to be plowed and the snow was still falling down heavily, and there were some workers who had to drive from Petersburg and Alexandria! I think we need alternative plans for conditions like these, so that everyone involved with Juniata can be safe. If that means having to cancel one day of school isn't it worth it?

Janet Howe
class of 2006

Juniata is a primarily residential campus and therefore very few students have to commute to school. Likewise, many professors and staff live within walking distance to the college and are able to make it to campus. Yeah, it would be nice to have a day off but frankly you can't do anything else during this type of weather. It just means that the next time your class meets the professor is going to cram two lectures into one. Frankly I am disappointed in the paper; you seem to use it as a grand "b------- session." I find it appalling that you cannot find anything else to write about except how much you dislike the food, the rooms in VLB, and the fact we do not get off for a day. Our college has other qualities that most colleges/universities do not have, i.e Mountain Day, Springfest, etc.

Jacob Harper
class of 2005

If I had spent my day sitting in a nice, warm office over in Founders, I probably wouldn't have cancelled classes either.

Erin Strine
class of 2004

As a student, I dislike classes. I hate getting up early in the morning, taking cold showers, and sitting in classes feeling disrespectful because I'm about to fall asleep.

I'd assume (insert name of person responsible for canceling classes) has lived in Pennsylvania for at least a *little* while and knows that weather like this makes driving dangerous. I know many of the professors cancel their own classes due to travel from outlying areas, but the professors in town rarely do. There are enough statistics out there stating that the majority of accidents occur near one's home, and I believe it is irresponsible to risk our bastions of education in such an easily preventable manner.

Norman A. Krumenacker IV
class of 2005

Men's Basketball streak continues

Ryan Genova
staff writer

The Juniata Men's basketball team is back in the playoff race. After two huge road wins at Lebanon Valley and Widener, the team extended its win streak to five with two home victories against La Roche and Messiah.

Though the wins have come in a variety of fashions, one key ingredient has remained constant throughout: defense, defense, and more defense.

The Eagles held Lebanon Valley to a season-low scoring output in the lopsided 63-45 victory.

Four days later the squad kept Widener under 40% shooting from the field, as JC downed another conference rival 59-58. The teams ended the half tied at 27, and the game remained close through most of the second half before Juniata found itself down 58-52 with 4:10 left in the game. That would be the end of Widener's scoring for the night, as the Eagles' defense held its opponent without a point for the remainder of the contest. Two free throws by sophomore Travis Boyd in the final minute gave Juniata a lead it would never relinquish.

"It was the craziest game I think I've ever won in college. It totally changed the conference standings," said sophomore Tommy McConnell.

Senior Craig Biller led the way on the scoring end with 15, going 4-5 from the field and 7-8 from the foul line. Boyd scored 11 and grabbed seven rebounds, while senior Jeff Lau added 10 points and four assists.

Last Monday's 73-56 routing of La Roche included a career-high 26 points from Boyd, as the Eagles turned up the heat at both ends of the floor in the second half. The Redhawks trailed by only six at halftime, but weren't able to cut the lead any further the rest of the game. Lau scored 18 along with five rebounds, and freshman Chris Jasiota pulled down a team-high seven rebounds to go with his eight points.

On Wednesday, conference foe, Messiah, wasn't able to withstand Juniata's defensive tenacity down the stretch, as a 12-0 run midway through the second half put the Eagles out in front for good. Hard half-court pressure, aided by another lively student crowd, helped the Eagles cause a flurry turnovers.

"The second half we came out and we got after them. We were the tougher team. The crowd made a big difference tonight. If we can keep that enthusiasm here at home, it'll be great," said head coach Greg Curley.

Biller led the Eagles with 20 points, and Lau contributed 19 points, seven rebounds, three assists and three steals. Freshman Nick Hager led the way defensively with five steals. Jasiota contributed 11 points of his own.

"I think we've relaxed and started playing better as a team," said Lau of the five straight wins, a streak a Juniata men's basketball team hasn't seen since the 2001-02 season. "Defensively, we've picked it up a lot."

Photo: Hannah Rauterkus
Sophomore point guard Tommy McConnell drives to the bucket around LaRoche's Kenny Gibbs in a home win on Feb. 2nd.

Juniata's streak came to an end Saturday night against MAC opponent Moravian. Juniata dropped a triple overtime thriller, 105-93.

The loss dropped Juniata to a 12-11 overall record, and 5-5 mark in the conference. But the team still has postseason possibilities.

With the defeat the final four conference games all become crucial.

The Eagles will be back in action on February 11 when they travel to Elizabethtown. Be in the Kennedy Sports and Rec Center for the final two homes that could determine the Eagles' playoff fate on Feb. 17 and 21.

Juniata Men fight through two tough weeks

Danielle Hart
staff writer

Ranked #2 in the latest American Volleyball Coaches Association Division III Top-15 poll, the Eagles fell to a Division I powerhouse on Feb. 3. Penn State stayed true to its successful history by taking the match in three games.

The Eagles started the match slow, allowing the Nittany Lions to jump to an early lead and take game one 30-20. Juniata bounced back in game two and held the lead until Penn State snatched it away 19-18. PSU extended the lead by four points and finished the game 30-26. Game three was tight in the beginning, but eventually the Nittany Lions pulled ahead and took the game 30-24.

Juniata was led by senior Kenny Eiser with 16 kills. Following close behind was senior Brian Dinning with 11 and junior Ricky Ziegler dished out 43 assists for the night.

Photo: Hannah Rauterkus
Senior Ryan Genova (15) hits over the block for a kill in JC's win over NYU.

Juniata also started off their Jan. 31 game a little slow. Rutgers-Newark jumped to a quick lead taking the first two games of the match 30-28 and 30-21.

But the Eagles refused to give up and finished fighting. Led by a strong middle attack in the third game, Juniata took the win 30-28. The fourth game proved to be another nail biter, but all-round team play gave Juniata the victory, 30-28.

Even play by both teams in the

Athlete off the track

Robb Patty
staff writer

Sophomore Mike Vella is not just a solid distance runner for the Juniata indoor and outdoor track team. He is also an EMT volunteer for his hometown in Hollidaysburg. Mike runs Cross Country, along with track and is looking forward toward the outdoor season.

Soph. Michael Vella

"The distance runners and the team as a whole are looking forward to the outdoor season," said Vella. "Hopefully running indoor will whip us into shape, because I'm geared toward breaking the 5000 school record."

That record is definitely within Vella's reach after running and training hard during the off-season and cross country season.

Track Coach Jon Cutright said, "Mike has learned how to train better this year and is seeing the benefits of the cross country season where he had a good year."

Along with volunteering in his home town Mike also runs with the Quick Response Service (QRS) here at Juniata. He even volunteers on the medical staff at the Special Olympics and the Multiple Sclerosis Bike Tour. In the summer Mike is a volunteer at the Altoona ER and he eventually wants to go to medical school and specialize in trauma surgery.

"Working on the ambulance has been a really great experience for me," Vella commented. "I get to treat and interact with patients, many of whom are in the worst conditions of their life, and it's an adrenaline rush."

Super Bowl: Eagles watch Patriots and Panthers

Patriots outlast Panthers

Robb Patty
staff writer

In the best Super Bowl I have ever witnessed, the New England Patriots won their second title in three years. Place kicker Adam Vinatieri clinched Super Bowl XXXVIII with his game winning 41- yard attempt. This gave New England the 32-29 victory over the NFC Champion Carolina Panthers.

For Vinatieri it was déjà vu as he was called upon once more to make a game winning field goal in a Super Bowl. He was 0-2 on field goal attempts in the game until he converted his 41- yard game winner. He also proved why he is by far the most clutch kicker in the game as he nailed his last attempt to bring the Vince Lombardi trophy back to New England.

If you were hoping for defense in Super Bowl XXXVIII, you got it. Both teams struggled to find any offensive rhythm, resulting in the first 27 minutes of the game being entirely dominated by defense. This quickly changed with just over 3 minutes remaining in the half. Both teams were able to move the football and combined for 24 points.

The Patriots managed to get on the scoreboard first as quarterback Tom Brady found wide receiver Deion Branch wide open in the back of the end zone. Jake Delhomme and the Panthers would strike right back with just over a minute remaining. Delhomme found receiver Steve Smith for a 39 yard touchdown pass to square the game. Brady and the Pats were not done however as they march down the field again with just under a minute to go and regained the lead when receiver David Givens caught another 5 yard pass from Brady. Then with just 18 seconds remaining New England, for some odd reason, decided to squib the kickoff, giving the Panthers outstanding field position. This led to Steven Davis's biggest run of the game, 21 yards, and gave kicker John Kasay the opportunity to convert a 50 yard field goal as the half expired.

Due to the long halftime show both defenses were able to rest and in the third quarter, much like the first, both offenses could not move the football. Then in the fourth quarter neither offense could be stopped.

First it was Antowain Smith on a 2 yard touchdown run. Then DeShaun Foster answered for Carolina as he scampered 33 yards, diving across the goal line to make it a 16-21 Patriots advantage. It could have been 21-17 but Carolina head coach John Fox elected to go for the two point conversion instead of kicking the extra point. This turned out to be a bad call by Fox as it was still early in the fourth quarter and the Panthers did not need the two points at this time. I personally would have made the same call, thinking that the Panthers would have been down just three points and only a field goal away from tying the game. Delhomme then connected with receiver Muhsin Muhammad for an 85 yard bomb that gave Carolina their first lead of the game at 22-21. Brady would answer again with a little over 4 minutes remaining and then Delhomme answered him to knot the score at 29-29 with one minute remaining.

Kasay made an errant kick out of bounds on the kickoff, so New England took the ball at their own 40 within seconds Brady had his team in field goal range. Vinatieri nailed the final Super Bowl kick again. What a game.

This was one of the best games in Super Bowl history because it had a little something for everyone. If you like defense you got it in the first and third quarters. If you wanted big plays on offense and spectacular catches that was there for you in the second and fourth quarters. If next year's Super Bowl is anywhere close to what this year's was like then everyone is in for a treat.

Super Bowl for the sports-impaired

Pamela R. Bodziock
co-editor in chief

I watched my first Superbowl game this year.

This was an odd decision for me, seeing as I am not what you would call a "sports fan." Actually, I'm moderately famous for knowing absolutely nothing about sports, and caring even less. But for some reason, the idea of watching the Superbowl this year was appealing to me – so dang it, I was going to do it.

I started my Superbowl preparation by finding out who was actually playing in the game. I found out that the Patriots had beaten the Eagles a few weeks ago, and would now be playing the Panthers at Superbowl XXXVIII (or XXXVII, or XV71K95Q, or whatever it was). Since I still consider myself an honorary citizen of Philadelphia (I lived in a suburb of the city for eight years), I decided to root for the Panthers by default during the big game.

Photo: Hannah Rauterkus

Sophomore Matt Chabot screams at the Patriots' first touchdown.

(Sportspeople who know about these things – hang onto that thought that I know you're all thinking. We'll come back to it soon.)

February 1st, Sunday afternoon, rolled around at last. I joined my family (and friend from Penn State) in our family living room to watch the Superbowl. The game started promisingly enough, with me missing the kickoff because I was too busy talking, but turning back to the screen in time for me to immediately lose all track of where the ball was. In fact, I spent most of the game not knowing where the ball was, though eventually I learned how to spot it – if there was a pile of guys in the middle of the field, the ball would generally be found buried under them all. That much, at least, I could follow.

Photo: Hannah Rauterkus

All types of students, football fanatics, and the like, poured into the House on Superbowl Sunday to watch the memorable game.

Although, in the beginning, that was *all* I could follow. The Random Announcer Guys spent a lot of time talking about yards and flags and downs and ups and who knows what else. I had no idea what anybody was talking about, even though everybody *else* watching the Superbowl with me seemed to be doing just fine. I did try to understand, but held in such questions as, "How many points does a team get if they make a home run?" and, "Can the shortstop and the pitcher tackle the goalie at the same time?" Still, I did my best to follow the action, figuring I'd pick some things up as the game went along.

Unable to understand the commentary of the Random Announcer Guys, I encouraged those attending my Superbowl party to come up with their own. And they were quite effective, let me tell you. My friend kept shouting at the screen, "Don't try to go *through* the huge pile of people on the court! Go *around* them!!" I yelled several helpful remarks to #84 on the Panthers' team (such as, "Run away!"); #84 was fun to watch because he jumped around a lot. And despite the fact that one of my party-goers was convinced the Panthers' quarterback was too preppy-looking to be any good, I thought my team might have a real chance at winning. I was hoping, anyway.

So, as far as my sports-ignorant brain could tell, it was a good game, with things tied pretty much to the bitter end. I rooted my hardest for the Panthers, but my mother shouting advice to the Patriots eventually won out, with the Patriots winning the game 32-29 (or however the heck you give the score in these things). I had had fun watching the game, but I was rather disappointed that my team had lost.

But of course, as all you sports fans out there know, my story has a happy ending. The next day, someone knowledgeable about sports told me that I had been mistaken – it wasn't the *Patriots* that had beaten the Eagles in the game before, it was the *Panthers*. If I had wanted to root against the team that had defeated the Eagles, I should have been rooting for the Patriots. My first Superbowl game, and I was rooting, the entire time, for the wrong team.

So okay, I meant to be rooting for the Patriots. You can't win 'em all. At least I am comforted with the knowledge that, hey, my team won after all. I just didn't know they were my team until after the game. Go figure.

But don't think I haven't learned anything from my first Superbowl experience. Rest assured that I am not so ignorant to the world of sports that I don't even know what they call it in football when points are scored. Of course it's not a "home run." I know this now. It's referred to as "a hole in one."

It's amazing how quickly you can pick these things up.

Women fight for wins

Tommy McConnell
sports editor

After capturing their first conference win against Susquehanna, the Juniata women's basketball team has lost five straight games. The tough losing streak has dropped the women's record to 4-16 overall and 1-9 in the conference.

Said Senior Jen Uhrich, "The most disappointing part about it is that we have been in most of the games we have played, but have not been able to pull out a win by the time the buzzer went off."

The five game stretch has been a microcosm of the entire season. Juniata has played well in one half, then failed to match that level of play in the opposing half. "We could have won more because we were in some close games," said sophomore Kristen Kirk, "but [we] didn't execute our plays at the end of the game to pull through."

Against Moravian Saturday night, Juniata played well early, but still managed to fall behind. A late game surge would prove to be too little, too late. Kristen Kirk's career high 29 points would not be enough to give Juniata the win. Juniata dropped a close one, 82-77.

Previously, against Messiah, Juniata gave up three huge 15 point runs to the visitors, which the home team could not overcome even with Uhrich's fifth double-double of the season. The women fell again, 66-43, to the number one team in the conference.

The women are looking forward to their rematch with Albright, a game they feel they should have won. "Albright is the biggest rivalry," said Ulrich. "Because we are both tied for last place in the MAC, and they beat us by three points the first time."

Juniata wants to play solidly and get some wins in the final five games of the season. Says Kirk, "we want to win at least three of the five games we have left to play, have more fun on the court, and play with more determination and intensity."

Track and Field Teams at Bucknell

Michael Vella
staff writer

In the packed Gerhard Field House of Bucknell University on January 31, athletes from one of the smallest schools of 30 teams ran, jumped, and threw against some very strong competition.

The meet began with the infamous 3000 meter speed walk, much to the amusement of the other athletes. Those poor walkers take a lot of heat for their awkward form. At the same time it provides comic relief to an otherwise nerve-racking competition.

The distance runners had a good day on the track, despite showing symptoms of the notorious "indoor track" cough. "We had to cool down outside to escape the dusty indoor air," says sophomore Justin Fritzius. Sophomores Katey Glunt (11:31) and Mike Vella (9:26), along with Fritzius (9:44), ran personal bests in the 3000 meters. Chris Sheaffer (4:40) and Jeremy Lampert (2:51) raced to season bests in the mile and 1000 meters, respectively, despite some pushing and shoving early in the 1000. "This was probably the most physical race I've ever run," says Lampert. "[The other runner] kept throwing elbows to my chest, so I had to fight back." Rumor has it the other coach had to hold him back when the race was over!

The sprinting events took up most of the meet. In the 200 meters alone there were 26 total heats for the men and women combined. Junior Jeremy Weber (7.61) and freshmen Dusty Sier (7.34), Kurht Engle (7.65), and Randy Anderson (7.59) all competed in the 60 meter dash. Sophomore Gary Ondecko (55.63) and freshman Elena Amato (1.05.02) both ran the grueling 400 meter run.

In the field events, Freshman Adam Loser cleared 6'1" in the high jump, and sophomore Shawn Miller vaulted 4.05 meters. Juniata's only thrower, senior Andrea Denkovich, tossed the 20 pound hammer a distance of 8.45 meters.

Head coach Jon Cutright and sprint coach John Boyer are happy with the team's progress, but acknowledge that there is still much work to be done. "We're not there yet, but we're getting better," says Cutright.

"I'm starting to see the techniques that we are teaching in practice show up during races," adds coach Boyer.

Both teams will compete this Friday night at Susquehanna University. This meet offers one of the last chances to qualify for the indoor MAC championships.

Rough water

Cara Yancey
staff writer

Juniata swimmers currently hold a winning 9-3 record overall and a 5-3 record against MAC opponents. On January 30, Juniata faced two new opponents, Bryn Mawr and Farleigh Dickinson, at a tri-meet. Victory followed with scores of 123-81 against Bryn Mawr and 162-36 against Farleigh Dickinson. On January 31, the Juniata women swam against Kings, a MAC opponent. Our swimmers flew through the water, resulting in a winning score of 170-18.

Senior Melanie Cegelski said, "I think Bryn Mawr was something we were ready for. We've all worked so hard and it was nice to see how well we could do against a school not in our conference."

With six first-place finishes at Bryn Mawr Juniata was clearly ready for Kings' challenge. Our athletes took eleven first places that day. Kim Allen (100-meter breaststroke, 400-meter medley relay), Kathleen Trainor (200-meter freestyle, 100-meter butterfly, 400-meter freestyle relay), Amy Sutherland (100-meter backstroke, 400-meter freestyle relay), Amy Hanson (50 and 100-meter freestyle, 400-meter medley relay), Andrea Nulton ('06, 400 and 800-meter freestyle), Lauren Chiapetta ('05, 200-meter individual medley, 400-meter freestyle relay), Kim Dierolf ('06, 400-meter medley relay), Holly Gabries ('06, 400-meter freestyle relay), and Rachel Almy ('07, 400-meter freestyle relay) all earned first place finishes.

The swim team has recently been tapering practices in order to prepare for the MAC, ECAC, and NCAA tournaments coming up February 13. Tapering allows the swimmers to cut back on how many meters they swim in a practice so that they may concentrate more on their strokes and retaining energy. "We have been tapering for a while now and I feel very good in the water," said Hanson. "I think I am ready to swim my best at MAC's." The women's toughest challenges will come against Albright, Scranton, and Widener.

Gabries said, "They're the only three teams we lost to this year [...]. Albright's been consistently the top team in our conference, and we lost to them by only seven points, so we're really excited to have another go at them."

Coach McGrath's immediate goal is "[achieving] personal bests from every swimmer, so that we can place much higher in the tournaments."

Gabries continued saying, "Everyday we have practice I feel stronger physically and mentally. I'm psyched. Our team is so strong this year. We've broken tons of records, lifetime bests, and season bests. I know this is the strongest our team has ever been and we're going to have an amazing showing at MAC's."

THE RANDOM ELEVEN

Matt Russell, layout editor

Snow? What snow? That seems to have been the administration's position on February 3rd, when snow of Biblical proportions fell on our little college. Every school and institution within three counties was closed for the day, yet we remained open. Students had to walk through a foot of snow to their 8 a.m. classes because facilities couldn't keep up and people were dropping like flies on the ice. **The Regional Cancer Center closed**. The roads were so treacherous that people with terminal diseases couldn't go receive treatment, but we could go get lecture notes? Nice call.

Disgruntled students: Is it any wonder then that the school closed for the ice storm two days later? It reminds me of peasant taxation. At some point, you manage to anger and annoy the peons so much that you have to show a little charity because if you screw up one more time they'll revolt and storm Founder's… I mean… the castle.

Big Fish: Once every few years, I shed a tear during a movie. But this was the first time I had to retrieve the handkerchief from my pocket to dry off my entire face. A critic referred to it as a modern Wizard of Oz, but I think it's above the standards of any other movie; it's something new. Tim Burton is a master.

Icicle booby traps, part 2: I attempted to enter Lesher. First, I slid two feet over the patch of ice in front of the door. I grabbed the handle to regain my balance and pulled, but it wouldn't open. I shook it a couple times, and then noticed a small, handwritten sign. It warned me of the ice patch I'd crossed to get to the sign and the icicles hanging over my head as I shook the door violently below them.

Sorry for this item: Why is it that everyone who sends a mass e-mail about their lost keys or backpack needs to begin with "Sorry for the mass e-mail, but…" That's a lie! You're not sorry, or else you wouldn't send it! Dean Clarkson doesn't give brownie points if you pre-apologize in the e-mail either. Save us the effort of reading extra words and get to the point so we can delete it faster.

Irony of ironies: As I was typing that last item, another little charm found its way to my inbox. "Sorry for the mass e-mail, but I lost my keys outside Kennedy." If you lose your keys outside Kennedy, go look around for a good long while - preferably until your fingers are too numb to type an e-mail. Then go check the lost & found - it's why it's there. Unless it's an heirloom, a deadly cluster of spores, or an explosive, skip the instant notification.

Hole in the wall: I was sitting in the South Hall lounge and noticed the blinds rustled every time someone came from the outdoors into the foyer. This made little sense to me since the foyer is a separate room. I commented on this to a friend, who acted like I was dumb for not realizing there was a large gap in the wall near the window through which air moved the blinds. "How often do you see a big hole in the wall?" I demanded. My friend replied "Expect the uncommon."

Technical Difficulty: There was a technical problem with the web streaming of the Catch the Fire event, so someone e-mailed the people running it. That's good. What's not good is copying the entire student body on it and proceeding to copy us on every message saying "I have this problem too." I think the next time I e-mail the Help Desk with a problem I'll copy them on it just for fun.

Good intentions: Ok, fess up. How many were praying for a day off all last week so you could catch up on your work a bit, but then did absolutely nothing when it happened Friday? Yeah, me too.

Moment of Zen:

Icicle booby traps, part 1: I was exiting the library when I saw a chair in the middle of the porch with a small sign on it. I stopped and bent over slightly in front of the chair to read the sign. "Watch for falling icicles." I then looked up at the icicles centered directly over my head as I paused to read the sign. Well placed.

Periodic table

contninued from page 9

mentary blank-out of a first rate blockhead. To compound the situation, during that same space of an hour, we learned of the fascinating "Crystal Habit," i.e. how crystals break apart, and oops! It happens again. Sitting in that little desk, I read the overhead vocab, and my subversive subconscious pipes up, "Crystal- wha-? Does somebody need to kick a drug habit?"

Luckily my misadventures into the world of geologic terminology ended there. But as I'm sitting here missing Spain, my drug problems in Geology got me thinking about something that's easy to forget. Sometimes it's good to be a fish out of water. Sometimes it's better to be lost in translation. And sometimes people just need to be reminded that Valium is not a natural element. Which of course, my friends, is exactly why I'm here.

Men's Volleyball

contninued from page 13

fifth and decisive game kept the fans on the edge of their seats. But the Scarlet Raiders came out on top with a 16-14 win over the Eagles. Senior Ryan Genova led the offense and defense for the night with 18 kills and 13 digs.

"The nice thing about this match was that we picked ourselves up and really attacked them in the third and fourth games," Coach Ken Shibuya commented. "Ziegler, Dinning, and Eiser hit some great jump serves and let us slow down their side-out attack."

On Jan. 30, the team defeated rival New York University. The Eagles came out fighting and crushed the #7 ranked team 30-27, 30-27, and 30-23.

With a noisy crowd in the main gym, game one was tight from beginning to end. But Juniata pulled ahead in the end with two huge digs and a kill from Dinning. An ace from Eiser ended game one. Game two started like the first with the score back and forth between the two teams. But the Eagles grabbed a three-point lead and ended the game with another kill from Dinning.

In game three the Violets jumped to an early start, but could not hold onto their three-point lead. With a kill by Eiser and a serving run by Dinning, the Eagles regained the lead and never looked back. A series of blocks from Ziegler and sophomore Cordt Withum gave Juniata a ten-point lead. NYU fought back with a flurry of points, but could not chip away the Eagles' lead. A kill from freshman Glenn DeHaven finished the match.

Dinning led the Eagles attack with 13 kills and Eiser was close behind with 10. Withum led the night of blocking with 9 and sophomore Tim Cole led the defense with 10 digs.

Due to weather conditions on Feb. 6 and 7, the Eagles match against Springfield is postponed until Feb. 16 and their game against Sacred Heart was cancelled. Juniata faces Princeton, another Division I team tomorrow night at 7:00 p.m. in the Kennedy Sports and Recreation Center.

Contrivances Amok

contninued from page 10

He said, "I think CS and IT strengthen each other. In my security class last spring, IT majors were strong in networking, and CS majors typically knew more about virus writing. The two programs build on each other."

The programs are so interrelated that Computer Science, which fell under the Mathematics Department, will soon combine with the IT Department.

Said Rhodes, "The move is primarily administrative. We have no intention of muddying the two programs." However, he did point out that students can combine CS and IT studies through Juniata's independent POE system.

Rhodes, who is currently the chair of information technology, will continue to serve as chair of the new department.

Development of a third technology POE – Digital Media – is in discussion. Students interested in that type of technology are advised to create an independent POE at this time.

So, "technology" is a term that can encompass a wide range of skills and professions. At Juniata, Computer Science and Information Technology POEs define that range.

Nate Drenner is the Juniatian's tech columnist and a TLT lab assistant. He was originally an IT major, but then he switched to Digital Communications. Now he wants to be an English teacher.

Juniata violating federal law?

Danielle Hart
staff writer

Stacks of graded papers. Posted grades. "Stalkernet." Midterm notices. What do all of these have in common? The possibility of being a violation of student rights.

Each item mentioned is something that many students do not think twice about. It is a regular occurrence to look for people in the online directory or search for a graded paper in a stack outside a professor's office. It is just the way things are done, but that does not necessarily make it right.

The Family Education Rights and Privacy Act, otherwise known as FERPA, protects the rights and academic records of all students in colleges and universities. FERPA regulates who receives access to student's academic records and the publicizing of other student information, such as home addresses and phone numbers. Therefore, before releasing any information about a student, the college must get written permission.

Photo: Hannah Rauterkus

The clutter of students' portfolios is an all too familiar sight in the Humanities building – and a violation of FERPA regulations.

One would think that "Stalkernet," the common term for our online Intranet directory, would be a direct violation of FERPA. Stalkernet provides students, faculty, and staff with each other's dorm or office phone numbers, campus box numbers, and home addresses.

Registrar Athena Frederick says, "The Intranet is legal on a need-to-know basis. It provides a directory list, like any phone book." Also, Stalkernet is only available to members of the Juniata community and there is the option of not having your contact information easily accessible.

"Individuals are not forced to have their information displayed in the online directory," says Joel Pheasant, Director of Web Technology. "Students are able to fill out the 'Restricted Release of Directory Information' form in the 'Juniata Policies and Agreements' channel on the Arch" (arch.juniata.edu).

This form, along with many others enables students to restrict information from being publicized. For example, a form is sent home to the parents of freshmen about behavioral information notices. Students can deny their parents access to information, but unless they convince them to

Racial conflict goes to J Board

Pamela Bodziock
Nate Drenner
co-editors in chief

On Friday, March 17, a racist incident allegedly occurred in East Residence Hall. Due to both verbal and physical assaults, the students involved appeared before the Judicial Board on Wednesday, March 24.

Other areas of the campus community have responded to this incident. An open forum on racial awareness will be held tonight at 8:30 p.m. in BSC A202.

The conflict involved an underage Caucasian student, who directed racist language at an underage African American student. That student retaliated with a physical assault. Both parties were under the influence of alcohol at the time of the incident.

Dan Cook-Huffman, Assistant Dean of Students, said, "It was very inappropriate and highly reprehensible racist language – the 'n' word, for example – and another student punched [the verbal offender]."

The Juniata Pathfinder prohibits "threatening, harassing, assaulting, or endangering the health or safety of any individual(s)." This case was a violation of this policy. Both parties were also charged with underage possession and consumption of alcohol, to which both admit.

The extent of intoxication according to Cook-Huffman, is "hard to say exactly, but both were seriously under the influence."

The incident appeared before the J Board yesterday. The J Board's decision though, was not available to the Juniatian as of press time.

Explained Cook-Huffman, "When we send something to the J Board, it's a signal that we see the incident as something very serious. It's a suspension-level offense."

Cook-Huffman continued, "Threatening language, harassing language – racist and homophobic language, for instance – are just not acceptable. We don't allow it or condone it; it goes against the spirit of community, and doesn't make for a stable learning environment."

The J Board is made up of two faculty members, a student services administrator, and four students (in this case, the top four student government executives).

Cook-Huffman contributed to the J Board as the coordinating dean. The coordinating dean is

Web Reg. will change advising

Michael Vella
staff writer

What if course registration each semester was just a few clicks away? What if students did not have to fill out all of the registration forms by hand in the middle of a busy spring semester? These "what-ifs" could become a reality with the successful implementation of the Datatel Colleague software package, a system that enables students to complete the tedious task of course registration online from their dorm rooms.

According to Registrar Athena Frederick, a pilot program for the software will begin this June. It will involve members of the incoming freshman class as well as a group of volunteer faculty. "The freshmen only have one advisor," says Frederick, "so that will make it much easier to test the program."

Although the timeframe of the project is not entirely determined in its first year, the program will provide students and advisors with easy access to vital information used in class scheduling, according to Frederick. After logging in, students will have electronic access to grades, class schedules, account summaries, and degree audits.

"It's open to a lot of different departments specific to students' needs," says Frederick. In addition, advisors will have access to their advisees' grades, class schedules, and other general ad-

Students voice their curricular opinions

Rachel Donahue
staff writer

On March 17, Student Government hosted a forum for students to discuss the current curriculum and its proposed changes. Unlike previous forums, where students asked questions, this time the faculty wanted student opinions. Bad weather and meetings kept many people away, but Provost Lakso managed to lead a lively discussion anyway.

Lakso started the forum by giving some background on the first two faculty meetings, which were covered in previous issues of the Juniatian.

The first topic discussed was Information Access. Predictably, many people thought students should be able to test out of IA. The Provost responded that the pace of IA was supposed to be student-driven, but admitted, "The process where you can demonstrate competency needs to be more transparent."

The general opinion was that the technology section needed work, but the library module was valuable for all students.

Next on the agenda was Extended Orientation (EO). In addition to the comment that many students hated EO but wanted to teach it, some questioned its purpose. Lakso said the class was there to help freshmen adjust to college.

Dean of Students Kris Clarkson added it was "intended to [...] make connections between what you're studying about and what's happening outside of class. I think it would be a shame if that's lost."

The students did not think that EO should be cut. However, many felt there needed to be more standardization, and that the "Social Engagement" project should bring the class together, rather than being an individual project. According to Lakso, this project is based on Ralph Nader's concept of "mandatory civil engagement" for schools, which Nader talked about when he spoke here in the fall of 2002. Students find a current events issue in the New York Times and follow it for the semester. They then write a paper explaining their experiences.

> "I don't think Minitab will help me do my taxes."
> **- Becky Zajdel, sophomore**

The writing portion of CWS came next, and students had plenty to say about it. Once again, people wanted standardization. In particular, the theming of CWS was protested. Although some students enjoyed it, most felt the random selection of topics led to freshmen taking sections that didn't interest them.

After the freshman courses were covered, the forum moved on to the other graduation requirements: Cultural Analysis, FISHN, and QM/QS.

Students once again wanted standardization with CA because experiences with the course vary greatly. Interestingly, a few people said other students felt CA was an excuse for professors to force their liberal ideas on a class. Another problem is that having multiple professors can lead to fighting.

Junior Steve Knepper said, "There's a division when the faculty argue, and the students are lost."

In defense of the professors, Lakso pointed out how hard it is to team teach. Each professor has his or her own ideas about a topic's relevance and meaning and how it should be presented. This can make giving a smooth and cohesive lecture very difficult.

Once CA was covered, time was running short, and students had more to say about the math requirements than the FISHN distribution. Everyone thought the Q requirement should be kept, but the Quantitative Methods course was criticized.

Photo: Hannah Rauterkus

At the student forum held on March 17, senior John Damin questions Provost Lakso about the possible curriculum changes.

"I have a big problem with QM [...] I don't think Minitab will help me do my taxes," said sophomore Becky Zajdel, who had hoped to get some real life skills from the course.

Math professor Cathy Stenson defended Minitab, which keeps a record of all instructions the user has given it. This record has the same benefit in teaching as writing out the work for a problem. It shows the work the student put into it, and also makes it easier to figure out where things have gone wrong.

The forum closed with a few comments on the Communications Writing (CW) requirement. Writing must makes up 25% or more of the final grade in CW courses, but people worried that students weren't learning.

Senior Natalie Houseman said, "I see seniors now that still can't write!"

This forum finally gave students the chance to speak where it would actually do some good. The curriculum committee will be able to use these comments to make decisions, and the students appreciated the chance to help.

Said Zajdel, "I've been wanting to address my concerns for the curriculum for a long time, and this was great!"

2004 - 2005 Student Government election results

President

Carl Kihm - 142 (57%)
Brenton Mitchell - 63 (26%)
Jacob Harper - 42 (17%)

Vice-President

Kellie Cummins - 126 (55%)
Brenton Mitchell - 84 (37% - write-in)
Cordt Withum - 18 (8% - write-in)

Secretary

Daysha Burkhart - 172 (87%)
Patrick Cain - 26 (13% - write-in)

The Senate will approve a Treasurer from the Executive Board's recommendation.

Clubs petition for funds

Meredith Pink
staff writer

It is that time of year again when clubs on campus yell from the rooftops, "Show me the money!" (Jerry Maguire style, of course.) But who is responsible for *allocating* club money, and how does the process work?

The process of club funding and determining who gets what is fairly straightforward. Every year clubs must fill out a Student Registration & Allocation Request Form in order to maintain official club status. This form is then submitted to the Director of Campus Activities, Dawn Scialabba, for review. She said, "I look at the form to make sure the club meets certain criteria. For example, in order to be a club they must have a minimum of 10 students, two officers, and one advisor."

In addition, this form includes a budget section where students must list the costs the club anticipates will accrue during the up coming year. They also list the amount of earnings that will come from fundraisers. Finally they need to record all events and accomplishments the organization achieved over the previous year. All of this information is relevant in terms of how much money will be allocated to the club.

After Scialabba evaluates the form, it is forwarded to Student Government. They review the requests and make the decisions about how to divide the pool of money. This decision is based on the past history of the club: what it did with the money in the previous year, how much it made from its fundraisers, etc. The allocation is also based on how many students are involved with the club, and exactly what it is they what money for. A club, for example, will not receive money to have pizza for its members at every meeting.

The total annual budget used to fund clubs has been about $80,000 in recent years. Between 60 and 80 clubs request money each year. The amounts requested range from a few hundred to several thousand dollars.

Once the student government determines who gets what, the proposal is sent to the senate for a vote. It takes about a month to go through the senate, and they vote on the allocations sometime in mid to late April.

For other club funding information contact Dawn Scialabba.

Writing Center benefits from $38,000 grant

Colleen Hughes
staff writer

The Writing Center is one of the greatest assets to the Juniata student community. Located in the basement of the library, the center is one of those rooms that is always in high demand. It provides knowledgeable tutors to teach students to find and revise errors in papers while providing constructive input. During the fall semester alone, the center had more visits than ever with 451 tutees.

Recently, Director of the Writing Center, Carol Peters, and Instructional librarian, Julie Woodling noticed that this small but essential room was in much need of a face-lift, and decided to do something about it.

Peters and Woodling received a $38,000 Library Science Technology Act grant. The money will be used mainly to buy new computers and update the Center's technology. Peters said, "I'm really excited about this; it's going to rock our little room." She added that she would like to see the whole room redone. With the help and input of the all-student staff, they will be better able to preserve what is useful, replace what isn't, and put the grant money to good use.

Senior Laurie Harden, a Writing Center tutor, said that she would like to see the room have a more comfortable feel when redone. Her reasoning for this is that students are a little uneasy about coming and having their papers read, but if the center had a more comfortable feel it would make them more relaxed.

She also added that she would really like to see some daytime hours added to accommodate anyone who has obligations as night, such as athletes, commuters and PAR students.

For those who have not taken advantage of the Writing Center, it is an excellent resource for your writing worries. Sunday through Thursday from 7:00 to 10:00 p.m., there are four tutors in the Writing Center. The tutee walks into the center, signs a sign-in sheet with a description of concerns and then meets with a tutor. The tutor has the tutee read the paper aloud. Then s/he provides constructive feedback and teaches the writer how to find and revise r mistakes. They do not edit the entire paper. Organization, sentence construction, and basic grammar mistakes are the most common concerns.

It is a good idea to bring along any assignment sheets given by your professors in order to better inform your student tutor. Also, there is a space on the sign-in sheet that asks if the tutee would like his/her professors to know that s/he received help from the Writing Center. It might be a good idea check "yes" to show your extra effort.

Sophomore Laura Rath said that she has visited the Writing Center for all of her "big" paper assignments in CWS, CA, and even resumes. She added, " It is good to get a different perspective. It definitely helps and improves my grade."

The classes that give students the most trouble are both CWS and CA courses. But, Peters wanted to emphasize that is it a common misconception that the tutors are a bunch of English POEs. They are not. Peters recruited across the curriculum so that all writing needs of the students would be met, from lab reports to education papers.

In the future if you are having problems with your writing and your roommate is too busy to read a 6-page draft, take it on over to the Writing Center. Sign up for an appointment or walk right in.

Business and IT programs to relocate

Holly Brown
staff writer

When students return for the fall semester '04, they will notice quite a few changes to the campus. In addition to renovations in Good Hall and the addition of the Halbritter Performing Arts Center, Brumbaugh Science Center will become the new area for business and information technology (IT) classes. The Teaching Learning Technology (TLT) Center, currently in Ellis, will also relocate to Brumbaugh.

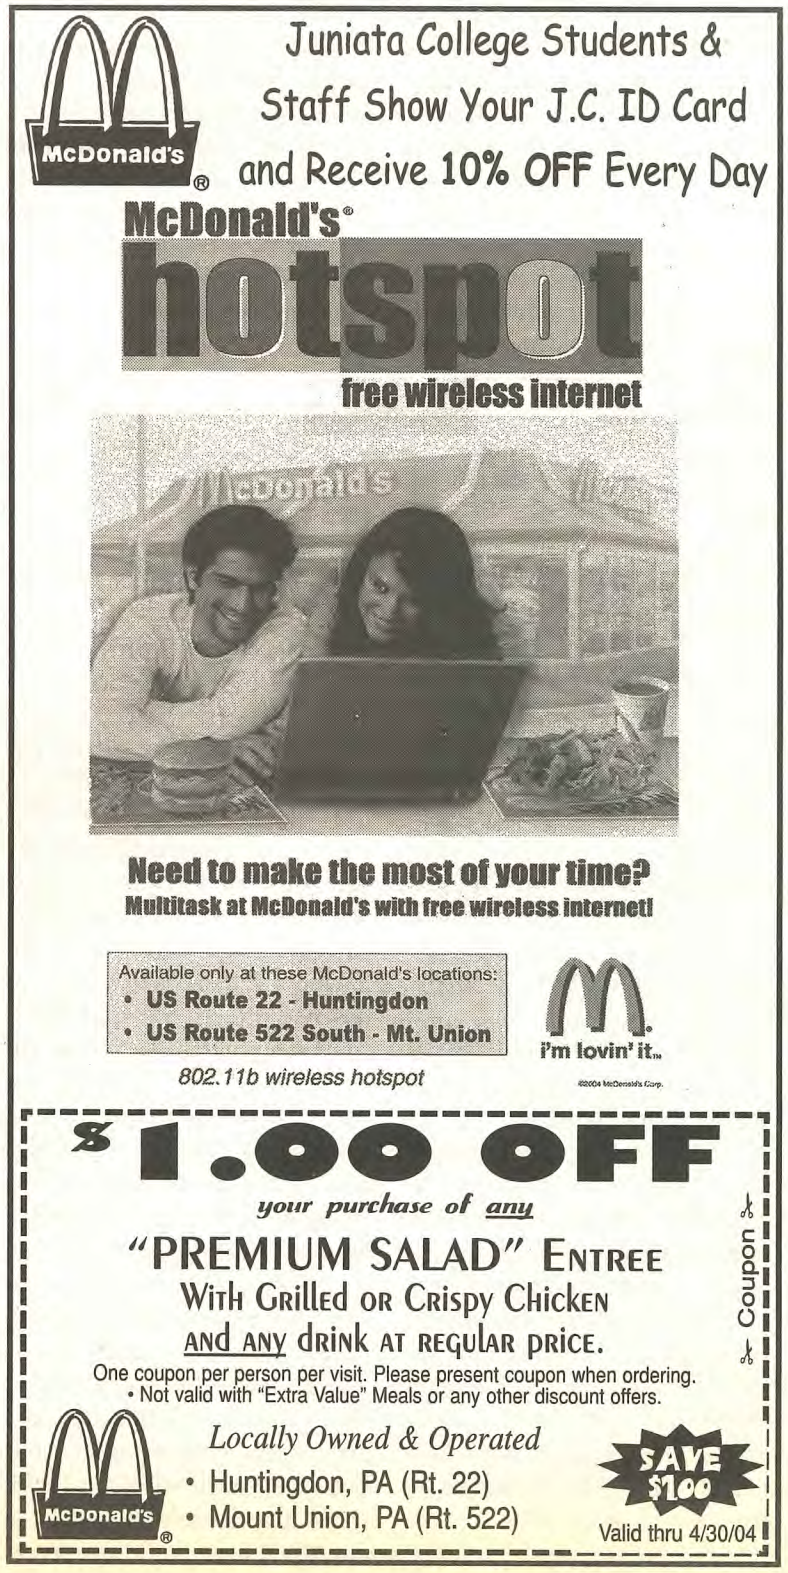
Changes are being made in an effort to centralize business and IT offices and classrooms. The Computer Help Desk, Solutions Center, and TLT Center will all be conveniently located in the same building. These changes will be funded through contributions from alumni and corporations.

Senior Tim Zeltz says the business department and class moves will be positive. "I think it's a good move. I think having all the professors' offices along with the classrooms and computer labs adds a certain level of convenience for the students. We'll be able to access all those resources at one time."

This relocation of resources extends to the Information Technology services as well. This year the Help Desk was placed in Brumbaugh's C Wing, next to the Solutions Center, and over the summer both will move to first floor. Rob Yelnosky, Associate Director of the Solutions Center, says he feels that people will have some difficulty finding the moved rooms, but that advertisement and communication will soon rectify the confusion.

The TLT Center will be placed in A101 and 102 as well as C101 to 107. A101-02 will contain four editing suites for digital media production and editing. New equipment includes a green screen, movable clip lights, and a space to conduct high quality interviews. The space will allow students privacy while working, and since A100 is right next door, they will be able to preview their works without interrupting another classroom, as is sometimes the case in the TLT Center.

The C100 rooms will contain the remainder of the Solutions and TLT Centers. A lab with 14 to 16 machines will be available, as well as a training room, workstations, and a common space. The Help Desk and PC Techs will be located there as well.



In addition to some new equipment and a centralized space, the TLT Center will be open more hours. The schedule will match the help desk hours, which are currently 8:00 a.m. to 1:30 a.m.

Of course, the main concern of students is the loss of convenience. Junior Katie Beers, TLT Business Manager, says, "I think that it would be a good move so the Solution center stays close knit, but then again TLT has always been in Ellis, and I think that's a good location for it."

Sophomore TLT employee Adam Loser agrees. "It's probably not the greatest move, since the TLT is right there in Ellis, with Muddy and the Cyber Café. It's more convenient for students. But we will have more space in Brumbaugh."

Students on campus seem to agree. Freshman Charlie Foster says "Ellis is a building that is used by the most students per day, and it makes more sense for [TLT] to be in a place like that rather than secluded in a science building. "

Yelnosky and the IT leaders are well aware of student concerns. While an effort is being made to keep some technology in Ellis, what is being done with the empty space on the second floor seems to be an open ended question. For more information on what will take the TLT's place in Ellis, and plans for Good, check the next two issues of the Juniatian.

Mental health issues on campus

Are we doing all we can?

Pamela R. Bodziock
co-editor in chief

According to statistics taken by the National Institute of Mental Health in October 2002, in any given year, one in five adults (anyone age 18 and over) suffers from a diagnosable mental disorder. There are certainly cases at Juniata of students dealing with mental health issues – something that is not unusual for a college campus, seeing as the majority of college students fall into this statistical age bracket.

One in five adults is suffering from a diagnosable mental disorder.

However, one person who works in health care outside of Juniata College, who asked to remain anonymous, expressed concern about how Juniata handles some of these cases. This person said, "There have been Juniata students who have been asked to leave after hospitalization [for mental health issues]. But it's not a crime to be mentally ill. It's a part of diversity, really – it's as important to understand as a classmate or roommate who has a physical disability."

Kris Clarkson, Dean of Students, addressed this, saying, "Students have been asked to leave, if staying would be debilitating for them or if their behavior is disruptive. They can go home, resolve their issues, and return."

Clarkson went on to describe an incident involving a student who, some years ago, smashed out a window in Good Hall in a fit of anger at a professor. When the student was calmed down, it turned out that, underneath the outburst, the student had simply not been taking medication properly. The student did leave Juniata for a time but eventually came back and graduated.

"There is an increasing number of students coming here already on medication," Clarkson went on to say. "Physicians are quick to prescribe medication – sometimes without explaining likely side effects and the importance of taking medication regularly – and then someone goes off to college, and it changes their lifestyle. If someone decides to stop taking medication so they can go to a party and '[act] like everybody else,' well, that just can't be done. Medication has to be moderated."

Beth Williams, Juniata's counselor, believes in a holistic approach to treatment. "When I talk to a student, I ask about diet, exercise, how much time they spend studying – or procrastinating – what they're doing to take care of themselves, mind, body, and soul. I look for something that's out of balance. It's a social work perspective – to look at a person in their whole environment."

There are a variety of mental health issues – depression, bipolar disorder, learning differences, behavior problems, suicidal thoughts – and each one must be dealt with in a different way. Juniata, as a college, cannot be expected to provide full and complete treatments on campus; that's not its purpose as a facility. But the issues still come up, and therefore must be dealt with in one way or another.

Said Clarkson, "Not a year goes by that there are no suicidal gestures [on campus]. There were six this past fall, which is pretty high – usually it's six in a *year*. Most of them aren't life-threatening now, but we've taken each and every one seriously – and we haven't lost anyone; no one has slipped through the cracks."

Suicidal students have been asked to take leaves of absence – "It would be traumatic to find someone on campus attempting suicide," said Clarkson – but having a student take a leave of absence has its own problems. Clarkson pointed out that if students have heard that anyone facing a mental health issue is asked to take a leave of absence, they will to become less and less likely to report any disruptive thoughts, feelings, or behaviors.

However, not everyone who has some form of mental health illness or issue to deal with is going to be asked or expected to take a leave of absence. It is possible to stay on campus and continue treatment. Williams said, "The [physician and physician assistant] here work extremely closely with me – they help monitor the medication as long as the student is seeing me, as well." She went on to say, "For a small campus, we do very well with the limits of one counselor, one physician, and one [physician assistant]," adding that bringing in at least one more counselor would be beneficial.

Juniata's Health and Wellness Center offers 10 free counseling sessions per student year, and all services are completely confidential. J.C. Blair, the local hospital, also offers care for anyone dealing with a potential mental health issue. Anyone can call or visit the hospital and set up an appointment for a free and confidential assessment through the Community Assessment Center. The staff will do a basic intake form, then schedule a time to meet with a counselor to do a more thorough evaluation, followed up with a recommendation of care.

It is worth mentioning that, if a mental health issue is caught early enough, there are many resources available that will allow for hospitalization to be avoided. Having a mental health issue does not automatically land a person in the hospital – the effects and issues of mental illness are far larger and in too many shades of grey for that simplistic an answer.

Juniata is a college that prides itself on the acceptance of all people, from all diverse backgrounds. People dealing with mental health issues should be included in this category of diversity. Williams, a member of the diversity committee on campus, said that they have started the process of addressing mental health issues as part of the diversity workshops and issues.

Said Clarkson, "Juniata College is typical of the national trend, but Juniata students are incredibly good. [...] If there's a big plus for us, it's this caring community. Students look out for one another."

If you feel that someone you know is in need of assistance, please fill out a Notice of Concern form, are available online at http://services.juniata.edu/dean/concern.html.

Roving Reporter

Reporting and photos by Rachelle Luther

Do you think students who attempt suicide should be required to take a leave of absence?

Sophomore Kara Rehner ***(left)*** "Yes. If a person attempts to commit suicide then they obviously have issues in their life that they aren't dealing with. They need to focus on those problems first before they focus on school."

Freshman Sarah Kotora ***(right)*** "Yes, that would probably be better for them mentally, but it isn't necessary."

Sophomore Kari Dundore ***(left)*** "Yes because those who attempt suicide are not in the best mental health and to properly learn in college, a student must be of sound mind. It will only help them out."

Asst. Professor of Chemistry Susanne Lewis ***(right)*** "I don't know. It depends on what the circumstances were leading up to the attempt. If it was not school related, then I see no need. If it was, then it might be in the best interests of the student."

Help CROP

It is time for the annual Meal for CROP sponsored by Christian Ministry Board. This is how it works: students agree to give up their evening meal in Baker on Tuesday, March 30. People in the community buy those meals with the proceeds going to CROP.

Meanwhile, students have to eat. Several area restaurants including McDonald's, Domino's, and China Dragon have agreed to give part of their proceeds from the evening back to CROP.

Students can help in two ways: first by signing away a meal at Baker and second by eating at area restaurants. Look for the sign-up sheet at the check-in counter outside Baker to give up your meal or talk with your RA to get your name on the list.

The money raised through CROP events is used worldwide for hunger relief with 1/4 of the money raised by Juniata College's Meal for CROP staying right here in Huntingdon County.

Give up an evening meal for CROP to help STOP world hunger. Eat out on March 30! If you have any questions, please call the Campus Ministry Office at 3361.

Correction

January 29, 2004 – page 2, "World Religion Day." The Juniatian indicated that Father Christos Patitsas spoke on Buddhism. His comments were reflective of the Greek Orthodox Christian faith. Patitsas does not claim to have knowledge of or represent Buddhism.

FCC violations could end WKVR

Mary Gardiner
staff writer

They stay up until 2 a.m. to entertain. They play the best music and have some of the funniest stories to tell. In fact, those Juniata radio station DJs are often unsung and are an untapped resource for infinite pleasures. But if they drop the "F-bomb," WKVR fines the DJ $100 automatically, absolutely no questions asked.

If they do get fined, that could be the end of our college radio station.

Fining that amount of money might seem excessive, but it's one of the only deterrents WKVR directors have. "We only air to a three-mile radius, but you never know who's listening. We really need to keep an eye on what we're saying," says junior Chris Brookhart, co-director for the club.

Recently, the Federal Communications Commission (FCC) has strengthened its enforcement. In mid-January, FCC Commissioner Michael Powell urged the commission to vote with him to raise the fines for using the "F-word" by a factor of 10. Such an increase would boost fines from about $30,000 to $300,000 for the bigger stations.

With the latest suspension and possible termination of the Howard Stern show, several hearings on Capitol Hill about indecency, and the rise of FCC fines, WKVR's worries about violations do not seem so unreasonable. What could happen if WKVR violates the regulations and FCC decides to press charges?

"WKVR would have to cover the cost of the fine immediately," says Brookhart. There's no way a college student could cover some of these fines. Even if the station was fined just five grand, a reasonable estimate for a station like WKVR, no student—or club—could cover such a fine.

"We used to keep extra money in our account for these sorts of things, but Student Government insisted that we use our money before we petition for more. That buffer is now gone," says Brookhart.

WKVR doesn't have the money to cover DJs infractions either. Their funds must cover maintaining expensive equipment, renewing licensing fees, and paying countless bills as well. If WKVR DJs do ignore regulations and incur heavy fines the group can't pay, that could be the end of our college radio station.

"A lot of DJs push it," explains Brookhart. A few years ago, the FCC gave a warning to WKVR when a student DJ played the Jerky Boys, a popular parody group that is known for their obscenities.

But to avoid seriously crippling fines and potential community backlash, Brookhart hopes DJs will keep clean. "Just know your music," urges Brookhart, "and don't curse."

Senior Jeremy Weeden and freshman Karen Leonard work overtime on Saturday night during Scrap.

Federal law violated?

continued from page 1

sign and return this form, the parents will receive a letter every time their child is written up.

The problem with this form is that it is sent only to freshmen parents. Frederick, a strong FERPA advocate on campus, states that she is already looking for ways to fix this issue, because the form should be sent yearly to *students*, not their parents. The choice should be the student's; otherwise there is a possibility of students never even knowing this form existed.

Unlike behavior notices, mid-term notices and students' grades are solely mailed to students. "We do not routinely send copies of mid-term notices or copies of grades to parents of dependent students," says Dean of Students Kris Clarkson.

It would be a violation of FERPA to discuss a student's academic records without the student's consent. Frederick points out that along with parents being unable to receive academic information about their children, faculty cannot even discuss a student's grades with a parent. The bottom line is that students must give written consent for their academic information to be shared or made public.

Therefore, it is a direct violation of FERPA when professors post grades or leave graded papers outside of their offices for students to pick up. These practices potentially enable others to have access to students' academic information. The distribution of graded papers outside of office doors is always a violation to FERPA no matter what the circumstances.

On the other hand, many will argue that posting grades is not a violation if a student's ID number is used instead of their name. Actually, it is still a violation. Frederick points out that the only way professors can post a student's grade is if there is a code number or word that only the professor and student know.

New professors to Juniata are shocked by the way some things are handled concerning FERPA laws. For older professors, this is the way it has always been done. But that does not make it acceptable. Frederick states that the college is addressing this issue by informing all professors of FERPA and providing alternate ways to handing out grades and papers. One way is by supplying all professors with a "do's and don'ts" guide to FERPA.

Frederick also wants to educate students on their FERPA rights. She hopes by fall to present the information to the student body by presentation, e-mail, instructions, and a policy book on what is being done and what students should do.

"We try hard not to violate student rights," says Frederick. "We want to protect the privacy of all of our students."

Web Reg. will change advising

continued from page 1

vising information right from their computers. Mid-term notices can also be sent electronically and can be flagged so students and advisors are alerted.

As far as actual course registration is concerned, students will eventually be able to schedule classes online. The program will inform the student if he or she has the prerequisites for each selected class and whether or not the class is open-in real time.

Students then send the information to both advisors who have two options. They can mark a check box indicating that the class schedule is accepted, thus finalizing the process. However, they could also leave the box unmarked, indicating a need to see the student face-to-face before the registration is completed.

"I would be excited to try something like that because I think it would be a lot easier to plan my schedule," says sophomore Emily Steinke.

Sarah May Clarkson, Director of Academic Support Services, is looking forward to using the new program. "The system we use now is unbelievably inefficient. After signing up for classes, it takes about a month until the student knows what classes he or she is registered for," she said.

She also adds that the new program will decrease time spent on actual registration, giving students and advisors more time to talk about graduate school, jobs, and life in general. "The new program offers more time for true advising and consultation," says Clarkson.

Online registration is currently in place at Penn State University. Tom Davies, a sophomore biology student at PSU, says he likes it. "It's easy and quick," he says, but also adds, "it's still smart to check with an advisor before finalizing your schedule."

Despite the potential advantages of such a system, some students and faculty remain hesitant. Frederick says some people are cautious of online registration. Recent problems with the W Drive and errors in the class schedules may leave some concerned about adopting the new program.

Sophomore Max Stem says, "[Web Reg.] sounds easier, but it seems like it could be prone to further complications. I feel more comfortable with paper."

Others, including Dean of Students Kris Clarkson, are afraid the new program will lessen the face-to-face contact between student and advisor. When asked if the new program has the potential to hamper this student/advisor relationship, Dean Clarkson replied, "certainly."

Frederick also acknowledges that complete online registration is a danger. She said, "I have talked to advisors at Penn State, where everything is online, and a lot don't like it." She stresses, however, that "the advising here at Juniata will still involve face-to-face meetings between student and advisor." The previously mentioned checkbox allows the advisor to determine when to schedule a meeting.

In the meantime, the parameters of the web program are just being set up, and decisions need to be made about when and how to allow online registration. Hopefully the pilot program will provide the information needed to get the system up and running. Frederick still has one unanswered question, however: "What happens if the lights go out?"

On March 23, 24, and 25, a controlled demonstration of the online registration software will be presented in the lobby of Ellis. Come and see the beginning stages of the new face of course registration.

Racism

continued from page 1

not the decision-maker, but helps to keep the Judicial Board aware of precedents and makes sure correct procedure is followed.

The final decision is made by the Judicial Board. Formally, it is a recommendation to the Dean of Students, who can either accept or reverse the verdict.

Said Cook-Huffman, "In my history here at Juniata College, Dean Clarkson has always accepted it. He [stands by] the well thought-out decision from the Board."

Either party may appeal if they find the decision unfair. In such a case, the final verdict would be made by President Kepple.

The open forum held tonight, Thursday March 25, is sponsored by the Women's Group and other student organizations on campus. An open letter to the student body was also placed on tables in Baker Refectory and is reprinted in this issue on page 12.

The Juniatian will continue to cover this incident and the state of race relations on campus in the upcoming April 8 edition.

All Class Night's triumphant return

Colleen Hughes
staff writer

Who needs Jim Breuer, Colin Mochrie, or Chip Esten when we have our very own comedians right here on campus? The juniors and seniors who participated in the college tradition of All Class Night definetly put on some side-splitting skits on Saturday night.

The tradition is an onstage performance of an all-student cast acting as distinguished student groups, faculty members, staff, and more. Both classes vividly and without hesitation represented every ongoing joke, rumor, and stereotype. But, in the end, the senior class of Oh Four dominated.

On Friday evening, while waiting for his turn to rehearse, senior Ben Wetzel hoped that students would show up the next night to see the skits they worked so hard on. All of his hopes came to be when people had to start filling in the balcony on the night of the show. The students anxiously waited for the skits to begin while they reviewed their programs, remarking that some of the actors would fit their parts perfectly.

The show began with the loud and proud chanting of the senior class as the curtain opened. The juniors made a spin on the popular television show "The Bachelorette," replacing the bachelorettes with women volleyball players and the male suitors with distinguished faculty, staff, and townies.

Junior Nate Thompson said, " It was a little nerve-wracking because I didn't know how my friend who plays volleyball would react."

The actors who impersonated Coach Smith, and Professors Sowell, Bruce, Andrew, and Wang strutted their stuff on stage and impressed everyone with their provocative dance routines and hidden stomach crunching, skoal-chewing talents.

A flashy spandex-wearing Frisbee player spoof filled intermission during the juniors skits. Even everyone's "favorite" professor, Dr. Reingold, was paid some homage with an ingenious parody of one of his famous chemistry songs.

In the end the bachelorettes chose Norm, the famous baker cook, as the ideal date. Random appearances of a wild banana-throwing monkey were definitely an asset to the juniors' performance, yet it just wasn't enough to beat out the seniors.

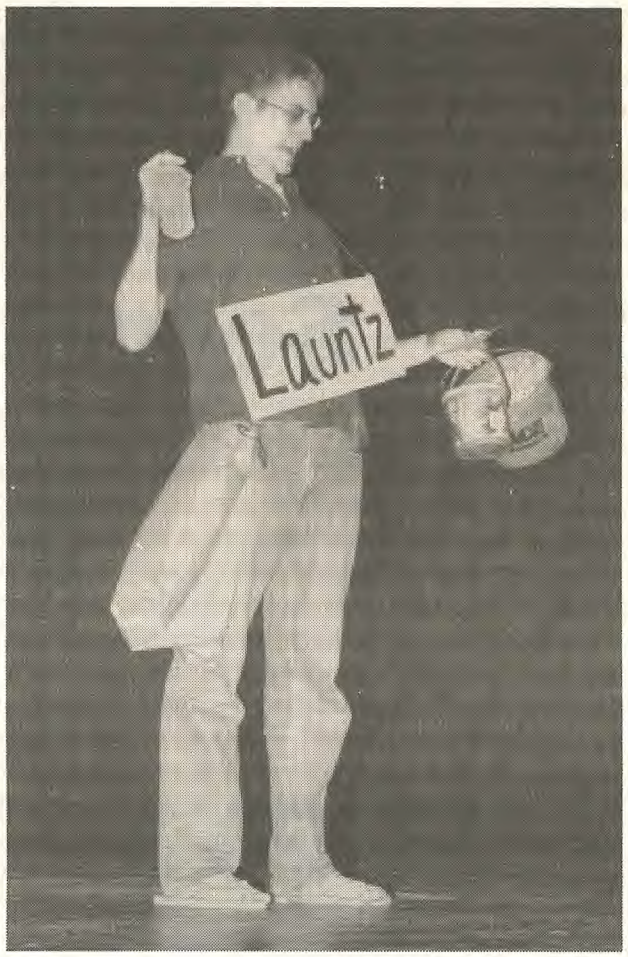

Photo: Hannah Rauterkus

All Class Night, held on March 13, gave students a chance to laugh about campus life while the Junior and Senior classes put on a show.

The senior class really outdid themselves. Their presentation idea consisted of two "meatheads" sitting in recliners, channel-surfing while procrastinating for their upcoming business test. Whenever the two decided on a TV show the rest of the seniors would act out the program. "Survivor" was hilarious, exaggerating the tendencies of everyone from Professor Bruce to Coach Smith, while "The Jerry Springer Show" featured a full-blown fistfight between Professors Braxton and Hochberg. The appearance of Terri Bollman as the Wicked Witch of the West preying on not Dorothy, but perspective students, was hysterical.

The segments that had everyone rolling were an infomercial that made President Kepple the spokesperson for Levitra, and the weather report of "hurricane" Isabel where Tim Lautnz was decked out in a trench coat and holding tight to a fire extinguisher. However, the skit that undoubtedly stole the show was "Late Night with Conan O'Brien."

"It was the most hysterical part of the whole night, especially his opening jokes," said sophomore Danielle Cappriotti. Out of the many funny guest appearances on the Conan show, the walking, talking, and even eye-shifting William vonLiebig painting was beyond hilarious. Thompson added, "The Conan O'Brien skit was my favorite, and they tore up VLB so bad, it was great. The seniors most definitely deserved the win.

The performance usually consists of the freshman and sophomore classes too; however, this year both decided to drop out. Both the junior and seniors did not let them get away with it. They emphasized the lack of participation and spirit by freshmen and sophomores by making it a point to include it in their jokes, complete with comments about the infamous "freshman fun bunch."

All Class Night 2004 was a great success. The talents and comedy of the fearless junior and senior classes really illustrated their school spirit. The entire show, complete with a performance by the talented Juniata Dance Team, was excellent. The tradition's return really makes us wonder if it's flattery or mockery that's the most sincere form of flattery. Either way, it is just plain funny.

Concert Choir returns from European tour

Matt Soniak
staff writer

The Concert Choir will be holding their annual Homecoming concert on Saturday March 27 at 7:30 p.m., in Rosenberger Auditorium, having recently returned from their concert tour of Europe.

The spring break concert tour, which included three performances in Croatia, two in Italy, one in Slovenia, a bus trip through the Alps, and skinny dipping in the Adriatic Sea, was used as practice for the upcoming concert. After playing to audiences of five people in Croatia and upwards of 400 in an Italian cathedral, the choir is prepared for what is traditionally the culmination of their year.

When asked about the tour's highlights, Freshman Matt Chabot recalled that after a group photo, "Someone said 'Let's go skinny dipping.' It wasn't very planned out."

> "Someone said 'Let's go skinny dipping.'"
> **- Matt Chabot, freshman**

Freshman Amy Chamberlain said that the tour was not *all* debauchery, however, but also a bonding experience. "The tour was amazing - simply incredible. Choir is like a second family. Really, I think it comes from the sense of unity when you sing, a common experience we all take from our passion for music, and I think bonds develop from that. Spending time with 45 other people 24/7 just enhances that."

Chamberlain was even fortunate enough to reconnect with an exchange student she had met in junior high school. "She's kind of hard to get in contact with," Chamberlain said of her Italian friend, "but since she's studying law in Milan, and we were in Italy for concerts…she and her boyfriend decided to hop on a train and come to Venice for the concert."

Though Oller Hall is different from Italy's famous cathedrals, the choir hopes that the campus community will attend and enjoy the Homecoming concert just the same. Knowing that choral music remains something of an acquired taste, Chabot said that the concert "will be impressive to all, not just choral fans."

Chamberlain said that the pieces featured at the concert are "mostly sacred, Renaissance pieces, like 'Tu Es Petrus' by Palestrina. And we're singing a couple gospel pieces as well, like 'Moses Hogan'."

Having honed these pieces and their collective skills on their tour and at practices throughout the year, the choir promises an amazing show. "We do it really well, not to be immodest," said Chabot.

Outdoor opportunities

Nate Thompson
staff writer

You did not come to Juniata College for the city living. Face it, the sounds of the local "nightlife" are primarily created by owls and crickets. Now that the snow has finally melted, it is time to take advantage of this area's most plentiful and most popular form of recreation: the outdoors.

The outdoors seem to play a big roll in students' decision to come here. Sophomore Kat Gomez agreed. "The outdoors made my choice. I wanted someplace where I had the opportunity to relax outdoors in clean air, instead of [the] city air that I came from."

Within a 20 mile radius (easy driving distance), you can find five state parks, 11 state game lands, six natural areas, two wild areas, a handful of lakes, several caves, and a cornucopia of outdoor activities.

Wild areas and natural areas are designated by the state's Bureau of Forestry. Wild areas involve state forest land with excellent habitat selected for public use. Natural areas have natural history and are allocated to remain in a relatively pristine state.

The first step to enjoying these opportunities is to get involved in some of the college's eight outdoors clubs. Each club schedules trips and other activities to make it easier for the campus to get outdoors. These trips are especially convenient for students who do not have a car.

Laughing Bush and Fishing Club offer cheap rentals on equipment. For a weekend, you can rent a sleeping bag, a small 2-person tent, and a backpack for only $10.

If you are searching for additional information or equipment, try local sources. Rothrock Outfitters (418 Penn St.) provides expert advice on outdoors recreation. They also sell and rent any equipment you may need. You can call them at 643-7226.

Local information on the Raystown area is available at www.raystown.org. For state forest information, visit www.dcnr.state.pa.us. State park information, including weather and other advisories, is located at www.dcnr.state.pa.us/stateparks.

From Huntingdon, there is outdoor recreation in every direction. West on 22 is the Little Juniata Natural Area, as well as the Mid State Trail. This 260 mile trail is the largest continuous footpath wholly in the state of Pennsylvania. Canoe Creek State Park is also located in this direction.

East on 22 is the 1,000 Steps trail. This trail was created by miners who worked for the brickyards in Mount Union.

26 South has many access points for Lake Raystown. You can also reach Trough Creek State Park and Trough Creek Wild Area in this direction.

The Raystown area is riddled with hiking trails. These include the 27 mile Terrace Mountain Trail, which travels the entire western side of the lake.

The International Mountain Bike Association is developing at least 25 miles of mountain biking trails along the lake. The trails will be for all levels of mountain biking. Information about these trails can be found at cyclesa.com or by calling 1-888-RAYSTOWN.

North on 26 has the largest number of options. Another part of the Mid State Trail runs through here. This route also has the largest section of Rothrock State Forest which contains 95,000 acres of woodlands. Also included in this section of forest are Whipple Dam, Greenwood Furnance, and Penn Roosevelt state parks. You can also find five different natural areas here. Thickhead Mountain Wild Area surrounds Detweiler Run and Bear Meadows natural areas.

There is an amazing array of outdoors opportunities in this portion of the state. The state parks and wild areas vary in activities. Some offer everything from camping to hunting, while others offer activities such as boating, ice skating, and snowmobiling.

Information for all the local opportunities can be found at the aforementioned websites and places. Get active, get involved, get information, and get outdoors! See you on the trails.

Dance diversely, JC style

Rachelle Luther
staff writer

Dancing the night away used to only happens at Madrigal. However, AWOL (All Ways Of Loving), Juniata Women's Group, and UCJC (United Cultures of Juniata College) changed all that with the Diversity Dance.

AWOL came up with the dance idea last year. They finally made it happen on Friday, March 19 with the help. The event rocked the Ellis Hall Ballroom from 10 p.m. until 1a.m.

Music, snacks, and fun were all on the agenda for the evening. The clubs provided a smorgasbord of goodies. Music was provided by Local Motion DJs.

According to sophomore Michelle Schoonmaker, the clubs teamed up because they "just wanted to host an event for the campus." Schoonmaker, also AWOL secretary, added that the dance was "a fun way for the campus to celebrate the diversity that Juniata does have."

Thanks to all the groups for their hard work at giving the campus something different on a Friday night. You never know-- this could this become a new JC tradition.

Secret Window

Rachelle Luther and Holly Brown, staff writers

Summary: Johnny Depp is author Mort Rainey, who has retreated to an isolated cabin to escape his impending divorce and his wife's new boyfriend. While trying to write, he receives a visit from Mississippian John Shooter, who claims Mort stole his story, "Secret Window." The situation quickly turns serious as Shooter goes to any lengths to bully Rainey. But not all is what it seems in this Stephen King adaptation.

Rachelle: So Johnny Depp is in this one. Wow. *shiver* This is most certainly one of the creepiest movies I think I have seen in a very long time. I will tell you up front, this is a must see.

The filming of the movie is artistic genius. Director/writer David Koepp is a master at making even a hat severely creepy. He has actually found a way to film tension. Wide camera angles and scary quietness give every frame of "Secret Window" a sense of foreboding. For the entire soundtrack, there may be a total of three songs; one for the opening credits, one for the closing, and one for the freaky climax.

Overall, the scenery is not creepy. It is mostly sunny days and forest paths. There are a few shots in a quaint little town as well. Not exactly your typical bone chilling darkness and rain. But then, there are the dark nights in the middle of the woods. Oh yeah, and that rustic cottage with that secret window, with that secret garden right below it.

As for the acting, Depp is stunning, as always. His character reminded me of a typical college student with a bizarre sort of twist. John Turturro plays Shooter, the movie's resident creepy guy. It was strangely comforting while he was on the screen, but when he is missing I really felt his presence.

As far as my usual emotional display, it was mostly little scared sounds eking out of my wind pipe as I choked on my own breath. Despite the warmth in the theatre, I was buried in my winter coat, huddling as close to Holly as the chairs would allow.

I love to be scared by movies that promise me they are scary. "Secret Window" did not, in any way, break that promise.

Grade: a solid **A**

Holly: "Secret Window" is an excellent example of how a so-so thriller script can be transformed into something quirky and enjoyable by a strong cast. Johnny Depp, with the help of co-stars John Turturro and Maria Bello, carries this somewhat cliché movie with his amazing screen presence and added details.

The story itself isn't much to get excited about. Thrillers such as King's "Misery" and "The Shining" contributed now well-worn themes of isolation, insanity, and the story-within-a-story to the genre. If you add a "Fight Club" twist and water it down, a lot, you have "Secret Window." Intensely suspenseful scenes and Depp's extreme likeability are what keeps you glued to the screen.

Most of the movie features Depp in his isolated cabin, attempting to avoid depression and solve the Shooter mystery. He has extended dialogue with his dog, swings verbal punches at his wife's slimy boyfriend, and takes enough naps to make a college student proud. It's the small character traits and fun dialogue he gives to Mort that separates the character from a personality-less lead and elevates "Secret Window" to an enjoyable state.

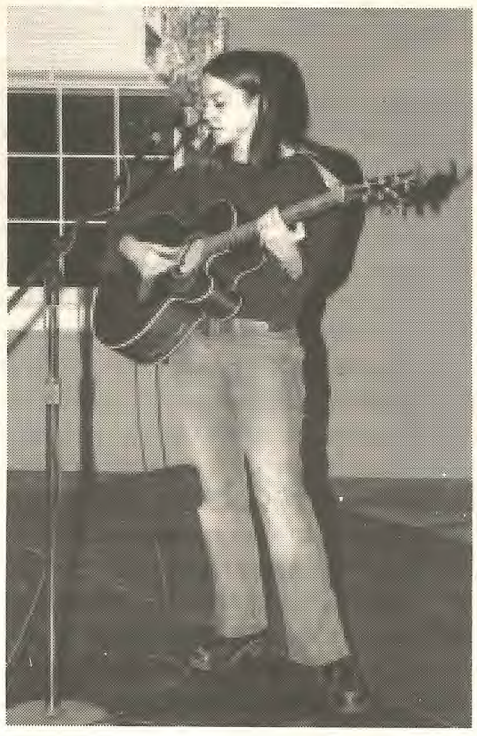
John Turturro is creepy enough as the scary Mississippian stalker, but doesn't receive much screen time. Maria Bello is convincing as the unfaithful wife who isn't exactly all bad. Her character is a good contrast to her wonderfully hate-able "rubbernecker" boyfriend, played by Timothy Hutton. Charles Dutton also catches the audience's attention, but succumbs to the fate of all the secondary characters in "Window," and quickly falls into the background.

Perhaps these lovable characteristics are what make the inevitably dark ending surprising and somewhat out of place. The plot twist is rather predictable. I won't ruin it for you, but there are many visual clues (mirrors being the most prominent), and it's beginning to be an over-used trick. But the conclusion will send chills up your spine – and maybe make you cackle evilly, if you're of the darker sort like me.

An operational script and cliché themes threaten to sink "Secret Window," but Depp is charming enough to make you feel you didn't waste your $4 at the Clifton. The moral of the story is. . .Johnny Depp rocks your face off, no matter what.

Grade: B-

Best part: Johnny Depp's grandmotherly robe that he stalks around in for 75% of the movie. Now that's sexy.



Worst part: The overly gratuitous use of screwdrivers.

Brenda Weiler

Photo story

Hannah Rauterkus, photo editor

Brenda Weiler wowed the audience with her soulful music on March 12 in Ellis Hall. "Weiler never fails to bring style and comforting originality" said one publication of Weiler. Senior Johanna Holtan has personal ties to the singer; "My friends and I used to go and listen to her back when I was a sophomore in high school and she has been my absolute favorite ever since. When I was organizing the events for Women's Month I thought a concert would be a great addition to the activities."

Collegiate Dementia

Jude, David...meet my feet

Carolyn Keller
staff writer

No syndrome this week, guys, I've got something way bigger than that to deal with. It's so big they should teach a class in college on how to avoid it, because I can think of a couple times in the past weeks where I have felt the spectacular need to extract my foot from my mouth.

Take last weekend, for instance. My dad and I went to see "Cold Mountain," which I think is a lovely movie, and I was very interested in what he would have to say. Being religious (and my dad), he didn't much care for the female nudity, which I thought completely natural. In fact, I wholeheartedly agreed. Female nudity is quite excessive in the film, and I stood firm in my opinion when I told my father, in the name of equal rights, "Absolutely. If we're going to see that much of Nicole Kidman, we should see that much of Jude Law as well. It's only fair."

Being my father, I think he handled it rather well.

Second example: So I'm walking over to Humanities one day after class with Dr. Hochberg to pick up a Fiction Writing assignment from his office. I had been having a few insecurities about my writing style (can you imagine?) and in the name of small talk, felt it appropriate to express them. Dr. Hochberg was quite nice about my random worries, and told me that I don't have to write like James Joyce or Edgar Allen Poe, as I'm still learning, and even Poe and Joyce didn't write like Poe and Joyce when they were starting out.

That's a nice thing to say. You'd think I'd have left it at that. Then again, why stop there? I chimed right in, "Well, as long as I don't end up writing like Charles Dickens I'll be happy."

I should explain that this semester in my novel class we had to read Dickens's "David Copperfield," and it's *horrid*. I *abhor* it. My friend Suz, describing "The Passion of the Christ," said, "It's all, so there's this great guy, and something bad happens to him, and then something worse happens to him, and then the worst thing you can probably think of happens to him, and on and on..." That description is frighteningly similar to my own (er...ok, Holly Brown's) in regards to "David Copperfield." Except David's *not* a great guy, and after 870 pages he STILL doesn't die, which is a real shame, and I was

Like many of you, I'm a cheap college student. This being said, I am constantly searching for a cheaper way to buy items. Usually, this involves searching endlessly through websites to see if they offer what I'm trying to find at a good price. In fact, it's one of my most efficient ways to avoid work. However, that's about to change.

The Ratings
froogle.google.com

Addiction	4, Forget the mall.
Humor	1, No-nonsense.
Navigation	5, Nothing beats Google.
Politically correct	5, Not a problem.
Usefulness	5, You need it.

When I normally search the web, I'm on Google. It's the best search engine out there. Imagine that there was a search engine as good as Google devoted to finding products. Say hello to Froogle (froogle.google.com).

Froogle is still only in its Beta (or testing) stage, but the results are phenomenal. No matter what you type in, you'll only receive hits for online stores where you can purchase a related product.

Each hit comes with a picture of the product. The product title, price, description, and category are also included. It also tells you at what stores the product can be found. You can arrange the results by best match or price range (high to low or low to high).

One of Froogle's default settings allows it to group recognized merchants before it shows you hits found on the web. For instance, searching for "tent" provides you with over 6,000 recognized store hits. These hits are displayed before the other 170,000 web hits. Froogle even provides a disclaimer warning you when you reach the web results. By keeping this setting enabled, you can filter out some of the shadier spots online and look at the more known online stores.

Froogle does not receive incentives from evil, hit-hungry merchants, either. The results you get will always be the most relevant products. Advertisers on the site have their products clearly marked and separated as "Sponsored Links."

Froogle features the same straightforward design that makes Google so lovable. In an internet cluttered with more junk than my dorm room, straightforward search engines are necessary. Now, I just wish Google had a search engine to find the ID card that I lost somewhere in this room.

Scrap Arts Music, *the second to last Artist Series event, was performed on March 20 to a packed audience and ended to a standing ovation. The original, high intensity music captivated the audience. Many were wowed by the energy felt on stage and the elaborate dance moves of the performers. Right before the 15 minute intermission, Scrap invited 25 members of the audience to help them perform "Mass Energy." All ages went up to test their skills.* ***Photo and story: Hannah Rauterkus***

Student exhibit draws crowd

Michelle Calka
staff writer

On Friday, March 19 the Juniata College Museum of Art opened its annual student exhibit.

Photo: Hannah Rauterkus

Senior Rachel Donahue and sophomore Sarah Pierce stop by the student exhibition to admire friends' artwork. The opening of the exhibition was Friday, March 19.

On display are 41 pieces of artwork created by students within the fine arts classes, taught by Alexander McBride, Jack Troy, and Nancy Siegel.

The opening reception drew a large audience of both students and faculty who came to see the best and most unique outcomes of Juniata's fine arts classes.

The works represent a wide range of media, including painting, photography, clay, and stoneware, computer-generated images, and charcoal drawings. Pieces ranged from the functional to the abstract, incorporating a variety of techniques as mediums for expression.

All of the pieces were pre-selected by McBride, Troy, and Siegel. Siegel said, "The wide variety of media displayed in this show demonstrates the exceptional talent of our fine arts students. We are thrilled to exhibit high-quality student work produced by our studios in a museum setting."

Several student artists at the reception expressed excitement at seeing their work on display. Senior Gene Aarnio, whose work entitled "Lessons" is featured in the exhibit, said, "This is the only time any of my work will get to be displayed in a museum-type setting." Aarnio created his incredibly-detailed ninja figurines in Jack Troy's "Beyond Modes" class. Amory Koch, a junior, created her stoneware piece in an independent study with Troy. "I think it's neat that they display student art and not just the permanent collection," Koch said.

The student exhibit was arranged by the museum practicum students, and will be on display now through April 10. The museum is open Monday-Friday 10-4 and Saturday 12-4.

Deloused in the Comatorium

Record review

Matt Soniak
staff writer

The record companies have it all wrong! Flashy packaging, catchy sing-along choruses, and hot, happening, hip-shaking grooves are not the answer to illegal filesharing and plummeting profits!

Holy alliteration, Batman! What *is* the answer, then?

The way to revitalize the music industry, dear reader, is through bands like the Mars Volta, and albums like "Deloused in the Comatorium."

So the answer is bands and records with funny names? No. The answer is awesome bands that make compelling, interesting, and exciting artistic statements. Allow me to explain.

Remember the Verve and their smash hit single "Bittersweet Symphony?" I do; it was a great song, and got a lot of airtime both on radio and MTV.

Remember all those other songs the Verve wrote?

I didn't think so. I'll be honest; I don't remember them either, despite owning a copy of the album "Urban Hymns." The sad fact is that the Verve really weren't all that great, but gained notoriety and your hard-earned dollars by surrounding one awesome song with a lot of easily forgettable filler songs.

Another question: How many of you own albums by the following "artists": Limp Bizkit, Kelis, Ruben Studdard, and Nickelback? Show of hands please. Thank you.

Now, how many of you, despite not owning said albums, still have popular songs from these people on your computer? Despite my not being able to see you, I can imagine there's a lot more hands up than before.

This, ladies and gentlemen, is the problem. Whereas a few years ago the record industry could take a sub-par band like the Verve, with one good song, and con you into buying the whole album based on that one hit single, the digital music revolution has enabled kids to swipe the hits off the Internet and not even have to bother with the rest of the fodder that's on the CD.

The recording industry pulled the wool over our eyes for a while, but now we've changed the rules of the game, and downloaders are getting sued because of it. What the industry needs to understand is that single-driven artists with nothing to offer in the long run are only going to allow the problem to continue. If record executives want some more cash in their pockets, they're going to have to offer consumers a little more for their money, which brings me to the Mars Volta.

"Deloused in the Comatorium," the group's full-length debut, is an album in the grand tradition of Pink Floyd's "Dark Side of the Moon," Led Zeppelin's "IV," and the Beatles' "White Album." Far from one or two good songs and a bunch of filler, the album is dense, complex, and entertaining from the first note to the last. It absolutely begs to be listened to, in its entirety, every time it gets within a few feet of my stereo.

The music itself sounds like a combination of Fugazi's spastic punk rock and Santana's flowing soul. On songs like "Cicatriz Esp" and "Drunkship of Lanterns," flailing bursts of energy give way to smooth blues jams, and the whole occasion is peppered with some of the most emotive vocal lines this side of John Lennon.

These gentlemen can obviously play, but don't flaunt it, concentrating, instead, on making an album greater than the sum of its parts. The songs flow seamlessly from one to the other, many of them dealing with...well I don't know what. The album booklet has no lyrics or info, just mysterious quotes, many of which are in Spanish. This is another strength, believe it or not, of the album, as it allows a lot of dissection and personal interpretation on the part of the listener. More so, one can imagine, than the copy of, say, "The Milkshake Song" that you downloaded.

Two classes are better than none

e Drenner
editor in chief

This year's revival of the All ss Night tradition is more aptly d, "Half Class Night." The or and senior classes valiantly ied on with their skits, poking at Juniata life while the fresh- n and sophomores merely ched.

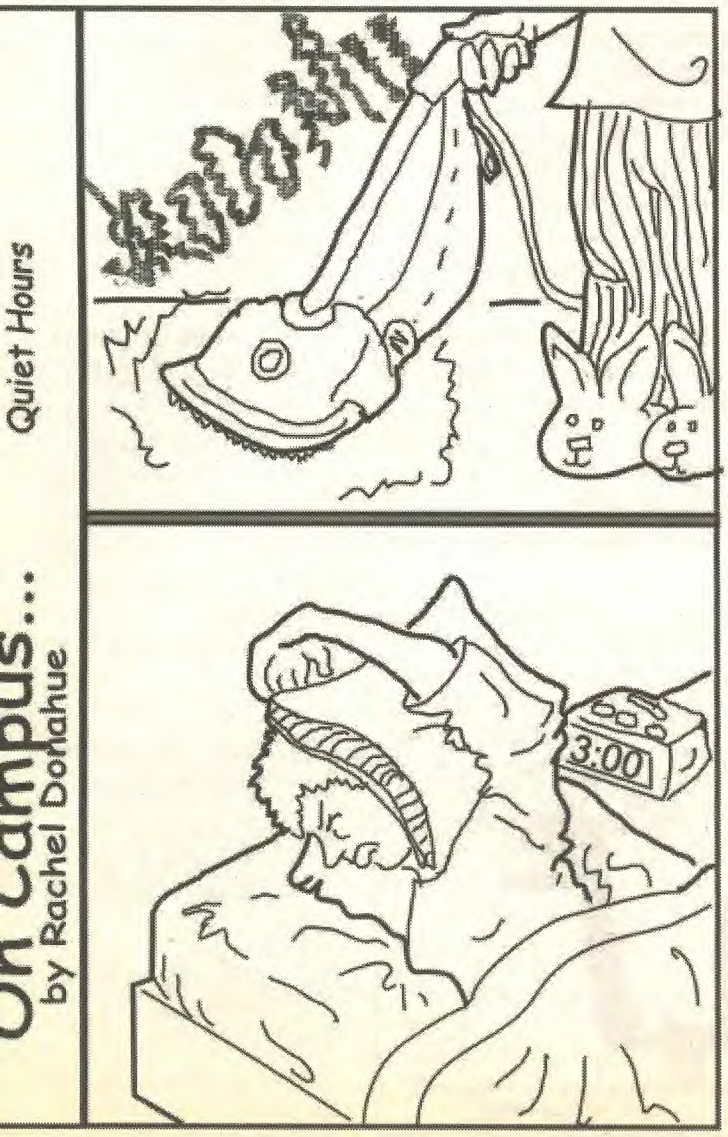
rior to March 13, the All Class nomenon admittedly puzzled As a freshman last year, I rd the descriptions during ori- tion and read about the tra- on, which, since 1938, has ofed campus events and per- alities, according to the ata Activities Board's (JAB) site. Then came last year's or that All Class Night would canceled. I thought, "It nds like a fun tradition... but ere is no longer interest in it, maybe it's time for All Class ht to go."

Sometimes traditions die. It is inevitable. But it is curious why this tradition – more fun than, say, Lobsterfest – would come dangerously close to extinction. What student *wouldn't* like to satirize his or her professors?

A possible explanation is that it takes more effort to organize a skit than it does to eat lobster. Lobsterfest, Mountain Day, and Madrigal are all organized by JAB itself, with assistance from the administration. All Class Night relies on volunteers outside of JAB. The classes (or, this year, some of the classes) pull together the brave people willing to go on stage, subject to applause and jeers from the audience. Scripts are entirely original. I know from experience in Odyssey of the Mind competitions that creative, group script writing is not a simple task.

We have to admire the effort put in by the organizers of and performers in this year's All Class Night. And it is interesting to note that one of the best character impersonations of the night was not of a Juniata personality (unless Conan O'Brien is an alumnus).

But if the inspiration of this year's performance does not heighten future participation, perhaps change of a sort is in order. This isn't the first time that All Class Night's existence was threatened or changed. The front page headline of the May 4, 1978, Juniatian reads, "The Tradition – Saved!!!"



The article goes on to describe the efforts to "salvage All Class Night." It seems that, instead of only skits, the event was more accurately titled, "All Class Party." Held in the gymnasium, the night included dancing, a band, and, yes, college-sanctioned alcohol.

So, there is a precedent for tampering with the All Class Night tradition. Obviously, the night no longer includes a dance party. It also no longer includes a faculty skit, which was present in 1978. Just because these elements happened in the past does not mean they need to become part of All Class Night again, but they are worthy of consideration.

Reducing the skit length might help the lack of student participation. Filling half an hour is a tall task for overworked students... even with the amount of potential material available.

Perhaps the most radical change to aid participation would flex the very premise of the night. Instead of *classes* spoofing Juniata, student groups could compete for the silver cup, either official student organizations or more informal groups organized by student leaders. Some students may identify more with a group they choose to belong to than the year they happened to enroll at Juniata.

These are only suggestions, but I, for one, would not like to see a tradition as fun as All Class Night fail merely because it is inflexible. Sometimes, for a tradition to survive, it must adapt.

Ask President Kepple

"When tuition costs go up, why don't the scholarships go up proportionally?"

Juniata has had a long-standing practice of providing students and parents with what we have termed "The Juniata College Conditional Guarantee." In essence, we have promised families that the need based financial aid they receive from the College for the first year of a student's attendance will be maintained at that value for the three succeeding years (students who have questions about the conditions specified by the policy may contact the Office of Student Financial Planning for details). They don't have to be concerned about arbitrary and unexpected reductions to a student's aid (sometimes referred to as "bait and switch" awarding practices) from one year to the next. For many years, this policy has been a source of some reassurance to families who understand that a college education is a four year experience.

Generally, the financial aid (Stafford Student Loan, etc.) and other programs (monthly payment plan) available to families significantly moderate the affect of cost increases from one year to the next. Families that utilize all of the options available to them usually find that their annual costs remain relatively constant over the period of their attendance at Juniata.

This policy applies to need-based grant funds from the College. However, we occasionally make up the loss of a PHEAA Grant from one year to the next. Sometimes a parent has an income increase of a couple of thousand dollars and, while they still show sufficient need for the grant, they've bumped over the program's income ceiling. But generally the policy works for need-based aid. By the way, the four conditions for continuing need-based aid are:

1. Maintain academic progress
2. File renewal applications by April 1
3. No significant change to family or financial data
4. Special policy with respect to the PA Sci-Tech program

With the exception of our full tuition room and board scholarships and our full tuition scholarships, merit aid continues at the same amount as awarded in the freshmen year. These are very generous awards and the College makes it clear that they remain the same throughout a student's four years at the College.

"Why does Spring Break occur in the winter? Why don't we have it later in the semester?"

We have two semesters. The first we call fall and the second we call spring. Maybe they are not the best names, but that's what they are. The break in the semester traditionally occurs mid-way through. Since it is the break for the spring semester it's called spring break. It could probably be better called spring semester break. It would probably interrupt the academic calendar more if we had it later (say in April) in the semester.

The Juniatian accepts questions for the "Ask President Kepple" column. Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Questions will be considered based on relevance to the campus community.

The Juniatian accepts letters to the editor in response to articles and editorials and to address the campus community. Letters will only be refused due to space limitations. LETTERS TO THE EDITOR

I just finished reading "Students, Modernity and CA" and am rather disappointed with the bias and extremely limited scope of the article. Only two student perspectives were used, both were sophomores, and *both* of them had negative experiences. This combination gave an impression of Cultural Analysis that was poor, misleading, and a wholly inaccurate representation of student opinions on CA. Most importantly, I thought it was evident that the students interviewed, and perhaps many Juniata students, fail to notice or appreciate the overall goal of CA. Indeed, there are goals stated in the course catalog and in online descriptions and I believe that the professors accomplish these goals; however, they do so in ways that are not completely obvious to the student. If the methods were obvious, this would require no thought on the part of the student, thus defeating the learning process.

The fact that CA I courses are team-taught is meant to be part of their appeal; how can one person with one viewpoint effectively talk about something as broad as culture or modernity? I fully agree that arguments among faculty are distracting, but this issue is currently being addressed in the CA forums. The value of the course lies in the multiple perspectives and areas of expertise brought to the course by professors from various disciplines. Having multiple perspectives helps us see that many issues or ideas are multi-faceted and do not affect merely one area of society or study. Further, the idea of a liberal arts education is to expose oneself to numerous subjects, not just one, and especially in a general education course, one should not expect the subject matter to be limited to a single area of emphasis.

CA I can certainly be a challenging course if you are not prepared to think on your own. Indeed, if you are not willing to engage yourself in the class then you will gain little from it, which is *not* the fault of the faculty! There may not be a definitive answer to questions raised in CA I, but perhaps this is the point; not that we must find an answer, but that we must broaden our minds and employ our thought processes in search of one.

Catherine J. Sheely
Class of 2004

This is in response to the Feb 12 article that touched upon the significance of EO. I feel that Juniata has both a philosophy and a culture that is truly unique from those of other universities, a fact made clearer to me now as I spend a year away from campus studying in an altogether different environment. I think EO is key to the integration of students into these aspects of Juniata, as it is meant to introduce incoming students to both of these things.

I want to point out, however, that it is NOT meant to force or brainwash students to adopt the philosophy and culture, but to show them that they exist, what they consist of, and how a student can become a part of these things (whether becoming a part means helping them continue along their current path or making them evolve into something else).

One aspect of the JC philosophy was mentioned in the article, that students leave with 'a passion for knowledge, culture, and competent writing and comprehension skills.' EO *does* cultivate these things, in my opinion. While it's true that the "social lives of students... shouldn't be evaluated or graded academically," it seems to me that students, indeed, aren't graded this way; students are graded on their *ability to write* about what is discussed in the class. This way, EO is given some credibility and students are introduced to JC without allowing the class to be little more than an after-school special. Students also learn to write and communicate in a manner aside from the textbook & research manner that, if they aren't already familiar with it, they will learn and practice in CWS (and then, in most of the other classes that follow).

What I felt the biggest problem was my freshman year was that too many EO instructors made nothing of the class and dismissed sessions after 15 minutes. This led to other classes wondering why they ought to care for the class at all. EO needs to remain linked to CWS and, while I believe instructors ought to be free to introduce their students to JC in their own way, there still needs to be more cohesion in the goals of the course so that it does not become an aimless joke.

Paul Blore
Class of 2005

Because of recent events I felt compelled to write the student body a letter- a challenge. This past week one of our own was attacked in a racial way. As a student leader on this campus I must take a stand and say this **CANNOT** be swept under the rug. It is time for this campus to take a stand and be the campus we claim to be.

In the first place, I think it is a shame I even have to write this and I am honestly disappointed in this campus for letting this happen once again. Because it has, it is time for this campus to come together and take a stand on this issue.

Earlier I mentioned a challenge. My challenge to the racists, the homophobes, and the misogynists is to pack up and leave this campus. Leave this campus tomorrow. Go into the real world and say your opinion out loud; scream it from the tops of your lungs. It is easier to say your opinions here where it is "safe" in Central Pennsylvania than to utter your beliefs surrounded by those who differ with your views. Leave your false sense of security behind on the Juniata College campus then say your opinion and see who you have standing beside you at the end of the day.

If you don't leave, fine, we can handle it. But know this; do not hide your opinion behind closed doors. Let it be known loud and clear, come and say it to our faces. A few clubs on this campus will be holding an open forum in the upcoming week to discuss events such as this and if you feel you have a viable thing to say, come! Plain and simple- just show up. Do not hide behind the walls of your room; do not hide behind the comfort of your friends. It is easier to say a racist comment to one person standing by themselves than it is to say to a group of your peers. And we are not just talking to those directly involved in the incident. We are talking to anyone who heard about the events or saw the e-mail sent out to the campus and looked upon it with apathy and did nothing or felt nothing. Everyone's views will be heard at the forum, so come with those opinions that are crucial to whom you are. Information about the upcoming forum will follow in the coming days.

This is the challenge I lay before my peers, the people who surround me everyday. If you're up for the challenge, I applaud you. But if you continue to hide, one day you will eventually be seen for whom you truly are and that day is today.

The winning streak continues

Danielle Hart
staff writer

On March 20, the men's volleyball team captured its ninth straight win in its match against Vassar. The Eagles easily handled the Brewers in three games 30-14, 30-14, and 30-22. The win brings Juniata's overall record to 11-3.

Strong serving from senior Brian Dinning gave Juniata a six-point lead at the beginning of game one. Strong attacking from freshman Glenn DeHaven and Dinning kept the Eagles on top and a Vassar error finished the game.

The stomping in game one brought younger players from the bench for game two. More strong offense early from Dinning gave Juniata a 13-4 lead. A block from freshman Dan Rapp and sophomore Cordt Withum terminated game two 30-14.

In game three Vassar jumped to an early four-point lead off Juniata ball-handling errors. But a block from freshman Derek Stanley and Withum tied the game at seven. The lead bounced back and forth in the middle of the game. But the Eagles pulled ahead with a six point serving run, including three aces, from sophomore Matt Springer. Juniata terminated the match with a kill from freshman Mike Fisher.

Photo: Hannah Rauterkus

Jeremy Barndt (6) and (8) go for a block over Vassar on March 20th. The game was a swift victory for Juniata.

Fighting for its fifth win in the EIVA Tait Division, the Eagles topped St. Francis in a tight five game match on March 17. Juniata took the victory with the scores 30-20, 31-33, 30-24, 27-30, and 15-10.

"We've really controlled our passing when the game is on the line, and Ricky has been doing a masterful job of distributing the ball once we get it to him," commented sophomore Tim Cole.

Junior Ricky Ziegler directed the Eagles offense against the Red Flash with 65 assists. Dinning led the offense with 23 kills and recorded seven aces for the match.

The men's volleyball team's slow starting tendency sent them into a four game match with rival New York University on March 13. The Violets took advantage of Juniata's rough beginning and won the first game 30-27.

The Eagles then settled in to the match with a stronger defense and offense, winning the next three games 30-27, 30-24, and 30-22. Senior Ryan Genova continues to front Juniata's offense, while Cole leads the defense. Genova pounded 25 kills for the night while Cole picked up 13 digs.

"If we can serve well without too many errors and pass well, we are unbeatable," said Cole. "Lately we've been doing just that, so we've been winning."

This match was no different. Consistent passing, serving, and blocking continues to give Juniata the upper hand over tough teams. The Eagles recorded 11 blocks and seven aces on the match.

Previously, against Rutgers-Newark, Juniata allowed the first two games of the match to slip through its fingers. The Eagles fought back and won games three and four, but the momentum was not enough. Juniata fell in a tight fifth game with the score 16-14. The Eagles look to avenge this loss against the EIVA Tait rival on March 27 at Rutgers-Newark.

Come out to see the team's last two regular season home matches on April 2 and 3.

Solid start for baseball team

Tommy McConnell
sports editor

What a difference a year makes.

Last season, the Juniata baseball team was not considered a serious threat to make the playoffs. After a strong 2003 season that saw the Eagles miss the postseason by a single game, Juniata earned the respect of its fellow MAC opponents. The Eagles were picked to finish third in the preseason polls, even garnering one first place vote.

Juniata, though young, returns nearly its entire starting lineup and pitching staff from last year. It will not be uncommon to see six, seven, even eight sophomores in the Juniata starting lineup. So far, the young Eagles have lived up to the preseason expectations, going 3-1 in the MAC with a huge home win over preseason number one Messiah.

"I think we've performed well to start the season," said pitcher Drew Michanowicz, "We are well on our way, but there is still a lot of baseball to play."

In a recent outing, a double header at home against Johnson & Wales, the Eagles managed a split. Juniata trailed most of game one, but a three run seventh inning allowed JC to overcome a two run deficit for the win. The inning saw three hits for Juniata, including a two RBI single from sophomore Troy Beaver. Sophomore Will Russell capped off the comeback with a walkoff RBI single to give Juniata a 4-3 win. Michanowicz got a no decision while striking out seven.

Photo: Hannah Rauterkus

Until their field thawed out Kodi Hockenberry (OF) and teammates warmed up on Oller Lawn.

Juniata could not duplicate a comeback in game two though. A four run third inning by the visitors would be too much for the home squad to overcome.

Juniata started the season by traveling to Florida for nine games. They finished 4-5 overall, but went 2-1 in the conference, with all three MAC games against Moravian.

In their first meeting with the Greyhounds, in game one of a double header, Juniata relied heavily on their ace Jayme Fye. Fye pitched seven solid innings, allowing only one run on five hits and striking out five. All of Juniata's runs came in the fifth inning. Russell led with a solo homerun. Fellow sophomore David Saintz followed with a single, eventually scoring on an Adam Camberg single. Mark Frailey then scored Walt Goedkoop on a sacrifice fly. It was all the insurance Fye would need.

For his effort, Fye was named Commonwealth Conference Pitcher of the Week. "Its nice to be recognized" the junior commented, "but, all that doesn't really matter if we don't win the conference this year."

In the second game, Juniata starter Drew Michanowicz held Moravian hitless for the first four innings. This time, however, it would be Moravian who would go on a fifth inning run. The Hounds scored three runs in the inning. Juniata would answer Moravian in the top of the seventh. An error, hit batter, and a Zach Sternberg single loaded the bases with two outs, bringing centerfielder David Saintz to the plate. The sophomore would come through with a clutch two-run single. The rally ended when Fye was thrown out at home. Juniata errors in the eighth would cost them the game, as they fell in extra innings, 7-3

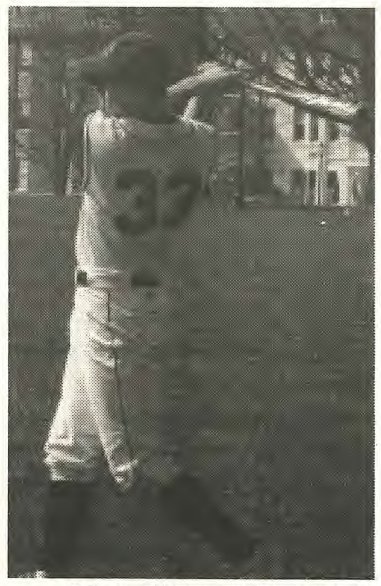

Photo: Hannah Rauterkus

Senior Adam Camberg (C) works on a picture perfect swing in a practice session on campus.

Juniata bounced back the next day, picking up a 6-5 win on a bases loaded walk off single from Senior Matt Garner. Juniata then carried the momentum from

Women's swimming breaks record at ECACs

Ryan Genova
staff writer

The Juniata Women's swim team sent five members to the ECAC Swimming Championships. Senior All-American Honorable Mention winner Kim Allen, sophomores Kathy Trainor, Amy Hanson, Andrea Nulton, and freshman Amy Sutherland made the trip to the University of Pittsburgh from the 27th-29th of February. In those three days, Juniata swimmers matched up against some of Division I's top schools and top swimmers, and still racked up a total of 68 points in competition.

Individually, Kim Allen saw the most success in Juniata lanes. Allen earned seventh-place in the 200-yard breaststroke and 11th in the 100-yard breastroke. Trainor finished seventh in the 100-yard freestyle.

Relays really put the Eagles on the board with three strong showings. Allen, Trainer, Nulton, and Hanson teamed up to earn a 10th-place finish in the 200-yard free. Juniata was also good for an eleventh-place finish as Allen, Trainor, Hanson, and Sutherland managed to take home a new school record with a 1:53.15 time in the 200-yard medley relay.

"It was good to break [the record] because the former relay had girls that are very good swimmers in Juniata swimming history," said Head Coach Brian McGrath. "It's good to know our swimmers are matching their accomplishments and making the top marks even faster."

Allen, Trainor, Nulton, and Hanson finished with a 12th-place finish in the 400-yard freestyle relay.

In such an intense atmosphere as the ECACs, it's easy for athletes to crack under pressure. Taking your mark next to some of the top swimmers in the nation is a nerve-wracking experience for a small-school athlete. Knowing this, Coach McGrath created a mindset for his swimmers that would put their nerves at ease and allow them to give their best.

"The Division I schools just wanted to beat each other. We went in to have fun and swim well with no pressure on our backs. Sure enough, with no pressure we did *really* well," said McGrath.

Hanson added, "We were swimming against Division I teams, and that's something you never get to do. We hung in there, and we got noticed. A lot of people were surprised that we were a Division III school."

The season will come to an end with Kim Allen's performance at the NCAA National Championships. Allen, who competed in the meet as a freshman, looks to win one more for JC.

Softball sets a postseason goal again this year

Robb Patty
staff writer

Last season the Juniata softball team finished the season with a 19-11 record. With the loss of just one player from last year's team head coach John Houck is optimistic that this squad has what it takes to advance past the first round of Commonwealth Conference postseason play. He stated, "We have the potential to be back [in the postseason]. Our three freshman pitchers are now sophomores and defensively we are very solid."

The season's home opener for the Eagles was a double header against non-conference opponent Washington & Jefferson. It did not take long for the offense to get going as they plated five runs in the bottom of the first inning. That would be all the Eagles needed, as they would score six more runs throughout the game and win easily by a score of 11-1.

Sophomore pitcher Lizzie Bartosik held Washington & Jefferson to just four hits and one run in five innings of work. She also picked up her second win of the season, while striking out three. Freshman Julie Hatfield was 3-for-4 while scoring three times to lead the Eagles' offense. Senior Becky Herr, junior Allison D'Ambrosia, and sophomore Leann Leymeister all had two hits apiece to help pace Juniata's offensive attack.

Game two proved to be a defensive struggle until the bottom of the fifth when the Eagles broke a 1-1 tie. Senior Amy Gable started off the three run inning with a single. Then after stealing second she advanced to third on a sacrifice. Gable would then score on senior Sarah Patterson's squeeze bunt. The Eagles would go on to score two more runs in the inning and win game two 4-1.

As conference play approaches Coach Houck knows that his team is in a tough conference but is looking forward to the competition. He commented, "The Commonwealth Conference is the toughest conference, period, in Division III. Each year one or two teams are nationally ranked and to get a .500 record is pretty good."

Juniata will be in action at home on Saturday when they take on conference foe Lebanon Valley. Game time is schedule for 2:30.

Photo: Hannah Rauterkus

So far this season, the Juniata softball team's biggest opponent has been the weather. Snow has forced the team to practice daily on Oller Lawn.

Weather or not: Outdoor track starts new season

Cara Yancey
staff writer

Neither rain, nor snow, nor sleet, nor hail would deter these U.S. postal inspired athletes from practicing. I would drive past in below freezing temperatures, while the relentless distance runners would, "keep on, keepin' on," as Joe Dirt would say. However, the weather now has an effect on whether or not Juniata's outdoor track team will compete. Saturday March 20, the first outdoor track meet at DeSales University was cancelled. Sophomore Adam Loser hit the nail on the head suggesting, "The biggest challenge has to be the weather."

The track and field team finished its indoor competitions, which provided a great foundation for the outdoor season. "The indoor season gave us the opportunity to look at where some of our competitors are and also showed us where we are at this point in our training," said senior Stefanie Rynkewitz. The preparation focus led to the number of wins being unimportant to those competing.

"To tell you the truth, nobody really pays attention to the [team] scores. The indoor season was about setting personal records," said sophomore Jennifer Marshalek.

And everyone did set personal goals, especially Rynkewitz saying, "I want this, my last season, to be my best season."

Junior Kira Troutman added her goals of, "working towards winning MACs in the javelin and heptathlon. Then, I'll be taking it a step further with the National title."

Not only does physical ability help, but certain mindsets also have the power to place you well above your competitors. Coach Cutright believed a "desire to do well, an understanding of what it takes to improve, and a commitment in and out of practice," constructs a great athlete. These great athletes all had a place at the indoor MACs, where Juniata moved up a notch from eighth in 2003 to seventh place.

Next up is Susquehanna Invitational at Selinsgrove, Pennsylvania, starting at 9:00a.m. this Saturday. To follow it up on Saturday April 3 is the Western PA Championships in Pittsburgh, beginning at 10:00a.m. Coach Cutright continues to work on scheduling a home meet in April.

Baseball *(continued from page 13)*

Florida back to Pennsylvania when Messiah rolled into College Hill. Fye returned to the mound to pick up his second win of the season, allowing three runs over a solid eight innings.

With the score tied at three in the eighth, Moravian had a runner in scoring position with no outs. Fye calmly retired the next three batters to end the inning. Juniata then scored the go ahead runs in the bottom of the eighth. The Eagles scored four runs in the inning, with the back breaker being a two-run single from Will Russell. Juniata would hold on for a 7-4 win.

Said sophomore David Saintz, "It was a great win, especially this early in the season. It's a great way to start conference play."

Juniata plays at home this afternoon in a double header against Elizabethtown at 12:00 and 2:30. They play Lebanon Valley at home on April 2 at 3:00.

Women's lacrosse starts first season

Caitlan Zlatos
staff writer

When you're walking outside on a spring afternoon, you may notice several club team sports in action. There's men and women's rugby. There's ultimate frisbee. And then there's lacrosse. You may have noticed the Men's Lacrosse Club playing around campus—they've been a club for many years—but where are the women lacrosse players? Look no further—they have arrived, and have begun playing their very first games this season.

Women's lacrosse at Juniata may not be a varsity sport, but the club is on the rise. After two years of organizational work, the Women's Lacrosse Club has finally played its first scrimmages. On Saturday, March 13, the women traveled to Shippensburg University to play with another team for the first time. And we're not talking about another club team—the Juniata women played Shippensburg's varsity Division II team. On Sunday, March 14, the women traveled to Lycoming College to play their varsity Division III team.

With about half of their squad being beginners, Juniata's club lacks experience. The scrimmages were not played in a regular format, as the focus was on teaching the sport to new players. There were no official referees and score was not kept. Play was occasionally stopped to explain techniques and positioning.

The weekend turned out to be a great opportunity for the new players to learn the sport by experiencing game situations. Junior Nikki Bressler said, "I've never played before and I'm having a lot of fun learning the game. It's great to get out and play against other teams."

During the 20 minutes of full field play with Shippensburg, sophomore goalie Heather Hassel made many excellent saves for Juniata. Other lacrosse veterans provided positioning direction for the new players, with defense led by sophomore Lauren Welsh, midfield by freshman Catherine Hoyt, and attack by sophomore Karin Brown. After full field play the team worked on offensive techniques.

The 7v7 format at Lycoming gave Juniata's club a chance to try out both its offense and defense on a half-field. Juniata's defense limited Lycoming's ability to score, and JC's attack scored several goals. Those scoring were Brown, freshman Meghan Ruffner, and myself.

Beginner players were enthusiastic about the experience. Junior Emily Blejwas said, "This is turning out to be so awesome—I am learning so much about the game and meeting a lot of new people. There is always encouragement between the players and there's already a sense of unity."

Junior Sean Scheler, who traveled to Lycoming with the club as a fan (and who is a member of the Men's Lacrosse Club), noted that "the lacrosse programs at JC are really starting to take shape—the women's club has really developed into a strong team."

The club is currently under the leadership of Brown (president), myself (treasurer), and Advisor/Coach Caroline Gillich. While the club will probably not be able to host any games this season, it will be traveling to Lock Haven on March 27 for a 3:30 p.m. game and Kutztown University on April 24 for a game at 12:00 p.m. Other scrimmage/game dates are in the works.

Keep your eye out for women's lacrosse and for the men's club team, who will host several games later this spring.

Men's tennis ready for spring

Ryan Genova
staff writer

The Juniata Men's tennis team is confident that this spring will bring some pleasant surprises. In their third season as a returning program at Juniata, the nine total members are set for a slightly shortened, but intense 2004 campaign in the Commonwealth Conference. The team will play ten matches in a three and a half week span from mid-March to mid-April. Despite the difficulty in finding suitable weather conditions for practice, they will look to pick up their play where they left off one year ago.

The team has a nice blend of experience with three seniors and solid returnees such as MAC Rookie of the Year Neil Eicher to go along with a promising freshman cast. "We won't have a true standout, but we won't have any low-point players either," said Head Coach Klaus Jaeger.

Jaeger, who coached the men's program in the early 90s, will again step up as the Eagles' head coach this season. "It's a very homogeneous group. Team spirit is impressive," said Jaeger. The players seem to feel that Jaeger is a perfect fit and a great personality to have around the court.

"Klaus is our motivating force. He's the man," said senior co-captain Dave Bullock.

In addition, team chemistry will play a big role in the team's success. "We have a lot of team camaraderie, that's a strong point of ours," said Bullock. "I think we have the ability to surprise some people if we work hard and put our talent together."

As always, a strong showing in the MAC Championships is each player's goal. Last year the team sent four members to the Individual Championships, and saw Eicher take home a first-round win. This season the squad expects to be even more competitive come playoff time. And, barring any further wintry weather, they are right on track to do so.

As snow melts, rugby begins

Mary "goblinhats" Gardiner
staff writer

They play and practice with absolutely no protection; they destroy freshmen in fall semester's Storming of the Arch. They are infamous for their debauchery and they even have their very own "hooker." They are the ruggers of Juniata College, and they're ready for the spring season.

"We ended the fall season with on a real strong note against Cal-U," said Corey "Roids" Duvall, the men's rugby match secretary. "We look to continue that record."

The women also ended on a great note, with a record of 3-3. "We lost to IUP and Pitt last fall, because they're such big schools. They show up with fifty or sixty girls," said Lindsay "Hooker" Clark, the women's rugby president. "That's our biggest disadvantage, the numbers."

At the same time, the men's team was fortunate with their numbers this year. Says Dan "D" Healy, men's rugby president, "We've had our biggest turnout in four years, over forty kids."

Duvall agreed saying that the team is "growing, both in numbers and intensity."

That growth might be attributed to the spread of the reputation of the club sport. "It's a relaxed atmosphere," according to Healy. "It's a cooperative effort by upperclassmen to teach the rookies and pass down the legacy. It's entirely student run."

For both the men's and the women's teams, this is certainly true. Players come out whenever they can. "It's rough," says Healy, "We have a lot of biology or chemistry majors that have labs in the afternoons, and they try and run home and come out whenever they can, but it's definitely rough." Player Matt "VD" Sheley practiced last week in jeans and dress shoes, coming to practice straight from lab.

Of course, everyone on the team—and everyone on campus—is excited for pig roast, coming up on April 3. This event is especially significant to the men's rugby players, who play their alumni game that afternoon.

continued on back page

THE RANDOM ELEVEN

Matt Russell, layout editor

Conveyor belt technology: The parent of a prospective student was in line ahead of me to return his bowl and glass in Baker. He sat them directly between the green belts that carry the trays back, and paused. After several seconds of watching them not move, he turned to me and said, "Guess I need to put them on a tray, huh?" No, just give it another second, really.

Res. Life reminders: It was with both glee and disbelief I learned this. The lack of e-mail reminders regarding roomdraw since the last issue of the Juniatian is directly related to the jabs they received in my column. Not even **I** take this column so seriously. It amuses me more than the original item did.

Eleventh hour addition: An e-mail from Mr. Launtz entered my inbox just this very moment. How did he know I was writing the Random Eleven? The e-mail reminds us that the students who will not be returning next year may not "participant" in room draw. I'm sure the students that won't be here will miss not having rooms.

Persistent POE problems: My POE was only 2 weeks old. Then I found some of the courses in it would no longer be offered. Since I used a pre-made one, I went online to alter it and found that the POE had completely changed. Fifteen e-mails later, I found that it was not the correct POE and was given one that was only slightly different than the original. It then took a 90 minute meeting with my program advisor just to sort out the changes (thankfully her patience was greater than my own). This is me shaking my fist at everyone responsible.

The one that got away: A couple times each week, someone walks up to me and says, "Oh Matt, I had this great idea for the Random Eleven... but I forget it now." Gee, thanks.

A dorm by any other name: This past month we received an e-mail requesting info about an event near the Long-Miller Residence. "What?" I asked myself. "Did we buy another house on Mifflin Street?" I kept reading and it was referred to a second time as "East." East will always be East, and North will always be North. We can continue the charade that dorms are named after donors, but let's not try to use them in practical context. Ever.

Russell's First Law: The most likely place for a professor to stand is between you and the notes you are trying to copy.

Fire alarm lunacy: Someone in TNT cooked a soft pretzel so long it charred and created enough smoke you couldn't see all the way down the hallway. That makes my head hurt so much I'll just skip to the next item.

Fire alarm solution: There was also a false alarm in South last week. As we stood around outside, I thought of an idea that would both give us something to do while waiting out there and decrease the frequency of false alarms. Whenever there's an alarm, we all go outside and line up. Then, whoever the idiot was that set off the alarm would have to be pelted by snowballs. Given the weather, we could probably continue this through summer. Problem solved.

Staff shout-outs: Dial the tech Help Desk at x3619 and you'll often be greeted by it's queen, Heather Bumbarger. She takes all tech challenges and never fails in her cheerful replies. Thanks Heather! I also have to point out that despite my relentless jabs at his e-mails, I appreciate Tim Launtz taking care of business down in Res. Life. His recent application for improvements in South was similarly satisfying. Speaking of which...

Of mulch and microwaves: Last issue, there was a long list of planned campus landscape improvements in the "Ask President Kepple" column. This week, I found out that South has been denied new lounge furniture and a kitchen. South continues to have septic sofas and the distinction of being the only dorm with no kitchen, and yet we're more concerned about our shrubbery? Ni!

College Dementia

continued from page 9

profoundly and vindictively disappointed by that. As I walked back to Hochberg's office I felt the need to tell him so, in not so many words. He smiled and was very polite and even waxed sympathetic as I described this book as something somewhat short of satanic. But in the name of fairness I quickly added that my great and patient roomie Becky loved it very much and was ever trying to get me to finish it so that we could talk about it, instead of letting me let sleeping dogs lie.

Dr. Hochberg listened with a funny little smile and finally responded, "Well, you can tell your roommate she can come talk to me anytime. I'm quite the Dickens fan myself."

Uh, oops?

I took my assignment, thanked him, and scurried off to lunch. Yes, I'm sure he agrees with me: as long as I don't end up writing like that *classic novelist* everything will be okay and the world will keep turning as usual.

I'd like my feet back, please.

Rugby's new season

continued from page 15

The women's rugby hasn't been able, so far, to get an alumni game together, however. "It's hard to find female alumni. They get married and have babies, and it's tougher to play such a rough sport when you're pregnant or taking care of little kids," joked Clark.

And it's certainly a rough sport. Last season, when player Kevin "Par" Fasick broke his nose, he simply used tampons to plug it up, covered it in tape, and continued playing. Players have gone in with dislocated shoulders, injured ankles, or gashed heads. "The fact that we play without pads makes me feel tougher," said John "Bort" Vargo, a rookie who plays the hooker position.

Perhaps it's this feeling of roughness that brings such fraternity that the ruggers enjoy. Said Vargo, "I really enjoy it because of the closeness. Because we're all brothers in rugby."

Music review

continued from page 10

The Mars Volta are a great band, and they write some awesome songs, but their real strength is their ability to craft an incredible album that is epic, brilliant, and can actually be called a work of art. Go out and *buy* this, sit down, and listen to it over and over again. Then tell the record executives to send a few more records like this out your way.

JUNIATIAN

HUNTINGDON, PENNSYLVANIA

APRIL 8, 2004 | JUNIATA COLLEGE | VOLUME 85, ISSUE 11

Students, faculty encourage discussion of racism

Rachel Donahue
staff writer

By now, everyone has heard about the racial confrontation which happened on campus two weeks ago. Many students have expressed not only disgust but also shocked surprise about the issue. Prejudice on our small and friendly campus? Yes. Racism is everywhere.

Assistant Dean of Students Dan Cook-Huffman noted that, "Ultimately, despite the personal tragedy, which is horrible, it's a good thing to have this issue out in the forefront." People are now aware that discriminatory language can happen anywhere.

On March 25, students and faculty were invited to a forum to ask questions and offer opinions on the subject.

The meeting started at 8:30 p.m. and was led by a mixed panel including Beth Williams and Dan Cook-Huffman, as well as juniors Marissa Gunn and Alcione Frederick, and senior Sara Cain. The forum did not focus on the incident. Instead, Frederick and Gunn encouraged those present to ask any questions about what it is like to be a minority at Juniata, and were very open about their experiences.

Gunn and Frederick both said that, although they don't feel threatened on campus, coming to Juniata definitely made them more aware of their heritage.

"Every day I realize the fact that I'm black, and there are a whole lot of people here who aren't," said Gunn. She was quick to point out, however, that the experience is "positive and different" and has helped her to know herself better.

A great deal of time was spent discussing the low number of minority students on campus and what we as a whole could do to promote sensitivity to diversity. Before the Office of Diversity and Inclusion came into existence two years ago, the College had a Diversity Task Force, which Gunn remembered having an initial goal of enrolling five African-American students for the next academic year. Although the goal may have been modest, that it was accomplished proves that the school can increase its diversity.

Junior Denique Conner recalled thinking, upon her first visit to campus, "Oh my God! You can't have a college without black people! I can't be the only African-American coming to Juniata! Then I found out I was. [...] I think the Office of Diversity – which didn't [used to] exist – is something we should be proud of."

Strides have certainly been made since Conner's first visit – considering how few minorities were on campus just four years ago. Since then, our diversity has increased several hundred percent.

However, such a success does not mean there are no problems. Frederick gave one of them: "People have said, 'hey, weren't you in my class?' and I'd think

National event coming to campus

Danielle Hart
staff writer

Every April Juniata hosts the state tournament for Science Olympiad. Junior and senior high students from across Pennsylvania fill the campus, ready for competition. This year Juniata not only hosts states, but also the national tournament for Science Olympiad on May 21 and 22.

The Olympiad brings together students with a love for science. Each team is comprised of 15 students who compete in a series of 23 individual and team events. Some of these events revolve around bottle rockets, egg dropping, forestry, meteorology, and fossils.

These teams compete first in their respective state tournaments. The two teams with the highest scores at the end of each state tournament will move on to compete at nationals. The National Science Olympiad brings together students from 42 states around the nation.

"We are the smallest school to ever host National Science Olympiad," said Dr. Ronald Pauline, education professor and site director of the National Science Olympiad.

In the past, colleges and universities like Ohio State, Michigan State, and North Carolina State have hosted the event. But Pauline said, based on successful state tournaments, Juniata will be able to host this national event.

Photo: Hannah Rauterkus

The organizers of the National Science Olympiad: Colleen McLaughlin, Prof. Jamie White, Prof. Ron Pauline, Chad Herzog, and Tara Fitzsimmons.

Pauline considers this event a great opportunity for the college. National Science Olympiad will bring in the best science students from across the United States. Students will have the chance to see what a unique campus and learning atmosphere Juniata provides to its students.

The National Science Olympiad will be the largest event in Juniata's history. Approximately 3,500 people, including students, coaches, families, administrators, and media, will flock to the campus. Dorms, hotels, the Raystown Lodge, and even hotel rooms in Lewistown and Altoona are already booked solid for the weekend of the event.

Therefore, volunteers are in great demand. The National Science Olympiad Volunteer Coordinators, senior Andrea Greenleaf and senior Dana Groff, hope to recruit around 350 volunteers, who will be needed from May 17 to 24.

"We have a variety of volunteer job opportunities and are looking for anyone that is interested in helping," said Greenleaf. Duties will include anything from passing out ice cream, to seating students at opening and closing

Which departments really are overworked?

Mary Gardiner
Nate Thompson
staff writers

Over the past few weeks, much talk has been made of CWS, CA, Chem-Bio, QM/QS and FISHN at a series of faculty and student forums. Some of the discussion even appeared in recent issues of the Juniatian where staff writers looked at how offering required courses to students across disciplines can hamper the flexibility of specific departments. Such conversations prompted more general questions: Which departments on campus really are just barely managing, and which aren't? Which departments *really* need more faculty?

Certainly CWS presents a problem for the English department. Last fall, 22 sections of CWS were offered. Over half of those sections occupied English professors and lecturers. Yet the 5 full time faculty members still managed to offer nine other courses that English and Secondary Education majors needed to fulfill degree requirements.

On the other hand, the Chemistry Department, which has eight faculty members, only offered four sections of its first requirement, O-Chem. The companion Chem-Bio lab was taught in two sections, but shared by seven faculty members. Aside from that tandem, the department offered just ten other courses for Chem majors.

Although contacted for comments on why the Chemistry Department seems to offer fewer courses than other departments even though it boasts one of the highest number of faculty and adjuncts on campus, only one professor responded and could not meet before this issue went to press.

Chemistry does not stand alone, though. The Biology Department shows a similar disparity. One biology professor can have just one or two sections of a Bio I or II course. Also, because of the bio discussion sections, biology professors only need to teach one additional course other than their Bio I or II classes.

The bigger issue here, in terms of looking at which departments are severely overworked though, isn't correlated solely to number of courses offered. Grading also factors heavily into a professor's time commitment.

In this area, again the departments within the Humanities and Social Sciences appear to carry a larger burden than their counterparts in the von Liebig. For example a history professor may have to read over 80 essays which require extensive feedback without help, while biology and chemistry professors often have help grading just over 100 multiple choice tests.

Of course, Juniata College is known for its prestige in the sciences. According to the website, 21% of students enter JC as Biology/"Pre-Health" majors. So chemistry and biology professors do teach a good number of JC students. So shouldn't the most popular departments receive the most faculty positions?

It depends on how you define popular. Consider the Philosophy Department. There are only 25 philosophy majors, but the courses offered from this discipline remain a necessity for a liberal arts education. And it's a *popular* necessity too. There can be anywhere from 50 to 150 students enrolled in philosophy courses in one semester. This spring, there are 139 people taking courses like Chinese Philosophy and The Ethics of Health Care. Students in those classes come from all disciplines across the curriculum. With only two professors in the department, handling at least five courses a semester *plus* CWS and CA courses, it seems as if the Philosophy Department is really stretched.

"The Philosophy Department is certainly understaffed," explains Don Braxton, chair of the Religion Department. "But it's a catch-22. If you don't have the students, then you don't need the faculty. If you don't have the faculty, you won't get the students." Are 150 students in two courses enough to show a need for more professors? It is a legitimate question.

This crunch is not only limited to the Humanities, however. For example, look at the Psychology Department. This semester 275 students are enrolled in the 13 courses that the department's five faculty members offer. In Psychology though, two professors, Mark McKellop and Kathy Wescott, share one full time position. Should 300 level courses at Juniata College consist of 50 or more students because of a faculty crunch? They do in the Psychology Department.

The Mathematics Department is beginning to feel the pinch of serving more and more students without a growing faculty base as a result of requirements for Quantitative Methods for those who don't wish to take both a statistics *and* a mathematics course

Bio and chem students are also required to take Calc I, which pulls on the understaffed Math Department. "We're starting to feel rather stretched," said Dr. John Bukowski, the Math Department Chair. These requirements ensure that they see every Juniata graduate at some point with only six professors. Again, does servicing *every* Juniata student before graduation provide enough of a need to compel the administration to hire additional faculty members?

That's really the ultimate problem: How can Juniata deal with such aforementioned disproportion in staffing and course load? Fixing the staffing problems in different departments will be fairly difficult, especially if we expect those problems to be resolved soon. Yet, don't students in every department deserve to have an ample and representative amount of faculty to mentor them through their Juniata education?

The Juniata Phonathon

Meredith Pink
staff writer

Have you ever found yourself zoning out during a less than riveting lecture and pondering the question, "What is the Juniata Phonathon?" Well, maybe not. That does not, however, excuse the fact that people are not aware of what the Phonathon is and what it hopes to accomplish. After all, someday you too will be an alumna or alumnus on the receiving end of a Phonathon call.

The Phonathon takes place twice each year: once in the fall, extending for 35 days, and again in the spring for 25 days. During these periods, students call alumni to raise money for the College. Senior Kelly Casperson, a member of the Phonathon team, said, "The group of people we have are incredible and have definitely made an impact on how successful we have been this year."

During the fall, the Phonathon brought in approximately $94,000, just shy of the $95,000 goal. The goal for the spring is to receive $38,000. Loni Fultz, the assistant director of the Juniata Fund, believes that they will accomplish their goal this semester.

The money that is raised goes into the Juniata Fund. Fultz said, "The Juniata Fund is an unrestricted fund that provides for the day-to-day operating budget of the College. An unrestricted fund, mean[s] the money goes where it is needed most." For example, it can go to financial aid for students, building maintenance, or toward faculty salaries.

Alumni, however, do have the option of donating to restricted funds. These include sports teams, specific scholarships, or specific departments. Fultz added, "The Juniata Fund, an unrestricted fund, is separate from a restricted fund. We do collect those types of funds through the Phonathon, but we make sure to designate those gifts to the proper areas."

A common misconception about the Phonathon is that it is all about the money. Donations are important, but it is more about maintaining relationships and connections between alumni and Juniata. This is the reason they call recent graduates. They aim to keep them updated on campus and alumni events, such as Homecoming and Pig Roast, not to take their money.

Casperson said, "My favorite thing about Phonathon is talking to people who really want to talk to you and are genuinely interested in what is going on at Juniata."

Fultz concluded, "The efforts of the Phonathon have reached a very acceptable level of success this year, and continue to improve with every phone call. The key to this success is the heart of the Phonathon, the callers. They unlock the door to the creation and maintenance of relationships with alumni, parents, and friends every night they call."

Photo: Sara Smith

Freshman Megan Carpenter helps Juniata raise money from alumni two hours a night, three days a week at the Phonathon office.

Changes slated for Good and Ellis Halls

Caitlan Zlatos
staff writer

The March 25 Juniatian reported on upcoming changes for Brumbaugh Science. However, the BSC moves are only a small part of the administration's planned campus-wide improvements and changes. Other buildings on the slate for such changes are Good Hall and Ellis Hall.

According to Provost James Lakso, the main changes in Good focus on renovations and the movement of professors' offices in order to group them by department. The business professors from the fourth floor will move out of Good to the old chemistry wing of BSC. This will allow the psychology and education professors, who currently have offices on the main floor, to move to the fourth floor. It is not known how soon these moves will occur, but it may not happen until next spring.

Kathryn Westcott, a psychology professor, expressed that she is not opposed to the office relocations. However, she said, "I kind of like that we are scattered because it allows us to get to know professors from other departments."

The shift of the main floor professors to the fourth floor will allow religion professors to occupy the main floor offices. It is reasoned that because J. Omar Good gave an endowment specifically for support of the Religion Department, religion professors should have offices together in Good Hall. Additionally, the growing size of the religion department requires more office space.

Amidst the shuffling in Good, the plan is to gradually renovate all offices to match those on the second floor. This includes new floors and ceilings, painting the walls, and new furniture.

While the condition of Good is not dangerous or inadequate, Lakso described it as being "an old, tired building…it's gotten a lot of use." He went on to say, "Students have the right to expect to work in an atmosphere that is conducive to learning."

As for Ellis Hall, Dean of Students Kris Clarkson emphasized that the planned changes are meant to make it "more functional and more student union-like." One specific desire Clarkson expressed was for Ellis to have "more hang-out space," especially on the second floor. This may include moving the couches from the main floor up to the Cyber Café area, and removing the "Juanita's" counter.

There will be an open space on the second floor once the TLT Center moves to Brumbaugh either this summer or next fall. According to Clarkson, the Career Services and Community Services offices could possibly be moved to the former TLT space, though the goal is also to keep some computer lab space open to students.

Additionally, the Alfarata, Juniatian, Kvasir, and Student Activities offices will be moved to areas of more student traffic. Currently in the basement of Ellis, the Alfarata and Juniatian will move to the main floor, switching places with the food services offices outside of Baker.

Professor Amy Mathur, faculty advisor for the Juniatian and the Alfarata, stated, "It only makes sense to place our offices in the main flow of student traffic as it will improve our visibility on campus. I hope that as students pass by our door every day they'll become more inclined to stop in to drop off letters to the editor or to offer coverage ideas."

Renovations of the current Alfarata and Juniatian offices will occur before both the food services offices from the main floor relocate.

The Student Activities office, now on the second floor, will then move to the spot where the catering office is now. Several club offices may move into the Student Activities office space.

All planned changes are contingent on budget restrictions. Those occurring in Good and Ellis will be accompanied by bigger changes on campus, notably the upcoming creation of the Halbritter Center for Performing Arts, which will be covered in the next issue of the Juniatian.

Princeton, Yale, Harvard... Juniata?

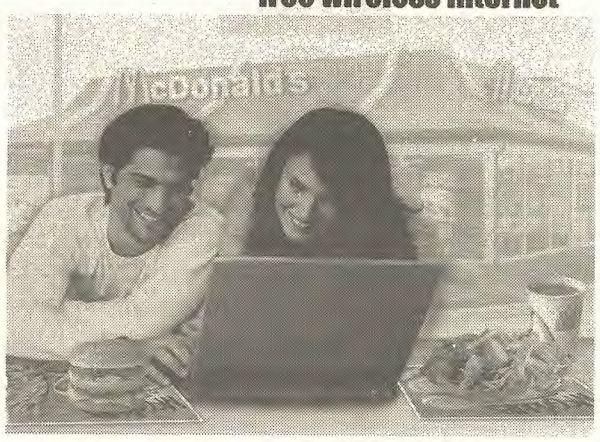
Michael Vella
staff writer

How many times have you heard the rumor that Juniata is joining the Ivy League? If you are a senior, the answer is probably "too many." Each year this rumor circulates around campus, and it is finally time to put an end to the questioning. Will Juniata ever join the ranks of Harvard, Yale, Princeton, and the five other schools that constitute the finest assemblage of colleges and universities in the world? Not in our lifetime.

According to ivysport.com, the Ivy League formed in 1945 as a football-only agreement. The eight schools that make up the league established common academic standards, eligibility requirements, and agreements on athletic financial aid. In 1954, this doctrine was applied to all sports, and the first competitive season took place in 1956. Today, these beliefs are still the backbone that holds this historically rich conference together.

In addition to athletics, Ivy League schools are known for their prestige and extremely competitive admission standards. Harvard and Princeton have the lowest acceptance rates of the Ivy League schools, accepting only 11% of applicants. Cornell, at 31%, has the highest acceptance rate of the Ivies (admissionsconsultants.com). Juniata's acceptance rate, on the other hand, is 75%.

The Ivy League schools can afford to have strong athletic programs and excellent academics because of their wealth. The endowments of the Ivies reach the billions, allowing them to have some of the most beautiful campuses in the nation.



Juniata's endowment is not even $100 million, and its student body is small compared to the Ivy League schools. Dartmouth is the smallest Ivy, with about 4,000 students, compared to Juniata's 1,400.

So where does this leave Juniata? "Juniata is a fine college, but it is so far removed from the Ivy League. Its academic profile is no where near those of the Ivies," says Dean of Students Kris Clarkson. "If you look at the hierarchy," says Clarkson, "it's Ivy League on top, then the baby Ivies [NESCAC schools like Amherst] and by the time you get to Juniata, we are like the 'embryonic' Ivies."

Clarkson suspects the rumors have started as a result of President Kepple's capital campaign to improve Juniata. He said, "Students see the quick progress we have made improving the campus, with the new science center, brick walkways, landscaping, and renovations, and assume we are preparing to join the Ivy League. But those students need a reality check."

Juniata grad and Director of Admissions, Terri Bollman attested, though, that the rumor has been recycled by every class since she came to campus as a

Phi Alpha plans Take Back the Night Week

During the week of April 12, Phi Alpha Service Club will sponsor Take Back The Night Week, an annual event in honor of sexual assault awareness month.

This year, Phi Alpha has an event planned for each evening at 8:15 p.m., including a student taught self-defense class and a special presentation of "PlayRights," an interactive theatre group from Bloomsburg, PA. Their performance will be on the topic of acquaintance rape.

Phi Alpha has been planning Take Back The Night events since last April, when they booked "PlayRights."

During the fall semester, Phi Alpha members spent almost every weekly meeting planning out the events that would take place in April 2004. Now, with only a few weeks to go, the final details are taking shape.

Following is a schedule of the Take Back The Night Week events:

Monday, April 12 Self-defense class, mat room (KSRC), 8:15 p.m.

Tuesday, April 13 Interactive Theatre Performance on Acquaintance Rape, "Playrights" Ballroom, 8:15 p.m.

Wednesday, April 14 Candlelight Vigil, steps of Founder's Hall 8:15 p.m.

Thursday, April 15 Movie: "The Accused," Alumni Hall, 8:15 p.m.

Friday, April 16 T-shirt day – wear your shirt to promote sexual assault awareness (cost: $2:00)

In addition to Phi Alpha sponsoring Take Back The Night Week, over 20 clubs made donations to help purchase the t-shirts, which are an annual part of Take Back The Night Week.

Enough shirts were purchased in the hopes that all would be sold and worn on Friday, April 16. If so, 1 out of every 4 students will be wearing one of the white t-shirts with black writing, which represents the ratio of female sexual assault victims nationally on college campuses. This year, the t-shirt motto is "1 out of 4, 1 out of 8", which is the female and male assault ratios, respectively.

All Take Back The Night Week events are free of charge and refreshments will be served at some of the events.

How can the Juniata community discourage discriminatory language or actions?

Junior Nicole Fernandez ***(right)*** "They should have better diversity workshops where the students do not feel attacked or guilty, but should instead have a workshop where interaction is encouraged and better examples are set."

Junior Stephanie Hodgdon ***(left)*** "Increase awareness. We need to learn about people's differences to become more understanding and tolerant. I think speakers on diversity are a good way to achieve understanding."

Rachel Taylor ***(right)*** "They can revise the diversity workshop so that students attending don't feel as though they are being attacked and/or belittled for their thoughts or feelings. Maybe have the students interact more openly instead of being below the attack. Handling situations such as the one recently will also help to set a precedent for future actions."

Dean of Students Kris Clarkson ***(left)*** "Continue to speak against discriminatory actions and language, avoid bystander behavior and pluralistic ignorance, and strive to be accepting and supportive of others."

Community & Career Service Asst. Hillary Sherman ***(right)*** "I think Juniata can continue to promote events, speakers, and discussions that foster dialogue and open all of us up to other perspectives. But, I also think offering lectures and such is only one part and that the entire community must continue to strive to make Juniata a place of inclusion and that, when someone violates this, the consequences need to be consistent and firm."

Discussion of racism

continued from page 1

'No, that's the other black girl on campus.' You all look different to me, why can't you afford us the same?" Because there are so few minorities on campus, they sometimes unfairly get lumped together and blurred as individuals.

As Rosalie Rodriguez, Special Assistant to the President for Diversity and Inclusion, put it, "Juniata is not immune to racism. [...] Students will hear something and not report it because 'it's not a big deal,' but if people had said something earlier then that might have prevented [the incident]."

Rodriguez later said in an interview that 10 to 15 people stepped forward saying they had similar experiences with the same person involved in the March 17 incident.

The responsibility of everyone on campus to help stop prejudice became the main thread of the forum discussion. Many people said that if you don't express your opinion when someone says something offensive, you are yourself a participant.

Registrar Athena Frederick repeatedly brought up the Notice of Concern form, available on the Dean's website. The form can be sent anonymously if you see one person harassing another.

Frederick, Rodriguez, and Cook-Huffman also stressed that if you hear someone saying something offensive, tell them so. "At the very least it will make them stop and think about what they're saying," said Cook-Huffman.

Cook-Huffman also said that incidents as severe as the one on March 17 do not happen frequently. The last time something serious happened was six years ago, when a student's car tires were slashed.

In smaller cases of harassment, the student would be brought in to the Dean's Office and told that his or her actions are insensitive and intolerable. This reprimand has always been successful, and such students have never been called back to the office for repeat offenses.

Rodriguez and Cook-Huffman also believe that there is a need for more diversity education on campus. The Diversity Workshop section of EO is one method, but it has not been very successful, nor nearly in depth enough. "It's like [students] would rather be tortured in a chamber, stuck in boiling oil, than to listen to their peers of different backgrounds talk about how you could change the culture of this campus," Cook-Huffman said.

Communications Instructor Jason Delo pointed out that such forums were important to challenge what people believe.

"'I was brought up that way' is not enough. We need to demand that people articulate what and why they think that way [...] that's where the argument begins," he said.

The Workshops are very challenging and can get heated, but as Gunn said, "We don't demand that people like each other, we just demand that they respect them."

Before the meeting was brought to a close at 10:13 p.m., Fala gave it a positive review. "This [forum] can be viewed as a pivotal moment because in my 12 years [at JC] we've never had such an open dialogue. [...] I'm really pleased with what I'm witnessing tonight."

At an interview after the forum, Rodriguez expressed her concerns and hopes for the campus. "My biggest concern is that students not feel apathetic," she said. She wants students to stand up to those who use offensive language and to be able to ask questions.

Rodriguez hopes that in addition to events sponsored by the Office of Diversity and Inclusion, more cultural awareness programs will be incorporated into the curriculum. "My feeling is that it is something that should be covered by Cultural Analysis. There are two CA requirements, and one of them should deal with domestic issues."

Juniata may not be immune to racism, but we are also not incapable of increasing sensitivity and awareness on campus. The forum held on March 25 was one step in the long process of creating a wholly open and diverse environment here.

On April 26 at 3:30 p.m. in Neff Lecture Hall, the President's Office will sponsor a forum titled "The State of Diversity at Juniata." Everyone should make an effort to attend, and everyone should speak up and do their part to help make Juniata a welcoming campus for people of all backgrounds and beliefs.

Making the Grade

Juniata uses accreditation to improve itself

Danielle Hart
staff writer

For every college student, one of the most important days of the year is receiving your grades in the mail. You rip open the letter praying that the final you were worried about did not ruin your cumulative grade point average. And there at the bottom is the one you are worrying about – A+. You jump. You scream. This is better than anything you could have ever imagined.

That pretty much sums up Juniata's feelings upon receiving its 2003 evaluation from the Middle States Commission on Higher Education, an organization that uses peer evaluations, self-assessment, and consultation to help colleges and universities improve. "We were really thrilled to death about this report," said Cindy Clarke, Director of Institutional Research. "They gave us a better report than [they gave] most other institutions."

So what makes this report so special? Why is it so important to the College?

The accreditation process is always one of the highest priorities for institutions. "It is one of the most important things a college does every ten years," says Provost James Lakso. "The government relies on independent crediting agencies, like Middle States, to assess colleges and universities to see whether or not they meet the guidelines of a good institution. If a college is not accredited, it is basically out of business."

Therefore, every ten years Juniata renews its accreditation by submitting a self-study to the Middle States Commission.

In the self-study, Juniata focuses on what we are doing, how well we are doing it, and what improvements need to be made. For this last process, Juniata chose to focus its self-study on three main areas: first year experience, internationalization, and student engagement.

After submitting the self-study, a team of outside evaluators examines it, visits the college for three days, and interviews students, faculty, and staff. The review team verifies if the college is fulfilling its mission.

While members of the Juniata community felt that there were areas the college needed to improve, Middle States delivered only praise. "This report was glowing and I think we were relieved it was so positive," said Pat Weaver, accounting professor and co-chair of the steering committee that conducted the College's self-study.

Middle States specifically commented on Juniata's sense of community. The Middle States report stated: "Juniata is truly a student-centered college. There is remarkable cohesiveness in this commitment - faculty, students, trustees, staff, and alumni, each from their own vantage point, describe a community in which the growth of the student is central."

Educational growth for students is epitomized by another area Middle States singled out for praise – Juniata's educational experiences, specifically the Program of Emphasis (POE) program.

Middle States encouraged Juniata to continue with its unique system of concentrated areas of study, which when coupled with intense academic advising, gives Juniatians an educational experience unlike any other in the nation.

While most students would sit back and revel in such high marks, Juniata has already begun steps to continue improving. President Kepple said, "Even with such a great report, we are not going to sit on our laurels."

Some suggestions are already implemented, while others are being considered for approval by the faculty. The College also used recommendations from evaluators to include key improvements for Juniata's five-year strategic plan.

The College has already instituted several major changes traceable to our self-assessment. For example, the lecture component of College's Organic Chemistry course no longer is taught in a single lecture section. Instead, the course is broken into smaller sections. Next year Biology I will also be split into smaller lecture sections. The Chemistry-Biology Lab sequence also features smaller teaching modules equally divided between chemis-

The road to graduation

Pamela R. Bodziock
co-editor in chief

So. I'm a senior this year. I was beginning to wonder if I'd ever actually make it.

Four weeks from graduation. After four *years*, this seems fairly unbelievable. Or, to be more accurate, after seventeen years, this seems fairly unbelievable. (I'm counting down through kindergarten, here.) And let me tell you, it's been a long road.

The road at Juniata has been particularly long, though not in a bad way. My four years here have been the most challenging of my academic career – as it should be, since this is *college*, after all. Juniata has been the mental and cultural challenge I had hoped it would be – an experience that demanded that I not only work to comprehend new academic ideals, but societal ideals as well.

Oops – I need to be more careful here; I'm starting to wax philosophical. Or, at least, I sound like I'm writing a graduate school application statement-of-purpose essay. Sorry about that. It comes from writing so many of them lately - the usual kissing-up stuff: "yes, I'm a good student; yes, I enjoy learning; yes, I feel my four years at college have been invaluable to me; yes, I think your program is the most amazing program on the face of the earth, and I'm not just saying that so that you let me get in." You know what I'm talking about. We all wrote one of those to get accepted into Juniata.

Yes, Juniata College. You know, I almost hate to say it, considering how I'm always whining about how tired I am of school – but I am really going to miss it here. Hard as college proved to be, it also turned out to be the most enjoyable four years of my academic life, with many good and often amusing memories.

I will remember Mountain Days, snow days, and Madrigal dinners. I will remember diversity workshops, heated class discussions, and political debates over lunch. I will remember Colin Mochrie and Chip Esten, "Hurricane" Isabel, and the poetry festival in New Jersey (er, you had to be there). I will remember, too, 9/11, the conflicting views on the war in Iraq, and the arguments – I guess I should say debates – over organized religion, diversity, and equality. The good and the bad, the frightening and the funny. It's all affected me and changed me – for the better, I think.

I am looking forward to my graduation with an almost ridiculous excitement. Just *thinking* about May 9 gets me grinning. I can't wait to walk down the aisle in my dorky gown and cap, can't wait to get that hard-earned diploma *in* my hands, can't wait to toss my hat into the air.

And believe me, I'm tossing my hat into the air. Didn't get to do that for my high school graduation; the ceremony was in a cathedral, and apparently the principal and vice-principal thought it would be disrespectful to toss our hats in church. If you had asked *me*, I would have said that I figured God would let a little thing like that go – I figured He was as happy as I was that I was finally graduating from high school, so that He'd no longer have to listen to me pray, "Please God, just let me pass the Spanish test and I promise I'll NEVER nag you about Spanish again." But I digress.

So yes, I'll be tossing my cap. I'll be clutching onto that diploma with pride and grinning excitement, ready to move on, ready to see where the road takes me next.

I'm not exactly *sure* where the road is going to take me, which is very frightening – but it's also part of the excitement. The possibilities aren't endless, of course, not really – but they *feel* endless right now, and I imagine, all things considering, they're probably not that far removed from "endless," anyway. Which is very scary, and very neat.

I won't forget Juniata, though. It is just one more twist of the road for all of us – but what we do with our time while we're walking it is up to us. For myself, I feel like I've learned what I came here to learn. Time to throw my hat in the air and move on.

So good luck to you future sophomores, juniors, and seniors – and good luck to the incoming class of freshmen, wherever they may be right now. Just remember, no matter how long your time here may feel, the next twist of the road is in sight. And – at the risk of sounding corny – it'll be over before you know it. So have fun, and get what you can out of the experience.

It'll be time to throw your own hat soon enough.

Ask President Kepple

"Why is it so expensive to purchase a new ID card (or a new car decal)? It can't possibly cost, for instance, $10.00 to make an ID card."

The card does not cost $10.00 but having someone around to do the work usually does.

"Why doesn't Juniata, a Christian-affiliated school, close for Easter Monday? Doing so disrupts many family celebrations or observances since most students (or their parents) must leave during Easter Sunday to drive back to campus."

While the administration is responsible for the class schedule, it receives advice on the schedule from the faculty executive committee. In the past few years, the executive committee of the faculty has considered requests from students to change the schedule so there would be no classes on the Monday after Easter.

The committee ultimately did not endorse the request for several reasons. The primary reason is the need to maintain the balance of class days between those scheduled in the MWF blocks and those scheduled on TTH. Since we do not have classes on the Friday before Easter, we would lose two class days both in the MWF blocks if we were to not have class on the Monday after Easter. This would come at a time of the semester when class time seems especially scarce.

Second, we checked with other private liberal arts colleges in Pennsylvania and did not find many that did not have classes on Monday, so our practice is consistent with other colleges and universities in Pennsylvania. Many of these colleges, of course, also have roots in a Christian denomination.

Finally, while Juniata was founded by members of the Church of the Brethren, we are an independent college, not a church. While we are proud of the Brethren heritage, we need to find an appropriate balance between acknowledging that heritage and affirming our independence.

The Juniatian accepts questions for the "Ask President Kepple" column. Questions may be submitted to juniatian@juniata.edu. Editors will submit your anonymous questions to President Kepple. Questions will be considered based on relevance to the campus community.

The Juniatian accepts letters to the editor in response to articles and editorials and to address the campus community. ***We strongly encourage students and faculty to write on any matter of concern or encouragement regarding the college and its community.*** *The Juniatian is a forum for its campus readers, and letters will only be refused due to space limitations. E-mail juniatian@juniata.edu or write to Juniatian, Juniata College Box 667, Huntingdon, PA 16652. Submissions may be edited due to length or content.*

LETTERS TO THE EDITOR

Mental health policy ludicrous

I am very concerned about the article regarding mental health in the last issue of the paper. I think it was constructed in an untrue light in favor of the policy. As a person who has suffered from mental health issues and a future health professional, I view this policy as ludicrous.

I have personal contact with this policy. If one says that they wish to kill, or even hurt, themselves, they are asked to leave the campus for the remainder of the semester. It's not as if you are given a grace period of a week or two to gain composure; you are strongly encouraged to take a leave of absence. This is ridiculous, as it seems to me that the school would rather have you "deal with issues" elsewhere than show concern and try to assist you. (Here's a plug; if you feel you need help and don't want to be ridiculed, contact Beth Williams. She is very understanding and everything is strictly confidential.)

If you fight the policy and choose to stay, you are made to feel like a criminal just by virtue of the fact that you may have a mental illness. Get this: YOU ARE GIVEN DISCIPLINARY PROBATION for the rest of the academic year. Yeah, THAT'S going to help you deal with a problem. That is probably the worst thing you can tell someone suffering from mental illness, because he/she will feel like they are WRONG for feeling they way that he/she does, when it is NOT THEIR FAULT. If it's not bad enough that you are already feeling horrible about yourself, you get an official letter from the college reprimanding you for your behavior.

A mental health issue should not be dealt with administratively, past asking a student to visit Beth, the college counselor.

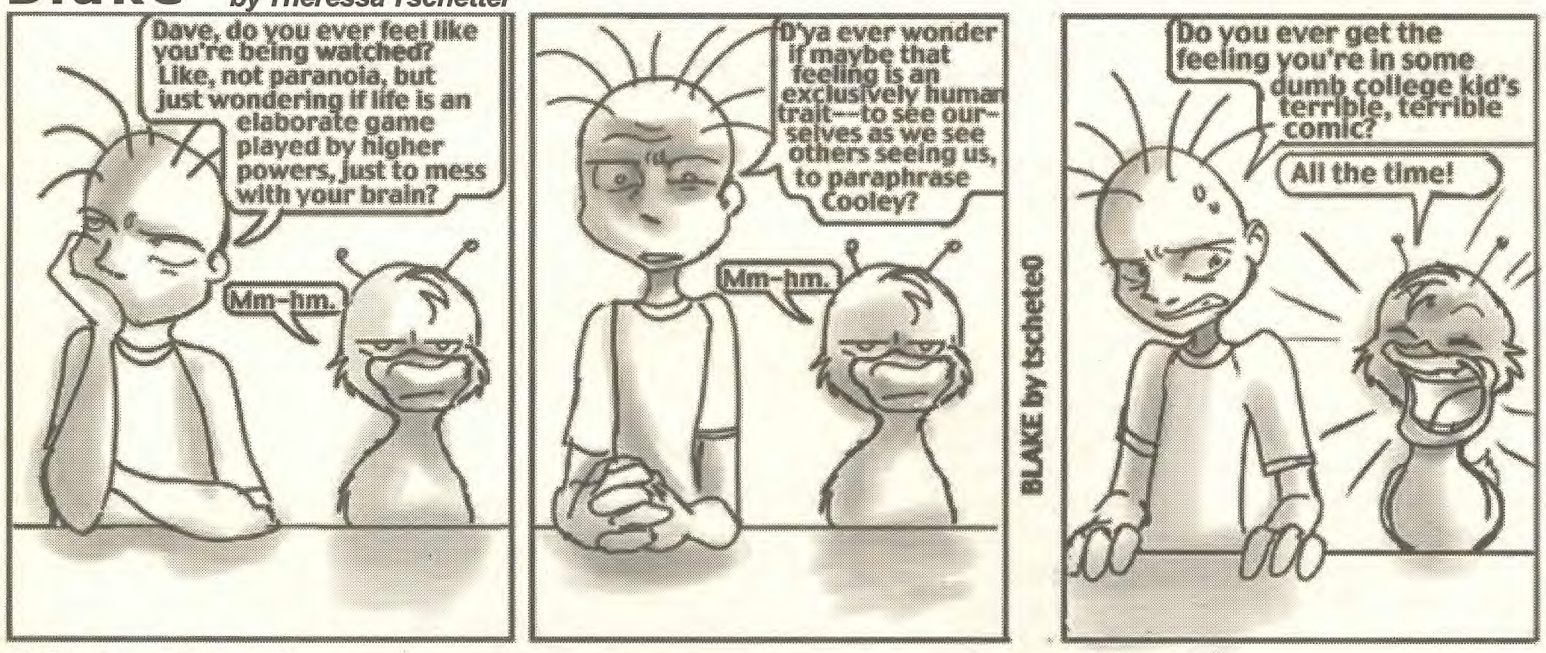
Anonymous student

Sloppy newspaper writing

I was very excited to pick up my copy of the latest Juniatian on Thursday [March 25]. I always look forward to the high caliber writing of the students on staff, but, upon reading it, this issue left me speechless and agitated. It wasn't that the article topics had struck a nerve; it was the complete lack of regard for grammar and detail. There were numerous errors within this issue, including one taunting me from the front page. Out of the 23 articles I read, there were 15 errors. I was so shocked with what I found in the first 11 pages that I completely skipped over the sports section for fear of further infractions. I guess in the fervor of the last couple of weeks, the staff was not as focused on putting out the exceptional Juniatian to which I have grown accustomed.

I really have enjoyed the Juniatian this year – I read every issue. I just want the staff to be more aware of what they are writing, and to take the time to check over their articles before everything goes to the printer.

Michelle Schoonmaker
Class of '06



Juniatian staff and editors spend many hours each week poring over copy to avoid grammatical mistakes. However, it is actually quite normal for some errors to remain in a finished edition, be it of a college or a professional newspaper.

We do acknowledge one notable, factual error from March 25, which is corrected in this issue on the back page.

Frankly, the Juniatian staff is proud of the content and depth of articles in the March 25 issue. We would rather have a meaningful newspaper with a few grammatical mistakes than an error-free yet bland publication.

November 2, 1978

WKVR to relocate

by Jane Carothers

This article is a reprint from the November 2, 1978, Juniatian.

As a result of its need for larger facilities, WKVR, Juniata College's radio station, will be moving from its present location in the basement of Founders' Hall.

According to George Meyer, Station Manager, the radio station will be relocated in the basement of Ellis Hall in the room which is known as Plato's Cave, and the adjoining room, which is currently occupied by the Outing Service. The area will be subdivided in order to accommodate a production room, conference room, lobby, record library, and office space. In addition, the transmitter and the antenna will be moved from the Science Center to Ellis Hall if approval is granted. Meyer stated that the actual work should begin next summer and be completed in the fall of 1979. As of yet, the actual cost of the move is unknown, although Meyer expects most of it to be covered by funds from administrative grants, alumni, and other interested parties. "This way," he explained, "it's not going to take money away from the things for which student funds are usually allocated."

Meyer expressed satisfaction with WKVR's future location, saying that "a 'communications area' will be created with 'The Juniatian' right across the hall. Also, we'll be more visible as a station – more in the middle of things, and more accessible." He added, "The better facilities should enable us to provide better service to the campus and the community."

Hidden treasures in the art museum

Holly Brown
staff writer

The Carnegie building, which houses Juniata's museum, is one of the most intriguing buildings on campus. Freshmen get lost on their way to art studios, students walk into closets instead of bathrooms, and everyone is surprised when they see the stained glass window in the ceiling. But these are not the only hidden treasures of the museum.

In the rotunda and the basement of the Carnegie are rooms full of the rest of Juniata's collection, including 19th and 20th century Navajo weavings, Juniata memorabilia, and historical Pennsylvania artifacts. At one time the rotunda was open to the public, but currently it is closed due to space issues. The collection in the basement is part of an outreach program that is often presented to elementary and high school students.

A well-rounded look at Juniata's history is contained in the Carnegie. Specific Juniata items include the chimes that were rung at dinner time, beanies, pennants, photos, and football memorabilia.

Domestic pieces, quilts, kitchen items, and a civil war diary round out the central Pennsylvania historical collection.

There are also thousands of 19th and 20th century photos that document life at Juniata as well as Huntingdon County.

These works are carefully archived and stored. Temperature, humidity, and light are closely monitored, and pieces are carefully hung and preserved.

Photo: Hannah Rauterkus

The Carnegie Museum, located on 17th and Moore Streets, houses an eclectic array of artwork, ranging from Juniata memorabilia to priceless weavings.

According to curator Dr. Nancy Siegel, only 15% of Juniata's entire permanent collection is currently on display. These paintings and miniatures were chosen because "we like to have some of the most well-known artists on display, as well as a variety of media, subject matter, and time periods," said Siegel. Part of the permanent exhibit comes from a JC alumnus, Quayton Stottlemyer ('51), who donated his father's fine arts collection in 1998.

The rest of the collection is out on loan, waiting to be restored, or kept in storage. Several of our pieces by Moran and Thomas Cole are being displayed in the Trout Gallery at Dickinson College. A painting by Charles Cromwell Ingram, which was just recently restored, hangs in the gallery.

This restoration is part of a yearly process. Funds are obtained through the Friends of the Museum program. As these funds allow, paintings are restored and modern art is purchased to enhance the collection. Efforts are now being made to acquire pieces of art by alumni and students. While changes are being made to the building, there is talk of making the current painting studio into another gallery, possibly to exhibit works by Juniata artists.

While some hidden treasures are generally off-limits to the public, the works are currently being catalogued and will hopefully appear in digital form within the next few years. In the meantime, the current exhibit and the permanent gallery are open to the public 10:00 – 4:00 Monday through Friday, and 12:00 – 4:00 Saturdays. Take some time to enjoy Juniata's artistic legacy.

Collegiate Dementia:

Spring's sprung - with cornbread and a big apple

Carolyn Keller
staff writer

So it is spring, and welcome to it. I've been stretching my brain in all its proportions to try to find something funny or even somewhat amusing to write about, and I'm still coming up woefully short. I mean, what's happened in the past few weeks that's going to make anyone laugh? Terrorists killed 200 people in Madrid? Not funny. Racial problems here at JC? Not funny. Controversy over "The Passion of the Christ?" Well, that could be very funny, but I don't really care to be tarred and feathered this week, so there goes that idea. The other weekend, I even made my return to my favorite city in the world (New York), only to find that I now like Sevilla more. Clearly, the world is not as it should be.

The New York trip did bring up an interesting dilemma, though. I was more than excited to meet up with one of my best friends from home, Jen-the-Actress, and her boyfriend, Playwright Josh. Jen and Josh are an adorable couple who, unlike me in my present funk, seem to actually be doing something with their lives. They're taking playwriting classes and going to auditions. All I've really managed to do is read well over half of a book that's not due in its entirety for at least two weeks, while I haven't yet touched anything that's due for *tomorrow*.

I don't know if it's me or the fabulous spring weather we've been having, but all-in-all, why spend time typing up strange things like papers when you could be lying out on the lawn with a book, feeling like you're ahead of the game? Delusion is a beautiful thing, especially when

Nate Thompson
staff writer

There are several three, four, and five letter words that just should not be mentioned on a college campus. I'm not talking about the kind of words that would get a kid's mouth washed out with soap. These words are much worse. They can cause fear, anger, resentment, and severely low self-esteem in college students. Just to clarify which words these are, I am going to write them all down, so brace yourself. They are as follows: GRE, LSAT, MCAT, PRAXIS, GMAT, and TOEFL. Most of these evil words are also linked by another five letter word: vocab.

Since I will be taking at least two of these exams, I've been looking around for decent preparatory websites. While Google can help you find several such sites, I have been enjoying number2.com. This website is designed to help the unfortunate souls that must take the GREs. It also has a separate vocab builder.

What I really enjoy about number2.com is its customization.

The Ratings

Number2.com

Addiction	2, Not quite
Humor	1, No-nonsense
Navigation	4, Decent frames
Politically correct:	5, Not a problem
Usefulness	4, GRE mastery

After working with the vocab builder, I went to take a practice antonyms test. I was amazed to see several of the vocab words I had just studied put into the test. I then was able to complete my mastery of those words with the "vocab mastery" section. These vocab words will also help out on most of the other graduate tests.

This customization goes much further. The program makes the vocab questions more challenging as you get more of them right, and less challenging if you are not having any luck at all.

It also suggests which portion of the sample GRE questions you should practice. You can even receive tutor e-mails, where the website will update you on your current performance.

When you take the sample questions, you will learn the ins and outs of the GRE. It almost seems better to get a question wrong at some points. When you do get one wrong, it will often tell you exactly why you chose that answer. It will then give you strategies on how to select the right answer next time.

I will admit that this is not the most exciting website out there. Forget the whistles and bells. There are also hardly any advertisements on the site. If you've

Empowerment for the Sexes

Rachelle Luther
staff writer

With all lights in the Ellis Hall Ballroom dimmed – save the one illuminating the would-be stage – the scene was set for "That Takes Ovaries!" The open mic night was sponsored by the Juniata College Women's Group and the Health and Wellness Center, with a little help from the Residence Hall Association (RHA) and All Ways Of Loving (AWOL).

Around the ballroom, photographs and mini-biographies of great women decorated the walls. On chairs and even the food table, winning pieces from the Juniata Women's Month Art Contest and Exhibition were on display.

A banner celebrating the title of the event attracted almost as much attention as the food table strewn with sandwiches from Billi's Bric-a-Brac and ice cream treats from Dairy Queen.

Outside the doors, performers of both sexes signed up to participate. The focus of the evening was to tell the stories of women who had taken a stand or showed courage.

"That Takes Ovaries," a national feminist movement, came up with the event. This group is connected to "The Vagina Monologues" and suggests ideas for more activities when campuses participate in "V-Day."

The Women's Group, Health and Wellness, RHA, and AWOL hoped to achieve several things with the open mic event. It was part of the celebration of Women's History Month. There was a more important goal, however. Said Hillary Sherman, Career Services Program Assistant and Women's Group member, "[We hoped to] get more people talking and bring more men into the dialogue."

Sherman added that sponsors wanted to create an atmosphere where people could feel safe and be free to talk and share their thoughts. This wish materialized when adults of both gender and even one young teen took the stage.

People shared personal stories and poetry of their own. Others shared the work of others, including songs and poetry. For many, the night was a first. For others, it was a chance to hone their performing chops. For everyone, it was a great experience.

Everyone who performed was rewarded with a "Golden Ovary Award." This award was a Dove chocolate egg wrapped in foil, a fitting thank you for participant's courage.

Nicole Plesnick, senior and Intern for the Health and Wellness Center, summed up the feelings of all the event coordinators: "It was awesome. I am really proud of the turnout. It was very empowering to both women and men and we should do it every year."

"A Sun That Never Sets"

Music Review

Matt Soniak
staff writer

I'm a fairly laid back type of guy. I find that a lot of things really aren't worth the trouble, let alone the energy, to get worked up about. That is to say, that's how I am in my day-to-day life; on stage, I'm a completely different person (shameless plug time: I have a band, Trephine, that will be playing at the Huntingdon County Arts Festival. Come see us June 11 & 12). When I have a guitar in my hands and the spotlight on me, I turn into a regular Mr. Hyde, letting the music and the moment take me where they will. I may end my night sore from thrashing around, and bruised from taking a flying leap off my amp; but I've certainly given the audience a real, old-fashioned rock and roll show.

That's a very important part of music to me: the visual element. Give me something to look at, give me a show! I want larger-than-life rock and roll heroes pouring their heart and soul into their art right before my very eyes, not mopey slackers staring at their shoes for the whole show. This is why people like David Bowie and Iggy Pop, rock's great showmen, will always be kings – nay, gods – compared to today's crop of immobile, lackluster rock star wannabes. This is also why we're talking about Neurosis today.

Neurosis is not my favorite band (that honor belongs to Pink Floyd). They definitely have earned my out and out respect as artists, though, for following in the footsteps *of* Pink Floyd and bringing a distinct visual element to their music. Having long ago shed the limitations of hardcore punk for higher aspirations, yet never surrendering their roots for art-rock snobbery, the California quintet has become famous for music that is a balancing act between aggression and aesthetics, ferocity and beauty. Now, with the "A Sun That Never Sets" DVD, the world can finally see the

Contrivances Amok

Hear ye, Hear ye!

Nate Drenner
co-editor in chief

Every student remembers morning announcements from the dark ages of high school. A school's PA system presents updates on school-sponsored activities relevant to the entire student body. But imagine if that same PA system was used by two teachers as a platform for debate.

Welcome to the world of mass e-mails.

The mass e-mail culture at Juniata acts like a PA system, sending announcements that have some relevance to the community as a whole. However, every so often, personal opinions enter the fray and start a debate. This semester's mass conversation on an e-mail pictorially comparing President Bush with chimpanzees is only the latest example. Students will also remember the science/humanities debate from this past fall.

From a technological standpoint, e-mail is a "push" technology as opposed to a "pull" technology, according to Director of Computer & Network Services (CNS) Dave Fusco. "E-mail gets pushed in your face," he said, "and it is not the place for a threaded discussion." A pull technology, however, allows a user to opt-in to a discussion.

The problem with mass e-mails compounds when a response intended for the e-mail's author is sent by using the "Reply All" button in Outlook. This button sends the response to every e-mail account in the original distribution list.

If concerned with the content of an e-mail, a person should reply only to the individual who sent it. Or, if the offense is severe enough, a complaint can be filed with the Dean of Students or Human Resources, depending on who sent the original e-mail.

Furthermore, users can set up inbox rules in Outlook to automatically delete mass messages. In this case, though, the user will

"Eternal Sunshine of the Spotless Mind"

Holly Brown
Rachelle Luther
staff writers

Summary: Joel Barish (Jim Carrey) attempts to patch up his broken relationship with the impulsive Clementine (Kate Winslet), only to discover she's undergone an operation to remove him from her memory. Grieved and angered, Joel decides to have the same procedure performed on him. But while all his memories are being taken away, he realizes that forgetting takes both the bad and the good.

Rachelle: Real people, real emotions, real movie, bizarre story line. "Eternal Sunshine of the Spotless Mind" is a real work of art. Unlike many movies, this film is not strictly plot- or character-driven. Rather, it is a well-conducted symphony.

Director/writer Michael Gondry and writer Charlie Kaufman should be hailed as cinema gods. They have ousted chronology and written a post-modern piece where characters and storylines coincide to create something different.

First, this film is not a typical Hollywood romance, comedy, or drama. Instead of the usual fairy tales, "Sunshine" portrays everyday life where "happily ever after" is never guaranteed, drama is probable, and laughter comes naturally.

However, since watching our own lives on the big screen would be boring, Gondry and Kaufman have added a sci-fi/psychadelic twist. Walking down memory lane takes new meaning in this film as the audience is allowed a rare glimpse into the tumult of the mind when memories are summoned up and simultaneously erased.

Unlike most films, the characters are ordinary people. They have crappy cars, small apartments, and are less than fashion-forward. No one has a ton of cash, perfect hair, or can even pretend to be a gift to the opposite sex.

Jim Carrey is brilliant as Joel Barish. It was surprisingly easy to watch Carrey breeze through this serious role. I was impressed by his ability to put away his "rubber-faced" antics and show a "normal" side. While Carrey does lapse into his usual ways once or twice, it is never overdone or done at inappropriate times.

Kate Winslet exhibits her star quality as Clementine Kruczynski. Winslet's Clementine is an impulsive and interesting character, to say the least. In some ways, she makes up for Carrey's funny-guy restraints, yet seems dramatic more often than not.

Elijah Wood and Kirsten Dunst deserve applause for their roles as Patrick and Mary. Wood exhibits his talent, taking on a slightly serious, quirky role that fits him well. Dunst is the star of a subplot that ultimately gives an unexpected twist to a rather predictable ending. While both of these actors only carry minor roles, they help to drive the plot and add to "Sunshine's" overall appeal.

"Eternal Sunshine of the Spotless Mind" is not emotionally exhausting, nor does it try to be anything more than it is – a real work of art.

Grade: A

Holly: Some girls gush over Justin Timberlake, Heath Ledger, or Orlando Bloom. I, my friends, become a squealing pile of goo over Charlie Kaufman.

If you're unfortunate enough not to know the man who transforms me to a gibbering 13-year-old girl, let me introduce you. Charlie Kaufman is the powerhouse screenwriter who has written amazing pieces of film such as "Being John Malkovich," "Human Nature," and my personal favorite, "Adaptation." He often deals with emotionally insecure characters and plays with the idea that perception can overpower reality. ("Do you even know what he looks like?" layout editor Matt Russell asks me. "I'm in love with his *mind*," I reply.)

"McKee says we all have to realize we write in a genre, so we must find originality within that genre [...] My genre's thriller, what's yours?" So says the unforgettable Donald in Kaufman's movie "Adaptation."

What's gleefully ironic is that Kaufman, with the help of fabulous directors, has managed to create indefinable movies that transcend genres. "Eternal Sunshine" is just the next example.

"Eternal Sunshine" is a beautiful movie, but not for everyone. This is not a Hollywood movie with fast paced action or beautiful, strong people. Joel is painfully shy, never confrontational, and bland. Clementine is impulsive and emotional. The blending of reality, memories and imagination makes for a confusing chronology. This is also not a sickly sweet, fake romance; we see all the good along with the bad. Basically, you cannot go into this movie with normal expectations.

Not that any of these things take away from the film; on the contrary, they enhance the entire experience. Kaufman's trippy plot mixed with director Michel Gondry's intimate camera work and use of color and contrasts create a movie with an entirely new, edgy feel. The uses of spotlights searching out Joel's memories, and looping film tricks add to the trapped feeling of trying to hold on to vanishing thoughts.

Looking to advertise that big bash?

Mary Gardiner
staff writer

Have you ever planned a meeting to be held in Cloister Lounge, to find out that the room was reserved already for an EO class? Have you ever wanted to post your club's event on the TV channel or on the website and didn't know how? Never fear, the Juniatian is here, and we know exactly what to do.

Just in case you don't feel like sending *another* e-mail out to the entire campus (see Contrivances Amok, page 8), you can certainly post your event right on the front page of Juniata's Current Students' page. On Juniata's Calendar page, at the bottom of the left navigation menu, left-click on "List Your Event," and supply all of the information required on the form.

Don't get too hasty, though. Before you go ahead and advertise that big get-together, make sure you have a place to put it! At intranet.juniata.edu/activites, left-click the "Event Scheduling Request Form," and Colleen McLaughlin or Sherry Sharum, the staff at the Offices of Conferences and Events, will be sure you have a room for your shebang.

Plenty of valuable information is available on the Scheduling Request Form, such as where and when rooms are free, and for what purposes you can use them. You can also request stands, video cameras, podiums, chairs, microphones, projectors, and virtually anything else you might need, too.

Once you're done reserving your space, putting up flyers, and sending out your e-mails, don't forget to advertise your event on Channel 98! At services.juniata.edu/av/channel98form.html, you can list up to ten lines that will appear on our campus channel.

And if you're planning big for that shindig, you can also e-mail the Juniatian at—you guessed it—Juniatian@juniata.edu for possible event coverage.

"A Sun That Never Sets"

continued from page 9

band's stunning musical and artistic vision become a visual reality.

There are two sections to the DVD. One half is Neurosis and the other, the band's trippy, abstract alter-ego, Tribes of Neurot. The Neurosis section of the DVD contains the entire album "A Sun That Never Sets," track by track, with visual representations of each song produced and directed by artist Josh Graham. Graham creates what can't really be described as a music video, but rather an abstract visual version of the songs, wherein the scenery, characters, and the band itself (present in some scenes performing, but blurred by visual effects) are seemingly controlled by the music. This is not only, in a word, *cool*, but stays true to the integrity and spirit of the music and leaves a lot open for interpretation to its meaning. This is not a dissection of the songs or the band, but rather an added layer to Neurosis' artistic vision for fans to digest.

The Tribes segment of the package is a tad more *out there*. The band replicated an audio experiment from the 70's by playing the Neurosis album, "A Sun That Never Sets," through a PA across the room into a tape recorder. This recording was then played across the room and recorded once again, and the process repeated until the result is a 30th generation sound. The album, by now, is so muffled and distorted that it is essentially just waves of noise. Here, Graham takes over again, placing visual elements in sync with the sounds, creating an hour-long psychedelic kaleidoscope of disturbing proportions. This is pretty odd stuff. You have to see it to believe it, and spend time with it to understand it, but like a Picasso painting or a Kafka story, you don't need to fully understand it to *appreciate* it. Though trippy, creepy, and a bit much to wrap your head around all at once, "A Sun That Never Sets" is a fascinating look at what Neurosis and their collaborators see as the visual counterpart to the band's music, and is something *much* more entertaining to look at than Dashboard Confessional shuffling through another whine-fest.

taken Ed Tech, you might recognize the website because it uses HyperCard. Overall, it's a highly practical website without any of the annoying frills.

This is a FREE website, so there is no need to go to one of those sites where you have to pay to get a practice test. All you really need to give the site is your e-mail address. As long as you don't ask to receive information from companies, you don't have to worry about any spam.

Even if you don't need to ace the GREs, improving your vocabulary will never hurt.

If you give it a try, you'll know what I mean when I say that this non-mendacious website won't obfuscate you.

*If you wish to suggest a website for review in The Bookmarkables, e-mail juniatian@juniata.edu.

Movie Review

continued from page 10

The cast is small, but brilliant. There was not a moment in this film where I thought of Joel as Jim Carrey – he was just Joel. Winslet completely embraced her character and I am infinitely jealous of her hair colors.

I know it's only March, but I can tell you right now this is one of the top movies of the year. Hollywood just doesn't come out with poignant, strange, real movies like this very often. "Eternal Sunshine" is worth the $8 for your ticket, and more.

Grade: You can't grade genius.

Best Part: Baby Joel bathing in the sink.

Worst Part: Not being able to watch this movie every single day. . .yet.

Collegiate Dementia

continued from page 8

it's countering stress.

We seem to have reached that point in the semester when everyone is stressed, and I am no exception. I'm talking stress to the point at which seeing people pet cornbread (Josh, at dinner; and yes, you read that right) or buy a beagle they can't afford (Jen) almost seems to make sense under the circumstances – which, at this point, now escape me. It just goes to show that yes, it may be spring, but just because nature is lightening up doesn't mean the rest of the world is.

Why else, aside from stress, would I think of throwing in the towel on writing and becoming a horse trainer or an accountant instead? Sometimes stress can make you a more logical person, and sometimes you just pet cornbread.

So, I say, on with the delusion! Enjoy spring. Take a nap. Buy a dog, but don't treat your baked goods like one. Go outside and read on the lawn. Relax. It's almost time for the final push towards the end of the semester, and for that, I wish you luck.
